- Lt. Col. Charles H. Higgins, architect, New York, New York.
- Frank C. Wright, Lee, Higginson & Co.
- Col. Douglas I. McKay, president Standard Coupler Co.
- Hon. Nathan L. Miller, Hornblower, Miller, Miller & Boston.

Rochester district:
- Edwin Corning, chairman bd. of directors, Ludlum Steel Co.
- C. E. Eveleth, v.p. General Electric Co.
- Edward Hoagland, asst. genl. freight agent N.Y. Central R.R.
- J. T. Loree, genl. mgr. Delaware & Hudson Co.
- G. S. Ruffner, pres. Mohawk Hudson Power Co.
- Carl L. Bausch, director Bausch & Lomb Co., Rochester, N.Y.

Philadelphia district:
- Samuel M. Vauclain, chairman of bd., Baldwin Locomotive Works.
- W. W. Atterbury, president Pennsylvania Railroad.
- Geo. Horace Lorimer, editor Saturday Evening Post.
- Josiah Penniman, president University of Pennsylvania.
- Chas R. Richards, president Lehigh University.
- A. Atwater Kent, president Atwater Kent Mfg. Co.
- Eldridge R. Johnson, financier.
- Irenee duPont, president E. I. duPont Company.
- Eugene G. Grace, president Bethlehem Steel Co.
- E. T. Stotesbury, financier.
- Leonard H. Kinnard, pres. Bell Telephone Co. of Pa.
- John E. Zimmerman, president U. G. I. Company.

LIST OF MEMBERS OF ORDNANCE DISTRICT ADVISORY BOARDS—continued

Pittsburgh district:
- F. J. Chesterman, p.p. Bell Telephone Co. of Pa.
- George Gordon Crawford, pres. Jones & Laughlin Steel Corp.
- T. M. Girdler, pres. & chairman bd. of directors, Republic Steel Corp.
- A. L. Humphrey, president Westinghouse Air Brake Co.
- C. D. Marshall, president McClintic-Marshall Company.
- W. L. Mellon, president Gulf Refining Co.
- F. A. Merrick, president Westinghouse E. & M. Co.
- William L. Munro, president American Window Glass Co.
- A. W. Robertson, chairman bd. of directors Westinghouse E. & M. Co.
- Homer D. Williams, chairman, president Pittsburgh Steel Co.
- E. T. Whiter, regional vice president Pennsylvania Railroad.
- I. Lamont Hughes, president Carnegie Steel Co.
- E. T. Weir, chairman bd. National Steel Corp.
- Arthur E. Braun, president Farmers Deposit Natl. Bank.

Cleveland district:
- Henry C. Osborn, v.p. & chairman, exec. com. Addressograph-Multigraph Corp., Euclid, O.
- Benedict Crowell, Brig. Gen., Crowell & Little Construction Co.
- Henry G. Dalton, Pickands, Mather & Co.
- Allyn F. Harvey, pres. Pittsburgh Steamship Co.
- Colonel Frank A. Scott, chairman India Tire & Rubber Co.
- Alexander C. Brown, president Industrial Brownhoist Corp., Cleveland, Ohio.

Baltimore district: None.

Cincinnati district:
- Frank Andrews, v.p., Andrews Steel Co., Newport, Ky.
- B. S. Armstrong, president the Mabley & Carew Co.
- C. H. M. Atkins, president Warner Elevator Co.
- J. B. Doan, president American Tool Works Co.
- Walter A. Draper, president the Cincinnati Street Railway Co.
- Nelson Emons, Jr., v.p., Dayton Mfg. Co.
- Tylor Field, president Ferro-Concrete Construction Co.
- F. A. Geier, president the Cincinnati Milling Machine Co.
- C. R. Hook, v.p., American Rolling Mill Co., Middletown, Ohio.
- R. K. LeBlond, president the R. K. LeBlond Machine Tool Co.
- H. M. Lefton, treas. & genl. mgr., the Columbian Iron Works Co., Chattanooga, Tenn.
- A. B. Morgan, v.p., the U. S. Printing & Lithograph Co., Norwood, O.
- George Puchta, president Queen City Supply Co.
- Walter D. Randall, v.p. & mill mgr., Champion Coated Paper Co., Hamilton, O.
- J. A. Reilly, v.p., Queen City Coal Co.
- J. J. Rowe, president First National Bank.
- Herman Schneider, president University of Cincinnati.
- Col. Clarence O. Sherrill, v.p. Kroger Grocery & Baking Co.
- F. D. Stalnaker, president Indiana Natl. Bank, Indianapolis, Ind.
- T. H. Townshend, exec. v.p., Hardwood Mfrs. Institute, Memphis, Tenn.
- Wm. F. Wiley, gen. mgr., the Cincinnati Enquirer.
- H. A. Worcester, v.p., the C. C. C. & St. Louis R.R. Co.
- Lucien Wulsin, president the Baldwin Piano Co.

Detroit district: None.

Chicago district:
- Frank R. Bacon, president Cutler-Hammer Mfg. Co., Milwaukee, Wis.
- William Butterworth, pres. U.S. Chamber of Commerce, Washington, D.C.
- Col. W. W. Coleman, pres. Bucyrus-Erie Co., So. Milwaukee, Wisc.
- Brig. Gen. Charles G. Dawes, chairman Central Republic Bank & Trust Co.
- A. R. Erskine, president the Studebaker Corp., South Bend, Ind.
- George M. Gillette, Minneapolis, Minn.
- R. P. Lamont.
- B. C. Heacock, president Caterpiller Tractor Co., Peoria, Ill.

St. Louis district:
- Louis H. Egan, president Union Electric Light & Power Co.
- Geo. B. Evans, St. Louis, Mo.
- H. I. Finch, president, the Emerson Electric Mfg. Co.
- S. W. Fordyce, Fordyce, White, Mayne & Williams, St. Louis, Mo.

LIST OF MEMBERS OF ORDNANCE DISTRICT ADVISORY BOARDS—continued

St. Louis district—Continued
- C. B. Fox, Alcoa Ore Co., East St. Louis, Ill.
- J. M. Kurn, president St. Louis-San Francisco R.R. Co.
- John J. Lonsdale, president Mercantile Commerce Bank & Trust Co.
- P. S. Medart, Fred Medart Mfg. Co.
- J. M. Olin, v.p., Western Cartridge Co., E. Alton, Ill.
- H. M. Pflager, senior v.p., Granite City, Ill.
- E. H. Steedman, president curtis Mfg. Co.
- John B. Strauch, president National Bearings Metals Corp., St. Louis.

San Francisco district:
- C. N. Black, chairman of board, Ford, Bacon & Davis, Engineers.
- J. D. Grant, capitalist, San Francisco, Cal.
- Theodore J. Hoover, Lt. Col., Ord.-Res., dean, School of Engineering, Stanford University, Calif.
- D. C. Jackling, president Utah Copper Co.
- W. H. Oliver, president Oliver United Filter Co.
- D. C. Seagrave, Col., Ord.-Res., v.p. & genl. mgr., Pacific Coast Shipbuilding Co.
- Stanley G. Harris, Harris Trust & Savings Bank of Chicago, San Francisco.
- K. R. Kingsbury, president Standard Oil Co. of Calif., San Francisco.

Exhibit No. 1341

Ordnance District Contract Boards

In compliance with a request from the president of the Board to Standardize War Contract Forms, the following boards have been appointed in the various ordnance districts for the purpose of making a study of the proposed war-time contract forms, especially the adjusted-compensation contract:

Baltimore Ordnance District:
- Major William E. Grainger, Ord.-Res., of the Bethlehem Steel Company.
- 2nd Lieut. Bernarde E. Anderson, Ord.-Res., of the Krebs Pigment & Color Corporation.
- Major J. S. Hatcher, Ord. Dept., recorder.

Boston ordnance district:
- Colonel Charles H. Tenney, district chief, chairman.
- Mr. H. C. Dodge, president S. A. Woods Machine Co.
- Mr. Alf Anderson, president Albert & J. M. Anderson Co.
- Mr. Alvan T. Simonds, president Simonds Saw & Steel Co.
- Lt. Col. Winthrop Sargent, Jr., Ord.-Res.
- Major George Paul Slade, Ord.-Res., lawyer.
- Major Roger Taylor, Ord. Dept., recorder.

Chicago ordnance district:
- Colonel Hamilton, Ord.-Res., president M. H. Treadwell Co.
- Lt. Col. F. A. Lorenz, Ord.-Res., general works manager, American Steel Foundries.
- Lt. Col. Max Epstein, Ord.-Res., chairman board of directors General American Tank Car Corporation.
- Captain Whitney B. Hobbs, Ord.-Res., superintendent at the Western Electric Company.
- Captain John Slezak, Ord.-Res., vice-president Turner Brass Company.
- Major M. K. Barroll, Ord. Dept., recorder.

Cincinnati ordnance district:
- Mr. Ludwig Kemper, president Cincinnati Ball Crank Co. Alternate, Mr. W. W. Sudmeier, Mr. Kemper's assistant.
- Mr. George W. Haydock, head of Haydock, Lamson & Co.
- Colonel Geo. G. King, head of King Powder & Peters Cartridge Co. Alternate: Mr. R. E. King, his son.
- Mr. Vincent H. Beckman, lawyer.
- Major A. C. Rasmussen, Ord.-Res., chief engineer, Insley Manufacturing Co.
- Mr. S. J. Hopper, general alternate.

Hartford ordnance district:
- Colonel B. A. Franklin, Aux. Res.
- Mr. John H. Goss, Scovill Manufacturing Co.

ORDNANCE DISTRICT CONTRACT BOARDS—Continued

Hartford ordnance district—Continued.
- Mr. C. R. Burt, Pratt & Whitney Company.
- Major D. B. Wesson, Ord. Res., vice president and purchasing agent, Smith & Wesson.
- Captain J. A. Lavallee, Spec. Res., superintendent, Westinghouse Electric & Manufacturing Co.
- Captain R. D. Mallary, Spec. Res., attorney.
- Captain J. V. Montague, Ord. Res., assistant comptroller, Scovill Manufacturing Co.
- Major F. H. Miles, Jr., Ord. Dept., recorder.

New York ordnance district:
- Colonel Frank W. Roller, Ord. Res., president Roller-Smith Co.
- Lt. Col. C. O. Brown, Ord. Res., chemist, American Cyanamid Co.
- Lt. Col. T. F. Brown, Ord. Res., vice president National Distillers Products Co.
- Lt. Col. C. E. MacQuigg, Ord. Res., research director, Union Carbide & Carbon Testing Laboratories.
- Lt. Col. Crosby Field, Ord. Res., president Flakice Corp.
- Major H. H. Hall, Ord. Res., mechanical engineer, Aluminum Company of America.
- Major R. L. Hall, Ord. Res., technical advisor, Kearny plant of Western Electric Company.
- Lt. Col. H. K. Rutherford, Ord. Dept.
- 1st Lieut. W. S. Broberg, Ord. Dept.

Rochester ordnance district:
- Schenectady:
  - Mr. J. F. Cunningham, General Electric Co.
  - Mr. W. E. Hoffman, General Electric Co.
- Buffalo:
  - Mr. J. L. Crane, attorney.
- Rochester:
  - Mr. James Gleason, president Gleason Gear Works.
  - Mr. Carl L. Bausch, Bausch & Lomb Optical Co.

San Francisco ordnance district:
- Mr. Roland Oliver, Pres., Calif. Cap Co., chairman.
- Mr. Milton S. Ray, president Ray Burner Co.
- Mr. E. H. Daniel, treasurer Columbia Steel Co.
- Major K. B. Harmon, Ord. Dept., recorder.

St. Louis ordnance district:
- Col. M. E. Singleton, district chief, chairman.
- Col. Harry Scullin, Aux. Res., pres. Scullin Steel Co.
- Mr. F. W. Olin, president Western Cartridge Co.
- Major E. H. Sager, Ord. Res., professor mechanical engineering, Washington University.
- 1st Lieut. G. C. Hetlage, Ord. Res., Hetlage & Co., appraisal engineers.
- Capt. L. J. Dillon, Ord. Dept., recorder.

Philadelphia ordnance district:
- Lt. Col. Edward Wiener, Aux. Res., lawyer, chairman.
- Major I. E. Lambert, vice president RCA Victor Co.
- Mr. Charles E. Acker, Treasurer Baldwin Locomotive Works.
- Mr. E. Grant Tice, special representative, Bethlehem Steel Co.
- Mr. J. H. Hubbs, purchasing agent, United Gas Improvement Company.
- Major W. L. Clark, Ord. Dept., recorder.

Detroit ordnance district:
- Mr. Alex Dow, chairman.
- Mr. C. S. Hirshfeld, vice chairman, chief of research, Detroit Edison Company.
- Mr. C. J. Jolly, legal department, General Motors Corp.
- Maj. John Worley, Spec. Res., Q.M.C., professor of transportation, University of Michigan.
- Mr. E. B. Stason, Law Department, University of Michigan.
- Mr. J. W. Parker, chief engineer, Detroit Edison Company.
- Mr. Edward T. Gushwe, purchasing agent, Detroit Edison Company.
- Lt. Col. Alfred E. White, Ord. Res.
- Maj. A. B. Quinton, Jr., Ord. Dept., recorder.

ORDNANCE DISTRICT CONTRACT BOARDS—Continued

Pittsburgh ordnance district:
  Mr. T. S. Grubbs, comptroller, Westinghouse Air Brake Co.
  Mr. W. V. McConnor, asst. gen. mgr. of sales, National Tube Co.
  Lt. Col. G. Elkins Knable, Ord. Res., Carnegie Steel Co.
  Mr. H. N. Mathias, dir. of ind. accounts, Westinghouse Electric and Manufacturing Co.
  Mr. James O. Carr, v.p., Allegheny Steel Co.
Cleveland ordnance district:
  Major John O. Findeisen, Spec. Res. (president).
  Major Theodore H. Eickhoff, Spec. Res.
  Major Daniel L. Britten, Ord. Res.
  Major Charles A. Kelley, Spec. Res.
  Capt. Chas. E. Herrstrom, Ord. Res.
  2nd Lt. Walter B. McClelland, Ord. Res., recorder.
Birmingham ordnance district:
  Major Herbert Ephgrave, Spec. Res.
  Major Herbert E. Smith, Spec. Res.
  Captain C. W. Cheathan, Ord. Res.
  1st Lieut. D. J. Early, Spec. Res.
  1st Lieut. Paul G. Parsons, Spec. Res. (lawyer).
  1st Lieut. Allen Rushton, Spec. Res.
  Captain J. D. McIntyre, Ord. Dept.

The following correspondence regarding Exhibit No. 1294 is included in the record at the request of the Remington Arms Co. (See text, pp. 3953.)

REMINGTON ARMS COMPANY, INC.,
EXECUTIVE OFFICES,
Bridgeport, Conn., March 5, 1935.

HON. GERALD P. NYE,
Chairman Special Committee Investigating the Munitions Industry,
United States Senate, Washington, D. C.

DEAR SENATOR NYE: At your committee's session of December 19, considerable attention was devoted to a comparative tabulation (exhibit no. 1294) made up in 1928 under the chairmanship of Mr. Hadley of our company, in which the attempt was made to set off in detail the estimated costs of various commercial manufacturers for the manufacture of .30/172 Springfield '06 boat tail cartridges against the reported costs of Frankford Arsenal. As you will no doubt recall, the consideration given to this cost comparison at the hearing was somewhat inconclusive, and the desire was indicated (pages 5811, 5814, 5816, and 5833 of the mimeograph record) for some further explanation by which the uncertainty that was thought still to attend the matter might be resolved. After the necessary review of the tabulations in question, we are now writing to respond to this request of your committee. In doing so, we of course have no thought of assuming to speak for the other manufacturers named in the exhibit; our statements are made solely on the authority of the Remington Arms Company.

Confining the view, then, to Frankford Arsenal and Remington, and excluding the complications of administrative expense, interest, and profit, the crucial figures of this 1928 comparison may be conveniently restated from sheet #7A of the exhibit as follows:

	Frankford	Remington	Difference
Materials	$10.3286	$9.1968	−$1.1318
Labor	3.5912	3.1037	−.4875
Burden	4.3902	9.7322	+5.3420
Total	18.3100	22.0327	+3.7227

With respect to both materials and labor, it will be noted, a moderate advantage was indicated for Remington. In the important item of factory burden, however, the estimated amount for Remington was more than double the reported figure for Frankford Arsenal, leaving a substantial net disadvantage to Remington for the total of the three essential elements of factory cost.

As was sought to be made clear by our witnesses at the hearing, this whole problem is mainly a question of comparative volume and assurance of continued volume. The figures submitted for Frankford Arsenal no doubt reflected the actual volume of some 60 million cartridges a year and the established condition of regular and continuous production there of this paramount item of small arms ammunition; that is, the manufacturers ideal of continuous, large volume production of a standard item, which was in accord with the actual condition.

The Remington figures, on the other hand, not only were arrived at in the spirit of conservatism which attends, or should attend, all estimates, but also naturally reflected the then recent experience of the manufacture in our plant of an experimental order of 10 million cartridges, of which 1 million were rejected upon inspection by the Government and had to be reconditioned. The lack of special equipment by the use of which considerable economies are attainable in the continuous large-scale production of a standard item of this sort, and the necessity which our factory had been under of adapting general equipment to the production of this cartridge, in the absence of any assurance of continued orders, we believe was made sufficiently plain at the hearing.

To show more definitely the influence of the volume factor, we have, after the necessary further brief study, adjusted the original Remington figures for alternative assumptions of 60 million and 100 million cartridges, in comparison with the original assumption of 10 million and with the Frankford Arsenal figures. The results, again disregarding all questions of interest on investment, profit, etc., may be compactly restated as follows:

	Frankford Arsenal	Remington—For various volumes		
		10 million	60 million	100 million
Material furnished by Government	$11.73	$11.73	$11.73	$11.73
Material furnished by manufacturer	10.33	9.20	9.20	9.20
Total material	22.06	20.93	20.93	20.93
Labor	3.59	3.10	3.10	3.10
Factory overhead and shrinkage	4.39	9.95	3.98	3.51
Total factory cost	30.40	33.98	28.01	27.54
Administration and general expense	.83	1.37	.56	.34
Total	30.87	35.35	28.57	27.88

This tabulation, we believe, will be found self-explanatory. We are entirely confident of its essential soundness and of our ability to substantiate in actual practice the advantage shown for private manufacture on a basis of volume and assured continuity of operation comparable with the actual conditions prevailing at the Government plant.

Mainly as a safeguard against possible misunderstanding, it occurs to us to submit also the following observations:

1. All the above figures, of course, reflect 1928 cost levels, which were high in relation to present conditions. Remington's present costs, especially as to materials, and no doubt those of Frankford Arsenal also, would naturally be substantially below the above figures.

2. Notwithstanding the contrary impressions which may naturally result from the appointment of Mr. Hadley to supervise the collection of the figures in question, from the formalities which attended their compilation and from the cooperation which was generously made available by Frankford Arsenal, the fact is that this study, especially so far as it related to the production costs of the Government, was by no means exhaustive and failed to arrive at satisfactorily complete and definite final figures. This, we believe, will be fully apparent to anyone upon brief scrutiny of the footnotes on various of the 11 pages of tabulations which make up the exhibit. It is to be regretted that the result was thus left inconclusive, and that no satisfactorily complete, definite, and assuredly reliable comparison of Government vs. private manufacturing costs for this standard product exists. The above figures are submitted, and should be regarded, in the light of this fact.

3. At the hearing (pages 5801–5802 of the mimeograph record), upon offhand examination of the exhibit, it was pointed out by Mr. Lammot du Pont, as an

evidence of incompleteness, that the comparison, as indicated on sheet #8, apparently made no allowance whatever for shrinkage at Frankford Arsenal, thereby assuming the impossible factory condition of 100% yield; and it was at once remarked by the chairman that the allowance for Remington was only 1%. This comment represents a quite natural misapprehension, growing out of a necessarily hurried examination of the footnote. As a matter of fact, as will be seen from a more deliberate reading of the entire footnote in question (single-starred note on sheet #8), this 1% was simply a supplementary allowance, thrown in for good measure, after a normal allowance for "known loss on condemned product and cost of repairing product" had already been included in the Remington figure for factory burden.

4. Finally, in presenting this response to the committee's request we desire to say with the utmost emphasis that there is nothing in this exhibit, or in the attended circumstances, which in any degree shakes our conviction as to the superior economy of private against government manufacture under basically similar conditions. In saying this, we have no thought of claiming for the Remington Arms Company or any other private manufacturer any superiority of managerial ability over the highly competent personnel in charge of production at the Frankford Arsenal. The difference is in the conditions of private as against public manufacture; and these same men, under the free conditions of competitive industry and with a sufficient background of that sort of experience, we have no doubt would surpass in a private factory the highly creditable results which they have already attained at the Frankford Arsenal.

In the preparation of this letter, the undersigned and his associates have acted under the same sense of responsibility which attended their oral statements made under oath before your committee. We request that this letter be included as an exhibit in the committee's record, since without some such statement with respect to matters left uncertain at the hearing, we believe a serious liability of misapprehension would inevitably remain.

Yours very truly,

Remington Arms Company, Inc.,
C. K. Davis, *President.*

March 8, 1935.

Mr. C. K. Davis,
President and General Manager, Remington Arms Company, Inc.,
Bridgeport, Conn.

Dear Mr. Davis: Senator Nye has asked me to acknowledge your letter of March 5th containing certain figures. The figures, contrary to your statement that they are self-explanatory, seem to need some explanation.

One question occurs first: How do you arrive at your factory overhead for the various quantities of 10 million, 60 million, and 100 million? The overhead on your table on page 3 drops from $9.95 to $3.51. What proportion of your total overhead would be represented in the $3.51 if the company is producing 100 million cartridges?

Further, how do you arrive at the figure that the Frankford Arsenal would pay $10.33 for material from the manufacturer, whereas you under your various categories would pay only $9.20?

Again, how do you arrive at your drop in administrative and general expenditures from $1.37 to $0.34?

These matters seem to need base figures before being at all comprehensive.

Further, what information have you that the cost at Frankford Arsenal would or would not drop proportionately with increased production up to 100 million?

The whole question is, as you say, quite open as far as volume production goes, but does not seem to me that another set of figures produced especially for this committee without more adequate explanation, really adds to an understanding of the situation.

Presumably the value of the other figures was that they were collected for your own benefit and by contrast these figures are collected to make a different kind of a case. In such instances, presumably the accuracy of your figures for large-scale production could only be checked by an impartial committee of engineering experts.

Upon receiving you reply to the information requested in this letter, the original letter and the correspondence will be put before the committee.

Sincerely,

Stephen Raushenbush, *Secretary.*

SR:Mly

REMINGTON ARMS CO., INC.,
Bridgeport, Conn., March 22, 1935.

Mr. STEPHEN RAUSHENBUSH,
Secretary, Special Committee Investigating the Munitions Industry,
Room 408, Senate Office Building, Wasdington, D. C.

DEAR MR. RAUSHENBUSH: This is in reply to your letter of March 8, in further reference to the comparative cost estimates of your "Exhibit No. 1294." A more prompt answer has been prevented by a recent brief absence from this office of our treasurer, Mr. Reisinger, who is officially responsbile for all our cost calculations (although, as you know, neither he nor I was connected with the Remington Arms Co. or the ammunition business when the original estimates in question were made up, in 1928).

I believe we can best seek to serve your purpose by first restating and then answering briefly the five questions included in your letter.

1. "*How do you arrive at your factory overhead for the various quantities of ten million, sixty million, and one hundred million?*"

Our total charges for factory overhead are made up of elements of two distinct sorts: (a) items that vary almost in direct ratio as the volume of production is increased or reduced, which we designate as "*variable overhead*"; and (b) items of which the amount remains practically constant regardless of any ordinary variations in volume of output, which we call "*fixed charges*". An example of variable overhead would be the allowance for shrinkage which was included in factory overhead as shown in the tabulation on page 3 of our letter of March 5th; while fixed charges are typified by the local taxes on our plant, or by the salary of the plant manager. The amount of fixed charges which must enter into the cost of the unit of production will, of course, diminish as volume increases; for example, if the output is doubled, then the cost per unit for this part of the total factory overhead will be cut in half. In the 1928 estimate for Remington, the $9.95 allowed for factory overhead and shrinkage on a volume basis of only 10 million rounds was made up of $2.786 of variable overhead and $7.164 of fixed charges. In adjusting this part of the estimated total cost for a volume six times as large or ten times as large, we simply let the variable overhead per unit remain constant and reduced the sub-total of fixed charges by spreading them proportionately over the greatly increased volume.

2. "*The overhead on your table on page 3 drops from $9.95 to $3.51. What proportion of your total overhead would be represented in the $3.51 if the company is producing 100 million cartridges?*"

By reason especially of the important effect of variable overhead, the answer to this question would, of course, depend on the total amount of production of all sorts in our factory at the time the 100 million order of .30 caliber ammunition was being manufactured. If total factory production increased, then variable overhead, and consequently the total cost for factory overhead and shrinkage (though not proportionally) would also increase; and vice versa. On the basis of present conditions and outlook, as reflected in our forecast now current for the calendar year 1935, this allowance of $3.51 per thousand rounds on a hypothetical order of 100 million rounds of .30 caliber ammunition to be manufactured in our plant within one year, would be approximately 15% of the total "Factory Overhead and Shrinkage" costs of the entire year's production in the ammunition department of our business.

3. "*Further, how do you arrive at the figure that the Frankford Arsenal would pay $10.33 for material from the manufacturer, whereas you, under your various categories, would pay only $9.20?*"

We did not originate the Frankford Arsenal figure of $10.33 for "Material furnished by Mfr." That cost was determined by Frankford Arsenal itself, and was part of the information furnished us. We believe, however, that a closer examination of your "Exhibit No. 1294" will show quite clearly how this difference could exist, since it will be noted that Frankford Arsenal did not use the same sizes and weights of materials for making the various components of the cartridge as those which were taken by Remington as the basis for its calculations. Of course, it might be entirely practicable for Frankford Arsenal to use identically the same materials as Remington, but it must not be assumed that the consequent saving in cost of materials would remain as a net gain in the total cost of production. The point is that here, as is often the case in factory operation, the manufacturer has to some extent a choice in seeking to arrive at the ultimate goal of minimum total production cost, between proceeding by the route of maximum economy in raw materials or in labor. The cheaper materials may require more operations or longer processing; and an initial saving in materials costs may be partly, or even more than, offset by the necessity of increased expenditures for fabrication. This statement is, of course, theoretical, and its application in the present case is to some extent conjectural; but we believe Frankford Arsenal would not have been using the materials indicated in the exhibit unless there had been a distinct advantage in their doing so. Of course, it must be constantly borne in mind also that this whole discussion refers to 1928 conditions, which were in many respects different from those prevailing today.

4. *"Again, how do you arrive at your drop in administrative and general expenditures from $1.37 to $0.37?"*

Here the principle is similar to that explained under question No. 2 above. The drop in "Administrative and General Expense" is in proportion to the assumed increase in volume of output, after taking into consideration the probable necessary added expense incidental to the increased quantity.

5. *"Further, what information have you that the cost at Frankford Arsenal would or would not drop proportionately with increased production up to 100 million?"*

Our understanding is that the figures for Frankford Arsenal were furnished by them in accord with a then prevailing actual volume of 60 million rounds of .30-caliber ammunition yearly. We have no specific information as to what would have been at that time, or would be now, the exact effect upon Frankford Arsenal's costs of any further substantial increase in volume. We understand that their facilities for manufacturing this 30/06 cartridge were expanded during or shortly after the year 1928 to permit production of 100 million rounds a year instead of 60 millions. Since this stepping up of production from 60 to 100 million would have to carry the additional fixed charge brought about by expanding the plant facilities, it seems obvious that under any complete and accurate system of accounting, even that part of the overhead element of Frankford Arsenal's costs could not go down in direct ratio to production for this added 40 million rounds of yearly output.

I hope the above explanations will make this matter entirely clear; but if not, we shall be glad to endeavor to answer your further questions.

As to your closing thought of a special study of this problem by "an impartial committee of engineering experts", we would heartily welcome such an investigation, whether directed to these plainly incomplete 1928 figures or, preferably, to comparative present costs in our factory and at Frankford Arsenal.

Careful reflection upon the last three paragraphs of your letter, impels me to add one further thought by way of insurance against any lack of complete understanding as to the relationship of our letter of March 5th to the record of the committee's December hearings. We were very glad of the opportunity to submit the data contained in that letter; but in doing so we acted not upon our own initiative but under what we felt was a definite and compelling obligation laid upon us by the committee. In fact, even if we had been disinclined to furnish that further explanation, no option was left to us to decline to furnish it. On pages 5811, 5813, 5814, 5816, 5833, 5834, and 5836 of the typewritten record, the committee's desire was repeatedly and insistently indicated for a more complete explanation than our witnesses were able to give off-hand of the plainly incomplete and unsatisfactory figures of the exhibit in question. Our letter of March 5th was therefore directly responsive to the committee's own reiterated request. As matters now stand, the absence in the record of any response on our part to this request would inevitably be misconstrued by future students of your record, and would leave us in a false light with them. I would therefore like especially to repeat and stress the request which we made in our letter of March 5th that that letter be included in the official record of the committee as finally published. The letter should, of course, also be plainly connected by appropriate reference, or references, with "Exhibit 1294" and with the expressions of committee members which I have just cited by page numbers; and this subsequent correspondence may, of course, be either included or omitted as you may think desirable. I am sure the reasonableness of this request cannot fail to be fully apparent to you; and I hope we may have the benefit of your kind offices in making sure that the final record does not lack inclusion of, or appropriate references to, our letter of March 5th.

Yours truly,

Remington Arms Co., Inc.,
C. K. Davis, *President.*

The following list of campaign contributions of officers and directors of the Winchester Co. was requested by the committee. (See text, p. 3976.)

WINCHESTER REPEATING ARMS COMPANY,
New Haven, Conn., December 18, 1934.

Mr. STEPHEN RAUSHENBUSH,
Secretary U. S. Senate Special Committee Investigating Munitions Industry.
Washington, D. C.

DEAR SIR: As requested in your letter of December 13, 1934 to Mr. J. M. Olin, first vice president, I wish to inform you that I have made no campaign contributions during the period of my official connection with the Winchester Repeating Arms Company, New Haven, Conn., namely, between December 22, 1931, and this date.

The above is intended to answer item 1 of your letter of November 20, 1934, addressed to the Winchester Repeating Arms Company, this item reading as follows:

(1) A list of all the campaign contributions from 1920 to 1934, inclusive, made by the officers and directors of the company.

Yours truly,

F. W. OLIN, *President and Director.*

WINCHESTER REPEATING ARMS COMPANY,
New Haven, Conn., December 18, 1934.

Mr. STEPHEN RAUSHENBUSH,
Secretary, U. S. Senate Special Committee Investigating
Munition Industry, Washington, D. C.

Yours truly,

M. W. ACKER, *Director.*

The following explanation regarding cost figures is in connection with "Exhibit No. 1305." (See text, p. 3977.)

WINCHESTER REPEATING ARMS COMPANY,
New Haven, Conn., December 21, 1934.

Mr. ROBERT WOHLFORTH,
Washington, D. C.

DEAR MR. WOHLFORTH: In reply to your letter of December 18th, I talked with Mr. Taft and he was under the impression that he had explained to you that prior to 1932 it was impossible for us to give you anywhere near accurate cost figures, therefore the cost figures which were submitted are only for shipments made from 1932 on.

Mr. Taft furthermore wished me to reiterate to you his statement that the cost figures in the earlier part of the period from 1932 to date are more of an estimate than those during the latter part, as there have been some modifications made in our method of costing during this time.

Yours very truly,

H. F. BEEBE,
Manager Foreign Dept.

HFB:H

The following list of stockholders in Western Cartridge Co. was requested by the committee. (See text, p. 3977.)

WESTERN CARTRIDGE CO.,
East Alton, Ill., May 25, 1935.

U. S. SENATE SPECIAL COMMITTEE
INVESTIGATING THE MUNITIONS INDUSTRY,
Washington, D. C.

(Attention of Miss Lydia Lee.)

GENTLEMEN: Your letter of May 22 requesting information concerning the common-stock ownership of the Western Cartridge Co. constituting 1 percent or more of the issued stock.

This is the first request you have made for this information and that is the reason you have not received such information before.

A tabulation in accordance with your request is attached hereto.

Yours truly,

WESTERN CARTRIDGE CO.,
J. M. OLIN, *Vice President.*

The following list of campaign contributions and stockholdings of Remington officers and directors was requested by the committee. (See text, p. 3978.)

New York, *March 4, 1935.*

Mr. Stephen Raushenbush,
Secretary Special Senate Investigating Committee,
Washington, D. C.

Dear Sir: Enclosed you will find a list of securities held by Mr. M. H. Dodge between the year 1926 and 1934, inclusive. Also, a list of campaign expense from 1928 to 1934. We have nothing available previous to the above dates. I believe this is what you asked for and I am forwarding it to you in the absence of Mr. Dodge.

Very truly yours,

O. C. Heppa,
Secretary to M. H. Dodge.

New York, *January 19, 1935.*

Mr. Stephen Raushenbush,
Washington, D. C.

Dear Sir: Mr. C. K. Davis, president and general manager of Remington Arms Company, Inc., has informed me that the Special Senate Committee Investigating the Munitions Industry requests me, as a director of Remington Arms Company, Inc., to inform you of my stockholdings and campaign contributions since becoming a director of Remington Arms Company, Inc.

I was appointed a director of Remington Arms Company on February 6, 1933, and since that date have not made any political contributions and have held stock in the amount of $10,000 or over in the following companies:

Atlas Corporation.
American Gas and Electric Company.
Commonwealth and Southern Corporation.
Central Hanover Bank and Trust Company.
Chase National Bank.
Electric Power and Light Corporation.
The Fiduciary Corporation.
National Fuel Gas Company.
United Corporation.

Very truly yours,

Wm. Crawford.

Remington Arms Company, Inc.,
Bridgeport, Conn., January 25, 1935.

Mr. Stephen Raushenbush,
Secretary Special Senate Committee
Investigating the Munitions Industry,
Washington, D. C.

Dear Sir: This is to advise that during the time I have been an officer of the Remington Arms Company I have not owned outright stock in any other corporation in the amount of $10,000, nor have I made any contributions to any political organizations.

Yours very truly,

W. U. Reisinger.

Remington Arms Company, Inc.,
Bridgeport, Conn., February 7, 1935.

Mr. Stephen Raushenbush,
Washington, D. C.

Dear Sir: In accordance with the request of the Special Committee Investigating the Munitions Industry, I wish to advise that during the period that I was connected with the Remington Arms Company, as an officer and director, my stock holdings in other companies, in amounts of $10,000 or over were as follows: 1,000 shares of E. I. duPont de Nemours & Co., common stock.

I have made no campaign contributions of any kind.

Very truly yours,

C. K. Davis,
President and General Manager.

Remington Arms Company, Inc.,
New York City, January 28, 1935.

Mr. Stephen Raushenbush,
Secretary to Senate Committee, Washington, D. C.

My Dear Sir: As an officer and director of this company and agreeable to your request I beg to inform you that I now own the following stocks amounting to $10,000 or more, viz:

100 Campe Corporation.
105 N. Y. Telephone, preferred.
290 Du Pont common.

From 1926 to 1931, I owned the following stocks:

150 N. Y. Central R. R. common.
50 Knox Hat, common.
1,100 Mountain Producers.
600 Salt Creek Producers.
154 Con. Gas, common.
200 Anaconda.
200 Ford of Canada, A stock.

Have not made any contributions to any campaign committees at any time.

Very truly yours,

George Bingham.

The following exhibit, showing commission arrangements of Remington agents was requested by the committee. (See text, p. 3979.)

REMINGTON ARMS COMPANY'S AGENTS ON FOREIGN GOVERNMENT BUSINESS

Casa Mayrink Veiga S/A, 17 Rua Mayrink Veiga 21, Rio de Janeiro, Brazil—on .50 caliber ammunition only	MAYRINK.
Francisco Sefzic, Pension Borja, Quito, Ecuador	SEFZIC.
Box 368, Guayaquil, Ecuador	"
Urueta & Samper H. (Sucs.),	
Apartado Aereo 3600, Bogota, Colombia	URSAM.
Apartado Postal 536, " "	"
Webster & Ashton, Casilla 144, La Paz, Bolivia	ACTIVOS.

Casa Mayrink Veiga usually purchases direct and resells to the Brazilian Government. However, our arrangements will allow of deviation in this plan if the circumstances in any particular case warrant it.

Francisco Sefzic has not concluded any Government business for us. Our arrangements permit either of a commission for him being included in the price or for him to add his commission to the quotation we give him.

Urueta & Samper received a commission of 5 percent, but the arrangements allow of deviation from this if conditions warrant.

Webster & Ashton received a commission from us of 2 percent, but our arrangements allow of deviation in this plan if the conditions warrant.

[1] In cases of exhibits comprised of excerpts from the minutes of certain wartime civilian boards only such parts as were actually entered into in the hearings have been published in the appendix. At a later date the committee ordered to be printed separately as committee prints, the minutes of the following wartime agencies: War Industries Board, Price Fixing Committee of the War Industries Board, Council of National Defense, Advisory Commission of the Council of National Defense, Munitions Standards Board, General Munitions Board.

INVESTIGATION OF MUNITIONS INDUSTRY

THURSDAY, DECEMBER 20, 1934

United States Senate,
Special Committee to
Investigate the Munitions Industry,
Washington, D. C.

The hearing was resumed at 9:30 a. m. in room 357, Senate Office Building, pursuant to the taking of recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Pope, and Vandenberg.

Present also: Robert Wohlforth, assistant to the secretary of the committee, and Alger Hiss, investigator.

The Chairman. The committee will be in order.

TESTIMONY OF LT. COL. C. T. HARRIS, LT. E. M. BRANNON, LAMMOT DU PONT, IRÉNÉE DU PONT, AND K. K. V. CASEY—Resumed

Senator Clark. Mr. Chairman, for the purpose of clearing up the record on a matter that was considered here yesterday, I would like to say for the record that I have been in communication this morning with the Bureau of Internal Revenue. I am told that there is nothing out of the ordinary routine in a return for an earlier year still being in existence in the Department and returns for later years being not in existence; that it is the Department's practice whenever the scarcity of room for storing records makes it desirable to come to Congress and get specific authority in each case of the destruction of a classification of returns; that it is not the practice of the Department in any case to destroy a return in which there has been or may be either any demand for further payment on the part of the Government or any demand for refund on the part of the taxpayer. Only the returns which are not in controversy and clearly not likely to be in controversy are destroyed.

I simply make that statement for the purpose of clearing up the matter that was mentioned here yesterday.

Mr. Lammot du Pont. Mr. Chairman, in yesterday's hearing we were shown "Exhibit No. 1331", which we accepted subject to the provision of studying it more carefully. Apparently that exhibit was prepared by a man in our foreign relations department for the guidance of the investigators when they were looking through our files.

Senator Clark. What was that exhibit?

Mr. Lammot du Pont. It was intended for the committee. I have a copy of it here as it was presented yesterday.

Those pencil marks show the changes that we ask be made in it. Here are the new copies with the changes on them. The changes are all minor, in some cases correcting erroneous language, in other cases arranging it more satisfactorily.

Senator CLARK. You mean you desire to have this substituted for the other exhibit?

Mr. LAMMOT DU PONT. Yes.

The CHAIRMAN. Then let there be substitution of that particular exhibit, with the original exhibit marked as a committee exhibit and identified as such at this time.

(The substituted document referred to was marked for identification as " Exhibit No. 1331 ", and is on file with the committee.)[1]

(The original " Exhibit No. 1331 ", was replaced by " Exhibit No. 1342 ", which is included in the appendix on p. 4351.)

Lieutenant Colonel HARRIS. May I make a request?

The CHAIRMAN. Yes.

Lieutenant Colonel HARRIS. Mr. Chairman, as a representative of the War Department for your committee, may I state that when your committee has reached its conclusions, submitted its recommendations, and the Congress of the United States has indicated its pleasure regarding matters under discussion here, the War Department will still remain one of those agencies charged with carrying out any plan adopted in war.

Testimony has been introduced to the effect that the War Department thinks this or that; that the War Department has agreed to this or that. I myself have answered various questions " yes " and " no ", and have acknowledged many isolated paragraphs read to me.

Since I fear from all the above that there may be some confusion as to what the War Department's policies are in regard to these matters, I request to be given 30 minutes during the current sittings of this committee for the purpose of presenting to the committee the War Department's views concerning the production of munitions.

The CHAIRMAN. That is your own request?

Lieutenant Colonel HARRIS. As a representative of the War Department.

The CHAIRMAN. The Chair will announce that the committee will be delighted to afford that time or more, if more may be needed for the Colonel to do that.

You are not desirous especially of approaching this before the holidays, are you, Colonel? You mean before the committee shall complete its work?

Lieutenant Colonel HARRIS. I want to have an opportunity of verbally stating it to the committee rather than having it go on the record. In other words, I want to submit it to the committee in session.

The CHAIRMAN. Very well. That chance will be afforded.

Mr. CASEY. On December 6, there was a discussion of a letter from Colonel Taylor to me regarding the possible sale of 30 tons of powder to Holland, which it was afterwards discovered was to go to China. At that time there was no attempt to discuss whether or not that powder went. We were really discussing the principle of a proposition as to whether or not we should take the matter up with the State Department whether Holland was not involved in any question of license.

---

[1] Hearings, Part XVI, p. 3983.

For the matter of the record, I would like to advise that that 30 tons of powder never went to Holland. It was reported in the press that such was the case, but there was absolutely——

Senator CLARK. That was the case, Major, was it not, where you accepted the order?

Mr. CASEY. We accepted the order, but they never came through with the final proposition.

Senator CLARK. You never delivered the goods?

Mr. CASEY. No. I just wanted that as a matter of record.

Mr. IRÉNÉE DU PONT. Mr. Chairman, you asked me to report on certain stockholdings of Lt. Col. William Williams. We have communicated with Wilmington and find that the name William Williams, No. 1 West Fifty-fourth Street, New York City, appears as the owner of 100 shares of debenture stock of the E. I. du Pont de Nemours & Co.—not "powder company"—from November 1913 to May 1925.[1]

The CHAIRMAN. Thank you.

Proceed, Mr. Hiss.

ADJUSTED COMPENSATION CONTRACT—VALUATION OF PLANTS

Mr. HISS. Colonel Harris, in connection with that provision of the adjusted compensation contract which calls for valuation, has the War Department decided what type of valuation is meant? For example, is it original investment or is it replacement value, or is it prudent investment, or just what kind of valuation does the War Department have in mind or will it differ for different companies?

Lieutenant Colonel HARRIS. This contract form is in the development stage. There has been no definite conclusion as to the points you make.

Mr. HISS. Quite different results in total value assigned to any plant might result, depending upon which particular theory of valuation was taken?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Are you familiar with the work that the Interstate Commerce Commission has done in the field of valuation, Colonel Harris, and the difficulties that they have had?

Lieutenant Colonel HARRIS. I am not.

Mr. HISS. I have a memorandum here which I offer in evidence, that you may wish to consider.

(The memorandum referred to was marked "Exhibit No. 1343", and is included in the appendix on p. 4353.)[2]

Mr. HISS. On the first page of this is a quotation from a statement of Mr. Ernst, in connection with an investigation of the Bureau of Internal Revenue by a Senate committee known as the "Couzens Committee." The statement is there made:

> The Interstate Commerce Commission in valuing only the properties of the railroads of the country has spent more than 13 years on the task and more than $27,000,000, and the carriers themselves in working on these same valuations have spent the same period of time and more than $85,000,000.

---

[1] Hearings, Part XVI, p. 4012.

[2] In connection with this memorandum on valuation the committee appends a letter dated January 28, 1935, from the Acting Secretary of the Treasury. (See appendix, p. 4488.)

Does the War Department have in mind anything like a judicial or legal valuation in the sense that the Interstate Commerce Commission uses the term "value", Colonel Harris?

Lieutenant Colonel HARRIS. I would say not.

Mr. HISS. I call your attention to a further fact in connection with the Interstate Commerce Commission——

Senator CLARK. How are you going to find value, Colonel?

Lieutenant Colonel HARRIS. Senator, I am not acquainted with this contract form at all.

Senator CLARK. I am just interested to know that.

Lieutenant Colonel HARRIS. I would say it would be by mutual agreement and by disinterested advice. It would have to be a negotiated sum, arrived at within a reasonable time or else we could not go to war.

Senator CLARK. That might be a good thing.

Lieutenant Colonel HARRIS. I think the best answer for all this is not to go to war again.

Mr. HISS. Turning to the Interstate Commerce field again, I call your attention to the fact that the Interstate Commerce Commission is dealing with an industry that has been accustomed to rate making, supervision of one kind and another, and uniform accounting, for a long period of time. Any exact valuation in other industries would be even more difficult than in the railroad field. Is that not correct?

Lieutenant Colonel HARRIS. I think to get the same character of valuation that the Interstate Commerce Commission is giving would be more difficult for another agency in another field; yes.

Mr. HISS. I also call your attention to the amounts which have been appropriated simply for valuation. On page 2 of this memorandum, according to the fortieth to forty-third annual reports of the Interstate Commerce Commission, the reports between those periods, $1,800,000 was appropriated for that purpose in 1926, $1,700,000 in 1927, $2,500,000 in 1928, and $2,300,000 in 1929.

Are you familiar with some of the differences which have arisen in the field of valuation between Government experts and those representing industry, Colonel Harris?

Lieutenant Colonel HARRIS. No.

Mr. HISS. I call your attention to page 29 of "Exhibit No. 1343", in relation to certain valuations fixed at different times by the Bureau of Internal Revenue.

Under the heading "New Jersey Calcite Co." there appears this:

> The taxpayer claimed a value of $130,000. * * * The valuation engineers fixed the value of these leases at $8,950.93.
>
> The taxpayer appealed from this determination to the committee on appeals and review, which allowed a value of $106,000.

Then on the next page, with reference to valuation in the copper field, the first valuation of 47 copper mines was $1,456,327,002. The second valuation resulted in a total of $323,707,404; or a difference between the two of $1,132,619,598.

On page 31 of this memorandum, with reference to valuation of certain limestone mines, the first valuation averaged 191.87 percent of the proper values, according to the report of the Couzens committee:

> The first valuation of vein mines averaged 307.39 percent of the proper values, and the first valuations of the porphyry mines averaged 421.90 percent of the proper values.

Under this contract, Colonel Harris, the rate of return is a fixed one, and any increase in valuation makes a resultant increase in total compensation under this particular clause, does it not?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. So that the actual practical fixing of value will be one of the most important points in determining the total compensation any contractor is to receive.

You are familiar, are you not, with the length of time that has been taken in certain valuation cases where a particular industry disagreed with the Government? Some of the rate cases have lasted 5, 6, and more years in the courts. Those are also referred to in this memorandum.

ADJUSTED COMPENSATION CONTRACT—ONLY A FEW CONTRACTORS RELIED ON TO SUPPLY EACH OF CERTAIN MAJOR ITEMS

Mr. HISS. Colonel Harris, you remember the exhibit introduced showing the approximate total purchases during the World War were about $12,000,000,000, and that some four billion of that amount was spent by the Ordnance Department.[1] Could you give some rough idea of the size in relation to the total amount or in rough figures of some of the most important and the largest items that were included in those totals?

Lieutenant Colonel HARRIS. One item alone was over a billion and a half.

Mr. HISS. A billion and a half in the Ordnance figures?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Would you say that you could choose say 9 or 10 of the most importance from a military standpoint and the largest from a value standpoint?

Lieutenant Colonel HARRIS. May I inquire, Mr. Hiss, your query was as to the last war about that figure, was it not?

Mr. HISS. Yes, sir.

Taking those 9 or 10 items, under what general procurement branch would they fall? Would they be more apt to be in the Quartermaster Corps or would they be in one of the others? You do not need to name any particular branch.

Lieutenant Colonel HARRIS. I would say they would be more likely to fall in the others.

Mr. HISS. Would they be apt to be purchased under the adjusted-compensation contract or under a fixed-price contract?

Lieutenant Colonel HARRIS. Both. In that connection I would like to repeat what I said yesterday, that the cost-plus contract was 25 percent, approximately, of the total expenditures in the last war, the remaining 75 percent being the straight-price contract.

Mr. HISS. The fixed-price contract?

Lieutenant Colonel HARRIS. The fixed-price contract.

---

[1] "Exhibit No. 1104", Hearings, Part XIII, p. 2906, Appendix, p. 2974.

Mr. Hiss. When you say "fixed-price contracts" with reference to the present plan, you mean the contract that has the provision for increases in prices for labor and materials?

Lieutenant Colonel **Harris**. It is a fixed-price contract adjusted to certain war conditions, where the Government is responsible for raising rates of labor and material.

Mr. Hiss. All the contracts have a termination clause under which any raw materials acquired by the contractor for the purpose of performing the contract are to be paid for at cost less salvage value by the Government; is that not correct?

Lieutenant Colonel **Harris**. They have a termination clause; is that correct?

Mr. Hiss. Is that an accurate statement?

Lieutenant **Brannon**. I believe that is correct, Mr. Hiss. Each one of them has a different termination clause.

Mr. Hiss. We will get into the termination a little more fully later.

Returning to this other line, Colonel Harris, assuming 9 or 10 major items, would it be correct to say that a substantial portion of the expenditures which would have to be made for those 9 or 10 would be made under adjusted-compensation contracts which involve negotiations as to the valuation to be placed on plant?

Lieutenant Colonel **Harris**. They will have to be under some form of contract that is not a fixed-price contract. What that form will be, I do not know.

Mr. Hiss. The present crystallization of the War Department's views on that, although not permanently fixed, is the adjusted compensation contract, is it not?

Lieutenant Colonel **Harris**. That is the last thought, but it is not, to my mind, in satisfactory shape.

Mr. Hiss. Is it not true that within those 9 or 10 items the War Department has a relatively restricted field of contractors which it believes can supply its requirements?

Leutenant Colonel **Harris**. I think that is a fair statement. The reason for it is that these items are noncommercial in nature, and the character of industry permits only a relatively few to execute that program.

Mr. Hiss. Referring now to certain specific examples, do you know of one of those items of the size that has so far been indicated in which the present plans call for a division of the total requirements among three contractors and the United States Government, the three contractors each to have approximately 29 percent?

Lieutenant Colonel **Harris**. I have not those figures in front of me, but I have no doubt——

Mr. Hiss. I am referring to material previously supplied by the War Department.

Lieutenant Colonel **Harris**. That is my recollection, although I have not the data here. I left the data in the office.

Mr. Hiss. I have certain notes that I have made, Colonel, on the basis of information that you and I have been over. I will refer to those, and if you will just assume that they are correct and notify me if you find any error, we will proceed on that basis.

Another item, the plans show a division between four contractors, 30 percent of the total requirements from one contractor, 16 percent from each of two others, and 38 percent from the fourth.

Another item shows 50 percent from one contractor, and 25 percent from each of two other contractors.

Another item shows an approximate division among three companies, 34 percent to one and 33 percent to each of two others.

Another item shows five companies and the Government itself supplying the total requirements, broken down into percentages of 21 percent, 19 percent for each of two companies, 12 percent, and 6 percent, and the remainder to be supplied by the Government.

These items that I have been referring to represent, as you have already testified, I believe, Colonel, some of the most important from the standpoint of military defense and some of the largest from the standpoint of dollar valuation, do they not?

Lieutenant Colonel Harris. That is true.

Mr. Hiss. In negotiating the valuation to be ascribed to any particular plant, will the War Department not be in a weaker bargaining position where it has only 2 or 3 or 4 or 5 contractors, each of whom has a definite percentage fixed for that contractor to supply, in your opinion, Colonel Harris?

Lieutenant Colonel Harris. I think that is open to question. I would not care to dispute it either way. But there is this viewpoint: The man that makes 20 percent of a program is running at a larger volume than if he had only 5 percent of a program. So perhaps in negotiating your statement might have weight, but in cost of production, I think the other viewpoint has weight.

Mr. Hiss. Colonel Harris, in regard to the items that I summarized, do you know whether or not it is true that the apparently few numbers of companies can, from one point of view, be regarded as even fewer because of the intercorporate control or relations?

Lieutenant Colonel Harris. I am not familiar with the corporate organizations or the holding of stocks, so I could not answer your question.

Mr. Hiss. I should like to state for the record that an examination of certain of these contractors whose names have been supplied the committee by the War Department does reveal intercorporate connections and relations, which makes that statement correct.

Colonel Harris, are there some important items, in addition to those already discussed, in which, because of the patent situation, the Government now plans to get 100 percent of its requirements from a single firm?

Lieutenant Colonel Harris. That applies to a few isolated cases.

Mr. Hiss. Do those cases represent items of importance from a military point of view, Colonel?

Lieutenant Colonel Harris. Some do.

Mr. Hiss. In connection with planning the future requirements and allocating or dividing those requirements among various contractors, has your particular branch, the planning branch, found that it is necessary to plan to use the larger companies, because they are more stable in keeping in existence, continuing in existence?

Lieutenant Colonel Harris. That statement is true; and also we are surer of their giving us the required munitions in the time required.

Mr. Hiss. Mr. Lammot du Pont, is there someone from your company present who is familiar with the explosives-department practices?

Mr. LAMMOT DU PONT. I think there is nobody here who is directly in that department, but probably we can find somebody who can answer your questions.

Mr. HISS. May I just hand you a statement, an excerpt from the report of the explosives department for the month of February 1933 to the executive committee, which I will offer for the record for appropriate marking.

(The statement referred to was marked "Exhibit No. 1344", and is included in the appendix on p. 4366.)

Mr. HISS. I call your attention to the next to the last paragraph [reading]:

> On February 27 du Pont made a general revision of dynamite prices and balanced the schedule by reducing the differentials between grades, particularly in the higher strength powders. Revised quantity differentials were instituted and sales groups realined at the same time. Approximately 4,000 special prices were eliminated. It is estimated that this department's gross value of sales will be decreased some $140,000 annually, but prices are now logical in comparison with costs and the whole price structure should be considerably improved.

In view of that paragraph, I call your attention specifically to the next sentence [reading]:

> All competitors have promulgated similar price schedules.

Do you know what that means, Mr. Lammot du Pont?

Mr. LAMMOT DU PONT. Of course, I do not know what the writer had in mind, but it conveys to me the impression that after the du Pont Co. price list was published other competitors adjusted their prices to correspond.

Mr. HISS. Were you a member of the executive committee in February 1933, Mr. Lammot du Pont?

Mr. LAMMOT DU PONT. Yes.

Mr. HISS. Do you remember this particular report being presented to the committee?

Mr. LAMMOT DU PONT. No.

Mr. HISS. Do you think that that refers to similarity in the actual prices established, Mr. du Pont?

Mr. LAMMOT DU PONT. It says "similar price schedules."

Mr. HISS. Do you think that means similarity of actual prices established?

Mr. LAMMOT DU PONT. I think the "similar" modifies "schedules", if that is what you are driving at. They used similar schedules of prices.

Mr. HISS. Do you mean similar in form as opposed to similar in amount?

Mr. LAMMOT DU PONT. I would say it was similar in relationship of the different grades.

Mr. HISS. Is there any substantial uniformity in the prices quoted in the dynamite business?

Mr. LAMMOT DU PONT. I believe there is among the larger companies; yes, sir.

Mr. HISS. Colonel Harris, if there is any established practice within any of the industries from which the War Department expects to receive its requirements—any similarity of prices—will that not constitute an added difficulty from the standpoint of negotiating separately with particular companies for the best price the Government can get?

Lieutenant Colonel HARRIS. I do not know just whether it would or not. There are prices even in time of peace that are similar for all companies and much material is bought at the present time under that arrangement.

Mr. IRÉNÉE DU PONT. Mr. Secretary, I wonder if you could not address a question to the colonel asking whether the bids on smokeless powder and other military explosives provided by these companies in the last war were identical in price per pound. That is what you mean by similar. I really don't know whether similar means equal or not, so I would like to have the question asked. I have been sort of inquiring around a little bit to find out what the Government did pay the other companies. I am satisfied that it did pay a higher price than it paid the du Pont Co. I was so advised in Washington years ago, but it was not authentic.

Mr. HISS. Were not the amounts purchased from du Pont greater in volume than the amounts purchased from your competitors?

Mr. IRÉNÉE DU PONT. I have no doubt of that; but I want to know whether on similar amounts the powder sold by Hercules Powder Co. or the Aetna Co., or other powder companies, compared in price per pound with what was sold by the du Pont Co. I think that is a pertinent inquiry, as to whether there was collusion among these companies to hike up the price to the United States Government to the same level.

Mr. HISS. Can you answer that, Colonel Harris?

Lieutenant Colonel HARRIS. I am unable to give the figures—unquestionably there were different prices submitted—but if the figures are desired, I would like to give them to you.[1]

Mr. IRÉNÉE DU PONT. I would like to see the record on that.

Mr. HISS. All right.

Lieutenant BRANNON. Mr. Hiss, weren't those prices brought out earlier in the hearing, the earlier prices on powder, showing the difference between different companies? It seems to me that 2 or 3 days ago there was evidence on that point submitted.

Mr. HISS. In connection with the testimony it occurs to me that in the negotiations preceding the letting of the Old Hickory contract there were certain minutes of one of the boards, either the War Industries Board or the Council of National Defense, in which prices were submitted in the powder field by Aetna, I think, Hercules and du Pont Co., and those showed certain differences in amounts.

Is that the point you were getting at?

Lieutenant BRANNON. No; that is not the point I had in mind. If you recall, there was a letter by Colonel Hoffer in which he wrote to the Chief of Ordnance a recommendation to the General Munitions Board as to the price to be paid for powder.[2]

Mr. HISS. Yes; I do, Lieutenant.

Lieutenant BRANNON. That was earlier. That was before the Old Hickory contract. That was, I believe, in June 1917.

Mr. HISS. That refers to a uniform price, as I recall.

Lieutenant BRANNON. I do not know, but I remember the prices were in there.

---

[1] Under date of April 4, 1935, the War Department submitted a list of comparative powder prices which is included in the appendix on p. 4496.

[2] "Exhibit No. 1121", Hearings, Part XIII, p. 2938, appendix, p. 3130.

Mr. HISS. But I do not think that the evidence was conclusive, as pointing directly to this particular inquiry.

Lieutenant Colonel HARRIS. To my mind, if you are going to submit the evidence covering this particular field, we should submit it fully.

Mr. HISS. Yes.

Lieutenant Colonel HARRIS. I should like to do so.

Mr. CASEY. Mr. Hiss, maybe I can enlighten you on one phase of that.

I was present in Colonel Hoffer's office in, I believe, April 1917, when all of the different powder manufacturers had been invited. Colonel Hoffer, after addressing the group, advised that each man present representing a company put in a memorandum of prices at which his company would supply powder. After all were in, he promptly opened them and began reading prices.

It was at that time that du Pont offered water-dried powder at 47½ cents and air-dried powder at 49½ cents, which was the lowest bid there by a good deal.

Colonel Hoffer then said, "Now, any of the other manufacturers who want powder, are they prepared to take it at these prices?" So you might say the low price established the price for all companies that were willing to take it at that price.

Within 2 hours after that I ran into one of the other bidders in the Willard Hotel, and his statement to me was, "The very thing happened that I was afraid would happen. Du Pont has taken all of the profit out of powder."

Mr. HISS. Major Casey, I think an exhibit describing that specific conference has already been put in,[1] and there was a later exhibit,[2] as I remember it, a week or two later, in which the Ordnance Department recommended an increase, due to increases in prices of material, of 2 cents.

Mr. CASEY. Alcohol.

Mr. HISS. Two cents.

Mr. CASEY. On account of the increased price of alcohol.

Mr. HISS. But the difference in the price of powder was 2 cents a pound over that figure of 47½ cents, was it not?

Mr. CASEY. Yes; that happened within 2 months, I believe.

Mr. HISS. Colonel Harris, we have talked about allocation and division of requirements, and I am not sure that there has been an adequate statement of the principles involved, from the point of view of the War Department, for the record. Would you just explain briefly what allocation means in the mobilization plan and what the division of requirements among the future proposed contractors means?

Lieutenant Colonel HARRIS. I would rather take up requirements, first, because that comes first.

Mr. HISS. Yes.

Lieutenant Colonel HARRIS. The requirements are computed according to the military program and are transmitted to the supply branches, who are charged with the procurement of these materials. The United States is divided, as I stated the other day, into geographical districts. The requirements are allotted to the geographical districts. The districts, when they receive their allotment of procurement requirements, examine the industrial field. I may state these allotments were made on the basis of a previous survey of the industrial field, and we have some 12,000 plants for which a survey exists.

---

[1] See footnote No. 2, on p. 4173.

[2] "Exhibit No. 1122", Hearings, Part XIII, p. 2942, appendix, p. 3133.

Upon the request of the supply branches, the Assistant Secretary of War's office allocates industrial plants to the supply branches to furnish their requirements of material. This word "allocate" means places at the disposal of the supply branches.

Going back to the allotment of the procurement requirements of the districts, when they are received in the districts the industrial capacity of the districts is analyzed and tentative tasks are set against the industrial units prepared to produce the material required. The industrial organization is acquainted with the tentative tasks that have been assigned them. They analyze the material, they analyze their productive capacity, and state whether or not they are capable of meeting the task assigned to them in the time required.

Mr. Hiss. Colonel Harris, in connection with the point that has been raised as to the valuation difficulties before the War Department in time of war, have you any idea of the approximate number of contracts that had to be handled by the War Department per day during the war?

Lieutenant Colonel Harris. I do not recall.

Mr. Hiss. I offer at this time for the record a summary of excerpts from a mimeographed memorandum, which I received from the War Department, dated March 28, 1932, headed "Explanatory notes. Contract forms for use in time of war."

(The memorandum referred to was marked "Exhibit No. 1345", and is included in the appendix on p. 4367.)

You will notice that the first paragraph says:

> From the fall of 1917 to the armistice approximately a hundred contracts a day were made in the Ordnance Department, and upward of 350 persons were employed in the negotiation and preparation of these contracts.

Does that volume sound about right to you, Colonel Harris, from your recollection?

Lieutenant Colonel Harris. I have nothing to dispute that with.

Mr. Hiss. Do you remember any instances during the war in which the Government desired certain action on the part of industrial concerns and was unable to secure it because the industrial concerns felt they were not receiving sufficient compensation?

WARTIME INSTANCES OF REFUSAL OF INDUSTRY TO AGREE TO GOVERNMENT VIEWS ON PRICES

Lieutenant Colonel Harris. I will be glad to answer that, but before that, may I add something to my previous answer?

Mr. Hiss. Certainly.

Lieutenant Colonel Harris. Of this large number of contracts a relatively small proportion of those was of the cost-plus variety. The great majority of those contracts were fixed-price contracts. Now, answering your question, it is true.

Mr. Hiss. Now, Colonel Harris, I show you excerpts from a meeting of the War Industries Board of September 11, 1917, which I will offer for the record for appropriate marking.

(The excerpts from the meeting of the War Industries Board referred to were marked " Exhibit No. 1346 ", and are included in the appendix on p. 4368.)

Mr. Hiss. We will turn to the second page of this document. This was a meeting with representatives of the copper interests, Mr. Ryan, Mr. Clendennin, Mr. Guggenheim, and others. [Reading:]

> Judge Lovett stated that the War Industries Board felt that a price of 22 cents per pound f. o. b. New York for copper was a fair price and would allow the copper companies a reasonable profit.

I ask you to turn to the next page. The next to the last paragraph quoted from the minutes of this same meeting is as follows:

> The representatives of the copper interests present gave assurances that they would do all they could to assist at whatever price was fixed, but that if a price below 25 cents per pound were fixed they felt sure that many mines would refuse to sell to the Government unless forced to do so.

Colonel Harris, in a situation like that, would it not be necessary in time of war, the Government having great need of supplies, for the Government to pay the price that was demanded?

Lieutenant Colonel Harris. This high price of copper was due to the enormous demand, which required the operation of high-cost copper mines. To reach the high-cost copper, the price was set. I think that that last paragraph, this being in 1917, where the mines would refuse to sell to the Government unless forced to do so, at that time they would have been able to sell commercially at a higher price, and the control of the price structure was not so well established at that time as it was later.

Mr. Hiss. Colonel Harris, I have only one copy of this other excerpt. I will read from it first and then hand it to you. That will be offered for appropriate marking.

(The excerpt from meeting of the War Industries Board referred to was marked " Exhibit No. 1347 " and is included in the appendix on p. 4639.)

I quote from excerpts of a meeting of the War Industries Board, November 16, 1917:

> Colonel Pierce presented a communication from the Chief of Ordnance dated November 16, stating that the Ordnance Department wished to use the Howard plant of the Aetna Explosive Co. for the manufacture of smokeless powder to be at the rate of 1,000,000 pounds per month, and which plant was now vacant.
>
> It was stated that the Aetna Co. refused to operate this plant unless they received an order at over 64 cents per pound, which was 15 cents higher than the price being paid the du Pont Co.

Then on January 2, 1917, according to this excerpt—I suspect it means January 2, 1918.

Lieutenant Colonel Harris. Before you go to that, may I answer the other question while it is before us?

Mr. Hiss. Certainly.

Lieutenant Colonel Harris. I ran a small powder plant myself and it is not easy to compete in price with a large volume. This 1,000,000 pounds a month is relatively small production, and I, from my own knowledge of the manufacture of powder, am not surprised that there should be a difference of price between that and a company that was producing a hundred million pounds, we will say, in a year.

Mr. Hiss. In that connection, Colonel Harris, I would like to call your attention to an excerpt from another meeting, copy of which I have been furnished by the War Department, showing the meeting was January 2, 1917. Whether that should be 1918 or not, I am not sure.

Lieutenant Colonel HARRIS. That must be 1918. What is it? It is a meeting of what?

Mr. HISS. It is a meeting of the War Industries Board, it says. That was not in existence at that time, as I recall.

Lieutenant Colonel HARRIS. It is bound to be 1918.

Mr. HISS. Could you check that for some time in the future, so we can correct it on the exhibit?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS (reading from "Exhibit No. 1347"):

> Mr. Brookings presented a communication from the purchase section, gun division, Ordnance Department, dated December 29, relative to order for 30,000,000 pounds of smokeless powder to be placed with the Hercules Powder Co. and recently approved by the Board at the price of 63 cents per pound and advising that the proposed price had been changed to 70 cents per pound.
>
> Under the advice of Mr. Brookings the Board approved of the amended contract with the opinion that while the Board considers 70 cents a high price and that as 7 cents per pound charged was for amortization of a new plant, that this should have been so shaped that this plant paid for by the Government in price should have been the property of the Government, but that, however, as Captain Peters reports, it was impossible to secure this and that it was either necessary to pay the 70 cents per pound or go without this powder and that having had nothing to do with the negotiations and acting only on Captain Peters' statement of the case and considering its emergency nature, the Board can see no reason why the contract should not be made.

Lieutenant Colonel HARRIS. I can state from the names you mention now that I can identify that date as 1918.

Mr. HISS. That is 1918?

Lieutenant Colonel HARRIS. Yes.

Mr. CASEY. What was that? Rifle powder?

Mr. HISS. It does not appear other than as stated. Would you just change that to 1918 on the memorandum, Colonel Harris?

Lieutenant Colonel HARRIS. I will.

Mr. LAMMOT DU PONT. Mr. Hiss, it has been stated in explanation of the difference in price per pound of smokeless-powder quotations that the volume of business was an important factor. I do not deny that, but you should not understand that that is the only factor of importance. The high price for the product of the Howard plant of Aetna may have been due to a number of other causes, such as the location of the plant, arrangement of the plant, modernization, and so forth.

TESTIMONY OF C. K. DAVIS, E. E. HANDY, AND W. S. GREGG—Resumed

N. R. A. SMALL ARMS AND AMMUNITION INDUSTRY CODE

The CHAIRMAN. Judge Gregg, what were your connections with the Small Arms & Ammunition Manufacturing Institute?

Mr. GREGG. My only connection with the Small Arms & Ammunition Manufacturers Institute was to act as counsel for both the du Pont Co. and the Remington Arms Co.

The CHAIRMAN. Who were the officers of the institute?

Mr. GREGG. I cannot give you the list, Senator, of all of the officers. Mr. Comeaux was secretary.

The Chairman. Who?

Mr. Gregg. Mr. Comeaux, Stuart Comeaux was secretary.

Mr. Casey. Gen. Harold C. Dill, of the United States Cartridge Co., is president. I do not know who the other officers are.

The Chairman. Judge Gregg, perhaps you can answer as respects efforts that have been made which accompanied the writing of an N. R. A. code.

Mr. Gregg. Mr. Davis can give you that at the beginning. I can come in later, Senator.

The Chairman. That is all right.

Mr. Davis, you were chairman of the code committee, were you?

Mr. Davis. Yes, sir.

The Chairman. From a memorandum which is before me, I take it that on March 22, 1934, a proposed code of fair competition for the small arms and ammunition manufacturing industry was approved by the National Recovery Administration. Is that true, Mr. Davis?

Mr. Davis. Yes, sir.

The Chairman. In approving the code the administrator deleted certain articles from the proposed code?

Mr. Davis. Yes, sir.

The Chairman. Those articles were articles 16 and 18?

Mr. Davis. Yes, sir.

The Chairman. Article 16 was as follows:

> By presenting this code, those assenting hereto are not thereby waiving any of their constitutional rights which might be infringed by any of the provisions of the National Industrial Recovery Act.

Article 18 was as follows:

> By presenting this code, the members of the industry do not thereby consent to any modification thereof, and they hereby reserve the right to object individually or jointly to any such modification.

An N. R. A. memorandum declares:

> In deleting these two articles, the Administration is denying the small arms and ammunition industry the right to object, either individually or jointly, to any modification of this proposed code, also the Administration is asking this industry to waive its constitutional rights insofar as they might be infringed by any of the provisions of the National Industrial Recovery Act.
>
> Because of these deletions more than 90 percent (from the standpoint of numbers and dollar volume of sales) of the small arms and ammunition industry, including 100 percent of the ammunition manufacturers, have informed the Administration that the proposed code is not acceptable.

Mr. Wohlforth. Mr. Chairman, I want to state here that I understand this undated memo, which was secured from the files of the Remington Co., is a statement of the industry rather than a statement——

The Chairman. Rather than the National Recovery Administration?

Mr. Wohlforth. Yes.

Is that correct, Mr. Davis?

Mr. Davis. That is right.

The Chairman. Mr. Davis, how were you advised, or in what form were you advised, of the decision of the N. R. A. regarding the code?

Mr. Davis. We received the order of approval. Prior to that we had received a telephone call from the Deputy Administrator, Harry

O. King, telling us that these two articles would be deleted and numerous other changes made in the code.

I would like to say at this time, Senator, that we held our first meeting on July 21, 1933, in connection with the formulation of our code, at which meeting there were 22 members of the industry. They appointed a committee to draft the code. We worked day and night and Sundays between that date and July 26. We drafted a code, presented it to the industry. It was approved unanimously by them. The draft of the code contained wage and hour provisions that were similar to the President's blanket code. In fact, they were the same.

The CHAIRMAN. This memorandum which I have just read expresses the attitude of the National Recovery Administration, does it?

Mr. DAVIS. I would like to go on, if I may, Senator.

The CHAIRMAN. Certainly.

Mr. DAVIS. At that meeting on July 26 the industry voted to send a telegram to the Administrator, Gen. Hugh Johnson, advising him that in an effort to cooperate with the Administration and knowing that there would be a delay in the approval of our code, we would immediately, on August 1, 1933, adopt the wage and hour provisions of our code.

We received no reply to that telegram, but the industry did adopt those provisions.

From that time until the hearing, open hearing on September 27, there were a number of changes made in the code. After the hearing there were quite a number of changes made. Finally we filed a code on December 21, 1933. This code was unanimously approved by all of the manufacturers, and we were given verbal assurance that the code would be approved by the end of the year. However, it dragged on until just prior to March 22. We were then advised by the Deputy Administrator, Harry O. King, that those articles would be deleted.

Now, as far as our company is concerned, we accorded our employees the same wage and hour provisions as specified in the code from before the effective date of the code, which was April 16, 1934, and since June of last year, when the du Pont Co. acquired control of the Remington Arms Co., we made an upward adjustment of wages and salaries of approximately 10 percent, in July last year, and it has been our policy to increase wages since that time, in order to keep them at a level at least equal to the average of the district in which our plants were located.

In addition to that, we have accorded our employees a 1-week vacation with pay, which is costing the company about $100,000 annually, and as the result of all this the Remington Arms Co. is paying in 1934 in wages and salaries $1,000,000 more than it did in 1933.

Mr. WOHLFORTH. At this point, Mr. Chairman, I would like to offer as an exhibit a table entitled "Weekly Earnings of Factory Employees in the Small Arms and Ammunition Industry, August 1933." That was before the adoption of the code. Is that correct?

Mr. HANDY. Yes, sir.

(The table referred to was marked "Exhibit No. 1348" and is included in the appendix on p. 4370.)

Mr. Wohlforth. Since that time you say the wage level has increased approximately 10 percent?

Mr. Handy. No, sir; ours. I am speaking only for Remington and not for the industry.

Mr. Davis. No, Mr. Wohlforth, it has increased more than that, because we gave all salaried and wage employees 10 percent increase in July 1933, and since that time we have been increasing our wages and lower salaries in order to keep them in line with the average in the districts in which our plants are located. There has been a much larger increase.

Mr. Handy. It has been greater than 10 percent.

Mr. Wohlforth. This was secured from the N. R. A. code authority that has the proposed small arms and ammunition manufacturing industry code in charge. The source is data computed from questionnaires distributed to the industry.

It shows in August 1933, an average weekly wage per employee of $18.78, total number of employees 7,488, 63 percent of whom were making less than $20 per week at that time.

I offer that for appropriate number.

The Chairman. Mr. Davis, on May 29, 1934, following your understanding that the Administration was not going to accept the code with the two articles deleted, did you propose any amendment to the code? Did you propose a reservation?

Mr. Davis. On May 29, 1934, Assistant Deputy Administrator Wilson Prichett, in an effort to end the impasse existing between our industry and the N. R. A. Administration, suggested an exchange of letters between the code committee and the Administrator, which would virtually guarantee our constitutional rights. He submitted two letters, one a suggested letter for us to send to the Administrator, and the other one that the Administrator would send to the code committee. These were approved by a majority of the industry, and our own company approved it. On two different occasions we sent representatives to Washington and they spent several days on each occasion in an attempt to have these letters signed and the exchange made.

To date——

The Chairman. We are a little ahead of the story there. As respects this letter of May 29, that was your proposal to accomplish acceptance at that time?

Mr. Davis. No, sir; that was the proposal of the Assistant Deputy Administrator, Wilson Prichett. I have a letter here that I might read. It is dated May 29, 1934, to Mr. C. Stewart Comeaux, secretary code committee.

The Chairman. I have here the letter of the code committee addressed to General Hugh S. Johnson.

Mr. Davis. I think I can explain that, Senator.

The Chairman. All right.

Mr. Davis. The letter which I was going to read was a letter from Wilson Prichett, to which he attached a copy of the proposed letter from the code committee.

The Chairman. The one to which I referred?

Mr. Davis. Yes, sir. That was a sample letter and was a letter from the Administrator to the code committee.

We have not been able to effect this exchange as yet, and we are anxious to do it.

The CHAIRMAN. Let the letter of the code committee addressed to General Johnson be made an exhibit.

(The letter referred to was marked "Exhibit No. 1349" and is included in the appendix on p. 4370.)

Mr. DAVIS. I would like to read Mr. Prichett's letter to Mr. Comeaux [reading]:

> DEAR MR. COMEAUX: Referring to our various telephone conversations of today I enclose herewith copy of suggested letter to be signed by the code committee of your industry.
>
> The matter has been discussed with our legal division, Deputy Administrator Craig, and Division Administrator Glancy.
>
> On receipt of this letter signed by your code committee I will prepare a letter for the signature of the Administrator following verbatim the letter of May 14, 1934, which we discussed, and believe that I can obtain his prompt signature thereto.
>
> With thanks for your cooperation, I am
>
> Sincerely yours,
>
> WILSON PRICHETT,
> *Assistant Deputy Administrator.*

The CHAIRMAN. Mr. Davis, during this time were members of your industry having difficulty with the Government in the matter of purchases under contract?

Mr. DAVIS. Yes, sir; we were.

The CHAIRMAN. Difficulties growing out of the fact that you had not accepted the code?

Mr. DAVIS. That is correct. In order to obtain any orders from the Government during this time it was necessary to signify compliance to the code, in other words, that we had signed the code, which was not the case.

The CHAIRMAN. I have before me a copy of a letter addressed to the Remington Arms Co., by J. E. Munroe, colonel, Ordnance Department, United States Army, from Frankford Arsenal, indicating that it was interested at about this time in an order for supplying 100,000 rounds of shotgun shells, 12 gage, loaded with smokeless powder and no. 7½ chilled shot. The letter says in part [reading]:

> You will recall that you declined to execute the bid affidavit furnished with this advertisement. This matter has been referred to the Secretary of War, who, in turn, communicated with the Administrator for Industrial Recovery to learn whether or not in this case an exception should be made and the certificate waived.

What was the bid affidavit? The N. R. A. compliance?

Mr. DAVIS. That has reference to a statement that we were complying with the code, which we had not, of course, signed.

The CHAIRMAN. Further on in the letter I find this language [reading]:

> In view of the refusal of the Administrator for Industrial Recovery to grant an exception in this case, information is requested as to whether or not you will execute the certificate on the inclosed form.

Mr. HANDY. I think that Colonel Munroe took it up with the Administrator, Senator. We did not.

The CHAIRMAN. I see. You do not know that the Administrator had not refused, then, to make an exception?

Mr. HANDY. No; I do not; but I have the impression that Colonel Munroe had discussed it with the N. R. A. Administration, because I talked with Colonel Munroe on the telephone regarding it.

Mr. Davis. I think I can explain that, Senator. Inasmuch as 100 percent of the ammunition manufacturers had not assented to the code and, therefore, could not sign the compliance, it was necessary in order for the War Department to obtain certain materials to secure exceptions in certain emergency cases.

The Chairman. Let Colonel Munroe's letter of May 22, 1934, be made an exhibit.

(The letter referred to was marked "Exhibit No. 1350" and is included in the appendix on p. 4371.)

The Chairman. You have outlined the attempt subsequent to that time to effectuate the adoption of the code?

Mr. Davis. Correct. I might say, Senator, that some of this confusion and delay unquestionably has been due to changing organization in the N. R. A. I think there were eight different Deputy Administrators who handled our code.

The Chairman. Mr. Davis, the Remington Arms Co., under date of May 24, 1934, responded to this letter of Colonel Monroe by quoting to him the exact language embodied in that memorandum which was taken from your files, and which was read at the opening of the hearing on this particular phase. Is that not true?

Mr. Davis. Yes, sir; that is correct.

Mr. Handy. I think you are probably confused, Senator. I was going to get back to that. This memorandum to which you referred is not a memorandum that was used by the industry. It is our own memorandum.

The Chairman. I think that is understood now.

Mr. Handy. I do not know what type of memorandum the rest of the industry used, but this is our own.

The Chairman. But it is this memorandum which was covered in this letter of May 24?

Mr. Handy. That is right.

The Chairman. Let the letter of the Remington Arms Co. to Col. J. E. Monroe, dated May 24, 1934, be made an exhibit and afforded an appropriate number.

(The letter referred to was marked "Exhibit No. 1351" and is included in the appendix on p. 4371.)

Mr. Davis. Senator, I wonder if I could read my letter to Stewart Comeaux from myself, in reference to this exchange of letters? It is dated June 8, 1934.

The Chairman. Identify Mr. Stewart Comeaux.

Mr. Davis. Mr. Stewart Comeaux is secretary of the Sporting Arms & Ammunition Manufacturers Institute, and he was serving also as secretary of the code committee of the industry. [Reading:]

Mr. Stewart Comeaux,
Secretary, Sporting Arms & Ammunition Manufacturers' Institute,
New York City.

CODE OF FAIR COMPETITION—SMALL ARMS AND AMMUNITION INDUSTRY

Dear Stewart: I wish to acknowledge your letter of May 31 on the above subject, to which was attached letter from Mr. Wilson Prichett, Assistant Deputy Administrator, together with copies of suggested letters to be exchanged between the code committee and the Administrator for the purpose of harmonizing the views of the industry and the N. R. A. with reference to our code.

In our opinion, and that of our legal department, such an exchange of letters would be satisfactory to our company, as we believe our constitutional rights and our rights to object to any modification of the code would be fully safeguarded.

I assume, of course, that Mr. Matthews is in accord with this plan and that it has the approval of General Johnson's office.

Very truly yours,

C. K. Davis,
President and General Manager.

The Chairman. What is the date of that letter?

Mr. Davis. June 8, 1934.

The Chairman. The committee has before it a letter dated August 23, 1934, with a notation that a copy went to Mr. W. S. Gregg, outlining a proposed exchange of letters between the industry and the Administrator regarding deletion of articles XVI and XVIII from the code.

Do you have a copy of that before you, Mr. Davis?

Mr. Davis. Yes, sir; I have that.

The Chairman. You can identify that, then?

Mr. Davis. Yes, sir.

The Chairman. This letter is offered as an exhibit, to be given an appropriate number.

(The letter referred to was marked "Exhibit No. 1352" and is included in the appendix on p. 4372.)

The Chairman. What is the status of the code at the present time, Mr. Davis?

Mr. Davis. There has been no change in the status. A new Deputy Administrator was recently appointed, only a few weeks ago, and he is reviewing the whole case and will advise the industry what he thinks we better do next.

The Chairman. Are you striving to comply with the provisions of the proposed code?

Mr. Davis. We have accorded our employees the same wage and hour provisions.

The Chairman. Are there not other provisions in the code?

Mr. Davis. There are certain trade-practice provisions in the code. I believe, so far as Remington Arms are concerned, we are complying with those 100 percent.

The Chairman. Article VIII, paragraph 3, of the proposed code, is a provision defining "commercial bribery" and making it an unfair practice. Is Remington adhering to this regulation, Mr. Davis?

Mr. Davis. Yes, sir; not because of the code, but because we believe it is good business ethics.

The Chairman. Do you consider that the code applies to your export business as well as your domestic business?

Mr. Davis. No, sir; it does not.

Mr. Handy. No, sir.

The Chairman. So that provision as respects bribery or commissions does not relate to the foreign trade as it does to your domestic trade?

Mr. Davis. It certainly does—not the provisions of the code.

The Chairman. Not the provisions of the code.

Mr. Davis. But our policies are the same.

The Chairman. Under the definition, Mr. Davis, as embodied in the code, a commission paid to an official of a foreign government or the splitting of a commission by one of your agents with an official of a foreign government would be an act of commercial bribery, as defined, would it not?

Mr. Davis. Would you please restate that?

The Chairman. A commission paid to an official of a foreign government or commissions split between agents and officials of foreign governments would be an act of commercial bribery?

Mr. Davis. We do not pay any commissions to officials of foreign governments.

The Chairman. Do your agents?

Mr. Davis. I cannot answer that. I do not think so.

The Chairman. Have you advised your agents of the provisions of the code?

Mr. Gregg. Abroad or here?

Mr. Davis. No; because it did not apply to our foreign business, and there was no need to do it.

Mr. Wohlforth. Do you not want to correct that statement, Mr. Davis? We put into the record last week that you formerly had several officials of the Brazilian War Department on your monthly pay roll and, as I recall it offhand, in previous years your agents paid two officials of the Mexican war department a certain amount to secure import permits. We were just wondering about that.

Mr. Davis. I do not remember anything about that at all. I am not familiar with it.

Mr. Wohlforth. Mr. Monaghan testified to that, I think, Mr. Chairman.

Mr. Davis. I do not recall that in the testimony at all.

The Chairman. Mr. Davis, paragraph 8 of article VIII of your proposed code of fair competition provides, under the heading, "False invoicing", as follows [reading]:

> To withhold from or insert in an invoice anything which would make the invoice a false record, wholly or in part, of the transaction in question, or make any arrangement which would contemplate payment or settlement contrary to the face of the invoice.

I want to ask you, Mr. Davis, for an explanation of the meaning of that particular paragraph.

Mr. Davis. I would like Mr. Handy to answer that.

Mr. Handy. Senator, this code is not intended and does not apply to export business. This refers to the invoicing of commercial business, sporting shotguns, ammunition, and so forth. It very clearly states exactly what it means.

The Chairman. And that does not apply to foreign or to export trade?

Mr. Handy. No, sir.

The Chairman. Why is it not made to apply to export business as well as your domestic business?

Mr. Handy. I did not know any codes were intended to do that.

Mr. Davis. I do not think any codes apply to export business.

The Chairman. Why would they not? Is it not considered that national recovery is dependent somewhat upon restoration of our foreign trade?

Mr. Davis. I think that is true, but I cannot answer why.

The Chairman. Why would there not be fair competition in gaining foreign trade as there is fair competition in gaining domestic trade?

Mr. DAVIS. I feel that is a question which the administration would have to answer. We could not.

The CHAIRMAN. Again in article VIII, but in paragraph 12, is a provision, Mr. Davis, making secret rebates, and so forth, an unfair trade practice. Will you explain the meaning of this?

Mr. DAVIS. Will you do that, Mr. Handy?

The CHAIRMAN. I read the paragraph:

> To pay or allow secretly, rebates, refunds, commissions, or discounts, whether in the form of money or otherwise, except such as are obligatory under existing agreements, but in no case shall any agreement apply to any transactions or shipments on and after the effective date of this code.

Mr. HANDY. Senator, when we wrote this code, I think the language there indicates that prior to du Pont taking control of Remington there had been more or less the practice in this industry of allowing secret rebates. As I said, I think the language in the code indicates that. So that this code was intended to eliminate that practice insofar as domestic business was concerned.

Now I can say to you that so far as Remington is concerned on the domestic end of our business we have no secret rebates, no allowances of any description.

The CHAIRMAN. Why should not that apply to export business as well as to domestic business?

Mr. HANDY. Perhaps it should, but, as I said before, I did not understand that any of these codes did, and we did not write the code with a view to applying it to the export business.

The CHAIRMAN. This code which I am offering for the record is indicated as having been approved, Approved Code No. 354, as approved on March 22, 1934. What is the meaning of that?

Does that mean that it has been approved by the N. R. A.?

Mr. DAVIS. Yes, sir; by the Administrator of N. R. A.

The CHAIRMAN. Have you accepted it?

Mr. DAVIS. We have not.

The CHAIRMAN. Has the institute accepted it?

Mr. DAVIS. The industry, and not the institute, has not accepted it.

The CHAIRMAN. Yet, so far as Remington is concerned, Mr. Davis, are we to understand that you are trying to conform to that code?

Mr. DAVIS. We have accorded our employees the same wage and hour provisions. We are complying with section 7 (a), and I believe that we are complying 100 percent with the trade-practice provisions of the code.

In fact, we have accorded our employees a great deal more than the benefit that they would have derived under the code.

(The code referred to was marked "Exhibit No. 1353" and is included in the appendix on p. 4373.)

Mr. DAVIS. Senator, I do not know whether you saw article XI. During the public hearing on September 27 in Washington, the Department of Justice asked the industry if they would cooperate in the sale of machine guns and submachine guns and requested us to put this paragraph in the code, which we did. It is article XI, page 361.

The CHAIRMAN. Please read it, Mr. Davis.

Mr. DAVIS (reading):

ARTICLE XI

> Members of the industry shall have the right to sell or otherwise dispose of machine guns or submachine guns or parts therefor only to the United States Government, any State, Territory, or possession of the United States, and political subdivision thereof and the District of Columbia; provided that with the consent of the United States Attorney General they may be disposed of to National, State banks or to corporations or other business associations having regularly organized police departments, and to manufacturers of ammunition in the United States for testing purposes; *Provided further*, That such members shall have the right to sell machine or submachine guns or parts thereof for export under such rules and regulations as may be promulgated by the United States Secretary of State.

So far as Remington is concerned, we are living up to that request.

Mr. Wohlforth. I understand you are adhering to these articles describing fair and unfair trade practices, so far as your domestic business is concerned. Is that correct?

Mr. Davis. That is correct. We are doing it as a matter of good business policy.

Mr. Wohlforth. Can you show me anything in this code where it says that these trade practices do not apply to export business?

Mr. Gregg. Export business is not mentioned in the code, except in that article relative to machine guns.

Mr. Handy. There is not anything in the code, Mr. Wohlforth, on that.

Mr. Wohlforth. Then you follow the articles of the code so far as your domestic business is concerned and your own policy so far as export business is concerned? Is that correct?

Mr. Handy. Yes, sir.

Mr. Davis. Here is a paragraph in the code, page 361, paragraph 3 under article X:

> Except as may be subsequently set forth in a specific or supplementary export code for the industry, the provisions of this code now or hereafter adopted with regard to prices, discounts, deductions, allowances, extras, commissions, or methods, and/or terms of sale, are not to apply to direct export sales or to sales in course of export (i. e., sales destined ultimately for export) or to sales of materials used in the manufacture of products for export.

The Chairman. Is the committee to draw this conclusion: That the struggle for export business is a struggle for a kind of business that calls for different ethics than are called for in competition to gain domestic business?

Mr. Davis. I do not think that is true, Senator.

The Chairman. You make exception, then?

Mr. Davis. As a matter of fact, this indicates that the industry was planning at a later date to propose to have a supplementary export code.

The Chairman. Where is there anything in the code to indicate that was contemplated?

Mr. Davis. It says:

> Except as may be subsequently set forth in a specific or supplementary export code for the industry * * *.

The Chairman. Have you given consideration to a code as respects the exporting industry?

Mr. Davis. Not as yet, because we are waiting for the approval of the domestic code first.

The Chairman. If it takes as long to accomplish approval and concurrence of a code affecting export business as it is taking to get together on this code affecting domestic business, agreement is a long way in the future, is it not?

Mr. DAVIS. The delay has not been due to the industry, Senator.

The CHAIRMAN. Are there peculiar situations confronting your business in the export field that could not be met by a code destined to meet needs of fair competition in the domestic field?

Mr. DAVIS. It is pretty hard to answer that on the spur of the moment. I think it might be possible.

Mr. HANDY. Not necessarily so, although there may be, Senator.

The CHAIRMAN. I am anxious to know why you would except the export business from the provisions of this code.

Mr. DAVIS. Because, as I said before, Senator, none of the codes, as I understood it, included export business. That is true, I think. They apply only to domestic business.

Mr. GREGG. I do not know of any code, Senator, that included export, unless it had a provision in the code that export business was included.

Senator POPE. Does that mean other kinds of business, other industries?

Mr. DAVIS. Yes, sir; other industries, all codes.

The CHAIRMAN. You think that all codes contain a paragraph excepting export business from the provisions of the code?

Mr. GREGG. I would say that they do not, Senator.

Mr. DAVIS. Some of them do and some of them do not.

Mr. GREGG. Some of them may, but I would say not all of them.

Mr. DAVIS. But I think they all apply to domestic business.

Senator, I would like to read this telegram also, which was sent to Stewart Comeaux, secretary of the code committee, on January 2, 1934. This had reference to the code as finally drafted on December 21, 1933, and is practically the same as this code, with the exception of the changes made at the time the code was approved by the Administrator on March 22 [reading]:

JANUARY 2, 1934.

Mr. C. STEWART COMEAUX,
New York, N. Y.:

We acknowledge receipt copy code of fair competition for small-arms ammunition industry as revised and dated December 21, 1933, and authorize code committee for industry to approve and submit same to National Recovery Administration for its approval and to accept same as so revised, and we hereby accept said revised draft of code and will operate under the provisions of the same.

REMINGTON ARMS CO., INC.,
By C. K. DAVIS, *President.*

The CHAIRMAN. Mr. Davis, has there been any resistance within the industry to provisions of this code?

Mr. DAVIS. I think not.

The CHAIRMAN. Have there been any complaints filed concerning failure of the industry to comply with provisions of the code?

Mr. HANDY. Not that we know of.

Mr. DAVIS. I do not know of any.

The CHAIRMAN. The committee would like now to hear Mr. Rosenblatt.

TESTIMONY OF SOL A. ROSENBLATT

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Will you state to the committee your full name and your connection with the N. R. A. at the present time?

Mr. ROSENBLATT. My full name is Sol A. Rosenblatt. I am compliance and enforcement director of the National Recovery Administration.

The CHAIRMAN. Mr. Rosenblatt, a communication was addressed to you by the chairman of this committee a few days ago. Will you read that communication?

Mr. ROSENBLATT. Yes. The communication is dated December 13, 1934, addressed to Mr. W. Averill Harriman, National Recovery Administration.

> DEAR SIR: Will you kindly furnish the committee with statistics as to the number of complaints received by the Compliance Division of N. R. A. with regard to (1) paying less than code wages, (2) sales at less than minimum prices fixed by the code. We would like these figures covering the whole period for which they are available. We would also like to have them broken down by codes.
>
> We will appreciate your cooperation in this matter.

Signed by yourself, Senator Nye.

The CHAIRMAN. Yes.

Mr. Rosenblatt, are you prepared this morning to advise the committee in connection with this inquiry?

Mr. ROSENBLATT. I should like to make the following observations to the committee.

The CHAIRMAN. Thank you. If you will, Mr. Rosenblatt.

Mr. ROSENBLATT. I am in receipt of a memorandum from the Chief of the Compliance Division, Mr. L. J. Martin, who acknowledges receipt of the communication and states that—

> the figures are, of course, available for the whole period during which the N. R. A. has been in existence. Every one of our field officers—

I may state that there are 54 throughout the United States—

> has on hand a tremendous amount of raw material for a tabulation of the kind desired, consisting of case records of all cases that it has handled since it began to function.
>
> I estimate, however, that it will require the services of 54 persons, or 1 person in each of our field offices, for a period of 10 days, in order to collect and tabulate the figures and put them into shape for transmittal to Washington. A further period of time will be required after the material reaches the Compliance Division, for assembling it for submission to the Senate committee.

I want to advise the committee, Mr. Senator, that for approximately 3 months past our field officers have been sending to Washington a so-called " face sheet carbon ", of which I have a type here present, covering each case which they have handled. As you will note, this sheet indicates the name of the code which is alleged to have been violated, the name of the alleged violator, the name of the complainant, the nature of the complaint—that is, the number of the article and section of the code alleged to have been violated—and a notation as to whether the complaint involves " labor " or " trade practice " provisions. These sheets do not, however, state specifically the nature of the alleged violation. For example, it is impossible to tell from their faces whether the complaint involves payment of less than code wages, in " labor " cases, or whether it involves sales at less than code prices, in " trade practice " cases.

As I have indicated, the practice of sending these sheets to the Washington office was inaugurated only a little over 3 months ago. The information desired by the Senate committee, as I understand their request, covers compliance operations over a period of 18 months.

We can, of course, prepare from our Washington files a report which will present a broad picture of the general nature of violations under the various codes during the past 3 months, if that would be satisfactory to the Senate committee. Specific compliance with Senator Nye's request, however, will require considerable time, since most of the work will have to be done in the various field offices.

In order that I may issue proper instructions to the field offices for inaugurating this rather comprehensive survey, I would appreciate information from the committee as to the form in which you desire the statistics to be submitted and whatever special purposes you seek to achieve, so that I can prepare an intelligent and comprehensive survey for you.

The CHAIRMAN. Mr. Rosenblatt, if there had been complaints concerning failure of industry to comply as respects these particular features, your offices here in Washington would have been quite apt to have become aware of it by this time, would they not?

Mr. ROSENBLATT. Oh, yes; oh, yes.

The CHAIRMAN. Then what are we to conclude from the situation that exists at this time?

Mr. ROSENBLATT. Your request was as to the number of complaints received by the Compliance Division with regard to (1) paying less than code wages, and (2) sales at less than minimum prices fixed by codes.

There is a tremendous number of complaints which are filed in the local offices throughout the United States and which are disposed of, and the records never come to Washington at all.

The CHAIRMAN. Do you know of such complaints in this particular industry?

Mr. ROSENBLATT. I had no indication until now that you were referring to this particular industry. I can easily secure any facts or data with respect to this particular industry and then get you a break-down later. I will be glad to do that. I will get you any kind of information on complaints, Government contracts, or anything else that you want.[1]

The CHAIRMAN. Mr. Rosenblatt, I believe the committee had best take the question under advisement, and it will then notify you definitely as to what information is wanted and to what extent you need go in getting it for us.[1]

Mr. ROSENBLATT. Yes, sir. I just want to say this: That the facilities of the Compliance and Enforcement Division in all of its branches—that is, the three branches, the Compliance Division strictly, the Litigation Division, and the Government Contracts and Purchasing Division—are entirely open to your inspection. Any data that you want will be furnished on request, not only from me but any of the chiefs of these Divisions.

---

[1] Information supplied by the Compliance Division of the N. R. A. in response to a request for figures giving some indication of the extent of price violations covering codified industry as a whole, is appended to a memorandum on Price Control which was entered into the record as "Exhibit No. 1406." See text, p. 4334, appendix, p. 4457.

The CHAIRMAN. Thank you.

Mr. DAVIS. I would like to ask Mr. Rosenblatt if he does know of any cases of noncompliance or any complaints.

The CHAIRMAN. That is as respects the small-arms industry?

Mr. DAVIS. The small-arms industry, and the Remington Arms Co. in particular.

Mr. ROSENBLATT. I do not know of any. May I ask the Chief of the Compliance Division who is here present, Mr. Martin, if he knows of any?

The CHAIRMAN. Yes; if Mr. Martin has information.

Mr. L. J. MARTIN. I know of no specific complaint against the small-arms industry or the Remington Arms Co. I do not want to certify that there has been none, but there has been none called to the attention of the Chief of the Compliance Division.

Had there been a flagrant violation in any way, I would have known of it.

Mr. ROSENBLATT. And I would have directed prosecution.

The CHAIRMAN. Yes. Mr. Rosenblatt, the industry has not itself accepted the code as yet. Do you understand that to be the case?

Mr. ROSENBLATT. I do not understand that to be the case for this reason: That so far as our records would indicate, all of the manufacturers to whom this code is applicable are apparently complying with its provisions, or otherwise we would have complaints.

The CHAIRMAN. So whether or not they have accepted it, your offices are considering this code, approved March 22, 1934, as in effect?

Mr. ROSENBLATT. In full force and effect.

The CHAIRMAN. And all of its provisions therein are enforceable?

Mr. ROSENBLATT. That is correct.

The CHAIRMAN. All right.

Mr. HISS. Mr. Chairman, may I ask just one question?

Do you consider that in force and effect under 4 (d), namely, as a compulsory code, or under the section providing for voluntary codes?

Mr. ROSENBLATT. I could not tell unless I saw the actual signatures to the code as presented to the President.

Mr. HISS. Do you know whether the industry has formally signed a code indicating their acceptance of it?

Mr. ROSENBLATT. I could not tell you that unless I actually saw the signatures which went over with the code to the President.

The CHAIRMAN. The Chair would like to ask the reporter if the code for the small-arms and ammunition-manufacturing industry was made an exhibit?

Mr. WOHLFORTH. Yes.

The CHAIRMAN. There was also an amendment, Amendment No. 1, approved of March 29, 1934, which ought to be marked "Exhibit A" to whatever number was given the main code.

(The amendment referred to was marked "Exhibit No. 1353–A", and is included in the appendix on p. 4383.)

Mr. ROSENBLATT. The amendment would also show whether it is a voluntary or imposed code. I do not know of any imposed code, so I assume this must be a voluntary code.

The CHAIRMAN. Will you look at the amendment, Mr. Rosenblatt?

Mr. ROSENBLATT. This is the type of amendment which would not show, because it is a mere stay of a provision.

The CHAIRMAN. A mere what?

Mr. ROSENBLATT. A continuance of a stay that was contained in the original order of the President approving the code. That is a mere administrative order.

The CHAIRMAN. A stay? For what purpose?

Mr. ROSENBLATT. It stays the original order of approval which requires, under the provision of section 3, on article 7 of the code, allowing a waiting period prior to the effective date after the filing of revised schedules. That provision is to be stayed for a period of 60 days from the effective date of the code, or after the completion of a study of open-price associations now being conducted by the National Recovery Administration.

The CHAIRMAN. It has no effect on the original code?

Mr. ROSENBLATT. No; unless that provision which is in the original code, which required a certain waiting period before filing schedules—I assume that is a price provision.

The CHAIRMAN. In that case it would affect only that single provision?

Mr. ROSENBLATT. That is correct. It would not affect the general code at all.

The CHAIRMAN. Thank you, Mr. Rosenblatt.

(Witness excused.)

Mr. WOHLFORTH. Mr. Davis, you have received an order from the War Department, and the certificate of compliance was waived in regard to that order, was it not? Am I correct in that?

Mr. DAVIS. I cannot answer that.

Mr. WOHLFORTH. Can you answer that, Mr. Handy?

Mr. HANDY. I do not know. What did it refer to?

Mr. WOHLFORTH. I think it was an order for some .22-caliber ammunition. Are you familiar with that?

Mr. DAVIS. When was that order?

Mr. WOHLFORTH. I think it was within the last 2 or 3 months. This is only my recollection.

Mr. HANDY. Was it not for .22 empty shells?

Mr. WOHLFORTH. I think so.

Mr. DAVIS. Blanks.

Mr. HANDY. Blanks. I think that is what it was.

Mr. WOHLFORTH. You were granted an exception from complying with the certificate of compliance?

Mr. HANDY. I presume so, although we were not notified to that effect. We just got the order.

Mr. WOHLFORTH. You just got the order?

Mr. HANDY. That is right. I do not recall that we had any notice whatever.

Mr. GREGG. Mr. Chairman, might I make a statement in connection with the deletion of articles 16 and 18, which seem to be the bone of contention with respect to this code.

Article 16, which you read a while ago, states that—

> By presenting this code, those assenting hereto are not thereby waiving any of their constitutional rights which might be infringed by any of the provisions of the National Industrial Recovery Act.

Article 18 provides:

> By presenting this code, the members of the industry do not thereby consent to any modification thereof, and they hereby reserve the right to object individually or jointly to any such modification.

I had considerable to do with codes from the time of the passage of the National Industrial Recovery Act. So far as I know, the President has not imposed a single code, as he has a right to do under the act. These constitute under the act voluntary applications for a code.

The courts have held, including the Supreme Court of the United States, that if you voluntarily apply for authority to do business under an act, and by that voluntary application you are granted authority to do business under an act, you cannot later take advantage of or present any defense that any provision of the act is unconstitutional; in other words, that you have waived that right.

For that reason, so far as our company was concerned, I advised them that it was essential to have this reservation in the code. My position in that matter was later borne out in the *Weirton Steel case*, which was recently tried at Wilmington, Del. In that case the Government took the position that in view of the fact that the Weirton Steel Co. had participated in an application for a code and had accepted the code, they could not in any way raise any question that any part of the National Industrial Recovery Act was unconstitutional. The Government devoted 9 or 10 pages of its brief to that point, and also made a point of it in oral argument.

As to article 18, under the National Industrial Recovery Act, the President is given the right to make modifications to codes, and the only purpose of article 18 is that the members of the industry are merely stating that by applying for this code they are not formally consenting to a modification thereof, and they reserve the right to object individually or jointly to any such modification. In other words, they do not want to be put in a position when they apply for a code and the code is approved that the administration may then come along and practically rewrite the entire code, imposing more onerous provisions than provided in the approved code, and they then have no right to object to any such modification of the code.

The CHAIRMAN. Major Casey, or whoever of the du Ponts might be in position to answer, how do prices at which your powder is sold domestically and abroad compare?

I will frame the question another way:

Do you sell powder cheaper abroad than you do to the Army and Navy?

Mr. CASEY. In no case.

The CHAIRMAN. In no case?

Mr. CASEY. Our price to the Government is our minimum price.

The CHAIRMAN. For the purpose of the record, who is Mr. O'Gorman?

Mr. CASEY. He was my assistant. He is now dead.

The CHAIRMAN. He was your assistant on August 15, 1929?

Mr. CASEY. Yes.

The CHAIRMAN. I refer to a memorandum sent by him to N. E. Bates, Jr. on August 15, 1929. Again, for the record, who was Mr. Bates?

Mr. CASEY. He was one of my associates, looking after export matters.

(The memorandum referred to was marked "Exhibit No. 1354", and appears in full in the text.)

The CHAIRMAN. In this memorandum I find him saying, after quoting prices to the Army and Navy of the United States on military powders:

> The above prices are frequently lowered in quoting on European prospects.

Mr. CASEY. It might be if it were a different type of powder. The type of powder governs the price. In other words, you cannot say it is the price of powder, you must consider the type.

The CHAIRMAN. Here in his memorandum as respects prices to the Army and Navy of the United States, rifle powder is quoted at 87 cents per pound f. o. b. Carneys Point.

> The minimum prices which we have quoted, c. i. f. European port, are as follows:
>
> Rifle powder, 71 cents per pound.

Mr. CASEY. I think that referred to the old Pyro D. G. .30 caliber.

The CHAIRMAN. No; Pyro is quoted here at 53 cents a pound.

Mr. BRADWAY. That is cannon powder.

Mr. CASEY. Cannon powder.

The CHAIRMAN. Let us read the entire memorandum ("Exhibit No. 1354"):

> Standard sales prices to the Army and Navy of the United States on military powders are as follows:
>
> Rifle powder, 87 cents per pound f. o. b. Carneys Point.
> Pyro cannon powder, 53 cents per pound f. o. b. Carneys Point.
> FNH or NH, 77 cents per pound.
> TNT, 17½ cents per pound, f. o. b. Barksdale.
> Tetryl, $1 per pound, f. o. b. Repauno.
> The above prices are frequently lowered in quoting on European prospects.

He says "the above prices", and I expect he refers to the same commodity.

Mr. CASEY. But the fact remains, Senator, no matter what O'Gorman might have written at the time, we have never sold at less than the price we sold to the Government.

The CHAIRMAN. Let us read on:

> The minimum prices which we have quoted, c. i. f. European port, are as follows:
>
> Rifle powder, 71 cents per pound.
> Cannon powder, 61 cents per pound.
> TNT, 22 cents per pound.
> Manufacturing cost:
>
> The total manufacturing cost of Pyro cannon powder is 36 cents per pound and the out-of-pocket cost is approximately 30 cents per pound. This is based upon a quantity of 2,000 tons of cannon powder being manufactured at Carneys Point within a year. From this you will see that with a minimum sales price, f. o. b. Carneys Point, of 56 cents per pound, it is necessary to get more than 50 percent of said price before we can repay ourselves the out-of-pocket cost. In general, there is a similar relation between the out-of-pocket cost and the sales prices of military powders manufactured by us.
>
> Insofar as China is concerned, the following are the minimum sales prices, c.i.f. Chinese port, exclusive of commission:
>
> On quantities of not less than 100 tons:
> Rifle powder, 85 cents per pound.
> Cannon powder, 61 cents per pound.
> TNT, 24 cents per pound.
>
> W. H. O'GORMAN.

Mr. O'Gorman was making it clear to Mr. Bates that frequently there was a lower price quoted to European prospects.

Mr. Casey. I do not think the prices he gives at all indicate that.

The Chairman. What does he mean when he says that "The above prices are frequently lowered in quoting on European prospects?"

Mr. Casey. I might add this:

In our general arrangement with the Ordnance Department on prices, we have what you might call a sliding scale of prices based on production within a year. When we make a sale, or if we have a prospect of a foreign sale sufficiently in advance, we promptly lower the price to the United States Government, because we consider that added production to a foreign country gives us a little more manufacturing capacity and because of that capacity we want to give the Government every advantage we can along that line.

You can see from these figures we are talking of a different kind of rifle and cannon powder from what we are supplying the United States Government. You take this question of the manufacturing cost. He says here clearly 36 cents on over 4 million pounds of cannon powder in the one year. Since the World War, with the possible exception of 1 year, we have never manufactured 4 million pounds of all our military powders combined. So therefore we have never been able to reach that cost figure.

At this point, Senator, I would like to give you an illustration of just what this thing looks like in a picture prepared for the Ordnance Department as an indicating guide. I think I have enough copies here so I can give each one of you a copy.[1]

When we decided to stay in the powder business at the request of the Government, our position was this:

We use every endeavor we can to stay in the business, being advised, however, that the reason the Government wanted us in the business was because of our potential ability to improve the quality of military powder. I believe, as I stated before, the Ordnance Department had something like 270-odd problems that they wanted solved in connection with military propellants and high explosives.

The position we take in this matter is this:

We are willing to go as far as we can. We have this old question, however, of trusteeship to our stockholders. It is not fair to our stockholders to ask them to pay taxes, both company taxes and individual taxes, a part of which is for national defense, and then expect the du Pont Co. because of tradition and family pride to likewise pay taxes by maintaining facilities and doing experimental work, which really means a double tax on the company.

In this set up—this is, I think, the second chart we have submitted, this one being dated March 1, 1931—we indicate to them that we must have a sufficient volume of business to maintain a skeleton organization to be familiar with manufacturing methods and likewise to prove out any experiments that have been conducted. You may notice there is a vertical line on those charts indicating a point below which we can not go and maintain even a skeleton organization.

The Chairman. The figure here as to production is in pounds.

---

[1] Chart showing effect of production on selling price of military propellants entered in record as "Exhibit No. 1357." See text, p. 4199, appendix, facing p. 4385.

Mr. CASEY. In pounds. It does not mean pounds of each type of powder, but pounds of all powders combined.

The CHAIRMAN. Your chart then shows that, as respects rifle powder, when you are producing 7½ million pounds, you can produce for 61 cents, approximately.

Mr. CASEY. Lower than that.

The CHAIRMAN. Your chart shows 61.

Mr. CASEY. Yes. I say, this is a chart not of actual fixed prices, but as an indication of the effect of production on selling prices.

The CHAIRMAN. When your production is down to 300,000 pounds, it puts it at a cost of approximately $3.60.

Mr. CASEY. In order to get the return of 10 percent on investment.

Mr. HISS. This is the selling price, cost plus 10 percent on the investment?

Mr. CASEY. That is right.

So you see, as far as we are concerned, the Government can order within this chart. Assuming that these are the high prices in the different periods, not necessarily the fixed prices, they can decide on how much powder they want and keep us going. The less they order the higher the price.

Now, there is an interesting point right at the present time. You take our selling prices. You have just read 71 cents at the present time on rifle powder, 60 cents on FNH. cannon powder. That means an annual sale of 3,900,000 pounds. We are actually selling at the present time between two and two and one-half million. If we were applying the prices of 2½ million, it would be about 80 cents on rifle, and—what is it on FNH.? That is the second line.

Mr. HISS. Sixty-six; something like that.

Mr. CASEY. So you see we are selling below. We must consider not the question of a profit on an individual transaction, but what it means on the investment for the year. It can be readily worked out that we might have a smaller order on which we might make 1,000 percent profit, and at the end of the year we would be in the red.

Senator POPE. In your foreign sales, competition of foreign competitors has to do with it, with what you sell it for?

Mr. CASEY. But we never go below our Government price.

Senator POPE. In foreign sales?

Mr. CASEY. Yes.

But if we feel that we cannot get a sufficiently large Government order—this has not occurred, but it might occur—suppose we got an order for 2,000 tons over 2 years. We would add that to what we would expect to get from the Government. We then go to the Government immediately and say, "We believe next year you can lower your price 5 cents a pound."

I am doing my best to get the price to the Government as low as possible. I believe we should do it. The Government appreciates that they are in this fix themselves. If they give us more business, then they take it away from the arsenal. It means the manufacturing cost to the arsenal goes up. So they try to maintain a state of equilibrium. I do not know what their costs are, but I imagine our selling prices must be comparable to their costs, otherwise they could not give us the business.

The CHAIRMAN. Do you know of any instance where powder has been sold to foreign customers cheaper than you sell it to the Government?

Mr. CASEY. I do not know of any. I think there was an instance of a small lot of about 5 or 10 tons, where we were trying to get the powder introduced. I think it was slightly less. But we could have given the powder away and have had the same effect. It was really a demonstration lot. That is the sole exception I know of. That was not with the idea we were going to sell it at that price at all, but we could not even get them to consider it.

I might give you as an illustration, there is sometimes a price made where very valuable experimental work has been conducted, such as where the Army has been experimenting with their boat-tail bullet. They had on hand tremendous quantities of Pyro D.G. .30 caliber. They were striving as a result of Major Wilhelm's experimental work to get a velocity to give them an extreme range of approximately 5,500 to 6,000 meters. That meant a certain velocity. They could not get it with Pyro powder. They could get it with IMR. They said, however, "The price of IMR is 90 cents a pound. That puts it out.

I said to General Williams, "Look here. You are buying 10,000-pound lots, at a time, and you are paying the regular loading company price, 90 cents. If you will give us an order for 100,000 pounds which we can run through in a month's operation, we will say, then we will get an idea of what it is actually going to cost on a peacetime production basis, and I will take a chance and give you a price which I think will eventually be our sale price."

So I gave him a price of 70 cents a pound. General Williams got together his requirements, and found that their program called for only something like 83,000 pounds.

I drew his attention to this, that by buying a hundred thousand pounds at 70 cents it would cost them less than buying 83,000 pounds at 90 cents. So he decided to go through with it. We afterward found out, approximately the time we were limited in production, that that price was too low. Later on it was raised. But it showed our guess was pretty near right, because today the price is 71 cents.

Incidentally, Senator, I might at this point introduce something that we have been trying to get in here, and I am going to ask Mr. Bradway if he won't read it, please.

The CHAIRMAN. What is the nature of the communications to which you are referring?

Mr. CASEY. This is this agreement with General Williams of 1919, when we were considering going out of the powder business.

PRICES QUOTED TO FOREIGN COMPANIES BY DU PONT COMPANY COMPARED TO PRICES TO UNITED STATES GOVERNMENT—TESTIMONY AS TO EFFECT OF CONSCRIPTION OF CAPITAL

The CHAIRMAN. Before we get to General Williams, let us continue our consideration of this matter of price quoting abroad.

Mr. CASEY. Will you allow us to put this in then?

The CHAIRMAN. Yes; we will get to that, but let us have a connected record here as respects the matter we have been discussing.

On June 30, 1932, Major Casey, you wrote a letter to Col. William N. Taylor in Paris concerning a prospective order in Esthonia, where bids were requested on 15,000,000 cartridges, delivery specified in the autumn of 1933.

> The competitive prices quoted by I.C.I. and Bofors disrupt our price schedule and make a noticeable differential in favor of the competitors insofar as made-up ammunition is concerned. You have advised that our maximum prices must be $1.40 per kilogram c.i.f. England insofar as I.C.I. is concerned which price includes 3 percent commission and $1.50 per kilogram c.i.f. Belgium on sales to Fabrique Nationale, which price includes 5-percent commission.
>
> Our cablegram has authorized you to quote these prices, and, naturally, since they are considerably below our usual export schedule they must be considered our minimum figure. You must realize that our price schedule on rifle powder sales to the United States Government is 71 cents per pound f. o. b. Carneys Point, excluding boxes. The prices you have quoted figures, in the instance of sales to England, a gross selling price f.o.b. Carneys Point, including boxes, of 54½ cents and in the instance of Belgium a price of 57.6 cents, thereby reflecting a noticeable reduction.
>
> Since our sales to the United States total approximately 700,000 pounds of rifle powder annually, we cannot take the chance of this reduced figure being divulged. Therefore, you must arrange some plan in submitting your proposal so that you will be absolutely satisfied that the prices quoted will be regarded with the utmost secrecy. We wish to make ourselves very emphatic on this point and, in the event you cannot work out the required arrangement or feel that our idea cannot be accomplished, then we must advise you not to quote.

Major Casey, are we to conclude that what you have discussed with us is the practice that prevails, providing secrecy prevails?

Mr. Casey. I don't think that is a fair statement, Senator.

Colonel Taylor was endeavoring to get this business and he was up against foreign competition. He was trying to force us in a position that was distasteful. You may notice there is a distinction there between the I. C. I. and Belgium, the answer being that at this time I. C. I. could have made that powder themselves, because it was the type of powder such as made by the old 303 British during the war. But here he was trying to get this business.

Now, if the business did not go through and these prices were made public, then we were in bad. If it had gone through it would have enabled us to give a lower price to the Government.

The Chairman. Did it go through?

Mr. Casey. I don't believe it did. Did it Mr. Bradway?

Mr. Bradway. No.

Mr. Casey. It never went through.

The Chairman. It could have gone through if Taylor could have arranged so there would not have been any revelation of the discrepancy?

Mr. Casey. I do not think so, not at those low prices. That was going too far.

The Chairman. Why didn't you tell him in your letter that it just simply could not be done?

Mr. Casey. Taylor was in a position where he was trying to get this business and he was really talking ahead of himself.

The Chairman. Were you helping him to talk ahead of himself?

Mr. Casey. No. Trying not to.

Senator Pope. What was the reason for secrecy there?

Mr. Casey. Just as I stated. If we made a sale today to a foreign country at a certain price, the price at which we would make the sale to the foreign country would be promptly given to the Government, because if we got an order right now for 2,000 tons from a foreign country, the United States Government would immediately, as soon as we had that contract established, get a lower price.

The CHAIRMAN. Let that communication be identified as the next exhibit.

(The letter referred to was marked "Exhibit No. 1355" and is included in the appendix on p. 4384.)

The CHAIRMAN. Mr. Irénée du Pont, do you entertain any fears about the ability of industry to respond in the event there should be conscription of wealth and industry in time of war?

Mr. IRÉNÉE DU PONT. I cannot say that I may voice the position of the du Pont Co., because I have never discussed the subject with anyone. I think if we are going to have war, we are going to have a hell of a time, no matter what route we take. There is only one way to really wage war, and that is to have an absolute monarch at the head. Caesar found that out, and Napoleon.

The CHAIRMAN. Has Mr. Simons ever discussed the matter with you?

Mr. IRÉNÉE DU PONT. Who?

The CHAIRMAN. Mr. Simons.

Mr. IRÉNÉE DU PONT. Not that I recall. I do not recall ever having mentioned the subject to him. I may have and forgotten about it, because I do entirely too much talking anyhow.

The CHAIRMAN. Then you have not discussed it with Colonel Simons?

Mr. IRÉNÉE DU PONT. Not that I recall.

The CHAIRMAN. Major Casey, have you discussed it with Colonel Taylor or Colonel Simons?

Mr. CASEY. No; I have not. That is something I felt we had nothing to do with. It was a matter that the Government would decide itself at the proper time, and as Americans we would subscribe.

The CHAIRMAN. The reason I ask is because of the conclusion of a memorandum written by Aiken Simons written on June 13, 1929, following, it appears, Mr. Simons' conference with Colonel Taylor. Was Colonel Taylor here in 1929?

Mr. CASEY. I believe he was

The CHAIRMAN. This memorandum declares:

> Colonel Taylor also spoke of the German belief that the present French law for conscription of men, women, and wealth in the next war will enable Germany, with an army not exceeding 400,000 men, to defeat and destroy France, since this law will take away all initiative and will set back the production of munitions at least 6 months.

Do you consider that the conscription of industry and of wealth would set back the production of munitions?

Mr. CASEY. Isn't that Colonel Taylor giving a viewpoint that he apparently picked up in Europe? It does not reflect Colonel Taylor's viewpoint.

The CHAIRMAN. What is your view of that, Major?

Mr. CASEY. I have no view.

Senator POPE. Do you see any reason why it should delay the production of munitions?

Mr. CASEY. If I could talk, I could tell any number of possible reasons where it might interfere.

The CHAIRMAN. He added in his memorandum:

> All of Colonel Taylor's remarks were much appreciated and will be given further study by the interested authorities.

Mr. Casey. Military and Naval Intelligence.

The Chairman. That is who he meant by "interested authorities"?

Mr. Casey. Yes.

The Chairman. That is who you think he meant?

Mr. Casey. I think I have tried to explain that; that we feel in duty bound to report everything. I believe Senator Pope certainly got it in his questioning of me the other day. By the way, Senator, before we forget, will this chart be introduced in the record and given an appropriate number?

The Chairman. Yes. First let this memorandum be marked as an exhibit.

(The memorandum referred to was marked "Exhibit No. 1356" and appears in full in the text on p. 4198.)

The Chairman. Now let the chart which the Major has offered be entered as an exhibit, if this be the appropriate place in the record.

(The chart referred to was marked "Exhibit No. 1357" and is included in the appendix facing p. 4385.)

Mr. Casey. I think we have enough copies so that every Senator will get one.

Mr. Irénée du Pont. Mr. Chairman, would like to enlarge my remark that we are going to have a hell of a time in war if we have one. I believe we should prepare in advance for time of war. That is, in time of peace prepare for war. In other words, you are going to have a hell of a time in any event.

The Chairman. Aren't we going to have a hell of a time no matter how well we are prepared?

Mr. Irénée du Pont. No. If we are well enough prepared, we will never have a war.

Senator Pope. What about Germany in 1914; was not she well prepared?

Mr. Irénée du Pont. She was extremely well prepared then.

Senator Pope. And we had a war anyway.

Mr. Irénée du Pont. Yes.

Senator Pope. She started it.

Mr. Irénée du Pont. She started it; yes. She is an aggressive nation. Remember the words, "Der Tag" that you read from Europe all the time. That was in contemplation of world conquest.

Senator Pope. She was the best prepared nation for starting a war.

Mr. Irénée du Pont. Yes; that is the point, for the purpose of starting a war not for the purpose of self-defense. I do not think the United States will ever attempt world conquest, no matter how well prepared.

The Chairman. Mr. du Pont, referring again to "Exhibit No. 1356", do you think that the conscription of industry in time of war will set back the production of munitions by months?

Mr. Irénée du Pont. Senator, I am not competent to answer that question. I think that there will be a terrible amount of lost motion and confusion if such a movement was started. This economic structure is so complicated and complex that it seems to me it would be hopeless for newcomers to start out on it in a short space of time. That is my opinion offhand.

The CHAIRMAN. Let us suppose our colleague here, Senator Clark, a service man, was to be commissioned at the time of the next war and was to make his entry into your offices and factory and say, "You are now drafted and conscripted, and I am delegated to be here to supervise the production of powder, with your cooperation, which I invite." Do you think that that would slow up the production of the munitions that the country needed?

Mr. IRÉNÉE DU PONT. If you could select just the right man for each job, it would be fine, but how on earth can they be selected under those conditions?

The CHAIRMAN. In Senator Clark's case——

Mr. IRÉNÉE DU PONT. We have trouble enough to select the right man for the right job in the du Pont Co., where we know the men and have known them for years. How can newcomers pick out the right man to enter on propositions of that kind? In the last war we had Mr. Jackling, who had never seen powder made, put in charge of a powder factory. He may have been a fine man and he is a fine man, but it seems to me that on the face of it, it is wrong.

You might as well ask me to take surgeon's tools and go over and repair people who are wounded. I would make a mess of it. I think we must depend on the expert. I have a good deal more faith in taking an expert and taking chances on his honesty than in putting somebody in who cannot know enough to be dishonest but who, I feel, will bungle the job.

The CHAIRMAN. I fear we are getting into something that we won't get out of today if we don't stop.

Senator POPE. Mr. du Pont, you made two statements awhile ago that interested me. One was that you thought that in order to wage war successfully we should have an absolute monarch.

Mr. IRÉNÉE DU PONT. I think that is correct.

Senator POPE. Yes.

Mr. IRÉNÉE DU PONT. The aggressive wars have been mostly waged by absolute monarchs. I never heard of a democracy or a republic properly waging a successful war.

Senator POPE. You made another statement, that in time of peace prepare for war.

Mr. IRÉNÉE DU PONT. Yes.

Senator POPE. Would you suggest we establish an absolute monarch now in time of peace in order to be prepared for war?

Mr. IRÉNÉE DU PONT. No, sir; not at all. I think we are too close to that already.

Senator POPE. Just what do you mean by that statement? You mean to establish an absolute monarch when we get into war?

Mr. IRÉNÉE DU PONT. I think if you are going out for world conquest you must have an absolute monarch, and if you want to prepare to resist an attack you must prepare in advance.

Senator POPE. Then you think we ought to be prepared?

Mr. IRÉNÉE DU PONT. To resist any attack that may be made upon this country.

Senator POPE. And then you think we must establish an absolute monarch in order to be prepared for war?

Mr. IRÉNÉE DU PONT. No, sir. I am talking about the defense of the United States; not going out for world conquest.

Mr. CASEY. Senator Pope, would you consider that Kaiser Wilhelm was an absolute monarch?

Senator POPE. Yes; I think so.

Mr. CASEY. I think in 1915 he announced that President Wilson had more power than he had.

Senator POPE. Well, it doesn't make any difference what he announced.

The CHAIRMAN. Major, have you now the material ready that you wanted to present?

Mr. CASEY. Yes. The examiners have drawn this material and therefore we will just read the first letter from General Williams and the ultimate agreement, but the others will be introduced in the record.

The CHAIRMAN. All right; make it as brief as you can.

Mr. BRADWAY. I will read fast.

The first is a letter from General Williams, chief of ordnance at the time, June 11, 1919, to the president of the E. I. du Pont de Nemours & Co.

Subject: Military explosives.

1. Some days ago I had a conference with Major Casey of your company concerning the future activities of the du Pont Co. in relation to military explosives.

2. From my point of view it would be a very serious loss to the Ordnance Department to have the du Pont Co. decrease its activities in the research and development of propellants and high explosives, and I am writing this letter with a desire to impress upon you the desirability from the Government's point of view of the du Pont Co. continuing its activities along military explosives lines.

3. I have nothing definite to offer in the way of giving business to the du Pont Co. on explosives, for, as you know, the Ordnance Department at this time is very heavily stocked with all kinds of military explosives. But at the same time, I feel that there is room for improvement in propellants, propellant ignition, and similar subjects.

4. It is highly desirable from a military point of view to develop in this country a nonhygroscopic, flashless propellant. Considerable work has been done along these lines by both the Ordnance Department and the du Pont Co., but a satisfactory solution has not been reached, and it is felt that a large field is open to develop such a propellant.

5. There is also some doubt as to the efficiency of the present ignition system for propelling charges, and it is believed that improvements can be effected in ignition. Many other problems of a similar nature connected with the general subject of explosives can be more quickly solved with the assistance of the du Pont Co. Indirectly, such improvements, in my opinion, will result in a few years in giving to the du Pont Co. considerable business along production lines.

6. As stated above, nothing definite as to finances, or giving business to the du Pont Co., can be stated at this time. It is not even definitely known that experimental work can be paid for by the Government, but I would like very much to have an expression from you as to the future policy of the du Pont Co. with reference to this most important subject.

7. I feel sure that, even though the financial outlook is not particularly bright along the explosives line, the du Pont Co. will, for various reasons, seriously hesitate before abandoning this work in which they have so particularly distinguished themselves in the past.

8. Please let me hear from you as early as convenient with reference to your feeling in this matter.

That is offered for the record.

The CHAIRMAN. It may be marked.

(The letter referred to was marked " Exhibit No. 1358 ", and appears in full in the text.)

Mr. BRADWAY. That letter was answered under date of June 14. I will not read that letter.

The CHAIRMAN. You are offering it for the record?

Mr. BRADWAY. Yes.

The CHAIRMAN. Very well.

(The letter referred to was marked "Exhibit No. 1358–A" and is included in the appendix on p. 4385.)

Mr. BRADWAY. A further letter of August 26, 1919, by General Williams, in answer to Irénée du Pont's letter of June 14, is offered but not read at this time.

(The letter referred to was marked "Exhibit No. 1359" and is included in the appendix on p. 4385.)

Mr. BRADWAY. Then we have a reply to the last letter, this reply being dated September 9, 1919, from the president of the company to Major General Williams, which will also be offered for the record.

(The letter referred to was marked "Exhibit No. 1359–A", and reads, as follows:)

SEPTEMBER 9, 1919.

C. C. WILLIAMS,
Major General, Ordnance Department, United States Army,
Chief of Ordnance, Washington, D. C.

DEAR SIR: In further reply to your letter of August 26, I beg to advise that on the date of my communication to you of September 3, Major Casey, directory of military sales, accompanied by Mr. Burnside, Mr. Bradway, Mr. Henning, Mr. Woodbridge, and Mr. Crane, visited Washington and had a conference with Colonel Harris at which were present Colonel Miles, Lieutenant Colonel Davis, and Major Hunter. After discussing the proposition of experimental work in connection with the development of a nonhygroscopic flashless propellant, it was mutually agreed as follows:

(1) That E. I. du Pont de Nemours & Co. will undertake such experimental work as it deems advisable, to attempt to improve our military propellant to make it nonhygroscopic and flashless with equal ballistics to the present propellant. M. D. cordite is considered to represent what is meant by a nonhygroscopic propellant.

(2) The Ordnance Department will supply the du Pont Co. with such informatiotn as they now have on hand of work done with propellants as well as information secured from the "other side", in order that we may avoid a repetition of what has already been done.

(3) The du Pont Co. will make no charge to the United States Government for conducting this experimental work. All firing tests, however, to be made by the Government, the Government supplying the guns, projectiles, and other material necessary for such tests.

(4) Should the Ordnance Department deem it advisable to make a firing test which would require the use of a quantity of propellant larger than the experimental sample, such propellant is to be ordered and paid for at the prevailing Government price for propellant.

(5) Should the experimental work result in success and the resulting propellant be adopted, the du Pont Co. will give the Government all information regarding the manufacture of the propellant.

(6) The du Pont Co. will permit the Government to manufacture in its own arsenals, such propellant as it may require for its own consumption, or will sell the powder to the United States Government without any charge being made for royalties, on any patents of employees of the company. Beyond this the du Pont Co. will have all rights for the manufacture and sale of this propellant.

(7) The du Pont Co. will give the name to the propellant and all propellant, whether manufactured by the United States Government or the du Pont Co. will bear that name.

(8) In order to avoid any misunderstanding as to who was responsible for such development, the du Pont Co. will undertake this experimental work independently of any of the Government arsenals or plants.

Will you kindly acknowledge receipt of this letter.

Yours very truly,

——— ———, *President.*

Mr. BRADWAY. The proposition resulted in an agreement under date of September 25, 1919, letter from General Williams to the du Pont Co.:

[Exhibit No. 1360]

Subject: The development work on flashless nonhygroscopic propellant.

SIR: (Please disregard my letter of Sept. 1, 1919, on the above subject and substitute therefor the following.)

1. Your letter of September 9, 1919, in which you set forth the position of the du Pont Co. with reference to the development of a more satisfactory propellant has been received and has been carefully analyzed. This office feels that the proposition of the du Pont Co. in connection with the development work is praiseworthy, and we are in agreement as to the fundamental conditions for carrying on this work.

2. In order that there may be no misunderstanding as to the position of each party, I will set forth in succeeding paragraphs my understanding of the various conditions enumerated in your letter. You state as follows:

"(1) That E. I. du Pont de Nemours & Co. will undertake such experimental work as it deems advisable, to attempt to improve our military propellant to make it nonhygroscopic and flashless with equal ballistics to the present propellant. M. D. cordite is considered to represent what is meant by a nonhygroscopic propellant."

I understand from the above that the du Pont Co. will energetically prosecute experimental and development work to improve the present military propellant to make it nonhygroscopic and flashless with equal ballistics to the present propellant, and that the reference to cordite is that it may be accepted as a guide in what defines the quality "nonhygroscopic."

"(2) The Ordnance Department will supply the du Pont Co. with such information as they now have on hand of work done with propellants as well as information secured from the 'other side', in order that we may avoid a repetition of what has already been done."

The above paragraph is understood to mean that we will give to the du Pont Co. all the information that is now available in this office, or that we shall receive from abroad. It is the understanding that no formal interchange of information is to be maintained between Picatinny Arsenal and the du Pont Co.'s experimental station.

"(3) The du Pont Co. will make no charge to the United States Government for conducting this experimental work. All firing tests, however, to be made by the Government, the Government supplying the guns, projectiles, and other materials necessary for such tests."

No amplification needed in this paragraph.

"(4) Should the Ordnance Department deem it advisable to make a firing test which would require the use of a quantity of propellant larger than the experimental sample, such propellant is to be ordered and paid for at the prevailing Government price for propellant."

No amplification needed in this paragraph.

"(5) Should the experimental work result in success and the resulting propellant be adopted, the du Pont Co. will give the Government all information regarding the manufacture of the propellant."

It is believed that this paragraph should be worded to state that when experimental work has proceeded to the place where it is submitted for firing trial, the du Pont Co. will give to the Government all the information regarding its manufacture.

"(6) The du Pont Co. will permit the Government to manufacture in its own arsenals such propellant as it may require for its own consumption or will sell the powder to the United States Government without any charge being made for royalties on any patents of employees of the company. Beyond this the du Pont Co. will have all rights for the manufacture and sale of this propellant."

It is my understanding that this paragraph means that the Government is permitted to manufacture in its own arsenals without paying either for the privilege of this manufacture, or for royalties on any patents of employees of the du Pont Co., and that the du Pont Co. will further agree to sell to the United States such quantities of powder as are needed without charge for royalties. By this is meant that no royalties can be collected on any patents which have been taken out by employees of the du Pont Co. during such employ, or on any patents which have been assigned to the du Pont Co. by employees of the company. Information is desired as to whether in time of war this authority would be further extended to enable the Government to have manufactured by concerns other than the du Pont Co., this propellant without payment for such authority or payment for the royalties. It is also considered that no sale of such a propellant should be made to other governments without prior notice being sent to Ordnance Department, United States Army.

"(7) The du Pont Co. will give the name to the propellant and all propellants, whether manufactured by the United States Government or the du Pont Co., will bear that name."

This paragraph is clear, but I believe that we should mutually agree that a properly descriptive name should be given to the propellant, rather than a number or trade name, but that it is entirely right that the name should have characteristics which would definitely acknowledge the origin of the development.

"(8) In order to avoid any misunderstanding as to who was responsible for such development the du Pont Co. will undertake this experimental work independently of any of the Government arsenals or plants."

With reference to this paragraph, it is understood that after the start is made, that no data will be furnished by either Picatinny Arsenal or the du Pont Co. for the benefit of the other.

3. Will you please inform me if the above is in agreement with the conditions of your offer to carry on the development work?

(The letter referred to was marked "Exhibit No. 1360" and appears in full in the text.)

Mr. Bradway. That was followed by a letter to General Williams under date of October 2.

The Chairman. What year was that, again?

Mr. Bradway. 1919.

(The letter referred to was marked "Exhibit No. 1361" and is included in the appendix on p. 4386.)

Mr. Casey. I might add to this, Senator, that the Navy likewise agreed to this arrangement a little later. It is interesting to note as to the powder made by the Government at Picatinny Arsenal, that it is marked on the box, "du Pont FNH", or "du Pont NH, powder manufactured by Picatinny Arsenal." That is the powder they are making.

Senator Pope. Just why do they put those in boxes?

Mr. Casey. That is a part of the agreement.

Mr. Bradway. It is the name of the powder.

Mr. Casey. But they make no payments of any sort. In fact, we help them to make it. They make it the same way we do. In other words, it is a standard powder made by Picatinny Arsenal and ourselves.

The Chairman. Mr. du Pont, you offered for the record this morning a statement indicating Lieutenant Colonel Williams' holding of stock. Was it debentures or stock? [1]

Mr. Irénée du Pont. That is stock, debenture stock, of the du Pont de Nemours Co. The record does not call him lieutenant colonel. It calls him William Williams. I have the transcript.

The Chairman. What was this stock worth in 1915?

Mr. Irénée du Pont. I suppose somewhere a little below par. I am not certain.

Mr. Irénée du Pont. 100.

The Chairman. Was it not considerably above par in 1915?

Mr. Irénée du Pont. No, sir; I don't think so. It hung around 100. Today it is worth more. It has been going up since the spread of low returns on investments. It is a fixed-return investment, 6 percent, and I believe now it is up to about 125, the corresponding stock.

---

[1] See text, p. 4167.

The CHAIRMAN. The committee has been advised that it is about 128 today.

Mr. IRÉNÉE DU PONT. I have not looked it up in the last week or two.

The CHAIRMAN. Major Casey, back on April 23, 1924, it is evident that you and Mr. Porter and Mr. Henning—C. I. B. Henning—who was Mr. Henning?

Mr. CASEY. He was one of my assistants, looking after technical matters.

The CHAIRMAN. You were in Washington at that time discussing with Majors Crain, Hardigg, Simpson, and Wilhelm, also Messrs. Storm and Addelman certain experimental and development work. What was that experimental and development work?

Mr. CASEY. Have you a copy of the letter? Maybe that will help.

The CHAIRMAN. Yes. There is reference in the second paragraph to hastening the program of projected erosion tests in the 75-millimeter field gun. Perhaps that may explain it.

Mr. CASEY. This was in connection with this experimental work brought about by this agreement we just have read.

The CHAIRMAN. This was brought about by that agreement?

Mr. CASEY. Yes; and this referred to the erosion test and also the possibility of using a double base powder and certain other things that would naturally go through an experimental period.

The CHAIRMAN. Would the results have been rather fatal to the du Ponts if this program had not gone through?

Mr. CASEY. It was more to the interest of the Government of the United States.

The CHAIRMAN. Would it have been fatal to the du Ponts if it had not gone through?

Mr. CASEY. In what way? I don't see how it could have hurt us.

The CHAIRMAN. Did not the adoption of a program afford a little better prospect for the du Ponts?

Mr. CASEY. Before the Government could adopt a powder they would have to go through these tests. They would be guilty if they accepted a powder merely because it looked good. The Government will not take a proposition of that sort until they know all about it. I think Colonel Harris can answer that better than I.

The CHAIRMAN. Major, what do you consider good years and lean years in business, good times and lean times?

Mr. CASEY. I think in the military game it depends almost entirely on what Congress is appropriating, because that is our mainstay. If it was not for the Government, we would not be in the business.

The CHAIRMAN. In this memorandum, of which you have a copy and which the committee has no intention of making a part of the record, there is this reference:

> It becomes more evident that decisive developments in the way of improved powder are needed to rescue us from extinction during the "lean period" in munitions requirements.

Mr. Casey. Immediately after the war was certainly a lean period; we were getting no business, and we were tiding over that lean period.

Senator Pope. Then you are very much interested in how much the Government appropriates for preparedness?

Mr. Casey. Surely. Of course, Senator, realize this: We have a plant that is a minimum-sized plant, below that you cannot build a plant, but we feel that it is only fair to note that the Government wants us to maintain it and that they must favor its maintenance and not ask, as I said before, for double taxation.

The Chairman. Let the memorandum to which we have been referring be identified as a committee exhibit, that being the memorandum of April 23, 1924. It is not to be printed.

(The memorandum referred to was marked for identification as "Exhibit No. 1362" and is on file with the committee.)

Mr. Hiss. Mr. Bradway, have you a copy of the letter you just read?

In the letter from Major General Williams, from which you read, Mr. Bradway, you will note under the sixth point which you read——

Mr. Bradway. Which one?

Mr. Hiss. The sixth point in the letter from Major General Williams. Have you got the letter?

Mr. Bradway. September 9?

Mr. Hiss. September 16, 1919. The letter from which you read, the sixth point, after the quoted part, reads, in part [reading "Exhibit No. 1360"]:

> Information is desired as to whether in time of war this authority would be further extended to enable the Government to have manufactured by concerns other than the du Pont Co., this propellant without payment for such authority or payment for the royalties.

Then you also read the reply dated October 2, 1919, introduced as "Exhibit No. 1361." Where in that letter is there an answer to that request of the Government?

Mr. Casey. I do not think there was the slightest misunderstanding as to our intention in the matter. The Government thoroughly understood it. Therefore, it was very much to my surprise, several years later, when we got a letter, I believe from General Ruggles, in which he wanted a clear statement on that one point.

Mr. Hiss. That was not referred to in your reply of October 2, 1919?

Mr. Casey. We accepted the proposition exactly as written. If du Pont FNH or NH powder is the standard propellant, the Government can get all they want, which they can get us to make, and, if they want other manufacturers to make the powder which the Government wants, they can get it without the payment of any royalty.

DEVELOPMENT OF SMOKELESS POWDER

Mr. Hiss. Mr. Bradway, what is the major military powder, in point of volume, now produced by the du Pont Co.? Smokeless powder?

Mr. Bradway. The major one? Repeat the question.

Mr. Hiss. It is smokeless powder, is it not?

Mr. Bradway. Yes, sir; military powder. In reference to what?

Mr. Hiss. From the point of view of volume.

Mr. Bradway. Yes; military smokeless powder.

Mr. Hiss. Going back some years to the original development of that smokeless powder, are you familiar with the name of Mr. Charles E. Munroe, who was chief chemist at the naval torpedo station at Newport?

Mr. Bradway. I am not familiar with him personally.

Mr. Hiss. Have you heard of his name?

Mr. Bradway. Yes.

Mr. Casey. I have met him once.

Mr. Hiss. What was the general opinion of the industry as to Mr. Munroe's ability as a chemist?

Mr. Bradway. I cannot answer that. It is before my time, going back that far.

Mr. Hiss. Do you know, from general knowledge in the industry, whether Mr. Munroe played any part in the development of smokeless powder?

Mr. Bradway. No; I cannot say that.

Mr. Hiss. This memorandum, which I offer as an exhibit, was prepared, apparently, in the publicity bureau of the du Pont Co., the subject being "History of smokeless du Pont powder."

(The memorandum referred to was marked "Exhibit No. 1363" and is included in the appendix on p. 4386.)

Mr. Hiss. The first paragraph says:

> It was about 1893 that Francis G. du Pont and Pierre S. du Pont invented a smokeless powder—"dead-shot powder."

Was that a military powder at that time?

Mr. Bradway. No.

Mr. Hiss. That was not a military powder?

Mr. Bradway. I assume not, from the name "dead-shot powder."

Mr. Casey. That was a shotgun powder.

Mr. Hiss. At the bottom there is the date "1893." [Reading:]

> Professor Munroe resigned as chief chemist of the Newport Naval Torpedo Station and was succeeded on February 1, 1893, by H. F. Brown. H. F. Brown continued to work for a satisfactory powder under the direction of Admiral G. A. Converse and Lt. J. G. Bernadou.

Going back to the first page again [reading]:

> One of the earliest of the formulas in this country was that to produce "indurite" first made by Charles E. Munroe, chief chemist at the Naval Torpedo Station at Newport. This powder was finally abandoned because it showed a tendency to decompose when kept in storage for any length of time.
>
> The Ordnance Bureau officials furnished the du Ponts about this time with specifications for a powder closely resembling the French B. N. powder which was called "Naval smokeless powder."

Was this period in 1893 the period of research, invention, and original development of smokeless powder to a satisfactory stage?

Mr. Bradway. You are taking me back a long ways. It is really beyond my recollection. Maybe Mr. Felix du Pont can answer it.

Mr. A. Felix du Pont. I know something about it. It was.

Mr. Hiss. On the second page of this memorandum, opposite the date 1895 it states [reading]:

> In 1895 these officers took out a patent for a smokeless powder closely resembling Vieille's powdre B. which had been adopted by the French Government

> In 1898 the International Smokeless Powder & Chemical Co. was formed.

Down at the bottom of the page [reading from "Exhibit No. 1363"]:

> The International Co. then turned to H. F. Brown and in 1900 engaged him as chief chemist. On his recommendation the company purchased the Bernadou-Converse patent. A plant was erected under Mr. Brown's direction in the spring of 1901 when manufacturing began. * * * The powder turned out was superior quality and the Government gave the company large orders.
>
> 1903: The capacity of the plant was doubled and in 1903 the company had orders for more powder than it could manufacture even though it worked a double shift of men and produced 7,000 pounds a day.
>
> 1904: On February 4, 1904, the control of the International Co. passed to the du Ponts.

Was the International Co. acquired by the du Pont Co. at or about that time, Mr. Felix du Pont?

Mr. A. FELIX DU PONT. I think that it was about that time.

Mr. HISS. Mr. H. F. Brown came from the International Co. to the du Pont Co., did he?

Mr. A. FELIX DU PONT. Yes.

Mr. HISS. He is now in what capacity with the du Pont Co.?

Mr. A. FELIX DU PONT. He is a director in the company and retired.

Senator POPE. Mr. Hiss, who prepared this history?

Mr. HISS. This was prepared in the publicity bureau of the du Pont Co.

Mr. A. FELIX DU PONT. May I call attention to an error on the first page, right at the beginning of "Exhibit No. 1363." [Reading:]

> It was about 1893 that Francis G. du Pont and Pierre S. du Pont invented a smokeless powder "dead-shot powder."

That is incorrect. They called it "du Pont powder" and "dead shot" was the powder made by a competitor.

Mr. HISS. Was the powder to which you just referred, Mr. Felix du Pont, a military powder or sporting powder?

Mr. A. FELIX DU PONT. You mean what I just referred to now?

Mr. HISS. What you just referred to now.

Mr. A. FELIX DU PONT. That was a sporting powder.

Mr. HISS. Is Mr. H. F. Brown also a vice president of the company?

Mr. IRÉNÉE DU PONT. Yes.

Mr. HISS. He acted in the past as chief chemist?

Mr. IRÉNÉE DU PONT. He was the head of the smokeless powder department during the World War.

Mr. HISS. Mr. Felix du Pont, in your opinion, was the research done at the Newport Naval Station by Mr. Munroe, by Mr. Brown, by Admiral Converse, and Lieutenant Bernadou, while they were in Government service, an important factor in the development of smokeless powder?

Mr. A. FELIX DU PONT. I consider it was very important, yes.

Mr. HISS. Was the du Pont Co. also working, as the first paragraph of this indicates, on the same problem?

Mr. A. FELIX DU PONT. Yes, and working in complete cooperation with the Newport Torpedo Station.

Mr. HISS. They were, therefore, informed of the development work which was being carried out by the Government?

Mr. A. FELIX DU PONT. Yes, sir.

Mr. HISS. In quoting prices to the Government on smokeless powder, from the time that the company began to produce it, on, has any allowance been made for any cost of research or any of the inventions made by the Government?

Mr. A. FELIX DU PONT. I could not say except negatively. That is, where the research of the Government saved money expended by the du Pont Co., it resulted finally in the Government getting their powder at a less price than they would have if the du Pont Co. had carried on all the research.

Mr. HISS. Is Mr. Davis, of the Remington Co., still here?

Mr. DAVIS. Yes, sir.

Mr. HISS. Mr. Davis, I have before me a letter dated March 5, 1928, signed Remington Arms Co., by the general sales manager, whose initials appear to be "H. J. S." Can you identify him?

Mr. DAVIS. Harry J. Strugnell.

Mr. HISS. Addressed to Col. W. G. Tschappat, Ordnance Department.

This letter may have been introduced previously, and, if so, it need not be numbered again.

(The letter referred to was marked "Exhibit No. 1364" and is included in the appendix on p. 4387.)

Mr. HISS. That letter reads, in part, as follows [reading]:

> You wrote to us on February 9 in reference to the semiautomatic rifle which the Government wished to develop either through the Ordnance Department or a commercial concern. You, of course, appreciate that the development of a rifle of this type, which is entirely new, would entail a very heavy expense, and unless we were reimbursed for this expense it would not be possible for us to give any consideration to the proposition. * * *
>
> The development of a rifle such as described is undoubtedly of great importance to the Government and it is our feeling and thought that the Government should be perfectly willing to pay for any experimental work in connection with the development of an arm of this type. If the Government do not feel that they can spend money in the development work, we will be unable to proceed, because we do not know what this would amount to and we feel that we are entitled to compensation for any work of this kind just as we would expect if we were doing it for some individual or a commercial firm.

Is that still the policy of the Remington Co., with respect to development work?

Mr. DAVIS. I think that is true. I would like to say to develop a rifle of that kind and tool up for it would cost in the neighborhood of $125,000 to $150,000, I judge. Is that right?

Mr. CASEY. More than that. Just to tool up, after you get your design, it would cost over $1,000,000.

Mr. HISS. Prior to the letter of March 5, 1928, there was a short letter of January 6, 1928, to Mr. Strugnell. Who was the author of that letter, signed "N", president, initials being "S. N."? Can you identify him?

Mr. DAVIS. Saunders Norvell, former president of the Remington Arms Co.

Mr. HISS (reading "Exhibit No. 1365":)

> I think we should write a letter to General Williams and make the statement that to design such a gun as required by the Government would be exceedingly expensive. Ask them if any appropriation has been made by the Government to cover such an expense; that otherwise we would not care to undertake the work.

That appears to be the official position of the company and not only of the sales manager at that time.

Mr. Davis. I think Mr. Hadley will have something to say along that line. He was there at the time.

Mr. Hadley. I think that conclusion is very decidedly justified, and although some discussion was given the matter, it was never carried very far. The fact is that there was but little encouragement from any of the ordnance people, when it came to a question of an appropriation that might be made. I think that they in the case of semiautomatic rifles had at some time or other, perhaps on several occasions, tested a number of guns which had been offered.

In other words, there have been a number of semiautomatic rifles, and I do not think that they felt that the time was appropriate for them to consider any further appropriation of such a sort as that suggested.

(The letter referred to was marked "Exhibit No. 1365" and appears in full in the text.)

Mr. Hiss. Colonel Harris, when the War Department purchases equipment, the development expense of which has been borne entirely or partly by the Government, is there any policy that that fact should enter into the computation of the prices paid by the Government for the product?

Lieutenant Colonel Harris. That fact should be reflected in an advantage to the Government.

Mr. Hiss. As a practical matter, do you know whether it is possible to reflect that advantage?

Lieutenant Colonel Harris. Without knowing the specific case to which you refer, I think that should reflect the advantage.

Mr. Hiss. Referring specifically to the development of smokeless powder and to the exhibits[1] already introduced by the chairman, as to prices or quotations to certain customers other than the United States Government, at not in excess of the United States Government price, and apparently less, in some cases, than the Government price—to that extent it would appear that in the case of smokeless powder no such reflection has been made in the price quoted to the Government.

Lieutenant Colonel Harris. I do not think I am clear on just what you mean, Mr. Hiss.

Mr. Hiss. The part that the Government played in the development of smokeless powder, as to which there has been some testimony, does not seem to have been reflected in any price made to the Government since that time.

Lieutenant Colonel Harris. The statement was just made by Mr. Felix du Pont, as I understood, that the Government was given the benefit of a lower price on account of that.

Mr. Hiss. I was referring to specific instances in which it appears that lower prices have been quoted to foreign purchasers than to the Government.

Lieutenant Colonel Harris. If such sales were consummated, the Government would not.

Mr. Casey. Mr. Hiss, I think you are getting a little confused there. This agreement clearly indicates that all the research and development work in connection with du Pont FNH and NH had to be borne by the du Pont Co., entirely independent of any Government agency.

---

[1] "Exhibits Nos. 1354 and 1355." See text, pp. 4193 and 4198.

Mr. Hiss. As to that particular powder.

Mr. Casey. That is what we are talking about.

Mr. Hiss. We were also talking about smokeless powder.

Mr. Casey. That has been put out of the picture entirely.

Mr. Hiss. For a long time it was the only military powder sold.

Mr. Casey. Yes; but Mr. du Pont explained that was reflected in the price.

Mr. Hiss. Are you prepared to state if FNH and NH powder are improvements on smokeless powder or are they a totally new type of powder?

Mr. Casey. A new type, using some of the basic principles, of course.

DISPOSITION OF SURPLUS WAR MATERIAL AT END OF WAR

Mr. Hiss. Colonel Harris, as a part of the industrial mobilization plan, has consideration been given to the problems of surplus material arising upon termination of war?

Lieutenant Brannon. Going back to the point which you brought up this morning, if that is what you have in mind, the contract provides a method of settling for materials in the hands of contractors.

Mr. Hiss. May I interrupt just a moment? Before you get to that, in addition to whatever material contractors may have in their hands, is it not inevitable that the Government itself will have large surplus stocks in its own hands at the termination of any war?

Lieutenant Brannon. I think so.

Mr. Hiss. Was that not true at the end of the World War?

Lieutenant Brannon. It was.

Mr. Hiss. I call your attention to a statement appearing in the Graham report ,and I offer a memorandum of excerpts from that report.

The quotation is at page 11, at the bottom.

(The report referred to was marked "Exhibit No. 1366" and is included in the appendix on p. 4388.)

Mr. Hiss. I read a quotation at the bottom of page 11:

> After the signing of the armistice it was determined that there was approximately 100,000,000 pounds of copper in the hands of the War Department that could be counted as surplus copper and was not needed by the Government for war purposes, and it was evident that some disposition must be made of it, either by a sale of it to the public generally or in some other manner.

That was true of other items as well as copper? Large quantities were held by the Government?

Lieutenant Brannon. That is true.

Mr. Hiss. Has the War Department given consideration to the plan of how the Government will dispose of its surplus stocks at that time?

Lieutenant Brannon. I do not think so.

Lieutenant Colonel Harris. Let me answer that. That would be a question of national policy and more for the administration to decide rather than for the Ordnance Department to decide, because the dumping of large stocks of material on the market would have a very demoralizing influence. So that I would say that would be a question for the administration to decide rather than for the Ordnance Department to decide.

Mr. Hiss. Colonel Harris, referring now specifically to the contract provisions which Lieutenant Brannon has mentioned, do the contract forms, as now drawn, not provide for an increase of whatever surplus the Government has, a likely increase, since the Government agrees either to pay the difference between cost and salvage value or to take over materials at cost?

Lieutenant Colonel Harris. I will ask Lieutenant Brannon to answer that.

Lieutenant Brannon. I do not quite get what the implication is, Mr. Hiss.

Mr. Hiss. The question is, to restate it, lieutenant: Colonel Harris has stated that he considers the disposition of surplus Government supplies at the end of a war as an important problem of national economy. I am asking if, under the present forms of contracts proposed to be used in the event of another war, it is not true that the surplus held by the Government at the end of the war will be augmented by considerable additional supplies, in all likelihood, taken over from contractors.

Lieutenant Brannon. No doubt there will be additional surplus in the hands of the contractors.

Mr. Hiss. A large part of which will, in all probability, be taken over by the Government?

Lieutenant Brannon. I presume so. I believe it says there will be settlement at salvage value, if taken over. The matter of salvage could be extended to that surplus.

Mr. Hiss. May I call your attention to a statement appearing at page 2 of this memorandum? This is from page 81 of the Graham report on ordnance [reading from "Exhibit No. 1366"]:

> On the signing of the armistice many contracts, executed only in part, were canceled. So enormous had been the number of contracts made that there were in the factories of contractors over the country almost inconceivable quantities of raw materials and partly finished products of all kinds. It is probably not an exaggeration to say that the greater part of all the manufactured products of the country had been withdrawn from the civilian population and were in Government warehouses or private factories awaiting Government orders.
>
> Immediately after the cancelation of the myriads of contracts, the Government was confronted with the choice of either taking these materials, raw and partially finished, which had not already been delivered, and reselling the same to the public or permitting the contractors to keep them at an agreed price.

That same problem will have to be faced and also settled by the present form of contract. Is that not correct?

Lieutenant Brannon. That is correct.

Mr. Hiss (continuing reading from "Exhibit No. 1366"):

> The War Department adopted as its fixed policy in every case possible the plan to permit the contractor to keep the materials. Repeatedly throughout the hearings appears the testimony showing that the policy of the Secretary of War was to protect the market of the contractor by preventing any of his manufactured products from being sold to the public by the Government in competition with the product of such manufacturer.

That, as Colonel Harris has indicated, will be a serious question of national policy at that time [Continuing reading:]

> Therefore we find everywhere one of two things happening, either the raw materials and partially manufactured products sold back to the contractor at

salvage prices, fixed only by the comparative honesty of the contractor, or such product taken by the Government and withheld from the market by failing to declare the same, surplus.

At what rate was material purchased by contractors against contracts, but not used, taken over at the time of the armistice?

Lieutenant BRANNON. I do not think you can set one rule for all cases, Mr. Hiss. They had all kinds of materials.

Mr. HISS. What is the plan under the present contract? What prices are specified, and what method of computing prices is specified?

Lieutenant BRANNON. I will have to look at that. I do not remember that it is specified.

Mr. HISS. I think it is cost less salvage value, it it not?

Lieutenant BRANNON. I mean, for determining the salvage value. That is correct.

Mr. HISS. I do not think any method for determining salvage value is given. That will be a matter of appraisal at the time, will it not, Lieutenant?

Lieutenant BRANNON. There will be two classes of materials, Mr. Hiss. One will be the raw materials and one will be partially finished products.

Mr. HISS. I am limiting myself for the moment to the raw materials.

Lieutenant Colonel HARRIS. I think the answer is " yes " to your question.

Mr. HISS. Apparently the War Department feels that the risk of termination must be borne by the Government rather than by the contractor. Is that correct?

Lieutenant BRANNON. The contract provides that the contractor will not be paid any anticipated profits. In other words, he will be paid a price for the goods to be delivered, but no anticipated profit. If he is to be paid no anticipated profits, then it is only fair that he should be fully reimbursed for his expenses.

Mr. HISS. Does not that mean that the Government as a whole bears the cost which comes out of it, generally speaking, rather than any risk being borne by the contractor?

Lieutenant BRANNON. Yes; in other words, the Government attempts to make him whole for the cost which he has incurred, but not to pay him any profit, so that he loses his profit on the part of his contract which is canceled, but is reimbursed for the expenditure which he has made.

Mr. HISS. Lieutenant, is that termination provision also found in the fixed-price contract?

Lieutenant BRANNON. In the fixed-price contract the contract price applies, which is a fixed price subject to variation for cost of labor and materials. That provision is included.[1]

Mr. HISS. It is in article XIII, section (c)?

Lieutenant BRANNON. Article XIII.

Mr. HISS. It says [reading]:

> The cost of material on hand, purchased for a necessary part of the contract less salvage value.

Lieutenant BRANNON. That is right.

---

[1] Contract for Supplies, introduced as " Exhibit No. 1226-D." Hearings, Part XV, p. 3625.

Mr. Hiss. In the event of the fixed-price contract, where the Government is not already paying the cost, is not the risk on the cost of materials to some extent on the contractor?

Lieutenant Brannon. The risk is to some extent. I believe this provides that the Government only pays an increase where the increase is ordered through some superagency which may be set up.

Mr. Hiss. That is my understanding.

Lieutenant Brannon. Yes, sir.

Mr. Hiss. Therefore, to some extent, there is a risk borne by a fixed-price contractor.

Lieutenant Brannon. There is.

Mr. Hiss. Why would it not be proper to try to translate back the fixed price into raw materials, instead of the Government bearing the risk of the cost? In other words, if the contract had been completed and the contractor had made a bad guess as to cost, he would have suffered whatever loss was involved, but, in the event of termination under the present contract, the Government saves the contractor harmless, regardless of his judgment, by paying him the cost of the materials. Is not that correct?

Lieutenant Brannon. I think it is.

Mr. Hiss. I show you a memorandum dated July 27, 1919, signed by Mr. William Coyne, on the subject of "Yields", which I offer for appropriate number.

(The memorandum referred to was marked "Exhibit No. 1367", and appears in full in the text.)

Mr. Hiss. That reads:

> To: Irénée du Pont, J. P. Laffey, J. B. Broad, and B. L. Ward:
>
> You will be glad to know that at a conference Saturday morning, July 27, in Philadelphia between Messrs. J. C. Jones, Colonel Delifield, Mr. Rothermel, Maj. J. J. Johnson, and W. S. Gregg, E. C. Britton, and the writer, the Government's representatives advised that yield figures would not be used for the purpose of either figuring price adjustment on finished product delivered under our contracts, or to determine the quantity of raw materials it would have to take back from us, on canceled contracts.

Apparently the same general method adopted in the present draft of the fixed-price contracts was followed in this instance.

Lieutenant Brannon. It would appear so.

Senator Pope. Just one question. Colonel Harris, I understand that most of this surplus war material on hand at the close of the war has been disposed of.

Lieutenant Colonel Harris. Practically all. In fact, you might say all surplus property left over from the war has been disposed of at this time.

Senator Pope. What would you say about the method of disposing of it, Colonel?

Lieutenant Colonel Harris. Each commodity was treated according to the conditions existing in the trade and was disposed of in a manner that seemed least likely to disrupt market conditions.

Senator Pope. Did you have some machine guns on hand at the time?

Lieutenant Colonel Harris. Yes, sir, we did.

Senator Pope. How were they disposed of?

Lieutenant Colonel Harris. I should prefer to refresh my mind on that. I do not recall that.

Senator POPE. Do you know to whom they were disposed? [1]

Lieutenant Colonel HARRIS. No, sir; but I can find out and put it in the record. I will give you that information later.[1]

Senator POPE. All right.

Lieutenant BRANNON. Mr. Hiss, before you continue, may I make one remark in connection with this, in reference to this particular thing?

Mr. HISS. Yes, sir.

Lieutenant BRANNON. Some of the contracts during the war had termination clauses and some did not, so that when you speak of a particular case, it may have been that there was some kind of termination clause under which it was settled.

Mr. HISS. And the present view of the War Department is that that cost must be borne by the Government rather than attempting to get some yield compensation?

Lieutenant BRANNON. Yes, sir. It would be a very intricate matter there. The cost might have been much higher in the initial stage of the contract than it would have been if he had continued with it.

Mr. CASEY. Mr. Hiss.

Mr. HISS. Yes, Major.

Mr. CASEY. On the subject of yields, in the summer of 1918 the Government was very much disturbed, particularly in the case of TNT, about the available supply of raw materials, and they were endeavoring at that time to make contracts where the contractor would agree not to use more than a certain quantity.

I informed them at the time: " It won't bother us, but if you want TNT and then try to limit an inefficient contractor in his yield, you won't get the TNT, because you say you cannot use more than a certain quantity."

So, therefore, they decided, at least in our case, they would put in this possible reservation, but it simply established a basis of allowance which was to be used for determination.

Mr. HISS. In this particular case they did not do it, apparently.

Mr. CASEY. I do not know about this particular case. I was referring to the situation in general.

Mr. HISS. Lieutenant Brannon, one further question:

Will you turn to page 13 of the adjusted compensation contract;[2] article 9, paragraph 1, page 13, provides, does it not, that expenditures made by the contractor among other things for accounting services for determination of payment settlements are to be paid by the Government?

Lieutenant BRANNON. That is correct.

Mr. HISS. Do you not feel that that is an extremely liberal provision that whatever, referring to their own accounts, contractors must do in order to determine their claims shall be borne by the United States Government?

Lieutenant BRANNON. Mr. Hiss, this is really the form of cost-plus contract in which the Government undertakes to pay the cost. During the process of the work accounting costs, of course, would be paid either as direct labor or in the form of overhead. After the contract has terminated, of course, we do not continue to pay any salaries of contractors' forces, except such as are necessarily kept on the work to clear it up, for protection of the Government property, and so forth, and the actual accounting force necessary to wind up the work of the contractor.

---

[1] Under date of March 29, 1935, the War Department answered this query as follows: " Following the World War, surplus machine guns were disposed of as follows: 95 Lewis aircraft machine guns to Mexico; 64 Lewis aircraft machine guns to China; 12 Lewis aircraft machine guns to Brazil; 21 Browning aircraft machine guns to Mexico; 50 Lewis machine guns to Honduras; 200 Browning machine guns to Nicaragua."

[2] Introduced as " Exhibit No. 1226–A", Hearings, Part XV, p. 3625.

Mr. Hiss. With reference to the accounting required in making settlements and determining the amount of claims, it seems to refer rather to personal services of the contractor. The average man who has a claim against the Government does not begrudge the time spent in computing it.

Lieutenant Brannon. That is true, Mr. Hiss, but as I say, this is a form of contract where we have attempted to limit the contractor's profit by paying him what we consider a very nominal fee, but the Government paying the cost. This accounting is one of the few costs that necessarily must continue for a time beyond the termination of the contract.

Mr. Hiss. Will you turn to page 24 of the memorandum I have introduced as "Exhibit No. 1366"?

At the close of the war, the surplus which the Government did dispose of was in almost in every case disposed of at a considerable loss to the Government, was it not?

Lieutenant Brannon. I do not know.

Mr. Hiss. Again quoting from the Graham report:

> On March 15, 1920, 15,000,000 pounds were sold to Belgium for export at 15 cents a pound. On April 10, 1920, 30,000,000 pounds were declared surplus. Fully one-half of this was sold to the packers, while the rest went to the country, through municipal stores and other similar agencies. What was sold to the packers netted the Government only 10½ cents a pound, less 1½ percent.
>
> Some of the officers who had charge of this surplus meat testified that it could have been sold with great ease at the price they received from the general public, namely, from 13 to 15 cents a pound.

Then on page 28, again quoting from the Graham committee:

> Your committee is convinced that there was a continued effort from the date of the signing of the armistice to the time of making the United States Harness Co.'s contract, to wit, September 24, 1920, to prevent the surplus leather equipment of the Army from being placed on the market in competition with leather products of manufacturers.

That sort of fear of competition on the part of the industry will be inevitable wherever the Government has large stocks which it feels it must dispose of?

Lieutenant Brannon. Colonel Harris mentioned that a moment ago.

Mr. Hiss. When the armistice was signed, the general price level was considerably inflated, was it not?

Lieutenant Brannon. Compared to what we ordinarily call normal times.

Mr. Hiss. The pre-war level. A large part of that inflation was due to purchases by the Government on up the line as the price level rose, was it not?

Lieutenant Brannon. I think it was.

Mr. Hiss. So that the inflation and incerased prices cost the Government money, is that not correct?

Lieutenant Brannon. That is true.

Mr. Hiss. And yet at the conclusion of the armistice, when the Government had large stocks purchased at inflated prices, we find strong pressure on the part of those industries who had received that high price to have the high price maintained for their protection, and to have the Government dispose of it in such way as not to affect an inflated price structure caused by the Government purchases.

Lieutenant Brannon. That is a question really beyond the province of the War Department, Mr. Hiss.

Mr. Hiss. Turn to page 33 of " Exhibit No. 1366 "; referring again to leather, the committee stated:

> The probabilities are that the Government will not receive to exceed 15 percent of the cost value of its surplus leather goods.
>
> * * * * * * *
>
> The whole affair from the time of the armistice seems to have been a concerted movement of all the leather men, both inside and outside the War Department, to protect the leather interests at the expense of the Government, until the time came when those inside the Government, having full control of the situation, and seeing their opportunity to realize great profits, deserted their former colleagues, and secured the contract of September 24, 1920, to the consternation of their former associates.

Then on page 38 the Graham committee refers to an agreement through Gen. R. E. Wood, Quartermaster General, entered into with the Canners' Association that some 200,000,000 cans of canned vegetables would be kept off the market during the season. This agreement was subsequently extended by an order of the Quartermaster General.

Then, on page 40, according to the records of the Graham committee, Lieutenant Brannon, a cost plus 7 percent of cost contract was entered into with a company known as the " Siems-Carey-Kerbaugh Corporation " for supplying spruce for airplanes. Director of aircraft production, Mr. John D. Ryan, who became Second Assistant Secretary of War in August of 1918—and he was apparently at that time an executive of the Anaconda Copper Co.—wrote to the Secretary of War in respect to this contract [reading from " Exhibit No. 1366 "]:

> Carey stated at the beginning of the negotiations in which I had part, that they did not expect to ever secure profit from the contract except to the extent that they were able to amortize and reduce the cost of the plan to the Government and take it over on an appraisal that would enable them to engage in the lumber business. That was, I believe, the chief incentive in their making the contract and never disguised, as far as I know.

The problem of selling to a contractor or paying a contractor for his own surplus supplies means settlement at an appraisal basis of the salvage value, does it not?

Lieutenant Brannon. I do not think you can bring in the case of selling a plant back to him. This is not a case of scrap or salvage material. It is the case of the plant, as I understand it.

Mr. Hiss. Look at page 41, a schedule of property accounts. You will see that the total construction material cost $23,000,000, that the estimated salvage value was only $3,900,000, approximately $4,000,000—an example of a very severe shrinkage that had to be borne by the Government.

One further point, Lieutenant Brannon: In settling contracts of this sort I assume that there must be need of great speed in order to clear up the great number of such contracts remaining.

Lieutenant Brannon. It is desirable, I think, to get them straightened out as rapidly as possible.

Mr. Hiss. If you will look at page 42, the Graham committee makes this estimate [reading from "Exhibit No. 1366"]:

> Those claims were going through the claims boards at the rate of about 35 a day, aggregating millions of dollars. Therefore, little time was given to their examination. The process was largely mechanical. In most cases, also, the contractors were shrewd business men, well versed in their line and were more than a match for the comparatively inexperienced members of the settling boards, most of whom knew nothing at all—and so admitted to the committee—about the business they were dealing with.

The Chairman. The committee will be in recess until 2 o'clock.

(Thereupon, at 12:40 p. m. a recess was taken until 2 p. m. of the same day.)

AFTERNOON SESSION

The committee reconvened, pursuant to the taking of recess, at 2 p. m., Senator Gerald P. Nye (chairman) presiding.

The Chairman. The committee will be in order. You may proceed, Mr. Hiss.

TESTIMONY OF IRÉNÉE DU PONT, LAMONT DU PONT, A. C. NIELSEN, F. W. BRADWAY, C. T. HARRIS, E. M. BRANNON, AND W. S. GREGG

Mr. Hiss. Colonel Harris, we were referring to the problem of surplus at the end of the war, just before the close of the morning session. Are you familiar with the amount of surplus powder on hand at the conclusion of the war?

Lieutenant Colonel Harris. I have not the figures. There was quite a large quantity.

Mr. Hiss. I call your attention to the testimony of Maj. Gen. C. C. Williams on October 10, 1919, before the Graham committee, at which time he estimated there were 200,000,000 pounds of smokeless powder on hand at the conclusion of the war.

Does that sound approximately correct to you?

Lieutenant Colonel Harris. It seems so.

Mr. Hiss. Do you know where the most of that powder was stored after the war?

Lieutenant Colonel Harris. It was stored in various Government establishments, but the greater portion was stored at the Old Hickory powder plant.

Mr. Hiss. Do you know how much of that powder that was then stored still remains in Government possession?

Lieutenant Colonel Harris. I do not know how much remains. A great deal of it does not.

Mr. Hiss. Are you familiar with a fire that occurred at Old Hickory, Colonel Harris?

Lieutenant Colonel Harris. I have a recollection of it; yes.

Mr. Hiss. Do you recall approximately how much powder was destroyed at that time?

Lieutenant Colonel Harris. I would hate to say. Something like 35,000,000 is in my mind. I don't know whether it is right or not.

Mr. Hiss. Something like 35,000,000 pounds?

Lieutenant Colonel HARRIS. I don't know whether that is right or not, but that figure is in my mind.

Mr. HISS. Are you familiar with the various experiments made in storing that powder, trying to prevent its deterioration?

Lieutenant Colonel HARRIS. Are you referring to under-water storage?

Mr. HISS. Yes.

Lieutenant Colonel HARRIS. Yes; I am generally familiar with that.

Mr. HISS. Can you describe generally what occurred in that connection?

Lieutenant Colonel HARRIS. We were faced with the task of taking care of this tremendous amount of powder, which was a great fire hazard, and in endeavoring to reduce the cost of maintenance of storage at Old Hickory—there had been some French tests of storing powder under water—there was developed and put into operation a scheme of storing this powder under water at the Old Hickory powder plant.

Mr. HISS. How did that work out, do you remember?

Lieutenant Colonel HARRIS. It did not work out very well.

Mr. HISS. It was not a successful method of preserving powder?

Lieutenant Colonel HARRIS. It was not.

Mr. HISS. Do you recall how much powder there was stored in that way, approximately?

Lieutenant Col. HARRIS. I cannot remember.

Mr. HISS. I call your attention to a letter of April 30, 1929, signed by W. H. O'Gorman, assistant director. It comes from the files of the du Pont Co. I will ask that that be marked with the appropriate exhibit number.

(The letter referred to was marked "Exhibit No. 1368" and is included in the appendix on p. 4408.)

Mr. HISS. I will read from the third paragraph:

> The War Department has in storage at Old Hickory more than 20 million pounds of smokeless powder, which at present is stored under water. Ballistic tests on samples of this powder indicate that it is ballistically unstable. It is, therefore, useless to the War Department. The Ordnance Department has decided to dispose of a portion of the 20 million pounds this year. It is estimated that five to six million pounds will be placed on the market in exchange for FNH. The balance, or upwards of 15 million pounds, will also be disposed of, but the Ordnance Department has not stated as to the approximate date when the greater portion of the powder will be made available for exchange.

What is the reference to "exchange" there?

Lieutenant Colonel HARRIS. There is a law on the statute books that authorizes the Ordnance Department to exchange deteriorated ammunition for renovated or new ammunition.

Mr. HISS. How is that exchange carried out, as a practical matter?

Lieutenant Colonel HARRIS. First, after public notice of desiring bids, bids are received, and a contract is entered into with the successful bidder. The method of bidding was that they were to give so many pounds for so many pounds.

Mr. HISS. So many pounds of good powder for so many pounds of bad powder?

Lieutenant Colonel HARRIS. Yes; give so many pounds of good powder for so many pounds of bad powder.

Mr. Hiss. Do the specifications in the bids require certain types of new powder?

Lieutenant Colonel Harris. Yes; the specifications in the bids required the powder that we wanted.

Mr. Hiss. Mr. Bradway, do you know whether in connection with this exchange the du Pont Co. has at times participated in such bidding?

Mr. Bradway. Yes; they have.

Mr. Hiss. Have other bidders than the du Pont Co. bid on the basis of securing powder from the du Pont Co. in order to comply with their bids? In line with that let me refer again to this last exhibit, the letter of April 30, 1929:

> Other advices given to you were to the effect that the Peters Cartridge Co. were anxious to buy one or two million pounds of powder at 8 cents per pound and that the Western Cartridge Co. would most likely bid on scrap powder. Both of these companies use scrap cannon powder as a basis for making shotgun powder, which is used in cheap-priced shot shells. They could readily afford to pay as high as 10 cents to 15 cents per pound and as their present stocks of cannon powder are low, it would not be surprising if they submitted a higher price to the Government on the next exchange of smokeless for FNH powder.

Mr. Bradway, what uses does the du Pont Co. have for the deteriorated powder which it acquires in this manner?

Mr. Bradway. They use it in some of their commercial products, like lacquer, and to some extent in some fabric coatings.

Mr. Hiss. Is there recovery of nitrocellulose from the powder?

Mr. Bradway. Yes; nitrocellulose. The powder has to be treated to recover the nitrocellulose of the powder, so that it can be used in some other materials.

Mr. Hiss. Colonel Harris, in relation to the amount of powder which was stored under water, which was estimated at 20 million pounds in this last letter, on September 24, 1929, we have a memorandum signed by Mr. Aiken Simons on the subject of " Deteriorated smokeless powder at Old Hickory ", which I will offer for the record for appropriate exhibit marking.

(The memorandum referred to was marked " Exhibit No. 1369 " and is included in the appendix on p. 4408.)

Mr. Hiss. This memorandum contains the following:

> The Ordnance Department, United States Army, was instructed by the General Staff to put in a formal request for permission to sell the deteriorated powder in under-water storage at Old Hickory, amounting to approximately 25,000,000 pounds.

Does that estimate or change of estimate from 20 million pounds in the first letter to 25 million pounds in the second letter strike you as being correct?

Lieutenant Colonel Harris. I do not recall how much was stored under water, so I am unable to say.

Mr. Hiss. Mr. Bradway, I have here a statement supplied to me by you, headed, " Deteriorated smokeless powder purchased by the du Pont Co. from the United States Government ", showing that in 1928, 3,700,000 pounds were purchased; 1930, 4,000,000 pounds; in 1931, nearly 2 million pounds; in 1932, over 2 million pounds; in 1933, over 1 million pounds; in 1934, 2 million pounds, making a total of 16,643,279 pounds, at a cost of $704,389, which is an average of 4.2 cents per pound.

That powder, Colonel Harris, of course, had cost the Government somewhere between the 47½-cent price and some of the higher prices that have been referred to, didn't it?

Lieutenant Colonel Harris. Within that range.

Mr. Hiss. The location of the powder referred to shows 5,000,000 pounds purchased from Old Hickory, that is, stored at Old Hickory, and the other purchased from various storage places.

I offer that as an exhibit for the purposes of the record.

(The statement referred to was marked " Exhibit No. 1370 ", and is included in the appendix on p. 4409.)

Mr. Hiss. Mr. Bradway, has the du Pont Co. purchased deteriorated powder from other sources than the United States Government?

Mr. Bradway. It has.

Mr. Hiss. Do you recall a purchase made in 1921 from the Bethlehem Chemical Co. of 33,000,000 pounds?

Mr. Bradway. Yes.

Mr. Hiss. This agreement, which I offer in evidence, is dated June 1, 1921, between the Bethlehem Chemical Co. and the du Pont Co.

(The agreement referred to was marked " Exhibit No. 1371 " and is included in the appendix on p. 4410.)

Mr. Hiss. This agreement is for 33,000,000 pounds of smokeless powder. Please turn to page 4, Mr Bradway, where the purchase price is stated to be 23,000,000 pounds at 1½ cents a pound, which includes 10 cents for each container in which the powder is packed and 10,000,000 pounds at 3 cents per pound, which includes 10 cents for each container in which the powder is packed.

In addition to the amounts indicated in the first exhibit, that is, the exhibit introduced just before this one, and to the 33,000,000 pounds purchased from Bethlehem Chemical Co., do you know whether the company may also have purchased additional amounts of deteriorated powder?

Mr. Bradway. Yes; we have purchased additional amounts.

Mr. Hiss. The June 1, 1921, contract just referred to recites that the seller—namely, the Bethlehem Chemical Co.—had acquired the 33,000,000 pounds which it was selling to du Pont, from the United States Government.

Mr. Gregg, have you with you a copy of the contract, dated December 1, 1923, between the United States of America by Maj. Charles R. Baxter of the Ordnance Department and the du Pont Fibersilk Co.?

Mr. Gregg. I have. I would like to go back to the Bethlehem contract, if I may do so.

Mr. Hiss. Surely.

Mr. Gregg. The 33,000,000 pounds under that contract with the Bethlehem Chemical Co. were at the rate of a cent and a half a pound and the 10,000,000 pounds were at the rate of 3 cents a pound, under that contract.

Mr. Hiss. That is just what I said.

Mr. Gregg. Oh, did you say that? I beg your pardon. Yes, I have a copy of that contract that you asked about.

SALE OF OLD HICKORY VILLAGE TO DU PONT FIBERSILK CO.

Mr. HISS. What was the du Pont Fibersilk Co., Mr. Gregg?

Mr. GREGG. The du Pont Fibersilk Co., which is now the du Pont Rayon Co., was engaged in the manufacture of rayon. It had a plant at Buffalo, N. Y.

Mr. HISS. That is a hundred percent subsidiary of the du Pont Co.?

Mr. GREGG. It was not at that time, but is now.

Mr. HISS. Do you know what the interest of the du Pont Co. was in the du Pont Fibersilk Co. at this time?

Mr. GREGG. I know the du Pont Co. had majority control.

Mr. NIELSEN. It was about 60 percent. That is approximate.

Mr. HISS. I offer this contract in evidence for appropriate exhibit marking.

(The contract referred to was marked "Exhibit No. 1372", and is included in the appendix on p. 4413.)

Mr. HISS. The first recital clause on page 1 of the contract reads as follows:

> Whereas on November 22, 1920, the United States of America, by Dwight K. Shurtleff, major, Ordnance Department, United States Army, acting under the authority of the Secretary of War, entered into a certain contract with the Nashville Industrial Corporation, a corporation organized and existing under the laws of the State of New Jersey, for the sale and delivery to said Nashville Industrial Corporation of the United States Smokeless Powder Plant and facilities (generally known and hereinafter referred to as the Old Hickory powder plant) located at Jacksonville, Tenn.

The next recital clause states that on July 25, 1923, the United States instituted a proceeding in equity against the Nashville Industrial Corporation praying that the contract referred to before be declared fraudulent and void.

Do you know, Mr. Gregg, what the outcome was of that particular proceeding?

Mr. GREGG. Because this is leading up, I assume, to the purchase of the land and buildings down there by the du Pont Fibersilk Co. at that time. I might say my first knowledge of this matter and of the Nashville Industrial Corporation is when the du Pont Fibersilk Co. came to me with a contract—well, it was not a formal contract; it was merely an exchange of letters, as I recall it—under which they had agreed to purchase and the Nashville Industrial Corporation had agreed to sell certain land and buildings—and the buildings were principally the village—at the Old Hickory powder plant.

Mr. HISS. Do you remember the date of that, Mr. Gregg?

Mr. GREGG. I cannot recall the exact date that they came to me with that.

Mr. HISS. There are certain exhibits attached to this, which may fix the date, directly after the contract as printed, which would be the page following page 8.

Mr. GREGG. Of the contract?

Mr. HISS. Of the contract, according to the copy I have. There is a letter of August 16, 1923, addressed to Messrs. B. P. Morse and William P. Smith, receivers for Nashville Industrial Corporation, signed by the du Pont Fibersilk Co., by L. A. Yerkes, president.

Is that the letter to which you referred, or is that one of the letters to which you referred?

Mr. Gregg. I think it is, Mr. Hiss.

Mr. Hiss. Had there been any negotiations prior to August 16, 1923?

Mr. Gregg. I assume that the du Pont Fibersilk people had been in negotiation.

Mr. Hiss. Do you know over how long a period of time negotiations were carried on?

Mr. Gregg. That I do not know. I do know this, and I might say this, that the du Pont Fibersilk Co. had investigated several sites for an additional rayon plant prior to making this offer to the Nashville Industrial Corporation.

Mr. Hiss. Will you turn to article 1 of the contract, entered as "Exhibit No. 1372", on page 6 of the copy that I have. I am reading from the clause following the semicolon:

> The United States will sell and convey the spur-line railroad and switching yards above referred to to the Tennessee Central Railway Co. for a consideration of one dollar, upon the condition that the Tennessee Central Railway Co. will give to the du Pont Fibersilk Co. a guaranty in writing that it will permanently operate and maintain said spur-line railroad and switching yards, and establish Nashville freight rates or better at the Old Hickory Powder Plant property.

Has that part of the contract been carried out?

Mr. Gregg. I think so.

When the du Pont Fibersilk Co. came to me with this proposal that they had made to the Nashville Industrial Corporation, I told them that I had heard for some time that the Government contemplated instituting suit against the Nashville Industrial Corporation, on the ground that there was some collusion or fraud between the representatives of the Nashville Industrial Corporation and the Government representatives who entered into that contract with respect to the sale of this property to the Nashville Industrial Corporation.

I advised the du Pont Fibersilk Co. that under those conditions, if the Government should bring a suit and the court should hold that there was fraud in connection with this contract and set the contract aside, they would not have a clear title to the property.

I then came to Washington. I took the matter up with the War Department and with the Department of Justice. They both had investigated, or at least the Department of Justice had investigated the conditions surrounding the sale to the Nashville Industrial Corporation.

I told the representatives of the Government here in Washington that we would not make that purchase unless the War Department and the Department of Justice would approve the contract, any contract between the du Pont Fibersilk Co. and the Nashville Industrial Corporation.

I was advised by the Department of Justice, by Mr. Seymour, who was then, as I recall it, assistant to the Attorney General, that the Department of Justice would not recognize and would not approve any contract that the du Pont Fibersilk Co. might make with the Nashville Industrial Corporation, but that the Government would sell us the property.

My reply to that was that I could not consider that proposal, because the Government had made a contract or the War Department had made a contract with the Nashville Industrial Corporation, under which they had sold the property to the Nashville Industrial Corporation, and I said, "If you do institute proceedings the court may hold that this contract between the Government and the Nashville Industrial Corporation is a valid contract. Therefore, we would be in trouble so far as title is concerned."

Mr. Seymour said: "Well, we consider the price of $650,000 that the du Pont Fibersilk Co. has offered for this property a fair price."

Mr. Hiss. Is that the price finally paid, Mr. Gregg?

Mr. Gregg. In connection with this purchase, Mr. Hiss, so far as I can recall.

Mr. Hiss. Yes.

Mr. Gregg (reading):

> And we would like to make the sale to you for that reason.

I then said to Mr. Seymour, "Well, I have heard it said several times that you were going to institute a suit against the Nashville Industrial Corporation, and, while I am not asking you to institute suit against anyone at all, you say that you consider this a fair price for the property. Now, if you contemplate bringing proceedings against the Nashville Industrial Corporation and if you wish to institute such proceedings, why don't you do it now and have receivers appointed for the property during the pendency of the suit? In that way we could get a deed from the receivers for the Nashville Industrial Corporation and we would also be in a position to get a deed from the clerk of the court for the property."

While I was in his office he called up the War Transactions Section that had this Nashville Industrial Corporation in hand, and asked them whether they were in position to institute proceedings. I assume the reply that he got over the phone was to the effect that they were, because he then turned to me and said, "That suit will be instituted within the course of a few days."

They did institute a suit in equity. Receivers were appointed to take over the property during the pendency of the suit, and I believe that about that time they also had an indictment in connection with the matter pending in the Supreme Court of the District of Columbia.

Following the appointment of the receivers, we went ahead with the negotiations, with the result that we got a quitclaim deed from the War Department. I won't be positive, but I think it must have been a quitclaim deed from the Nashville Industrial Corporation, represented by the two receivers, and a deed from the clerk of the United States District Court at Nashville.

With those various deeds I felt we were protected as far as title was concerned.

Mr. Hiss. Mr. Gregg, do you know the final outcome of the suit to which you referred which was instituted by the United States?

Mr. Gregg. My recollection is that there was a consent decree entered in that case—of course, I had nothing to do with that; I am just giving it from memory now—that there was a stipulation and a consent decree under which the Nashville Industrial Corporation agreed to pay a certain sum of money to the Government in connection with that property which, as I recall now—I do not want to be positive about this—but, as I recall, it was a somewhat larger sum than was agreed upon in the original contract between the War Department and the Nashville Industrial Corporation.

Mr. Hiss. Colonel Harris, could you secure for the committee the amount of the original price and whatever final amount was paid? [1]

Lieutenant Colonel Harris. I will try to.

Mr. Hiss. Mr. Gregg, referring again to this contract, "Exhibit No. 1372", article 1, the part I have read, that—

> The United States will sell and convey the spur-line railroad and switching yards above referred to to the Tennesee Central Railway Co. for a consideration of $1 upon the condition that the Tennessee Central Railway Co. will give to the du Pont Fibersilk Co. a guaranty in writing that it will permanently operate and maintain said spur-line railroad, and switching yards, and establish Nashville freight rates or better at the Old Hickory Powder Plant property—

You believe that was carried out?

Mr. Gregg. To the best of my recollection.

Mr. Hiss. Article 2 reads:

> In order that the du Pont Fibersilk Co. may enjoy the use of the concrete road running through the Old Hickory Powder Plant property and the use of the suspension bridge over the Cumberland River at the end of said road, the United States will convey said road and said bridge to Davidson County, in the State of Tennessee for the benefit of the public, upon the condition that Davidson County accept the same as one of its county roads.

If you will turn to "Exhibit A", schedule of property, rights and privileges, under parcel A, page 2——

Mr. Gregg. Appendix A you are referring to now?

Mr. Hiss. It is listed as "Exhibit A." No; it is appendix A.

Mr. Gregg. Appendix A; yes.

Mr. Hiss. There are two documents marked "Appendix A"; one is the letter and one is the schedule.

Mr. Gregg. That is correct.

Mr. Hiss. Appendix A of "Exhibit No. 1372", marked "Schedule of property, rights, and privileges", page 2, after referring to the property described as parcel A, in the last paragraph it says:

> All of the permanent village within the bounds of parcel A, consisting of 346 permanent houses, including all replacements of plumbing, heating, and lighting fixtures in good usable condition that may have been removed from said permanent homes. Said replacements of fixtures to be delivered to the buildings by the receivers at their expense and to be installed by Du Pont Fibersilk Co. at its expense.
>
> In addition to the said permanent houses, the following houses within the bounds of parcel A are to be included:
>
> One hundred and sixty-six so-called "6-room temporary bungalows", which are frame structures covered with either rubberoid or tar paper, including all of the plumbing and lighting fixtures in same. Replacements parts in good usable condition to replace any of the fixtures which have been removed are to be delivered to the buildings by the receivers at their expense and to be installed by the Du Pont Fibersilk Co. at its expense.

In addition:

> Sixty 2-story, 6-room, 6-apartment houses which are frame structures covered with rubberoid or tar paper, including all plumbing and lighting fixtures.

---

[1] Under date of March 29, 1935, the War Department submitted the following information to the committee:

The records of the Ordnance Department show that the purchase price of the Old Hickory plant contained in the contract of Nov. 22, 1920, with the Nashville Industrial Corporation was $3,503,000. The following were excluded:

Property sold prior to July 12, 1920, valued at	$2, 800, 000
Property previously transferred to other Government departments, valued at	2, 700, 000
Other property specifically reserved by the Government, valued at	1, 800, 000
Total exclusions and deductions	7, 300, 000

Replacement fixtures in good usable condition to replace such fixtures that have been removed are to be delivered to the buildings by the receivers at their expense and to be installed by the Du Pont Fibersilk Co. at its expense.

Nineteen 1-story, 4-room, 6-family apartment buildings, of frame construction covered with rubberoid or tar paper, including all plumbing and lighting fixtures. Replacement fixtures in good usable condition to replace such fixtures as have been removed will be delivered to the buildings by the receivers at their expense and to be installed by the Du Pont Fibersilk Co. at its expense.

A brick building known as the "Percy House."

Police headquarters.

Soda storehouse no. 5 (excepting contents).

Y. M. C. A. with the equipment.

Y. W. C. A.

Hotel, including 2 dormitory or rooming-house buildings, and 1 dining-hall building.

Two-bed hospital with all equipment.

Post office with all equipment.

Fire house and equipment, including one Broadway hose truck and one Ford chief's car.

Retail-store building occupied by the H. G. Hill Grocery Co., together with adjoining building, and such equipment located therein as does not belong to H. G. Hill Grocery Co.

Dry-goods store.

Paint shop.

Garage.

Drug stores.

Commissary store.

Bank building.

Farm house near the Hill store.

Swimming pool and bath houses.

Three community garages in village and other garages and maids' quarters on property—

And a list of additional buildings—

all of which are indicated on map U.S.N. No. 10, exhibit no. 1.

All railroad tracks now located on parcel A, together with the tracks and right-of-way for same connecting said tracks with the classification yard and main railroad spur, and the right to construct new railroad spur across the railroad right-of-way and road right-of-way to connect such additional tracks as the du Pont Fibersilk Co. may find it necessary to install on parcel A with the main railroad spur and classification yard.

All pipe lines of any nature above or below ground within the limits of parcel A together with valves and fire hydrants and manholes, inlet boxes, et cetera, on sewers, all pole lines, electric transmission lines, telephone lines, fire alarm, and all other signal lines within the limits of parcel A.

* * * * * * *

Included with the pump house are two 8,500-g.p.m. pumps—

Gallons per minute is that?

Mr. Gregg. Where is that?

Mr. Hiss. Page 5, under parcel B [reading from "Exhibit No. 1372"]:

Included with the pump house are two 8,500-g.p.m. pumps.

Is that gallons per minute?

Mr. Gregg. That is right.

Mr. Hiss (continuing reading):

With motors, together with all of the equipment, piping, electrical equipment, wiring, conduits, and switchboard inside of the building.

Again on page 8 [reading]:

On the 100-acre factory site of parcel A said 100-acre tract being marked "AA"—

Is that in addition to the village described, Mr. Gregg?

Mr. GREGG. What article is that?

Mr. HISS. This is not an article. It is under "Rights-of-way" in this appendix.

Mr. GREGG. Page 8?

Mr. HISS. Page 8 [reading]:

> On the 100-acre factory site of parcel A said 100-acre tract being marked AA on exhibit 1 the du Pont Fibersilk Co. purchases of the improvements on this factory site only the following—

That was in addition to the village to which you have already referred, was it not, Mr. Gregg?

Mr. GREGG. That is my understanding. I tell you what I would like to do: I have some of my files here, and I would like to check this. I assume that what is listed here, which was apparently the appendix to the proposal made by the du Pont Fibersilk Co. prior to the institution of suit, and so forth, but I would like to ascertain whether that makes reference to the same property.[1]

Mr. HISS. Could you just ascertain that and let us know subsequently, Mr. Gregg?

Mr. GREGG. Yes, sir; I will. I would like to check that though.

Mr. HISS. The village described in this contract is the village that was constructed by Mason & Hanger Co., is it not, Mr. Gregg?[2]

Mr. GREGG. I think the Mason & Hanger Co. did construct the village; yes, sir.

Mr. HISS. In addition to that there was a 100-acre factory site referred to, with certain equipment on the site?

Mr. GREGG. That is correct.

Mr. HISS. The amount paid to Mason & Hanger for the construction of the village was $20,000,000, was it not?

Mr. GREGG. No, no; not for the construction of the village. That was $21,000,000, as I recall it, for all the work Mason & Hanger did.

Mr. HISS. In addition to the village, what did Mason & Hanger do under their agreement?

Mr. GREGG. They built the railroad into the plant. I think there might be someone here who can give you more detail on that.

Mr. HISS. Referring to the railroad, Mr. Gregg, under this contract the railroad spur track was conveyed to the railway company for $1 by the Government, in order that it be kept open into the plant and the Nashville freight rates be guaranteed?

Mr. GREGG. That is correct.

Mr. HISS. And in addition to the village site was the 100-acre factory site?

Mr. GREGG. That is correct, if that checks with what was eventually conveyed to us.

Mr. HISS. The total amount paid by the du Pont Fibersilk Co. for whatever it has acquired on the Nashville site was $600,000, was it not?

Mr. GREGG. To the best of my knowledge. That is, in connection with that purchase.

---

[1] Under date of Apr. 18, 1935, Mr. Gregg notified the committee that the items in question are a part of the village and not an addition thereto. See appendix, p. 4496.

[2] Additional data regarding Mason & Hanger Co. on p. 4254.

LEGISLATIVE ACTIVITIES OF DU PONT OFFICIALS

The CHAIRMAN. Mr. Irénée du Pont, I want to state a request here that is somewhat involved, having to do with a request for information which we would like to have you furnish the committee.

We would like to have a list showing the names of all company officials, officers, employees, representatives, publicity agents, or lawyers who have been engaged in any character of legislative work for the company, that is E. I. du Pont de Nemours & Co., from 1920 to 1934 inclusive, together with a showing of their salaries by years, and such other income from the company or association and affiliated companies as might have been theirs.[1]

Also we would like to be supplied with the names of all officers or officials or representatives, publicity agents, or lawyers of various organizations to which the company contributed, directly or indirectly, during these years, and who engaged in legislative work of any character for the societies or for the company, and any of its affiliated companies, together with the total amounts of their salaries and their incomes during these years.[1]

If you would like, the Chair will have this request repeated in a letter and dispatch it to you at Wilmington.

Mr. IRÉNÉE DU PONT. I wish you would repeat that in a letter, but I should think that there is certainly some of that that would be utterly impossible for me to obtain, and I doubt if the company could obtain it.

What authority have we got to go to an organization, of which we may be only members, and secure from them, without your authority or specific subpena to them to bring "duces tecum" information. We cannot possibly do it.

The CHAIRMAN. Could you not request such association or organization to supply the committee with that information?

Mr. IRÉNÉE DU PONT. I do not know how long it would take, to go over 14 years of correspondence, because I do not know just what you mean by some of that. Of course, I have not had a chance to think about this, and I have not had your letter yet. Perhaps when I get your letter I can "stew" something more out of it.

The CHAIRMAN. With that understanding, we will try to make it a little clearer in the letter just what is wanted. If difficulty arises in furnishing any of that, of course you can apprise the committee of that difficulty.

Senator CLARK. Mr. Chairman, while you are asking for information, I would like to have an exhibit prepared by the company showing how much, if any, the du Pont Co. itself, or the same list of officials as to whom information was furnished on campaign contributions, contributed to the National Economy League.[2]

The CHAIRMAN. Mr. du Pont, have you had anyone detailed to Washington during this period from 1920 to 1930 to handle legislative matters for the company?

Mr. IRÉNÉE DU PONT. I do not know just what you mean. I was detailed to come down here in 1919, and came down about 6 or 7 days, and I think I saw pretty nearly everybody here. I do not mean everybody in this room, but anybody who had any influence with the legislation, that I could find.

---

[1] For du Pont response to above requests, see appendix, p. 4497.

[2] Under date of Apr. 18, 1935, the du Pont Co. furnished information regarding contribution to the National Economy League. See appendix, p. 4498.

There were other members of the du Pont Co. down here at the same time.

The Chairman. Have you employed anyone, outside of your own official staff, to do legislative work in Washington?

Mr. Irénée du Pont. I do not recall anyone, but it is quite possible we may have. My recollection is hardly elastic enough to say.

The Chairman. Did Joseph Tumulty do any legislative work for you in Washington?

Mr. Irénée du Pont. Not to my knowledge.

The Chairman. The record reveals that he was paid, Mr. du Pont, for services rendered your company, but they were ostensibly, or they were evidently, for services quite alone in New Jersey.

Mr. Irénée du Pont. I do not recall.

Mr. Nielsen. That is correct, Mr. du Pont. I saw the voucher. He did some work in New Jersey for us.

Senator Pope. What sort of work? Legal work?

Mr. Nielsen. Legal work.

The Chairman. It had to do with tax matters?

Mr. Nielsen. Tax matters; yes, sir.

The Chairman. And some legislation which was pending, perhaps?

Mr. Nielsen. I cannot tell you that.

The Chairman. Mr. R. R. M. Carpenter.

TESTIMONY OF ROBERT R. M. CARPENTER

(The witness was duly sworn by the chairman.)

The Chairman. Mr. Carpenter, have you given the reporter your full name?

Mr. Carpenter. Yes, sir.

The Chairman. You are a retired vice president of the du Pont Co., are you not, Mr. Carpenter?

Mr. Carpenter. Yes, sir.

The Chairman. In what various capacities or at the heads of what departments did you serve during your time with the du Pont Co.?

Mr. Carpenter. May I refer to a memorandum, Senator?

The Chairman. Yes, of course, you may.

Mr. Carpenter. I think I made a memorandum on it. How far back would you like to go, Senator?

The Chairman. When did you become a vice president?

Mr. Carpenter. March 23, 1916.

The Chairman. Let us go back to that time.

Mr. Carpenter. All right. On April 1, 1917, I was in charge of the development department. That was a department which was looking into new industries which the company might go into, and any other matters of that nature. In the year 1919 I was a member of the finance committee; from April 1919, to September 1921, I was a member of the finance committee.

From September 1921, to July 1922, I was the general manager of the cellulose department.

From February 1923, to August 1923, I was general manager of the pyrolene department.

From April 1925, to March 1931, I was a member of the executive committee.

I can explain, probably, Senator, why there were so many of those changes. I specialized more or less in the company on personnel and on organization matters. My reason for going into these different departments more or less frequently was purely an organization matter until those departments were reorganized, at which time I retired from that department, and probably was inactive for a while, and then went into some other department.

My work was mostly personnel and organization work.

The CHAIRMAN. When did you retire from the vice presidency of E. I. du Pont de Nemours & Co.?

Mr. CARPENTER. I still have that title. although inactive, as it is the custom of the company when any of the vice presidents retire and remain a director, they retain their title as complimentary, you might say.

The CHAIRMAN. When did you become a vice president retired?

Mr. CARPENTER. March 1931.

The CHAIRMAN. Have you continued in any capacity at all under this retirement? Have you maintained any connection at all?

Mr. CARPENTER. As a director, and at times in some advisory capacity, as someone requests, or if anything comes to my attention that I wish to call to the attention of any other department or official of the company, why, naturally, I do so, whether I happen to be in Wilmington or some place else.

The CHAIRMAN. Where do you maintain offices, Mr. Carpenter?

Mr. CARPENTER. I have an office in the du Pont Building.

The CHAIRMAN. Do you term that your headquarters?

Mr. CARPENTER. Yes, sir.

Mr. LAMMOT DU PONT. Mr. Chairman, I think Mr. Carpenter is entirely too modest as to his activities since retirement. He is frequently consulted on personnel and organization matters.

The CHAIRMAN. I, too, have been inclined, Mr. du Pont, to think that he was overmodest in connection with his continuing service.

Mr. Carpenter, were you, during your active vice presidency, engaged specifically in legislative work for the company?

Mr. CARPENTER. No, sir; Let me qualify that, Senator, if you will. I do not say that I did not have the same interest that other members of the executive committee had or any other vice president had, and possibly a half a dozen times I might have or I did interview someone with whom I was acquainted, or probably at the request of the president, but, as for being in charge or having any active position in legislative work, no, sir; to answer your question specifically.

The CHAIRMAN. It is not the case, then, that all legislative matters were referred to you yourself, when they arose during the time of your service as vice president?

Mr. CARPENTER. No; they were not. There have been times when men who might have reported to the executive committee through me, such as Mr. Weston, our policy being that on a small department or small division like a publicity division, that he had to contact with the executive committee, the contact being generally through the vice president on the executive committee.

Senator CLARK. Mr. Carpenter, we had an exhibit here last week, being a memorandum from Major Casey to yourself, in which he used this language:

> We believe this matter comes under the heading of "Unfavorable Legislation by the United States Government."

I thought that was an unusual procedure. He said that it was in the ordinary course to refer anything to you that had to do with "unfavorable legislation."

Mr. CARPENTER. May I see that letter? I still insist I had no jurisdiction over legislative matters, but I would like to see the letter.

The CHAIRMAN. We shall come back to the letter, which is a matter of record.

Speaking of contact, did the Du Pont Co. during your service there maintain a so-called "legislative" contact man?

Mr. CARPENTER. You mean over a period of years?

The CHAIRMAN. For a day or for a period of years.

Mr. CARPENTER. I think that was in the hands of the legal department, all legislative matters.

The CHAIRMAN. Who was retained as legislative contact man?

Mr. CARPENTER. I think that Judge Laffey at that time was head of the legal department. As to who his employees were, I am not sure.

The CHAIRMAN. We were not terming the judge as having been the legislative contact man.

Mr. CARPENTER. I do not know that we ever had a legislative contact man officially; not to my knowledge. I do not say that we did not, because I was not particularly interested in it.

The CHAIRMAN. Who in the company would you feel was the contact man on legislative matters, so to speak?

Mr. CARPENTER. All legislative matters were referred to Judge Laffey, as I remember.

The CHAIRMAN. Mr. Carpenter, I have before me a letter written at the Wardman Park Hotel in Washington on December 4, 1919, by Weston, and addressed to you. Who is Weston?

Mr. CARPENTER. May I go back a year or so and explain the situation?

Mr. Weston was employed by me when I was in the development department, during the war, as what we call a publicity man. There were a great many articles going in the papers which we thought detrimental, both to the interests of ourselves and the interests of the Government, and we decided that we would employ a man who could govern those questions through the newspapers and send them true information.

Mr. Weston, as I say, reported to the executive committee through me. And if he happened to be away at some other city, and had a matter that referred to a legislative matter, for example, if that is what you are bringing up, he might send that letter, as a matter of course, through my office, addressed to me, and it would be referred to whomever was concerned.

May I glance at that letter, Senator?

The CHAIRMAN. Just what was Weston's capacity?

Mr. CARPENTER. His title was publicity manager.

The CHAIRMAN. This is a letter which has already been introduced into the record and is known as "Exhibit No. 1059."[1]

Let us read it. I think it has not been read in full as yet [reading]:

> DEAR MR. CARPENTER: T. C.—

who is T. C.?

Mr. CARPENTER. I judge Mr. Coleman du Pont.

The CHAIRMAN (reading):

> T. C. and King—

who is King?

Mr. CARPENTER. I do not know unless it means John King.

Senator CLARK. Is that John T. King?

Mr. CARPENTER. I guess it was; was it not? John T. King.

Senator CLARK. One of the national committeemen from Connecticut?

Mr. CARPENTER. I think that is probably who is meant. I do not think I ever met him but once.

Senator CLARK. He died while under indictment for frauds in connection with the Alien Property Custodian office?

Mr. CARPENTER. I do not know anything about that.

The CHAIRMAN (reading):

> T. C. and King can help with Senate subcommittee. Curtis, of Kansas, is the party whip and always goes regular. The national committeeman, urged on by T. C. and King, either directly or through Hays, could manage him.
>
> Senator McLean, of Connecticut, ought to be easy for King to reach.
>
> Can't you get the wires or phone busy on King? He is due here early in the week for a national committee meeting—expected to arrive on Sunday—and could help this cause without inconvenience.
>
> We have all kinds of "dope" about Watson, of Indiana. The disquieting report is that he has been busy in behalf of importers and is not friendly to us. We thought Landis had him fixed and still hope that is true.

Who is Landis?

Mr. CARPENTER. I suppose that refers to Mr. Landis who I think at that time was in Washington representing Colonel Buckner.

Senator CLARK. He was a former Congressman from Indiana?

Mr. CARPENTER. Yes, sir.

Mr. IRÉNÉE DU PONT. He left the office before that time. The office in which Landis was during the war was closed the September previous, I think.

The CHAIRMAN (continuing reading):

> The diagnosis that we want to accept is that he will follow the Penrose lead and that Penrose picked him to put this thing over for us. According to all the political "wise men", this is the case—but you can't be sure that the political pull would not be wasted.
>
> Committee meeting was called at direction of Penrose, who wrote that action should not be delayed because of his illness. Evidently it is proposed to push the hearings through next week so that the full committee can act before Christmas holidays and have bill ready for Senate after first of year.
>
> Think Irènèe du Pont will have to come here Sunday for conference. There is a loud call for him from everyone. Garvan feels that he is worth more than all the others combined. I am to see Watson tomorrow and then we can complete our program. After that I will phone you or Mr. du Pont.
>
> Taken as a whole, the situation looks good to me, but I don't want to miss any tricks, hence the suggestion about T. C., King, and Hays.

---

[1] Hearings, Part XII, p. 2767.

Senator CLARK. Is that the Mr. Garvan who says this committee is a dangerous outfit, engaged in State socialism, in a document put out 2 or 3 days ago?

The CHAIRMAN. Who is the Garvan referred to here?

Mr. CARPENTER. I am not particularly familiar with the letter, Senator, as the letter probably came into my office as a clearing house and was referred, I think, to Mr. Irénée du Pont, who was looking after the dye legislation.

Senator CLARK. Was it the Francis P. Garvan, Alien Property Custodian during the war, who took the dye patents and gave them to the Chemical Foundation, of which he is now the head?

Mr. IRÉNÉE DU PONT. Yes, sir.

The CHAIRMAN (continuing reading):

> I have the military situation in hand, Earle, Williams, et al.
> Shall not fail to meet you at the Willard Saturday night.

Here we find the expression to which there was some reference the other day "(duce tecum)." [Reading]:

> Yours,
>
> WESTON.

You say this was sent to your office merely as a clearing house?

Mr. CARPENTER. Yes, sir.

The CHAIRMAN. Why was it addressed to you?

Mr. CARPENTER. As I say, Mr. Weston reported to the executive committee through me, and if he wished to address the letter to the company he would naturally send it to me, and my office would refer it to whoever was interested in that particular subject.

Senator CLARK. Here is the letter, Mr. Carpenter, to which I referred a while ago.[1] It is dated at Wilmington, Del., July 10, 1920 [reading]:

> EMBARGO ON EXPORTS TO CHINA
>
> Mr. R. R. M. CARPENTER, *Vice President:*
>
> According to our best information obtainable here and through reports from Commander I. V. Gillis, our representative in China, we understand that there is a positive embargo on the shipment of arms and munitions of war from this country into China.
>
> He assures us that he believes he could do considerable military business were it possible to make shipments.
>
> We believe this matter comes under the heading of "Unfavorable legislation by the United States Government" and we ask that you investigate this proposition with the idea of determining how long such embargo is likely to last and whether it is possible to have this order rescinded.

I would call your attention to the fact that the phrase "Unfavorable legislation by the United States Government" appears in quotation marks.

Was it due course in the du Pont Co. to refer such matters to you, such legislative matters?

Mr. CARPENTER. What was the date?

Senator CLARK. July 10, 1920.

Mr. CARPENTER. I judge that that letter must have been sent to me for the same reason at the time; that Mr. Weston was on that kind of work, publicity in Washington. I think that letter was probably sent to me, and I still think it must have been forwarded to the publicity department, for the heading shows that is where the letter was found.

---

[1] "Exhibit No. 861", Hearings, Part X, p. 2275.

Senator CLARK. Did you have a department in the du Pont Co. for unfavorable legislation by the United States Government, which this would seem to indicate?

Mr. CARPENTER. I do not think so. I would be practically willing to say no.

The CHAIRMAN. Mr. Carpenter, did you go to Florida in the early months of 1920 to see John T. King?

Mr. CARPENTER. No, sir; I was on leave of absence from January 1st of that year until April. I believe that I was introduced—I freshened my recollection on that, my memory, and I think I was introduced to John King, and although I do not recall the details of it, I wrote to Mr. Irénée du Pont—I think this is the letter to which you referred—and stated to him the statement which was made to me by Mr. King. That was the only time, I think, I ever saw John T. King. I did not go there for that purpose.

The CHAIRMAN. In that letter you do not refer to your talking with Mr. King as having been an introduction, but speak of it as being a long talk.

Mr. CARPENTER. As I say, I met him there, but never met him before or since.

The CHAIRMAN. On February 17, 1920, a letter was written from Palm Beach, Florida, signed "R." That is your letter?

Mr. CARPENTER. Yes, sir.

The CHAIRMAN. It is addressed to "Dear Buss." Who is Buss?

Mr. CARPENTER. Mr. Irénée du Pont.

The CHAIRMAN. That is a nickname?

Mr. CARPENTER. Yes, sir.

(The letter referred to was marked "Exhibit No. 1373" and appears in full in the text.)

The CHAIRMAN. The letter reads:

> I had a long talk with John King this morning.
>
> He says Penrose wants to put over the best legislation possible for dyes at this time, with the intention of improving it and giving us what we want later, as soon as their control is strengthened.
>
> He says he was in a meeting between Penrose, Watson, and himself, in fact he took Watson to Penrose, about 3 or 4 weeks ago, they being the first to see Penrose after his sickness. Penrose orders to Watson were: "Give Du Ponts what they want just as far as you possibly can without getting into a row, and will improve it later to meet their views."
>
> Penrose will be near here next week and King and I are going over to call on him.

Mr. CARPENTER. I wrote that to Mr. du Pont, and that is the last I ever heard of it.

The CHAIRMAN. You did not call on Mr. Penrose?

Mr. CARPENTER. No, sir.

Mr. IRÉNÉE DU PONT. Mr. Senator, if I might interrupt, I think I called on him. I recall going up to see Mr. Penrose at a place called Seward or Sewall, near Jupiter, Fla., where Mr. Penrose was wintering.

The CHAIRMAN. You were in Florida at this time?

Mr. IRÉNÉE DU PONT. No, I was not. I happened to go down there soon after. I have been in the habit of going every year, January, February, sometimes as late as March. I do not know what date this is.

The CHAIRMAN. 1920.

Senator CLARK. Was John King there when you saw Penrose?

Mr. IRÉNÉE DU PONT. I really do not recall. I have seen John T. King a number of times. He might have been there at that time or not. I would like also to say that Mr. Penrose did not give me the glorious opinion that the letter reflected by a whole lot. Maybe he was holding out on me. I do not know. And I would say that I tried to educate him the previous winter, 1919, very hard. I visited him several times.

The CHAIRMAN. As these letters are referred to, the reporter is requested to identify them with a number as exhibits in the record unless otherwise requested.

Mr. Carpenter, all of this seems to indicate more or less a large interest on your part in the legislative field so far as it related to the interests of the E. I. du Pont de Nemours & Co.

Mr. CARPENTER. I do not blame you for thinking that. Some of these letters certainly look it. But as they were spread over a period of about 12 years, I do not think they amount to that at all. I still repeat that I was not in any way in charge of legislation.

The CHAIRMAN. I read from a letter dated at Wilmington, July 10, 1920, addressed to you as vice president by K. K. V. Casey, director of sales, by S. Terrill.[1]

Who is S. Terrill?

Mr. CARPENTER. I do not know, sir. Do you know, Mr. Bradway?

Mr. BRADWAY. He was a man that used to be in the sales division under Major Casey.

The CHAIRMAN. Under Major Casey?

Mr. BRADWAY. Yes.

The CHAIRMAN. The note is written at the head of the letter, " Embargo on exports to China ".

Mr. CARPENTER. It is the same letter that Senator Clark referred to a moment ago.

The CHAIRMAN. Yes. The reference that was in this letter read by Senator Clark as to matters coming under the heading of " Unfavorable legislation by the United States Government " forces me to rather wonder now at your expression that you were not in charge of legislative matters, since this that came under the head of " legislative matters " was at once referred to you.

Mr. CARPENTER. I still say that I was not in charge of any legislative matters. It is not unnatural for a letter of that kind to come in to me. What is the date of that, Senator? 1920, again?

The CHAIRMAN. July 10, 1920.

Mr. IRÉNÉE DU PONT. Would it not be reasonable and fair to let Mr. Carpenter see the letter you are talking about? Remember, this thing is a good many years ago.

Senator CLARK. That is the one I read just a minute ago.

Mr. CARPENTER. I read this letter.

Mr. IRÉNÉE DU PONT. Oh, I thought it was something else.

Senator CLARK. I put it in the record last week.

Mr. CARPENTER. I think that very naturally might have come in to me. That was during the period I was on the finance committee, and occupied an office directly next to the president and handled a great many matters for the president.

---

[1] " Exhibit No. 861 ", Hearings, Part X, p. 2275.

Mr. Irénée du Pont. Mr. Chairman, I would like to point out that this was the question, "Let us find out how long this embargo is going to be in force." I think a newspaper man would be just the fellow who could nose that thing out, especially in Washington. I do not think there is anything very serious about that letter.

The Chairman. These were more than matters relating to this embargo, of a legislative nature——

Mr. Irénée du Pont. That is quite correct.

The Chairman. Which seem to have been put up to Mr. Carpenter.

Mr. Carpenter. There probably were a dozen in a period of some years.

The Chairman. Here is a letter of March 17, 1920, addressed to Mr. Irénée du Pont, who at that time, it appears, was at Palm Beach, Fla.

(The letter referred to was marked "Exhibit No. 1375", and is included in the appendix on p. 4422.)[1]

The Chairman. On the second page, Mr. Carpenter, the new paragraph that starts there reads as follows:

> I do not believe you appreciate the situation on passports. You doubtless know we have no Secretary of State, and Ruly gives it as an opinion that there may not be a Secretary for a month or more.

Who is "Ruly"?

Mr. Carpenter. That is I; another nickname.

The Chairman. Here again, on a passport matter having to do with legislative or administrative affairs in Washington, it evidently was left pretty much to you to look after.

Mr. Carpenter. Not a bit. He simply says that I gave that as my opinion. He did not ask me in any way to go and get a passport for somebody.

Mr. du Pont calls my attention to the fact that at that time Major Sylvester was in our employ, and I think that passport work in Washington was done by Major Sylvester, he being familiar with Washington affairs.

Mr. Irénée du Pont. He was under you?

Mr. Carpenter. He reported to me.

That was another division, Senator. Major Sylvester was in charge of protection during the war and remained after the war.

Senator Clark. That is the former chief of police here in the District?

Mr. Carpenter. Yes, sir; that is the man. He reported to me, as a member of the executive committee, not to take orders from me, but reported to me when he had anything to report; and I reported it to the executive committee or the president.

The Chairman. On April 6, 1922, Mr. Irénée du Pont, as president, is writing you, Mr. Carpenter, as follows:

> Referring to your letter of March 30, of which I spoke to you yesterday: I think that our legislative proposition should be in the hands of Laffey——

Mr. Carpenter. That is the head of the legal department, whom I spoke to you about a few minutes ago.

---

[1] There was no exhibit marked "No. 1374."

The CHAIRMAN (reading):

> because he is an attorney more skilled in matters of law than anyone else we could select.
>
> The confusion at Washington is doubtless due to the necessity of impressing everybody into the service to do what they could on behalf of the dye embargo. Asking the United States Government for such a proposition was almost unheard of. It has been in successful operation for 3 years; thanks to the efforts put on it. I think it will last a good many years longer if we maintain the effort. I doubt if any one man could have done it by the proper methods which have been used.
>
> IRÉNÉE DU PONT, *President.*

This was in continuation of the embargo matter, was it?

Mr. CARPENTER. I judge so; yes, sir.

(The letter referred to was marked "Exhibit No. 1376", and appears in full in the text.)

The CHAIRMAN. Again there is reference to the legislative proposition, which finds a memorandum concerning it being sent to you.

Mr. CARPENTER. Yes. At that time I was the general manager of the cellulose department. I think that probably something had come up, or somebody had spoken to me, and I referred that as a suggestion to the president of the company.

Mr. IRÉNÉE DU PONT. Mr. Chairman, would it not be fair to hand the letter to which that is an answer to Mr. Carpenter, to refresh his memory?

The CHAIRMAN. Do we have such a letter? The Chair has not seen such a letter.

Mr. IRÉNÉE DU PONT. You have taken that letter. It is one of the letters you pulled.

Senator CLARK. If you have a copy of it, you let him see it.

Mr. IRÉNÉE DU PONT. I will look it up, but I would rather read the letter. The gist of it was that certain Senators in Washington said we did not know how to go after legislation, by coming out in the open; we ought to have an undercover man in Washington and hide him in an office. I said, "We do not do business that way."

Senator CLARK. John T. King was pretty effective.

Mr. IRÉNÉE DU PONT. This was not John King that made the suggestion.

The CHAIRMAN. Did Mr. Carpenter ever make the suggestion to you that you ought to have representation in Washington?

Mr. IRÉNÉE DU PONT. He did not. He passed the letter along, somebody else's suggestion. Will you not please get out that letter? You have it. Perhaps I can get a duplicate for you.

Senator CLARK. Perhaps you can.

The CHAIRMAN. If Mr. du Pont feels that it is pertinent and of significance, and we have it, the Chair would ask that a number be reserved, to be afforded that letter as an exhibit, to be introduced at this point.

(The letter referred to was marked "Exhibit No. 1377" and is included in the text on pp. 4240 and 4241.)

Mr. IRÉNÉE DU PONT. Certainly Mr. Raushenbush has that letter, because as I understand it he went up to get the letter on a second visit to my office. He took out one of those letters and not the other, I believe. I am not sure that is the right letter. But he came back for one of them. Let me get at my copy.

The CHAIRMAN. Let us move along, and when you find that we will revert to it.

On January 27, 1931, Mr. Carpenter, you wrote Mr. Lammot du Pont as follows:

> Referring to my retirement on March 1, as verbally outlined to you, I would like very much to maintain a contact with the affairs of the company, especially along the lines of executive personnel work, remain on board of Grasselli Co., president's advisory contact on political matters which may arise, and be considered available for consultation and for any emergency which may arise.

In the fourth paragraph on this letter, continuing:

> Assuming above is satisfactory to you, I would of course, insist that my salary after March 1 be reduced to that of a retired vice president. I have selected the offices adjacent to yours, same not being in demand at this time, in order that I will be near to your office and available on above matters, as well as Delaware Realty, Christiana Securities, etc.

(The letter referred to was marked "Exhibit No. 1378", and is included in the appendix on p. 4423.)

The CHAIRMAN. We understand then that upon your retirement, Mr. Carpenter, you asked to remain there in a capacity which would let you assist in such matters as arose, as would have relation to political matters.

Mr. CARPENTER. I do not think that was ever carried out, except in a very high-spot way, and that I think referred mostly to political matters in Delaware.

The CHAIRMAN. You say "in a very high-spot way."

What do you mean by that?

Mr. CARPENTER. If he should ask any information in reference to any of the situations in Delaware, I would probably be able to tell him, as I was more or less familiar with the political situation in Delaware at the time.

The CHAIRMAN. But it had nothing to do with the political situation or legislative matters that might arise in a national way?

Mr. CARPENTER. I think not, sir.

The CHAIRMAN. September 15, 1931, finds you addressing a memorandum to Mr. W. S. Carpenter, Jr., a copy of which will be laid before you, Mr. Carpenter. I read the first paragraph of that letter:

> I am returning to you your development department report on the Remington-Winchester Consolidation. While I am not extremely enthusiastic over our getting mixed up in this way, my conclusion is that we are more or less at the parting of the ways and that we will be compelled to either consider that our smokeless powder business is on the wane or that we can put it back on its feet by going into this deal. I am more or less influenced by this opinion for the reason that if Western should take over the Winchester, our road would be pretty hard. I do not think there is very much in the thought that we should maintain our smokeless powder position for the Government in time of war as I believe if we ever had another war the Government would take over important industries the same as they did the railroads, which would not be a very pleasant experience as any of the railroad people will tell you.

(The letter referred to was marked "Exhibit No. 1379", and is included in the appendix on p. 4424.)

The CHAIRMAN. Here after your retirement, Mr. Carpenter, you evidently are maintaining a very large interest in the affairs of the corporation.

Mr. CARPENTER. As a director of the company I certainly did.

The CHAIRMAN. They refer to you the consolidation program for your consideration.

Mr. Carpenter. No. That was wholly voluntary on my part. I knew they were considering investing some money in a proposed consolidation between the Winchester and the Remington Co., which I was rather opposed to, purely from a financial standpoint, being a stockholder.

The Chairman. What makes you believe, Mr. Carpenter, that in the event of another war the Government is going to take over the important industries?

Mr. Carpenter. From listening to the testimony here I think so still more now.

The Chairman. You think so still more?

Mr. Carpenter. Yes; I think they probably would.

The Chairman. Frankly, I am glad to hear you say that.

On May 6, 1932, you addressed a letter to Mr. Robert G. Houston, House Office Building, the Capitol, Washington, D. C.

Who is Mr. Robert G. Houston?

Mr. Carpenter. I suppose that refers to the Congressman from Delaware.

(The letter referred to was marked "Exhibit No. 1380", and appears in full in the text.)

The Chairman. The language I read is the closing sentence in the second paragraph:

> To my mind what this country needs more than anything else is not more Federal legislation, but less Federal legislation and far more common sense in Congress.

Evidently you are interested in national legislation.

Mr. Carpenter. Personally, yes, as everyone should be.

The Chairman. Mr. Carpenter, upon what stationery do you write these letters?

Mr. Carpenter. I think these were all personal. While I could not swear to it, I think that this letter—it does not sound like my phraseology. I think that probably someone interested in this legislation asked me to write to Mr. Houston, but even that I cannot say. It does not sound like my writing.

The Chairman. Copies of this letter were evidently sent to Senator Hastings and Senator Townsend.

Mr. Carpenter. Yes, sir; as being Delaware Senators. I think that Goldsborough bill was a banking bill, was it not?

The Chairman. Let us read your description of what it was.

Mr. Carpenter. Not mine, but whoever wrote this letter.

The Chairman (reading "Exhibit No. 1380"):

> It has been called to my attention that on May 2 you voted in favor of the Goldsborough bill, which would require that the Federal Reserve Board and the Secretary of the Treasury shall restore and maintain prices at a level which is approximately 50 percent above present levels by controlling the volume of credit and currency. It is my further information that the President of the United States, the Secretary of the Treasury, and all responsible Federal Reserve officials are much opposed to this legislation and state that the aim of the bill is impossible and impracticable. Also, our own experts who have given most careful attention to the subject tell us that the bill is thoroughly unsound in principle, and that the only way to boost prices to the extent suggested would be to go off the gold standard and issue irredeemable paper money.
>
> Can't you realize that attempted legislation of this sort is doing more to shatter business confidence than anything else? Two or three months ago the country was getting ready for a sound business recovery. But just as soon as Congress began to suggest measures which would cheapen our currency, and

just as soon as they began to devise ways and means of putting heavier taxes on industry instead of cutting out the enormous wastes and extravagance of the Federal Government, immediately business began to slip rapidly down hill, and conditions have continued to grow worse. To my mind, what this country needs more than anything else is not more Federal legislation, but less Federal legislation and far more common sense in Congress.

If the Government will really reduce expenditures, keep our currency sound, and give us a breathing spell for a time, business will soon begin to work its way out of the present difficulties.

Mr. Carpenter, do you think that that was a letter that someone else wrote and asked you to sign?

Mr. Carpenter. I think parts of that letter were written for me by banking interests, probably in Philadelphia, where I had some banking connections, asking me to write to the Delaware Representatives and Senators in reference to the Goldsborough bill. Part of that may have been written from the other letter, because it does not sound like my writing. I do not say that I do not think that way, but I say I do not think that is my phraseology. But it makes no difference. I signed the letter and accept the responsibility. But it was purely personal.

The Chairman. Could the person that suggested that to you possibly have been Mr. Raskob?

Mr. Carpenter. I doubt it very much. I doubt it very much. I think probably it was someone in Philadelphia. But as I sent the letter, Mr. Senator, it is my responsibility. But it was purely personal, not in any way company.

The Chairman. Is that the letter? [Handing to Mr. Irénée du Pont a copy of "Exhibit No. 1377."]

Mr. Irénée du Pont. That is the same one. I just found that copy.

Senator Clark. That does not quite bear out your statement, does it Mr. du Pont?

Mr. Irénée du Pont. Perhaps I did not express it as clearly as I could have if I had had the letter, and I said so when I made my other remark.

May I read the letter into the record?

Senator Clark. Yes.

Mr. Irénée du Pont. This is the cellulose products department, E. I. du Pont de Nemours & Co. [Reading "Exhibit No. 1377":]

Mr. Irénée du Pont.

Dear Buss: Referring further to my conversation this morning on legislative matters, and in order that you do not overlook it before giving it further thought, I feel that the company is not handling their legislative question in the proper manner. Charlie Patterson I think also feels decidedly this way, in fact, my ideas are more from talks with him than original.

Senator Clark. Mr. Patterson was a director of the company, was he?

Mr. Irénée du Pont. He was at that time. He has since died. [Continuing reading "Exhibit No. 1377":]

There is no question but what Charlie is the best judge of this matter that we have in the company. He told me, among other things, that both Senator Frelinghuysen and Senator Watson, of Indiana, criticized our method of handling legislation very severely.

Our method of handling legislation was to go down and see everybody we could and tell them why. That is the point I was making. He criticized that method.

Senator CLARK. That was the point you were making, but it appears from this letter that the suggestion comes from Mr. Carpenter, with the approval of Mr. Patterson, who apparently agreed thoroughly with Senator Frelinghuysen and Senator Watson, because they then go on to discuss the proper men to install such a system.

Mr. IRÉNÉE DU PONT. Mr. Carpenter says [continuing reading "Exhibit No. 1377"]:

* * * criticized our method of handling legislation very severely, in fact, one of them said it was handled the worst of any corporation in the country. I would suggest that you make it a point to have a talk with Charlie Patterson and get his advice.

There has been some agitation among the industrial departments recently to have a Washington office simply as a sales proposition; that there is considerable difficulty in handling sales to the Government—one, that they only send out one inquiry and there is great danger of all divisions not hearing about it, and the other is they very often do not send out any, and many companies have representatives in Washington who make rounds each day or so of the bureaus in Washington, looking up these matters.

It takes rather a live man to handle it. It would seem to me that this same man in charge of the Washington office could be a man thoroughly capable of looking after legislation, in fact the sales office would be a good hiding place for the legislation if it were necessary to have one. At the moment, there are two people who come to my mind who might be able to fill this job—the best one, I should think, would be Charlie Meade, who has considerable experience now, and also is a pretty live wire. He could soon learn to handle this in a proper manner.

The second one I thought of, but whom I did not think would be as good as Charlie, would be E. N. if he were available.

The CHAIRMAN. Who is E. N.?

Mr. IRÉNÉE DU PONT. E. N., Mr. E. N. Carpenter, Mr. Ruly Carpenter's uncle.

I mention this on account of his very intimate relationship with Fletcher and he also has quite a broad acquaintance in Washington which might be of advantage to us, and he has also been in the political game some, having run for Congress.

The CHAIRMAN. Who is the Fletcher referred to?

Mr. IRÉNÉE DU PONT. That is the Fletcher who used to be our Ambassador to Chile. He has been a prominent man ever since, I think. Is he not a high light in the Republican Party now? [Laughter.]

I say that seriously. It is not a joke at all.

Senator CLARK. As a matter of fact, Mr. du Pont, I think he is one of your associates in the American Liberty League, is he not?

Mr. IRÉNÉE DU PONT. I have not seen the roster recently. I have been here for several weeks. He may have joined. I hope he has. He is not on the executive committee, I believe.

The CHAIRMAN. You have not read the concluding paragraph of Mr. Carpenter's letter.

Mr. IRÉNÉE DU PONT. Pardon me. [Reading end of "Exhibit No. 1377":]

I strongly recommend that you give this some thought.

My reply, which you read before,[1] was a reply to this letter and I stand on it today, and I think we did the right thing, and I think it has been successful. I think that I might take this opportunity of showing you whether the chemical industry of the United States has been true to the trust you gave them with that embargo and high tariff.

---

[1] "Exhibit No. 1376." See text, p. 4237.

Senator Clark. Mr. du Pont, this letter does not indicate that the du Pont Co. and the officials of it drew their skirts quite as austerely aloof from this suggestion as your previous statement would have led one to believe, because at least two of the very important officials of your company were writing to you urging that that very thing be carried out and that a hiding place be established in Washington.

Mr. Carpenter. May I correct that word? I think that is purely a stenographic error. It meant "hiving." I personally would not say "hiding place." There was no reason why we should hide anything.

The Chairman. What would be a hiving place?

Mr. Carpenter. A place where he could have an office, or hold out; just a slang expression. It certainly would not mean "hiding."

Mr. Irénée du Pont. It reads "hiding place." That is what I understood it to mean. That is one reason I jumped on it.

But to get back on that dye legislation, I think you men know that we behaved in an absolutely frank manner about it. We sold the idea to everybody. I think we do not make any apologies for it.

Mr. Wilson, in his message of May 1919, came out and asked Congress to do just this thing. I read that into the record the other day. He repeated it again in December 1919, and again in December 1920, and he backed us up and the Democrats behind him backed the idea up. The people we had to sell were the Republican Senators that did not know any more about the chemical industry than the man in the moon. I went around and told them all I could about it.

I just want to point out one or two things which have happened in the chemical industry thanks to this protection. In the first place, dyes have declined by about 58 percent in cost since that time to the American public. American-made dyes, all of them, before that were depending on Germany.

In the second place, that means that about $100,000,000 a year is saved to the consumers of dyes in this country by that one advance in dyestuffs.

Second, take the subject of rubber accelerators and antioxidents, which are used to make the rubber tougher and last longer. A rubber tire will last double as long today by reason of that advance in the chemical industry from what it would at that time. We are using today about $300,000,000 worth a year of rubber tires on automobiles. If we had not had that advance in the chemical industry, we would have had to spend $600,000,000 a year, because a tire would have worn out twice as fast. That is a saving of $300,000,000 a year to the American people.

Take the case of Duco. It was a chemical experiment, worked out by a corps of trained men working as an organization. Duco has supplanted the old coach varnish which some of you remember. The old coach varnish would last only a comparatively short time, and you would have to repaint. It has also saved in the cost of producing automobiles. I think it is safe to say that every automobile owner in this country on the average saves $10 a year by reason of the Duco paint. There are 24,000,000 automobiles in this country. That means a saving to this country of $240,000,000 a year on that idea.

I do not know how many other things there are. There is waterproofed cellophane, which is saving countless dollars in store upkeep, maintaining goods in salable condition, and keeping your cigar from breaking in your vest. I saw somebody with three in his pocket here today. Those kinds of things are the result of what the chemical industry has done for this country, and it is purely the result of protecting that industry until it could get on its feet. I am proud of having had a little part in it, even going to see Senators.

The CHAIRMAN. I understand about the only thing that does not come wrapped in cellophane now is new-born babies.

Mr. IRÉNÉE DU PONT. I am getting a little bit old for that, Senator.

The CHAIRMAN. You are not prepared to testify as to that, are you?

Mr. IRÉNÉE DU PONT. I refuse to testify, by advice of counsel.

The CHAIRMAN. Mr. Carpenter, continuing this line that reveals your continuing interest after your retirement as vice president, we find on December 8, 1932, a letter written by you to Mr. John J. Raskob.

(The letter referred to was marked "Exhibit No. 1381", and appears in full in the text.)

The CHAIRMAN. In this letter you said [reading]:

> I was going to talk with you the first time I saw you, but I run across you so seldom I thought I would drop you a line on this subject.
>
> You know that Lammot Belin, Alice's brother, was appointed as Ambassador to Poland recently. This comes up for approval in the Senate, I think. I understand from what I hear and see in the papers that the Democratic Senate is not going to approve any of Hoover's appointments. I have thought that it might be sort of a slap at Pierre to have the Democratic Party throw out his brother-in-law after he has been for the past two campaigns such a strong supporter of the Democratic Party.
>
> I doubt very much whether Pierre would approve of my taking this up with you but I am going to take a chance as I know you will handle it as you think best. I am dropping you this line to put the idea in your mind.

Mr. CARPENTER. A purely personal letter, written on my stationery, taken from a private file of mine that had no connection whatever with the company.

The CHAIRMAN. We are not to conclude that it indicates any connection with the company as a legislative interest?

Mr. CARPENTER. Not a bit in the world.

The CHAIRMAN. You wrote again on January 5, 1933, to Mr. John J. Raskob, a letter which I will ask to have marked for appropriate reference.

(The letter referred to was marked "Exhibit No. 1382" and appears in full in the text.)

The CHAIRMAN. You said in this letter [reading]:

> I am returning to you Pierre's letter of January 3 with the enclosure. I am certainly glad to hear this news and I thank you for sending it to me to read.
>
> I also read your note on my letter of January 3 that you are out of politics. I hope you do not have as hard a time as I am having. I dropped it about 2 years ago but still find I am just in about as much trouble as ever, as everyone who wants a political job around these parts thinks I can get it for him. It is a thankless game at the best, which I guess you have found out as well as I.

Mr. Carpenter, on April 27, 1933, last year, you wrote a letter to Senator Marcus A. Coolidge, here in Washington, which seems to me reveals that you had not retired entirely or divorced yourself complete from interests which had been yours.

Mr. Carpenter. Purely a personal letter, Senator, written to not altogether a Senator but an acquaintance, a distant relative through marriage. It had nothing whatever to do with company affairs. It is simply a personal letter, again taken from my personal file, not even in a company office.

The Chairman. You are especially well acquainted with Mr. Coolidge?

Mr. Carpenter. I suppose I have talked to him four or five times. My acquaintance with him is that my first cousin married his daughter.

The Chairman. You are expressing to Senator Coolidge in this letter——

Mr. Carpenter. Entirely personal opinion.

The Chairman (continuing). What you call your personal thought?

Mr. Carpenter. That is all.

The Chairman. On the general run of the national program at that time?

Mr. Carpenter. That was not being presented by the company. The company was not in any way responsible for it. It was merely an expression of mine as a private citizen.

The Chairman. That letter will be offered for appropriate marking.

(The letter referred to was marked "Exhibit No. 1383" and is included in the appendix on p. 4424.)

The Chairman. On March 16, 1934, you again addressed Mr. John J. Raskob, in a communication which I will offer for appropriate marking.

(The letter referred to was marked "Exhibit No. 1384" and is included in the appendix on p. 4425.)

Mr. Carpenter. That letter I remember was of the same category exactly, a personal letter to a personal friend.

The Chairman. Let us read this:

> Some months ago you stated in directors meeting—

What directors?

Mr. Carpenter. Of the du Pont Co.

The Chairman. You say directors of the du Pont Co.?

Mr. Carpenter. Yes.

The Chairman. You are sure it was not General Motors?

Mr. Carpenter. No; that was the du Pont Co.

The Chairman. This letter reads:

> Some months ago you stated in directors meeting that people as a whole should support the President. Many people are today at a loss to understand why the administration is doing many things. The majority of people I believe would like to think that the President is honest in his endeavors. People are unable to learn much of the truth for the reason that through some method unknown the President has strangled free speech both over the radio and by the daily papers. It has been a great mystery to me why someone close to the administration, if anyone is, other than Frankfurter and his ilk, has not attempted to determine the following:
>
> 1. Unless the administration is embarked on a campaign to buy the popular vote of the country through the C. W. A., the C. C. C., etc., together with the

gifts to certain classes, why should they compete with industry for labor, and put rates in farming districts way above what any farmer could compete with, and way beyond what such labor ever received? I mention a few cases I am familiar with:

An architect in town offered a position to a young draftsman recently at a fair salary. He turned down the job saying he had a position with the C. W. A. at $1.25 an hour.

Five negroes on my place in South Carolina refused work this spring, after I had taken care of them and given them house rent free and work for 3 years during bad times, saying they had easy jobs with the Government.

Planters in our vicinity were unable to get enough labor to harvest crops in the fall due to C. C. C. employment.

A cook on my houseboat at Fort Myers quit because the Government was paying him a dollar an hour as a painter when he never knew a thing about painting before.

If one person has had all this experience, how many thousands of men are leaving employment to accept easy jobs with the Government, paid for with the taxpayers' money and under the guise of relief? Many trades are on strike, being encouraged from Washington, and these same strikers employed by the Government and paid with the taxpayers' money.

2. Why should the administration, without trial, condemn a number of corporations, cancel their contracts, and leave them with blackened reputations, an act absolutely against the law, the Constitution, and common decency? In time, no corporation nor business could afford to have any dealings with a Government who has no respect for contracts entered into.

Then the closing paragraph of the letter:

A man like yourself, a supporter of his, and persona grata in Washington, could do a lot of good and set many minds at rest by getting the administration to answer these queries; that is, if you yourself are convinced that he is honest in his endeavors. As a loyal Democrat, I would appreciate your views a lot. Maybe you could set some of our minds at rest.

A personal letter, Mr. Carpenter?

Mr. CARPENTER. A purely personal letter, written with the idea that I believe that Mr. Roosevelt's ideas or his intentions were correct. I had heard a great many reports from people who did not believe that, and I had written to a friend of mine who is in the Democratic party and prominent, and I thought it would be a good thing for the country at large for such a statement to come out. I still think so.

The CHAIRMAN. What did you mean by "setting our minds at rest"?

Mr. CARPENTER. The public, I mean.

The CHAIRMAN. Is it fair to assume you were speaking for your associates there in the du Pont Co.?

Mr. CARPENTER. No; not at all. I mean by our minds, the public as a whole. People thought that way. That still is a purely personal letter from me to a friend.

Senator VANDENBERG. You can include my mind among those who would like some information on some of those subjects.

The CHAIRMAN. Mr. Raskob responded to this letter under date of March 20, 1934, which I offer for the record.

(The letter referred to was marked "Exhibit No. 1385" and is included in the appendix on p. 4426.)

The CHAIRMAN. I read the third paragraph of Mr. Raskob's letter to you:

You haven't much to do and I know of no one that could better take the lead in trying to induce the du Pont and General Motors groups, followed by other big industries, to definitely organize to protect society from the suffering which it is bound to endure if we allow communistic elements to lead the

> people to believe that all business men are crooks, not to be trusted, and that no one should be allowed to get rich.
>
> There should be some very definite organization that would come out openly with some plan for educating the people to the value of encouraging people to work; encouraging people to get rich; showing the fallacy of communism in its efforts to tear down our capital structure, etc.
>
> The reason I say that you are in a peculiarly good position to do this is that you are young enough to undertake the work, you have the time, you are wealthy enough to not have to depend upon a job or salary for a living and are in a position to talk directly with a group that controls a larger share of industry through common-stock holdings than any other group in the United States. When I say this, I mean that I believe there is no group, including the Rockefellers, the Morgans, the Mellons, or anyone else that begins to control and be responsible for as much industrially as is the du Pont Co.

Now, Mr. Carpenter, did you take this up with the du Pont Co. after the suggestion had been made to you?

Mr. CARPENTER. I did not. I was not looking for any more trouble.

The CHAIRMAN. Did you make any suggestions to the du Pont Co. at all concerning Mr. Raskob's suggestion to you?

Mr. CARPENTER. I think not, sir.

The CHAIRMAN. Who is Mr. E. E. Lincoln?

Mr. CARPENTER. I beg pardon, Senator?

The CHAIRMAN. Mr. E. E. Lincoln, who is he?

Mr. CARPENTER. He is an employee of the du Pont Co.

The CHAIRMAN. You addressed a communication to him on June 5, 1934, which I offer for the record.

(The letter referred to was marked "Exhibit No. 1386" and appears in full in the text.)

The CHAIRMAN. You say to Mr. Lincoln [reading]:

> I have your memorandum of the 31st. I am sorry I have been so slow in getting in touch with you but I have been away almost continually for a week or two and yesterday I had to be in New York.
>
> While, if necessary, I am willing to attend this conference with Theodore Roosevelt, I am not at all anxious to get into the political arena in any way. I have been trying to divorce myself entirely from this as it got on my nerves to such an extent when I was in it that I did not come very far from blowing up and I do not wish to get back into it again. If necessary, I am willing to attend and listen but take no active part.

Mr. Carpenter, what have been your party affiliations?

Mr. CARPENTER. Republican; regular.

The CHAIRMAN. Never been disputed?

Mr. CARPENTER. Pardon me?

The CHAIRMAN. Never had that regularity disputed?

Mr. CARPENTER. Oh, plenty of times.

Senator CLARK. In other words, you belong to the Penrose-King wing of the party, don't you?

Mr. CARPENTER. No; that is before my time.

The CHAIRMAN. Mr. Carpenter, who is Charles Ten Weeges?

Mr. CARPENTER. He is the president of the News Journal Co. in Wilmington.

The CHAIRMAN. You have an interest in that paper?

Mr. CARPENTER. It is owned by the Christiana Securities Co.

The CHAIRMAN. Who owns that?

Mr. CARPENTER. Several stockholders. I suppose a hundred.

The CHAIRMAN. Who owns the controlling stock?

Mr. CARPENTER. Eight or ten different people, I think.

The CHAIRMAN. Are the du Ponts interested in that paper?

Mr. CARPENTER. Yes, sir.

The CHAIRMAN. They are?

Mr. CARPENTER. You mean in the Christiana Securities?

Senator CLARK. The Christiana Securities is a du Pont enterprise is it not?

Mr. CARPENTER. It is a holding company.

Senator CLARK. That is the one you mentioned in your letter to Mr. du Pont as one of the duties you should keep on after your retirement from connection with the du Pont Co.

Mr. CARPENTER. It is an affiliated company.

The CHAIRMAN. Are you interested in that paper in any way?

Mr. CARPENTER. I am on the board of the News Journal Co., representing the owners' interest.

The CHAIRMAN. Do you have any voice in shaping the policies of that paper?

Mr. CARPENTER. No, sir. I have so stated to the editor, that his policy is his own and no one else's.

The CHAIRMAN. Here is a letter dated August 15, 1934, to Mr. Ten Weeges by yourself, which I will ask to have marked appropriately as an exhibit.

(The letter referred to was marked "Exhibit No. 1387", and appears in full in the text.)

The CHAIRMAN. This letter reads:

> DEAR CHARLEY: I sent you today a copy of letter I wrote Mr. Mapel—

Who is Mr. Mapel?

Mr. CARPENTER. Managing editor.

The CHAIRMAN (continuing reading):

> —in order to help him set his policy and to straighten out the question, that as to contact with owners of paper, he was responsible on policy to me, and not to everybody in the building.

Mr. CARPENTER. That means policy referring to anything in the du Pont Co., not the policy of running his paper. I think you will find a letter after that stating conclusively that he is to run the paper in his own way, as an independent publisher.

The CHAIRMAN. Upon your retirement you continued dictating newspaper policies but had nothing to do in a legislative way with the interests of the du Pont Co.

Mr. CARPENTER. Absolutely not. I am interested, of course, as any director might be.

The CHAIRMAN (continuing reading "Exhibit No. 1387"):

> Personally, I strongly advise you, in order to maintain discipline, to place the whole operation of the editorial and news sections wholly under Mapel. Let the staff understand that he is the boss and they cannot go over his head to you as president.
>
> You will have all you can do by managing the financial and business end without overloading yourself with detail.
>
> If I were you, I would lay out a complete chart showing the organization something along the attached rough sketch.
>
> Yours very truly,
>
> R. R. M. CARPENTER.

Now, when you retired actively as vice president, you indicated to the du Ponts in what capacity you would like to continue to serve, indicating that you would like to have contact in a political way where the company had political contacts. You did not say anything about continuing in control of any newspaper.

Mr. CARPENTER. I have no control over any newspaper today. I am on the directorate; I am one of the directors of the News Journal Co., representing the owners.

The CHAIRMAN. Yes; but you are saying to Mr. Ten Weeges that he is responsible on policy to you.

Mr. CARPENTER. Correct. The owners should have something to say on the policy of the paper as affects the company's interests, although if you will read—I don't know whether you have a following letter which clarifies that and says that he is to run the paper paper the way he thinks best.

Mr. IRÉNÉE DU PONT. Mr. Chairman, might I straighten that out?

The CHAIRMAN. Yes, Mr. du Pont.

Mr. IRÉNÉE DU PONT. The Christiana Securities Co. is a very large stockholder in the E. I. du Pont de Nemours & Co. E. I. du Pont de Nemours & Co. has no interest whatever in the Christiana securities Co. There are a group of stockholders who hold their stock in the company through the medium of the Christiana Securities Co.

We had obtained some years ago two of the newspapers in Wilmington. At that time—I need not go into the subject. It had nothing to do with politics at all. It was a personal row. We had those on our hands. We sublet that contract of running that to three men—Ten Weeges, Bob Richards, and Bill Metten, who were then the editors. They ran the paper entirely on their own, without any conference with us on policy whatever.

Mr. Carpenter represented on the board the owners. We had a division of profits between the owners and the operating men who leased the paper from us. Metten dropped out and Mr. Mapel was put in his place quite recently.

Now, I think this is telling Mapel what authority he had and telling Ten Weeges he should have that authority. The Christiana Securities has never dictated in any way what the policy of that paper should be, as long as it is run cleanly—always that.

The CHAIRMAN. But, Mr. Carpenter, we find you insisting in this letter that Mr. Ten Weeges was responsible on policy to you and not to everybody in the building.

Mr. CARPENTER. I can explain that, Senator. The publishers had always complained down there that on certain items which reported things which had happened in the company different people in the company had suggested what they were to do, and when this new management went into effect I conclusively stated to Mr. Ten Weeges that he need not discuss those questions with anybody up there, but if they came up at all to discuss them with me. I was confirming that in this letter; that is all there is to it.

The CHAIRMAN. You found in a general way in your communications and conversations with Mr. du Pont that he had done pretty much what you considered you had done in divorcing yourself in a political way?

Mr. CARPENTER. I do not quite understand that question, Senator.

The CHAIRMAN. In your contract with Mr. du Pont——

Mr. CARPENTER. Which one?

The CHAIRMAN. Or with Mr.——

Mr. CARPENTER. Raskob?

The CHAIRMAN. Raskob, yes.

Mr. CARPENTER. Yes.

The CHAIRMAN. You found he had quite removed himself from active politics?

Mr. CARPENTER. I haven't seen him three times in a year and all I know is what he wrote in that letter, but I see he is down at White Sulphur, so maybe he has not.

The CHAIRMAN. He told you in his letter that he was not——

Mr. CARPENTER. Active in politics?

The CHAIRMAN. Active in politics.

Mr. CARPENTER. I think that is what the letter says, yes.

The CHAIRMAN. Did it then occur to you that there might be others who stood closer to the administration here in Washington?

Mr. CARPENTER. I do not remember. sir. I do not recall that I ever took any action on that letter at all. Just put it in the file.

The CHAIRMAN. I have before me an exhibit which makes reference to Georgetown. What is Georgetown?

Mr. CARPENTER. Georgetown?

The CHAIRMAN. Yes. Is that a du Pont property?

Mr. CARPENTER. There is a Georgetown in Delaware and there is a Georgetown in South Carolina, where I go shooting sometimes.

The CHAIRMAN (reading):

> About our phone conversation the other day, let me know about what price you have in mind for Georgetown.

Mr. CARPENTER. Is that a letter addressed to Mr. Baruch?

The CHAIRMAN. To Mr. Bernard M. Baruch, yes.

Mr. CARPENTER. Mr. Baruch owns property in Georgetown, right outside of Georgetown. He wrote me a letter and asked me whether any of my constituents or friends were interested in purchasing it; he was trying to sell it. It is a shooting preserve, Senator.

The CHAIRMAN. You have taken up with Mr. Baruch certain political matters?

Mr. CARPENTER. I have written him two or three letters. I happen to know him personally, not very well.

The CHAIRMAN. You had reason to object or feel displeased about some appointments that had been made in the national administration?

Mr. CARPENTER. I know the letter you refer to, yes.

Mr. PIERRE DU PONT. Senator, might I say a word on this point?

The CHAIRMAN. Yes.

Mr. PIERRE DU PONT. In regard to the policy of the du Pont Co. with respect to legislation?

The CHAIRMAN. Yes, sir.

Mr. PIERRE DU PONT. I am not myself in that line of business at all, never have been, but if occasion should arise I would not hesitate to consult any man in the Senate or House of Representatives or in any other capacity in Washington or in any State legislature. I think every citizen has the right to and should talk to representatives of the people on interested subjects.

But the one thing that should be avoided is doing it underhanded. If I go to speak on anything concerning the chemical industry, I am well enough known in that industry so that my name speaks for me. I do not have to introduce myself as identified with the chemical industry. But if there was any dispute about the matter, I should certainly say why I came and who I was. That is the important question. As long as that is announced, our company will go anywhere on any mission at all and whoever grants us a hearing will weigh our words accordingly.

There is nothing underhanded in what we do, as far as I know, and I hope nothing that I do not know about. But we have done and will do just those things. We will go to any Senator or Representative on any mission. If, perchance, anything comes up concerning the lands in North Dakota, which you represent, you would be the first one I would talk with on the subject, and, without hesitation, I am sure you would hear me. That is the policy of the company, and always will be, I hope.

The CHAIRMAN. Mr. Carpenter, when you moved around from one division to another in the capacity of vice president, what was done with your files?

Mr. CARPENTER. At the time that I resigned from the company—I will give you an example: When I was general manager of the cellulose department and left there, all files I had at that time, other than personal files, were left in that department. When I retired from active service in 1931, whatever files I had at that time—there were not many—which referred to departmental matters or company matters, either the letters themselves were turned over to the departments that were interested or the files themselves were turned over or left in the departments.

I kept very, very few, if any, other than personal files. I had some files that were entitled, "du Pont Co.", but they were miscellaneous items, letters which I addressed to different people in the company at any time, on anything of interest.

The CHAIRMAN. In what department were you before you were at the head of the cellulose department?

Mr. CARPENTER. I was on the finance committee and the files at that time were kept by the secretary of the finance committee, all finance committee matters.

The CHAIRMAN. You had prsonal files during that time?

Mr. CARPENTER. I doubt if I had any to amount to anything. If I did, they were turned over to the interested departments afterwards.

Mr. IRÉNÉE DU PONT. The chairman said "personal files."

Mr. CARPENTER. Oh, personal files. I had personal files, of course.

The CHAIRMAN. What was done with the personal files?

Mr. CARPENTER. My policy in regard to personal files has always been to keep them at a minimum. I have destroyed personal files periodically every few months when they filled up with a lot of stuff which was unnecessary and which could not be used again. I have never destroyed anything which had anything to do with the company. It was turned over to where it belonged, if I did not keep it.

The CHAIRMAN. When you speak of your connection as active vice president, what did you then do with your files?

Mr. CARPENTER. Personal or company?

The CHAIRMAN. All of them.

Mr. CARPENTER. My personal files are in my office; my up-to-date ones. Any that referred to the company, as I say, I turned over probably to the different departments.

The CHAIRMAN. What was done with your personal file?

Mr. Carpenter. In my office.

The Chairman. All of it?

Mr. Carpenter. Yes.

The Chairman. In its entirety?

Mr. Carpenter. Yes.

The Chairman. And it is there today?

Mr. Carpenter. It is there today.

The Chairman. When did you last destroy what you call "personal files"?

Mr. Carpenter. I do not think I have taken out or destroyed any correspondence recently. I destroyed two files within a month's time that belonged to my father and mother's estate. I recall those distinctly. I took them out and destroyed them because they were of no further interest to me.

The Chairman. Who is your secretary at the present time, Mr. Carpenter?

Mr. Carpenter. Mr. Clarence Underwood.

The Chairman. Is he with you today?

Mr. Carpenter. Yes, sir.

The Chairman. Mr. Underwood, will you please come forward?

TESTIMONY OF CLARENCE UNDERWOOD

(The witness was duly sworn by the Chairman.)

The Chairman. Mr. Underwood, what is your full name?

Mr. Underwood. Clarence Underwood.

The Chairman. You are secretary to Mr. Carpenter?

Mr. Underwood. I am.

The Chairman. How long have you been in that capacity?

Mr. Underwood. About 20 years.

The Chairman. Did Mr. B. T. Moore, representing himself as an agent for this committee, call on you during the fall?

Mr. Underwood. He did.

The Chairman. Did he ask for access to the files of Mr. Carpenter?

Mr. Underwood. He did.

The Chairman. What did you then tell him?

Mr. Underwood. I took him to the file room and showed him the file cases and said he might go through all of them.

The Chairman. Did Mr. Moore ask specifically for the files running from 1920 up to 1930?

Mr. Underwood. He did not.

The Chairman. What did you tell Mr. Moore concerning the files of that period?

Mr. Underwood. From 1920 to 1930?

The Chairman. Yes.

Mr. Underwood. Mr. Moore asked me, after finishing four drawers, what we did with our files prior to those files which he looked at, and I told him in a great many cases when they had served their purpose we destroyed them.

The Chairman. After they had served their purpose they had been what?

Mr. Underwood. The personal files were destroyed.

The Chairman. Are there any files prior to 1920 in existence, files of Mr. Carpenter?

Mr. UNDERWOOD. Personal files?

The CHAIRMAN. Yes.

Mr. UNDERWOOD. Yes, sir.

The CHAIRMAN. Or any files?

Mr. UNDERWOOD. Personal files.

The CHAIRMAN. Prior to 1920?

Mr. UNDERWOOD. That I cannot answer. Prior to 1920?

The CHAIRMAN. Yes. Does Mr. Carpenter have any files originating before 1920 which are still in existence?

Mr. UNDERWOOD. I think there are some personal files.

The CHAIRMAN. Are there personal files dating from 1920 on?

Mr. UNDERWOOD. From 1920 on?

The CHAIRMAN. Yes.

Mr. UNDERWOOD. All the files we have, Senator, are in our office.

The CHAIRMAN. What is the status of the files running from 1920 on?

Mr. UNDERWOOD. They are personal files.

The CHAIRMAN. And how complete are they?

Mr. UNDERWOOD. That I cannot answer. As Mr. Carpenter said, at times he goes through them and destroys what he thinks has served its purpose and gets the file down to a minimum.

The CHAIRMAN. Wasn't that done with the files prior to 1920?

Mr. UNDERWOOD. It has been done at odd times right along.

The CHAIRMAN. Mr. Carpenter, wasn't that done prior to 1920?

Mr. CARPENTER. I don't think there are any files in existence prior to that. I do not keep any more files than I can possibly keep. I root them out occasionally to get the files down.

The CHAIRMAN. The testimony seems to be that there are files still available prior to 1920.

Mr. CARPENTER. I don't think so.

Mr. UNDERWOOD. Senator, I may be wrong in making that statement. All the files we had were opened to the investigators when they came there. We have no other files. If there are any letters in there prior to 1920, I am not sure of that.

Mr. CARPENTER. Senator, I think what has confused the examiners, and through no fault of theirs, is that they found, I am told, an old index file that had a great many files on it. That index nobody knew—I asked in the office—even existed. It was an index that was used 12 to 15 years ago. We have not used the index for 10 or 12 years. I don't think anybody even knew it was in the office. I think that is probably what Mr. Moore has in mind when he states there may be files somewhere prior to that time. There are no files, I am sure in saying, prior to 1920, in the office.

The CHAIRMAN. What was generally done with the folder marked, "Political"?

Mr. CARPENTER. It is a very small file. I think it is still there. They went all through everything.

The CHAIRMAN. As respects political parties, running from 1920 to 1930?

Mr. CARPENTER. If there are any letters there at all, they are in that file. If not they have been destroyed.

The CHAIRMAN. Would those be among the files that might have been destroyed from year to year?

Mr. CARPENTER. Many letters may have been destroyed; yes; but that had nothing to do with legislative matters or political matters in Washington, to my recollection.

The CHAIRMAN. Haven't you indicated that the letters, among other things, may have related to requests to friends in Washington for political favors for other friends?

Mr. CARPENTER. They may have. I am not sure. Personally, I have not been in Washington, I don't believe, 10 times in 20 years.

The CHAIRMAN. But you declare to the committee, Mr. Carpenter, that there have been no files destroyed which had relationship to the du Pont interests, as between their interests and the Government's?

Mr. CARPENTER. Positively not.

The CHAIRMAN. Mr. du Pont, during the September hearing we requested that the company furnish the committee with the political campaign contributions of its officers and directors from 1919 to date. The Chair is advised that at the present time there has been no return in compliance with that request as relates to Donaldson Brown, J. P. Laffey, H. M. Pierce, J. J. Raskob, A. P. Sloan, Jr., who were directors and J. B. Eliason, the treasurer.[1]

Did you make request of all of them to supply the committee with that information?

Mr. LAMONT DU PONT. The request was passed on to those gentlemen; yes, sir.

Mr. PIERRE DU PONT. Mr. Chairman, I happened to be talking with Mr. Raskob on the phone the other day, and he said he was sending in his list.

The CHAIRMAN. He said that he was sending it in?

Mr. PIERRE DU PONT. He said he was sending it in about 2 days ago.

The CHAIRMAN. Again, Mr. du Pont, request was made at one time of you for a furnishing of such listings as would show all stockholdings in excess of $10,000.[2]

Mr. LAMMOT DU PONT. Yes, sir.

The CHAIRMAN. Of the directors of the company.

Mr. LAMMOT DU PONT. And the subsidiary companies.

The CHAIRMAN. And the subsidiary companies. The request, it appears from a note which has been given by the committee's investigator, has been complied with in general, but that some of those have not given the number of shares which they hold in other companies. And in view of the war-time allocation of orders, this matter of holdings in other companies is of especial importance to the committee. Will you undertake to ascertain why we have not been supplied with that?

Mr. LAMMOT DU PONT. Mr. Chairman, I do not think I should undertake that. That information requested is the personal information of the men in question. I have no authority to ask them to give it.

Mr. IRÉNÉE DU PONT. You simply passed along the request of the chairman?

---

[1] Political campaign contributions of E. I. du Pont de Nemours & Co. officers and directors appear in Hearings, Part V, text, p. 1265, appendix, p. 1403. With the exception of A. P. Sloan, Jr., who, at date of publication of this volume, had not submitted his, the balance of the individuals mentioned above have returned theirs. This additional list appears in Hearings, Part IX, text, p. 2147, appendix, p. 2268.

[2] Lists of stockholders of directors of du Pont appear in appendix on p. 4498.

Mr. LAMMOT DU PONT. I did.

The CHAIRMAN. If you will do that——

Mr. IRÉNÉE DU PONT. That has been done. I received word from Lammot du Pont.

Mr. PIERRE DU PONT. Mr. Chairman, for my information, was the list supposed to be back to the war? I thought it was supposed to be from 1925.

The CHAIRMAN. 1919.

Mr. LAMMOT DU PONT. I think you are in error.

Mr. CARPENTER. 1925 to 1930, I think, Senator.

The CHAIRMAN. The Chair has no information before him on which to base an answer to the question. We shall ascertain definitely and will direct to you a letter covering the information that has not been furnished.

Mr. PIERRE DU PONT. I am afraid my list started in 1925. I should be glad to furnish a full list, if you wish it.

Mr. LAMMOT DU PONT. Senator, I trust you will not expect us to secure that information for you, because I think we have no authority to do so.

The CHAIRMAN. The Chair thinks he appreciates the situation, and the committee perhaps will have to proceed in another manner in order to get it.

The committee had expected that before adjournment for the holidays to lay a preliminary groundwork for what it considers a very important January inquiry into the amazing increase in new costs of naval armaments and methods of purchases and sales.

Our studies have developed, however, the necessity for such broad inquiry and involving such vital implications and conclusion that the committee has decided to postpone any public hearings on this phase until it can deal with it continously and conclusively in January, when we shall undertake that work.

Before stepping aside for continued hearings to be held this afternoon, the Chair wishes to announce that there will be a continuation of the hearings tomorrow morning at 10 o'clock, in continuation of the program that the committee will leave upon recess this afternoon.

All right, Mr. Wohlforth.

Mr. WOHLFORTH. Will the two officials of the N. R. A. please come forward—Mr. Dickerman and Mr. Scott?

Mr. GREGG. Mr. Chairman, may I take just a minute?

The CHAIRMAN. Very well.

Mr. GREGG. In connection with the purchase of the property at Old Hickory, question arose as to whether or not this village that was purchased by the du Pont Fibersilk Co. was not the village that the Mason & Hanger Co. constructed at a cost of about $21,000,000.[1]

I want to read from the contract of Mason & Hanger. They did considerable more work than constructing the village. In other words, the Mason & Hanger Co. contracts provide:

> The contractor shall in the shortest possible time furnish such labor, material, tools, machinery, equipment, facilities, and supplies and do all such things as may be from time to time specified by the Agent in the construction and completion of the following work—

---

[1] See text, p. 4227.

That was the agency contract of January 29 [continuing]:

Such extension as may be designated by the Agent [within the boundary lines of America, the plant site owned by the United States in the county of Davidson, State of Tennessee, known, or to be known as the "Old Hickory Powder Plant"] of a spur track now being constructed from the bridge of the Nashville, Chattanooga & St. Louis Railway over Stone River in the county and State aforesaid to the boundary lines of the plant site aforesaid. All of the work of such construction shall be in accordance with first-class American standards of railway construction. Within the plant boundaries aforesaid such tramway tracks, concrete roads, dwelling houses for employees, sewer lines, streets, sidewalks, and structures and improvements of a similar character as may be designated by the agent from time to time.

A new contract was made on March 23, 1918, with Mason & Hanger in which the same language was used, with the exception that Mason & Hanger's cost was broadened to cover work within and beyond the boundary lines of the plant's site.

So that approximately the $21,000,000 which was paid to Mason & Hanger not only included the construction of the village but any amount of other work.

Mr. WOHLFORTH. Mr. Dickerman and Mr. Scott will be sworn, please.

N. R. A. SMALL ARMS AND AMMUNITION INDUSTRY CODE

TESTIMONY OF CHARLES HEBER DICKERMAN AND JACK GARRETT SCOTT

(The witnesses were duly sworn by the chairman.)

The CHAIRMAN. Your full name, Mr. Dickerman.

Mr. DICKERMAN. Charles Heber Dickerman.

The CHAIRMAN. What is your official position with N. R. A.?

Mr. DICKERMAN. I am Assistant Deputy Administrator, manufacturing division.

The CHAIRMAN. Mr. Scott?

Mr. SCOTT. Jack Garrett Scott. I am the associate counsel of N. R. A.

Mr. WOHLFORTH. Mr. Chairman, this morning we heard testimony on the attitude of the small-arms industry toward its proposed code and the N. R. A. in general. And just to clarify the record, I would like at this point to put into the record the other attitude, the attitude of the code authorities of the N. R. A. toward the small-arms industry.

Mr. Scott or Mr. Dickerman, will you explain to the committee the exact status of the small-arms code?

Mr. SCOTT. The code was originally proposed to the N. R. A. sometime in July or August 1933. Negotiations were held upon that code and its various terms and a good many drafts were submitted as a result of these negotiations, until March of 1934, and at that time the negotiations apparently reached a stalemate; that is, the industry would not submit anything further, or what we deemed to be better proposals, and the National Recovery Administration would not approve what they had submitted.

At that time, in March 1934 the code in its then form was approved by the Administrator, in an order which imposed certain conditions. Subsequent to the entry of that order, the industry notified the National Recovery Administration they repudiated the code; that they would not regard the code as binding upon them, and that status has existed down to the present time.

Mr. WOHLFORTH. Have you any documents with you to show the attitude by the industry toward that code and, if so, will you please read them into the record and submit one copy for the reporter?

Mr. SCOTT. The first one was a telegram under date of April 4, 1934, from C. Stewart Comeaux, secretary of the small arms and ammunition manufacturing industry.

Mr. WOHLFORTH. Will you read it please?

Mr. SCOTT. Addressed to Mr. A. R. Glancey, Division Administrator, room 4867, National Recovery Administration, Washington, D. C. [reading]:

> Meeting of small arms and ammunition manufacturing industry now in session and members representing more than 90 percent in volume of sales have given careful consideration to changes and deletions in order of approval. Members desirous of cooperating in every possible way with National Recovery Administration but voted unanimously not to accept code as approved. However, they will unanimously accept code if amended by striking out final clause of paragraph C, section 1, article 2, reading as follows: "And provided further, that such hours shall not be availed of in more than 15 weeks in any year, nor more than 48 hours in any week" and provided article 16 is reinserted in code to read "by presenting this code, those assenting hereto are not thereby waiving any of their constitutional rights" and by reinserted article 18 relating to modification. Through conferences which have been held with Messrs. Matthews and Gregg you are familiar with the industry's position regarding articles 16 and 18. In reference to suggested change in paragraph C, section 1, article 2, we desire to state that original text was prepared after very careful consideration and was designed to permit the employment of experienced skilled labor when absolutely necessary to secure continuity of production without break in employment for general working forces. There how exists actual shortage of skilled labor, and experience has already demonstrated that the restriction imposed by the addition to that paragraph will seriously decrease employment in the industry. This telegram is sent as per your request to Mr. Gregg. Meeting will be in session until 6 o'clock today and any communication received from you prior to that time will be presented to the meeting.

Mr. WOHLFORTH. Have you any other letters or documents there relating to the attitude of the small-arms industry to the N. R. A. code, and, if so, will you read them for us?

Mr. SCOTT. Various negotiations were held between N. R. A. and the industry since this time in an attempt to have this accepted by the industry as a code for the industry, without any success.

On September 28, 1934, a letter from Mr. Comeaux, addressed to Mr. Barton W. Murray, Division Administrator, National Recovery Administration, Washington, D. C., was received, reading as follows:

> SMALL ARMS AND AMMUNITION MANUFACTURING INDUSTRY CODE
>
> At a meeting of the code committee for this industry held Thursday, September 27, consideration was given to the proposal outlined in your letter of September 13, and I was directed to advise you that the committee is unanimously opposed to having this code administered by the N. R. A. basic code authority.
>
> In this connection it will be recalled that this code, which was approved by the Administrator, was not accepted by the industry because of deletion by order of approval of articles XVI and XVIII, all of which is of record with the administration.
>
> While the committee is of the opinion that the industry would likewise be opposed to the proposal made by you, I am further directed to say that if you so desire, the question will be referred to a meeting of the industry.

Mr. Wohlforth. Have you any further documents which will throw light on the small-arms industry code and its adoption? If so, please read them into the record.

Mr. Scott I do not think there is anything that would add to the statement of the position of the industry.

Mr. Wohlforth. In your experience could you give us an expression on this matter: Was the attitude of the industry cooperative or did the code authorities meet with resistance to any considerable degree?

Mr. Scott. As to being cooperative, in my opinion the attitude of the industry was decidedly to the contrary.

That is shown, I think, by the records and files of the matter all the way through, and by the further ultimate fact that the code, when finally approved by the Administrator, was repudiated by the industry upon the basis of what I deem to be highly legalistic and technical grounds.

The history behind it throws a little light upon the thought. The main controversy which raged during all these months that the code was pending before the National Recovery Administration concerned labor provisions. As I said before, when we got to the draft of March 1934 we had gotten to the point where, in our opinion, the industry would not move any further toward providing what we considered to be satisfactory labor provisions for the industry.

Mr. Wohlforth. Is the code now in effect?

Mr. Scott. There seems to be a difference of opinion about it. In our opinion it is in effect but in the opinion of the industry they have expressly repudiated it and claim it is not in effect.

Mr. Hiss. Is a voluntary code in fact in effect?

Mr. Scott. In view of the attitude of the industry, there is a good deal of doubt about that.

Mr. Davis. Senator, could I have the floor?

Senator Vandenberg. Yes.

Mr. Davis. I would like to ask Mr. Scott—I understand Mr. Dickerman was appointed Deputy Administrator on November 27 of this year. I was chairman of this code committee from the time of its inception in July 1933, and the entire industry has been cooperating, and we are ready right now to accept that code, if they will restore the two articles, XVI and XVIII, in the code.

Mr. Handy. That has been our position. There have been no labor difficulties.

Mr. Davis. We have accepted everything.

Mr. Scott. I may say, in answer to that, that one of the conditions in this order of approval which is in dispute and the important one substantively was one concerning labor provisions. The other two had nothing to do with labor provisions.

Mr. Wohlforth. May I add, Mr. Davis, that Mr. Dickerman, although he has been quite recently appointed, has all the data on this and is the man in charge and the one to whom we, of course, had to apply.

Mr. Davis. I would be very glad to place this entire record of correspondence before the entire American public. We have had no less than eight Administrators and Deputy Administrators handling our code. I have been through it since July 1933.

Mr. SCOTT. I have been familiar with it myself since November 1933, not directly but generally.

Senator VANDENBERG. Do you want to make a statement, Judge?

Mr. GREGG. Senator, as I understand Mr. Scott to say, our objections are technical on articles XVI and XVIII. Article XVI is the provision in the code that by presenting the code we are not waiving any of our constitutional rights.

Article XVIII is that we are reserving the right to object to any modification of the code later on.

I went into that question thoroughly about the waiver of constitutional rights. I prepared a brief for Mr. Davis, and I would not advise any client to waive his constitutional rights under a code that is voluntarily applied for, when the Supreme Court of the United States has held repeatedly that, when you voluntarily apply for authority to do business under an act, and authority is granted under that voluntary application, you have waived your constitutional rights and you cannot take advantage of them later on.

I would not advise any client to thus agree to waive his constitutional rights.

Those are the two articles which have held up this code.

Mr. WOHLFORTH. Mr. Chairman, that is all I have. That shows the opinion of the code authorities and the opinion of the industry. I have no further questions unless Mr. Hiss has some.

Senator VANDENBERG. Mr. Hiss?

Mr. HISS. No questions.

Senator VANDENBERG. The N. R. A. officials are excused.

(Witnesses excused.)

EXCESS-PROFITS TAXATION

Mr. HISS. Colonel Harris, mention has been made in connection with the mobilization plan of plans of dealing with possible profiteering during war time through some form of excess-profits taxation. Is that correct, Colonel Harris?

Colonel HARRIS. That is correct.

Mr. HISS. Mr. Irénée du Pont, I think a few days ago you stated in connection with certain testimony as to profits made during the war, that 80 percent of the profits were taken by taxation by the Government. Are you familiar——

Mr. IRÉNÉE DU PONT. Is that my statement, sir?

Mr. HISS. That was my understanding of what it was. Would you advise me as to your understanding of it?

Mr. IRÉNÉE DU PONT. As I recall, Mr. Hiss, under the war tax which came in, I think in 1918, the Government took 80 percent of the profits in excess of 10 percent on the investment. I think that is correct. That is my recollection of that law. Prior to that time I think the rate was 65 percent of the profits. But you have got the records and know what it is. But I would like to refer to my testimony and if I made a mistake like that, it was certainly due to my inability to express myself.

Mr. HISS. I would like to have marked as an exhibit a chart by Mr. Arthur Ballantine, who was formerly assistant Secretary of the Treasury, a chart which he introduced at the War Policy Commission hearings as to the rate of corporation income- and profit-tax rates. It appears at pages 710 and 711 of the War Policy Commission hearings. The chart does not include the munitions tax.

(The chart referred to was marked "Exhibit No. 1388" and is included in the appendix on p. 4428.)

Mr. Hiss. My investigation indicates that the munitions tax was in effect for 2 taxable years, namely, 1916 and 1917. In 1916 it was 12½ percent of the income and in 1917 it was 10 percent of the income.

Mr. Irénée du Pont. That tax could hardly be called a "munitions tax", because I think Congress was very careful to call it an "excise tax." If it had been a munitions tax it would have been a tax on exports and unconstitutional. That was another way of "beating the devil around the stump."

Mr. Hiss. In using "munitions tax" I thought I used the words you did, Mr. du Pont.

Mr. Irénée du Pont. I think the word "excise" was used by Congress.

Mr. Hiss. As near as I can determine from an examination of the statutes, the actual taxes from 1914 to 1921 were approximately as follows:

For the taxable years 1914 and 1915, 1 percent of income.

1916, 2 percent plus the 12½ percent excise tax which you have described.

In 1917 a graduated tax, based upon brackets of income, which would total in the higher brackets somewhat less than 60 percent, according to Mr. Ballantine's table.

Mr. Irénée du Pont. Does it not depend on how high the profits go?

Mr. Hiss. I say, it is a graduated tax. Specifically it is this: Net income equal to 15 percent of the invested capital less war credits, taxed at the rate of 20 percent; the net income in excess of 15 percent of the invested capital and up to 20 percent, taxed at 25 percent; then the net income in excess of 20 percent but not in excess of 25 percent of invested capital taxed at a rate of 35 percent; then the net income in excess of 25 percent but not in excess of 33 percent, taxed at 45 percent and the net income in excess of 33 percent taxed at 60 percent.

Mr. Nielsen. That is correct.

Mr. Irénée du Pont. I thought it was 65.

Mr. Hiss. Since the lower brackets were taxed at less than 60 percent, the gross tax compared with the gross income would be somewhat less than 60 percent of the income less the war credits, which was anywhere from 8 to 10 percent.

Then in 1918——

Mr. Nielsen. There was a normal income tax in 1917 besides that tax.

Mr. Hiss. One or two percent at that time.

Mr. Nielson. I think it was 2 and 4. I may be mistaken [referring to papers]. It is 2 and 4 percent.

Mr. Hiss. That is shown in the chart.

Mr. Nielsen. This 6 percent is on the remainder.

Mr. Hiss. Four percent.

Mr. **Nielsen**. Some income was taxable at 2 percent and some taxable at 4 percent.

Mr. **Hiss**. That is correct.

Then in 1918, in addition to an income-tax rate, there were taxes approximating 80 percent, as you have previously described them, excess profits taxes. Prior to that year there was not this excess profits tax.

Mr. **Irénée du Pont**. What year?

Mr. **Hiss**. The years before 1918.

Mr. **Irénée du Pont**. That is the year before the Old Hickory contract was in operation?

Mr. **Hiss**. That is correct.

Mr. **Irénée du Pont**. I think that may be the matter you referred to. We were taxed 80 percent on that.

Mr. **Hiss**. I thought your statement was made in the evidence relating to general profits showing the price level or such evidence as that in the charts.

Mr. **Irénée du Pont**. Did I say all the profits on all that were 80 percent?

Mr. **Hiss**. I so understood you.

Mr. **Nielsen**. I think you meant, subject to 80 percent at a certain point. That is what you had in mind.

Senator **Vandenberg**. The record shows what the testimony is.

Mr. **Hiss**. From 1919——

Mr. **Nielsen**. Wait a minute. You have a 12 percent normal tax besides.

Mr. **Hiss**. I stated that.

Mr. **Nielsen**. I am sorry; I did not hear you.

Mr. **Hiss**. Then from 1919 to 1921 on the income above the war credit there was a 20-percent tax from the war credit income to 20 percent and 40 percent of the income in excess of 20 percent, plus the ordinary rate of income tax, which approximated——

Mr. **Irénée du Pont**. What is this?

Mr. **Hiss**. From 1919 through 1921.

Mr. **Irénée du Pont**. That was after the war period?

Mr. **Hiss**. That is right.

Mr. **Irénée du Pont**. I did not get beyond the war period in those charts, I think.

Mr. **Hiss**. During the years 1918 to 1924 there was, in addition to the amortization provision which has already been referred to, and as to which information has been requested from your company[1]——

Mr. **Nielsen**. That is being prepared.

Mr. **Hiss** (continuing). Under which investment in expansion, of capital investment, that is, the investment made after April 6, 1917, and prior to the end of the war, and which was for war purposes, could be deducted from taxable income. So that to that extent, to the extent that there was this amortization out of income taxes after the war and during the year 1918, particularly from 1919 to 1924, inclusive, there was a reduction of what would be ordinary income taxes which, in effect——

Mr. **Irénée du Pont**. Softened the blow.

---

[1] Hearings, Part XIII, footnote, p. 2927.

Mr. Hiss (continuing). Was a lessening of the tax burden during the World War. So that the 80-percent provision, even in 1918, must be qualified by the amortization provision.

Mr. Nielsen. Providing you had amortization, of course. Some taxpayers did not have any.

Mr. Hiss. Did the du Pont Co. have any during that period?

Mr. Nielsen. Yes; in 1918 we had $15,343,987.69.

Mr. Irénée du Pont. Did the du Pont Engineering have any amortization?

Mr. Nielsen. They did not have, and that was why the tax rate was 79 percent over all during 1918 and 1919.

Mr. Hiss. The du Pont Engineering did not have any amortization?

Mr. Nielsen. We do not claim they should have.

Mr. Hiss. Of course, that was paid by the Government.

Mr. Irénée du Pont. It does not affect the statement of fact, 79 percent of their taxes went back direct to the Government as a tax, and a certain proportion left.

Mr. Hiss. I should like to offer for the record a statement taken from your company, showing corporation receipts from all sources for the years 1915, 1916, 1917, and 1918—this does not include 1914, also a war year—to 1918, inclusive, of [reading]:

> $1,157,000,000, out of which there was expended for salaries and wages, $225,000,000; materials, freight, and expenses, $602,000,000; Federal taxes (paid and accrued), $72,000,000; B. bonus to employees, $15,656,000.

(The statement referred to was marked "Exhibit No. 1389" and is included in the appendix on p. 4432.)

Mr. Hiss. That exhibit also shows the net profits after taking out these items, of $228,731,000—more than the salaries and wages, exclusive of bonuses, and outside of the amount of Federal taxes.

Do you know, Mr. Nielsen, whether all the bonus of $15,656,000 was bought in the open market, or whether it constituted the issuance of treasury stock?

Mr. Nielsen. During the years 1915 to 1918 we purchased all of the bonus stock.

Mr. Hiss. $15,000,000 of purchases on the market must have had considerable effect on the price of du Pont stock during that period, did it not?

Mr. Nielsen. I would not say so. We bought it piecemeal and bought it carefully, and we watched the situation in that way.

Mr. Irénée du Pont. Could you tell me whether this is drawn from our published annual reports, or whether this report is corrected by reason of rulings of the Internal Revenue department, which changed the taxes, according as to which year it fell in?

Mr. Hiss. This came, Mr. du Pont, from a file of Mr. Pierre du Pont marked "Annual Report".

Mr. Irénée du Pont. Then it must be our own.

Mr. Nielsen. I think so, although I have never seen it.

Mr. Hiss. One last point: Mr. Irénée du Pont, there has been some testimony to the effect that the profits made by the du Pont Co. were almost entirely profits made on general business during this period. Is that your impression?

Mr. Irénée du Pont. I think the statement to which you refer was. I said that total profits made on the sale of powder to the United

States Government during the World War were more than offset by the taxes paid in the World War period to the United States Government.

Senator CLARK. That is not true on taxes allocable to business coming from the United States Government, is it?

Mr. IRÉNÉE DU PONT. Of course not. I am thinking of the du Pont Co. as an institution in the United States. If you had not had that institution here, the country would have been worse off from getting its powder at cost. I do not know whether I make myself clear. If we had earned from the Government $38,000,000, or something like that, of earnings from war contracts with the Government, we paid them in taxes in that period of time more than $38,000,000 or $50,000,000 of taxes, so that if this institution had not been here, the Government would have been worse off, even neglecting the tax, after they got the powder at cost. That is the point I was trying to put over, and I do not know whether I have put it over yet.

Senator CLARK. You mean the total taxes paid on all business from all sources during the period of the war from 1914 to 1918 was more than your profits on your United States Government contracts?

Mr. IRÉNÉE DU PONT. In that period.

Senator CLARK. But, of course, were not greater than the taxes allocable to Government business.

Mr. IRÉNÉE DU PONT. Of course not; no. You did not tax over 100 percent profit on our profits from the United States. Granted.

Senator CLARK. No.

Mr. HISS. Mr. du Pont, I have had certain computations made from " Exhibit No. 1113 ",[1] statement of the company's foreign sales.

The first shows the total sales to Belgium from 1914 to 1918, being $1,893,400. That is offered for appropriate number.

(The document referred to was marked " Exhibit No. 1390 " and is included in the appendix on p. 4432.)

Mr. HISS. The next exhibit shows the total sales to England during the same period, 1914 to 1918, and that comes to $347,395,511. That is offered for appropriate number.

(The document referred to was marked " Exhibit No. 1391 " and is included in the appendix on p. 4433.)

Mr. HISS. The next exhibit shows the same information for France, the total for the 4 years being $136,323,158. That is offered for appropriate number.

(The document referred to was marked " Exhibit No. 1392 " and is included in the appendix on p. 4434.)

Mr. HISS. And the exhibit for Italy, for the same period, shows a total amount of sales of $55,623,408. That is offered for appropriate number.

(The document referred to was marked " Exhibit No. 1393 " and is included in the appendix on p. 4434.)

Mr. HISS. The next exhibit shows the same information for Russia for the same period, the total being $62,017,385. That is offered for appropriate number.

(The document referred to was marked " Exhibit No. 1394 " and is included in the appendix on p. 4435.)

---

[1] Hearings, Part XIII, p. 2924.

Mr. HISS. I also offer as an exhibit a statement furnished to the committee by the Treasury Department, as to the status of war loans by the United States Government to foreign nations.

(The statement referred to was marked "Exhibit No. 1395" and is included in the appendix on p. 4436.)

Mr. HISS. Referring specifically to the countries to which the tabulations refer, the total indebtedness, with payments heretofore made deducted, the total indebtedness as of November 15, 1934, from Belgium to the United States was $413,653,000 plus, and the total indebtedness from France, similarly computed, was $3,980,000,000 plus, and from Great Britain $4,714,000,000 plus, from Italy $2,009,000,000 plus, and from Russia $346,000,000 plus.

Mr. IRÉNÉE DU PONT. Those were loans made by the United States to those foreign powers? Are they complete? They did not seem to add up enough, as you read them.

Mr. HISS. They are not all the loans. I read the loans to those countries to which these tabulations referred, to which your company had made sales, five countries.

I will also ask that the letter from the Acting Secretary of the Treasury be marked, because it describes the tabulation to some extent.

(The letter referred to was marked "Exhibit No. 1396" and is included in the appendix on p. 4437.)

Mr. HISS. Colonel Harris, are you familiar with some of the difficulties in regaining by taxation profits that have once accrued?

Lieutenant Colonel HARRIS. I do not feel qualified to discuss that phase.

Mr. HISS. There is considerable difficulty, is there not, in the technical complications of invested capital?

Lieutenant Colonel HARRIS. Repeat your question.

Mr. HISS. Will you read the question, Mr. Reporter?

(The pending question, as above recorded, was read by the reporter.)

Lieutenant Colonel HARRIS. I am not familiar with the difficulties; I can perhaps visualize some.

Mr. HISS. I offer for the record a letter which the committee received, under date of December 29, 1932, referring to the taxes of Mr. Alfred I. du Pont, which was made the basis of a formal request to the Treasury Department by the chairman, and the reply of the Treasury Department to the chairman under date of December 10, 1934.

(The letter of December 29, 1932, which was the basis of the formal request of the committee to the Treasury Department was marked "Exhibit No. 1397" and is included in the appendix on p. 4437.)

(The formal request of the committee to the Treasury Department under date of November 24, 1934, was marked "Exhibit No. 1397–A" and is included in the appendix on p. 4440.)

(The reply of the Treasury Department to the chairman of the committee, under date of December 10, 1934, was marked "Exhibit No. 1398" and is included in the appendix on p. 4441.)

Mr. HISS. "Exhibit No. 1398" shows that for the years 1920 to 1926 Mr. Alfred I. du Pont had a gross income of $29,586,000, but paid not one cent of income tax.

Mr. Pierre du Pont. Would you mind stating the taxable income?

Mr. Hiss. What I stated was gross income.

Mr. Pierre du Pont. What was the taxable income?

Mr. Hiss. This is the gross income. I should assume there was no taxable income.

Mr. Pierre du Pont. There was no taxable income. Is not that right?

Mr. Hiss. I guess so. There were stated certain deductions which entered into the computation, and they showed losses on stock on a company known as Nemours Trading Co., $2,499,000 in 1920, $1,249,000 in 1921, and $1,000,000 in 1922, and $999,000 in 1923.

That may have had something to do with it.

Mr. Pierre du Pont. Therefore he had no net income.

Mr. Nielsen. Why speak of taxing gross income, when the tax is on net income? Gross income has nothing to do with it.

Mr. Hiss. The question was addressed to Colonel Harris before these exhibits were offered, as to whether there would be difficulty in determining taxes after profits had been made.

Mr. Nielsen. I do not think your example proved anything.

Senator Vandenberg. The committee will recess until 10 o'clock tomorrow morning, and all witnesses are excused except Lieutenant Colonel Harris and Lieutenant Brannon, who will be with us in the morning.

(Thereupon, at 4:40 p.m., a recess was taken until tomorrow, Friday, Dec. 21, 1934, at 10 a.m.)

INVESTIGATION OF MUNITIONS INDUSTRY

FRIDAY, DECEMBER 21, 1934

United States Senate,
Special Committee to
Investigate the Munitions Industry,
Washington, D.C.

The hearing was resumed at 10 a.m. in room 357, Senate Office Building, pursuant to the taking of recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Vandenberg, Clark, Pope.

Also present: Stephen Raushenbush, secretary to the committee; Alger Hiss, legal assistant to the committee, and Robert Wohlforth, assistant to the secretary of the committee.

The Chairman. The committee will be in order.

Senator Watson, will you be sworn, and then we will hear you.

TESTIMONY OF JAMES E. WATSON

(The witness was duly sworn by the chairman.)

The Chairman. Senator, you have asked, in light of what transpired a week ago before the committee, for an opportunity to be heard. The committee is glad this morning to afford you a chance to say what you might wish to say respecting the matters that are pending before the committee.

Mr. Watson. As the chairman has said, I was not summoned here, I was not subpenaed here, I was not asked here. I called the chairman and requested this privilege and he very graciously consented, and I am deeply grateful for the opportunity.

Some days ago, when I was in the West, I read in the newspapers an account of a letter written by Senator Penrose to somebody, in which he asked that the du Ponts be given what they want, or language to that effect. I would not have cared anything about that, but some of the headlines in the western papers recited, " Watson involved in munitions investigation."

The word " involved " as used in these days has more or less of a sinister meaning. It was the word " involved " that I objected to. I just felt nettled about it and I thought I ought to have an opportunity to say to this committee how I felt in the matter.

The records referring to the letter show that Senator Penrose in that letter said nothing about munitions. It was all about the dye industry and about the tariff on dyes. I assume it is fairly well understood, or used to be, that nobody needed to urge me to be a protectionist, nor instruct me how to be one. I was an advocate of that theory before I ever saw Senator Penrose, and have been since he left this vale of tears to fight in other realms.

Senator Clark. This particular proposition went a little further than protection, Senator.

Mr. Watson. What was it?

Senator Clark. It went to the extent of embargo and prohibition against the import of dyes.

Mr. Watson. Do you want me to explain that?

Senator Clark. I just thought we might agree on terms, that is all.

Mr. Watson. No member of the du Pont family ever at any time spoke to me about the tariff question in any form, as far as I have any recollection. I do not recall, Senator, whether Coleman du Pont was in the Senate at that time or not. I do not think so. But, if he was there at that time, he was very chary about talking to his colleagues about something in which his people might be interested. At all events, he never talked to me.

I have no recollection of any legislation touching munitions, there may have been some, and especially any tariff on munitions, but the dye question was first and foremost for a good while. Senator Penrose, being a great protectionist, was for a tariff on dyes. He and I talked about it very often. But the man who led that fight more than anyone else was Senator Knox of Pennsylvania. He made a number of speeches on the floor in favor of this embargo on dyes.

I was chairman of the subcommittee that considered the tariff on dyes and we had extensive hearings on the subject. At the end of that time we unanimously reported in favor of an embargo on dyes, or what amounted to an embargo, the reason being that there was such a difference in the cost of production in Germany and here that no tariff rate could adequately measure that difference.

I never got into anything more interesting or more fascinating in my experience in either House or Senate than this question of the tariff on dyes. It showed what tremendous progress the Germans made in that respect and how marvelous were their investigations and their production. They put their scientists on the pay roll and kept them there, and they worked in secret places and produced these dyes in marvelous ways in taking the various steps in producing the final formulas which brought the dyes.

On one side, for instance, they would find a remedy. Practically all of the coal-tar preparations we now have come from these dye investigations by the Germans in their laboratories. Take 606; that simply meant that it took 606 experiments and operations before they finally reached the formula that produced the remedy.

Senator Clark. Senator, the way that matter came into this investigation, as you suggested——

Mr. Watson. Which, the 606?

Senator Clark. No—was that the du Ponts, as some of our evidence showed, were down here very busily engaged in urging this embargo as a national defense measure. That is, they were insisting that it was necessary for the national defense for them to be permitted to build up this monopoly in chemicals.

Mr. Watson. Yes.

Senator Clark. I may say, incidentally, since you mentioned the embargo on chemicals, that it has been in evidence here that under that embargo the du Ponts have been able to build up their business in the chemical line sufficiently at the expense of the American people that they now say their old family standby, the munitions business, is only 2 percent of their operations.

Mr. Watson. Of course, as to that I know nothing as to the relative value of their production; but at that time I became profoundly convinced that if we intended to establish a dye industry in the United States at all, it would have to be done behind an embargo; that it could not be done by a system of tariff rates. I can give you one illustration.

Senator Clark. I am glad to hear this frank statement, Senator, from a so-called "protectionist."

Mr. Watson. Not only that, but if my friend, Senator Clark, will look at the proceedings that occurred in the Senate during the passage of the Fordney-McCumber bill—no, the Smoot-Hawley tariff bill—he will find the hottest fights over rates in that bill were about the tariff on dyes, and when the time came to vote, 24 Democrats voted for this high tariff on dyes.

Senator Clark. I am very regretful, Senator, to learn that during those dark and gloomy days of the Republic some of my brethren strayed from the straight and narrow path.

Mr. Watson. But, you know, you have gone much further now, because you have placed in the hands of the President the power to fix anything at all, with their N. R. A., A. A. A., or any other of the alphabetical organizations that have been established.

Senator Clark. Not with my vote.

Mr. Watson. I congratulate my friend from Missouri.

Senator Vandenberg. Senator, if there is going to be any commenting on the subject, I would like to say that I cordially agreed with your viewpoint of the necessity for the protection on dyes.

Mr. Watson. That is very kind, my friend. A friend in need is a friend in deed.

I only wanted to say this, and I do it as much for the Senators in as the Senators out: I am not a candidate for office, and therefore I am not seeking any kind of public favor, but I do not want to be placed in a false light with reference to a thing of this kind.

I was for a tariff on dyes. I was for an embargo on dyes. I believed it was essential to establish the dye industry in America, and I knew that it could not be done unless it was done behind an embargo. And my Democratic friends, enough of them, agreed to go along.

Senator Nugent, Brother Clark, was on this subcommittee, from Idaho. He was a pretty good man too, notwithstanding his political proclivities. He was as much against the tariff as anybody when we started in, but when we quit he was for this embargo.

Senator Clark. That shows the effect of argument.

Mr. Watson. It shows the effect of argument and logic on a wise man. But we did establish that industry. I don't know what it amounts to. They talk about the lobby business. Nobody needed to lobby me to be a protectionist. I beat them to it. I was for protection before they were. No du Pont ever spoke to me about it that I have any recollection of at all.

We did have before our subcommittee some of the scientists and some of the investigators and some of the specialists from the du Pont dye industry, but none of the du Ponts that I recall. We had them over here to give certain testimony as to why an embargo is necessary.

We might have fixed rates equivalent to an embargo, Senator Clark. I remember one dye that we would have been compelled to put a 2,000-percent rate on in order to protect its production in America. Nobody would have stood for that. There would have been an almighty howl go up that would have shaken the figure on the top of the dome of the Capitol.

Senator CLARK. Senator, I agree with you that there may at times be the necessity to impose an embargo, but there have been altogether too many instances where that has been done under the guise of making out a case for protection.

Mr. WATSON. I agree with you entirely. I, however, acted on my own responsibility. I resent the idea that somebody from the outside or somebody from the inside influenced me on that proposition, that because Senator Penrose wrote me a letter, therefore I was involved in this proposition. I do not like the word "involve." There never was a clearer, straighter fight made on any tariff proposition in all these years than for the tariff on dyes. It was renewed under the Smoot-Hawley bill, and there was a long fight. I am not going to mention any of my Democratic friends that advocated it. They can speak for themselves, as some of them are here.

Senator CLARK. Some of them wish they had not.

Mr. WATSON. I have not found that. They may, but I rather doubt that, because they believed in this dye industry in America. I know of no Democrat, Senator Clark, that does not think that if we had not imposed an embargo we would today have a dye industry in America and, as far as I am concerned, I think it is infinitely better to have it in American than in Germany, because the Germans built up from that dye industry enormous side industries, ancillary, which had much to do with the industrial supremacy of Germany and with her financial success.

Now, Mr. Chairman, I think I have said about all I want to say. I might add this: I am not putting on any robes of sanctity, but I want to say that in my experience not one cent of du Pont money ever came to me or any campaign committee of mine, never at any time. I think, perhaps, they were a little remiss in their opportunities, but that was the situation. They did not say anything to me about it beforehand, and there were no results afterhand. But everybody knew that I would be a protectionist and stood for the doctrine, for the theory, which I yet do, and I am very happy, Brother Clark, that you and your party have gone beyond that now.

Senator CLARK. Don't take me.

Mr. WATSON. You go along. You joined the crowd.

Senator CLARK. How is that?

Mr. WATSON. I say that you go along with them. You joined the crowd.

Senator CLARK. I would like for you to look over my record as long as I stay in the Senate to see whether I ever vote for a duty against revenue.

Mr. WATSON. Do you wish to ask me any questions, Senators?

The CHAIRMAN. I think not, Senator.

Mr. WATSON. I am very grateful to you for this opportunity. I just felt nettled when I saw those headlines in the western papers—

the idea that one Senator would write another Senator a letter and thereby he would become involved. Senator Penrose and I were very great friends in the Senate and we were together very, very much. If he wanted to say anything to me he would have said it, as he did. We talked about the tariff on dyes, and all of the Senators on my side, as well as on the other side, because there were a great number of Democrats for this tariff, were, I think, actuated only by patriotic motives.

The CHAIRMAN. All right, Senator.

Mr. WATSON. I am very much obliged to you, Senators, and glad to meet you again. This is the first time I have been in this building since I left. I have never set foot in the Capitol since I left it, and I would not be here today but for this opportunity which you have so cordially extended me, and for which I am very grateful. Thank you.

The CHAIRMAN. Thank you, Senator.

Mr. HISS. Colonel Harris and Lieutenant Brannon.

TESTIMONY OF LT. COL. C. T. HARRIS AND LT. E. M. BRANNON—Resumed

Mr. HISS. Colonel Harris, so far in regard to the contract forms——

Lieutenant Colonel HARRIS. Before you start, Mr. Hiss, do you want to take the information you have asked us to get at this time, or later?

Mr. HISS. I think this might be a very good time.

Lieutenant Colonel HARRIS. We have some of it now and some of it will have to be furnished later.

Lieutenant BRANNON. The first was in reference to salaries paid to the members of the War Industries Board.[1] From the records in the file of the Army Industrial Board I have made up this paper. Should I read it?

Mr. HISS. Would you, please?

Lieutenant BRANNON. Mr. Baruch, salary, $1 a year.

Mr. Brookings, from August 1, 1917, $500 per month. The records show that was terminated May 27, 1918, and the following day, May 28, 1918, Mr. Brookings was reappointed at the same salary, $500 per month. It finally terminated February 28, 1919.

Mr. Lovett, from August 1, 1917, $400 per month; September 16, 1917, $500 per month; terminated March 5, 1918.

Mr. Frayne, from August 1, 1917, $500 per month; from August 1, 1918, $675 per month; terminated February 14, 1919.

Mr. Scott, from August 1, 1917, $400 per month; from September 25, 1917, $500 per month; terminated October 26, 1917.

Next was the investment at Frankford Arsenal.[2]

The plant investment at Frankford Arsenal is as follows:

Land	$1,000,000
Buildings	8,189,000
Utilities	2,311,000
Total	11,500,000

There is no record of a deficiency appropriation for Frankford Arsenal during the years 1927, 1928, and 1929.[3]

---

[1] Hearings, Part XVI, p. 4021.
[2] Ibid., p. 3958.
[3] Ibid., p. 3953.

Mr. Hiss. Lieutenant Brannon, does that represent cost, those figures you have?

Lieutenant Brannon. I do not know the basis. We simply asked the Ordnance Department and they furnished these figures, Mr. Hiss.

Mr. Hiss. Yes.

Lieutenant Brannon. The next is reference to orders placed with the E. I. du Pont de Nemours & Co. for powder.

The following powder orders were entered into with E. I. du Pont de Nemours & Co. during the calendar year 1934, and paid for from N. I. R. A. funds:[1]

37-millimeter gun, model 1916	$2,560
3-inch antiaircraft gun, model 1918	75,313
155-millimeter gun	1,050
Powder for caliber .30 ammunition	208,000
Total	286,923

EXTENT TO WHICH ORDNANCE DEPARTMENT COMMANDEERED PLANTS IN WORLD WAR

Lieutenant Brannon. Now, with reference to the plants that were commandeered during the war.[2]

Attached hereto are memoranda of December 9, 1918, listing commercial plants commandeered for the Ordnance Department during the World War, under section 120 of the National Defense Act of 1916. I have only one copy of the list of plants. This is a letter written December 9, 1918, from the Administration Division, Advisory Section, to the Procurement Division, attention Captain Featherstone.

Subject: Plants commandeered for the Ordnance Department. I have simply taken this letter and put it in. It reads as follows:

December 9, 1918.

From: Administration Division, Advisory Section.
To: Procurement Division.
(Attention Captain Featherstone.)
Subject: Plants commandeered for the Ordnance Department.

1. The following plants have been commandeered by the Ordnance Department:

1. Plant of the Liberty Ordnance Co. at Bridgeport, Conn. Req. 26 A/C, Ord. No. 27, dated 1/5/18.
2. Plant owned by Smith & Wesson, Springfield, Mass. Req. 709 B/C, Ord. No. 604, dated 8/31/18.
3. Plant of Bigelow-Hartford Carpet Co., Lowell, Mass. Req. 20 A/C, Ord. No. 62, dated 12/27/17.
4. Hoboken Land & Improvement Co., Hoboken, N. J. Req. 37 A/C, Ord. No. 516, dated 2/28/18.
5. Plant of Federal Enameling & Stamping Co., McKees Rocks, Pa. Req. 738 B/C, Ord. No. 609, dated 9/11/18.
6. Mosler Safe Co., Hamilton, Ohio. Req. 781 B/C, Ord. No. 612, dated 9/23/18.

By direction of the Chief of the Administration Division.

M. F. Griggs,
Lt. Col., Ord. Dept., U. S. A.
By Lt. Richard L. Davisson,
Ord Dept., U. S. A.

---

[1] Hearings, Part XVI, p. 3986.
[2] Ibid, p. 4012.

Now, there is another letter, Mr. Hiss, which has the same plants and, in addition, mentioned one or two that are not mentioned here. I believe from the context they were simply plant requisitions in order to take the land and buildings which were located thereon.

This is a letter from Lt. Col. M. F. Griggs, Advisory Section, Administration Division, to Lt. Col. R. P. Lamont, Procurement Division:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, December 9, 1918.

From: Lt. Col. M. F. Griggs, Advisory Section, Administration Division.
To: Lt. Col. R. P. Lamont, Procurement Division.
Subject: Surrender of requisitioned or commandeered plants.

1. In accordance with the directions of the claims board, steps are being initiated to surrender at once to their owners the following properties:

(*a*) Liberty Ordnance Co.'s plant, Bridgeport, Conn., now operated by the American Can Co. under contract between the United States and the company. It is assumed that cancelation notice in this cost contract will be immediately served in connection with the breaking down of the 75 mm project.

(*b*) Mosler Safe Co. It is understood that the contract for the operation of this plant for the manufacture of gun carriages will be canceled or not executed.

(*c*) Federal Enameling & Stamping Co., McKees Rocks, Pa. This plant was manufacturing adapters and boosters, and it is understood that the contemplated contract for its operation by the National Operating Corporation will not be completed and that, as the output is not needed, this plant may be returned to the company and the operations discontinued by the Pittsburgh district office as now conducted.

(*d*) Smith & Wesson, Springfield, Mass. The revolvers manufactured in this plant will not be required. It is assumed that the contract with the National Operating Corporation will be canceled and this property surrendered to the owners.

(*e*) Several properties in Hoboken, N. Y., such as the Hoboken Land & Improvement Co., Jewel Tea Co., and the Bijour Motors Co., requisitioned for the Remington Arms-U. M. C. Co., for cartridge manufacture, as well as the Bigelow-Hartford Carpet Co. for use by the U.S. Cartridge Co. for cartridge manufacture, will continue in operation for the present, but that notification should be given as soon as these contractors can dispense with the requisitioned properties in accordance with partial suspension orders.

2. We should be notified at once in case the procurement division differs with the understanding above stated.

3. For the purpose of the necessary records of the commandeering section of the purchase, storage, and traffic division, letters are being prepared for Colonel Lamont's signature reciting the suspensions and cancelations which will remove the necessity for retaining the plants in question.

M. F. GRIGGS,
Lieutenant Colonel, Ordnance Department, U. S. A.

Senator VANDENBERG. What is meant by commandeering a plant, Lieutenant? What do you do to commandeer a plant?

Lieutenant BRANNON. As I understand, there are two separate provisions. There was a general provision which authorized the taking by eminent-domain proceedings, just like we might in peace time take land or buildings. The other one—section 120 of the National Defense Act—authorized the commandeering of plants which refused to accept compulsory orders.

Senator VANDENBERG. In other words, you had the authority to commandeer in any situation where you could not arrive at a satisfactory agreement?

Lieutenant BRANNON. Yes, sir.

Senator CLARK. Just what was that authority, Lieutenant? I mean, did it go merely to the extent of having the Government go and take physical possession, or did it go to the extent of permitting you to commandeer personnel? In other words, you did not just have an Army officer walk in and say, "Boys, you are in the Army. We want to turn out some powder."

Lieutenant BRANNON. I believe if I read section 120 of the National Defense Act, that will answer that. The first paragraph of that section authorizes the placing of compulsory orders. The second section reads:

> Compliance with all such orders for products or material shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof, and shall take precedence over all other orders and contracts theretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any plant equipped for the manufacture of arms or ammunition or parts of ammunition, or any necessary supplies or equipment for the army, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any manufacturing plant, which in the opinion of the Secretary of War shall be readily transformed into a plant for the manufacture of arms or ammunition, or parts thereof, or other necessary supplies or equipment, who shall refuse to give to the United States such preference in the matter of the execution of orders, or who shall refuse to manufacture the kind, quantity, or quality of arms or ammunition, or the parts thereof, or any necessary supplies or equipment, as ordered by the Secretary of War, or who shall refuse to furnish such arms, ammunition, or parts of ammunition, or other supplies or equipment, at a reasonable price, as determined by the Secretary of War, then, and in either such case, the President, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement herein provided for, is hereby authorized to take immediate possession of any such plant or plants, and through the Ordnance Department of the United States Army to manufacture therein in time of war, or when war shall be imminent, said price or material as may be required and any individual firm, company, association, or corporation or organized manufacturing industry or the responsible head or heads thereof, failing to comply with the provisions of this section shall be deemed guilty of a felony and upon conviction shall be punished by imprisonment for not more than three years and by a fine not exceeding $50,000.

Senator VANDENBERG. You could not commandeer the du Pont organization for the purpose of erecting Old Hickory, could you? You would have to deal with them at their mercy, so to speak. You had no authority to enforce your judgment as to the national necessity in the situation, did you?

Lieutenant BRANNON. When it comes to an engineering organization, that is where it is not a question of a plant so much as it is personnel, and I do not know how far we could go, sir.

Senator VANDENBERG. You could have commandeered the du Pont plant, could you not?

Lieutenant BRANNON. Yes, sir.

Senator VANDENBERG. Then why could you not have commandeered the du Pont plant and expanded it as a branch of Old Hickory under your commandeering authority?

Lieutenant BRANNON. I think we could, sir.

Senator VANDENBERG. It would seem so to me.

Senator CLARK. I do not see that there is any provision in the law for that, Senator.

Senator VANDENBERG. I am asking the lieutenant.

Senator CLARK. I am referring to the lieutenant's answer.

Lieutenant BRANNON. If we commandeered a factory, of course, the question of taking over the personnel and getting them to serve the Government, whether they want to or not, is a different proposition.

Senator CLARK. I understand that, and that is what I am getting at. I thought I understood your response to Senator Vandenberg's question to be an agreement with the proposition, which I do not think is justified. I will ask Colonel Harris if it is justified.

Lieutenant Colonel HARRIS. That same question was raised several days ago and I said I felt they could commandeer the plant but not the personnel of the organization.

Senator CLARK. To use the du Pont example, you would have to go up and commandeer the du Pont plant under the law?

Lieutenant Colonel HARRIS. Yes, sir.

Senator CLARK. But when you state, "We want you to build a powder plant for us at Old Hickory", they would say, "No; we have something which you cannot commandeer, the 'know-how.'"

You have no authority to say, "Well, boys, it is the 'know-how' which we want, and trains are running to Leavenworth barracks where we send men who hang back from the front-line trenches."

They had a perfect right to say, which still exists, that "You have to haggle with us on terms", when the Germans were about to break through.

Lieutenant Colonel HARRIS. I think every du Pont man could have walked out and left a shell of the plant.

Senator CLARK. I agree with you.

Senator VANDENBERG. You could have commandeered the plant?

Lieutenant Colonel HARRIS. Yes, sir; the physical property.

Senator VANDENBERG. Having commandeered the physical property, would it not have become almost of vital interest for the personnel to stay there?

Lieutenant Colonel HARRIS. I would think so.

Senator CLARK. You had no intent to draft the "know-how?"

Senator VANDENBERG. I agree with you, but I am getting at the fact, that there was a power, which apparently could have been used, to get the ultimate net result, if anybody wanted to use it.

Senator CLARK. You mean "moral suasion"?

Senator VANDENBERG. Yes; with a capital M and a capital S.

Lieutenant BRANNON. That is what I had in mind. If they transferred their services to the Government, they could have sent them to Old Hickory, or anywhere else, as long as they wanted to work for the Government.

I believe that is all the data which we have so far.

Lieutenant Colonel HARRIS. I would like to repeat the request which I made before, to be able to submit a report in connection with Old Hickory, which I have not had a chance to prepare as yet.[1]

ADJUSTED-COMPENSATION CONTRACT FORM—EXTENT OF POSSIBLE PROFITS TO CONTRACTORS

Mr. HISS. Colonel Harris, you have discussed certain provisions of the proposed contract forms developed to afford safeguards under the present War Department plan to prevent profiteering, which, as I understand it, is one of the ills which the War Department has in mind in connection with this plan.

---

[1] Hearings, Part XVI, footnote, p. 3985.

We have also had considerable evidence and testimony as to some of the difficulties and some of the profiteering practices which were common during the World War and which resulted in many months of hearings before the Graham committee, in taking many volumes of testimony. The matter seems a long way off, but it has been necessary to bring up certain of those instances which have afforded concrete examples against which to check certain provisions of the contract.

It has also been developed that under the principle of allocation there is extreme doubt as to how much, if any, competition between suppliers there will be, since suppliers will be counted on for a definite percentage of the total requirements rather than three or four competing for the same orders.

Referring again to the adjusted-compensation contract——[1]

Lieutenant Colonel HARRIS (interposing). Mr. Hiss, I would like to add to your statement, if that is a statement of summary of the plan, that the whole plan is based on a construction that there will be price fixing and basic price fixing, and that when we let under the allocation system, when the plant takes on a job, the Government will have something to say about the price.

Mr. HISS. The price at which raw materials are bought, do you mean, Colonel Harris?

Lieutenant Colonel HARRIS. Yes; and I think about the estimated value of the material to be manufactured. In other words, it is entirely free to negotiate, and we will know on our side or will have some data on our side to strengthen our hand.

Senator CLARK. Colonel, Lieutenant Brannon testified here yesterday, I believe, or day before yesterday, when I asked him how many of these industrial-plants data had been assembled on, upon which could be based a figure of the base cost on which a return was to be allowed, and he said none. That is 15 years' time since the last war, and we have not the data on a single plant.

Lieutenant Colonel HARRIS. We are talking about two different things. You are talking about valuation of the plant and we are talking about the estimated value of the plant to be entered into.

Senator CLARK. I understand that cost is based on actual cost plus a return of 6 percent to the contractor.

Lieutenant Colonel HARRIS. They are both elements.

Senator CLARK. In other words, you cannot fix the cost price without having your base figure any more than you can fix a utility figure without having the base figure under almost every law in every State in the Union.

Lieutenant Colonel HARRIS. That is true.

Senator CLARK. According to Lieutenant Brannon's testimony we are just as far away on having the essential data on which to fix costs as we were 15 years ago at the end of the war.

Mr. HISS. With respect to that same point, Colonel Harris, under the proposed contracts there will be paid, regardless of the particular contractor, regardless of his business ability or his efficiency or anything else, 6 percent on the valuation of his plant and capital. In other words, that is a guarantee of 6 percent on the valuation of the plant and capital. Is not that correct?

---

[1] Introduced into the record as "Exhibit No. 1226–A", earings, Part XV, p. 3625.

Lieutenant Colonel HARRIS. Correct; as agreed upon between the United States and the contractor.

Mr. HISS. That refers to the amount of valuation?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. That is, it has been determined that every contractor will make 6 percent under the present plan. Is that correct?

Lieutenant BRANNON. He will get 6 percent for the estimated amount of performance, Mr. Hiss. If he takes longer on the contract, he will get no extra fee.

Lieutenant Colonel HARRIS. That is at a rate of 6 percent per annum.

Mr. HISS. On the valuation figure.

Lieutenant Colonel HARRIS. And the working capital.

Mr. HISS. He will get at least 6 percent assured him by the contract, regardless of whether up to that time he was getting 6 percent in ordinary competitive business or not. Is that correct?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. That value, I think you testified yesterday or the day before, will have to be fixed, not by any exact valuation procedure similar to utility valuation, the Interstate Commerce valuation, or the valuation employed by the Bureau of Internal Revenue in considering invested capital under the excess-profits tax; it will have to be determined by negotiation in time of war, when there is great pressure for getting contracts signed and production started. That is correct, is it not?

Lieutenant Colonel HARRIS. Unless we can accomplish some of that work beforehand.

Mr. HISS. So far none of that work has been done?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. If the valuation finally agreed on is in excess of the true valuation, then the contractor will be getting more than 6 percent on his true valuation. Is not that correct?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. And there are still many contractors, or prospective contractors, who have expressed themselves as not satisfied that that contract furnishes adequate return for selling to the Government in time of war.

Lieutenant Colonel HARRIS. I think that is probably true, but that is arrived at in a little different way. Industrialists have been asked to pass upon this contract, and some of them had their own plants in mind in commenting, but it was more basic than to comment on their own plant.

Mr. HISS. But men familiar with the trade, men who will probably be contractors, have given it as their opinion that a great number of the prospective contractors would not be able to consider this contract sufficient compensation for their services?

Lieutenant Colonel HARRIS. I would say some. I do not like to say "a great number", because I do not know how many, but some have.

Mr. HISS. You have some comments from different ordnance districts?

Lieutenant Colonel HARRIS. That is right.

Mr. HISS. In addition to the 6-percent fee, paragraph 4 of article III of the adjusted-compensation contract, page 4 of the memorandum form, provides for a bonus for any reduction by the contractor of the costs below the costs fixed in an estimated schedule of costs to be drawn up at the time the contract is signed. This bonus is to be one-quarter of the percentage of saving applied to the actual cost; in other words, somewhat less than one-quarter of the actual savings. Is that correct?

Lieutenant Brannon. That is correct.

Mr. Hiss. Are you familiar with the " bogey " contracts, as they were called during the war, Lieutenant Brannon or Colonel Harris?

Lieutenant Brannon. Yes.

Lieutenant Colonel Harris. You answer.

Mr. Hiss. They were an attempt to get away from the cost-plus-a-percentage contract?

Lieutenant Brannon. That is correct.

Mr. Hiss. They provided, did they not, for an estimated cost?

Lieutenant Brannon. That is right.

Mr. Hiss. And a percentage of the saving actually arrived at under that estimated cost?

Lieutenant Brannon. Yes. The usual form was this: The so-called " bogey " contract was a form of cost-plus contract, but instead of paying the contractor a percentage of the cost, so that he would have an incentive to increase the cost, usually the percentage was based on the estimated cost. It was assumed that he would receive a certain percentage of the estimated cost, and that was the " bogey." If he could better that estimated cost, he was paid a part of the savings as additional compensation.

Mr. Hiss. Is it not true that under that particular scheme the tendency, and in certain cases the result, was to cause contractors to boost their estimated costs beyond any reasonable relation to actual costs, in order to increase their fee?

Lieutenant Brannon. Of course, this was not the contractor's estimate. It was the estimate agreed upon between the contractor and the representatives of the Government.

Mr. Hiss. But just as in the case of the estimate of the valuation, that would have to be determined by negotiation, would it not?

Lieutenant Brannon. Yes.

Mr. Hiss. And, as in the case of the estimate, the contractor would have considerably more knowledge than the War Department, since there will not be a big staff of valuation experts, such as the Interstate Commerce Commission has?

Senator Clark. It would be very much to the interest of the contractor, leaving aside any patriotic or ethical considerations, from purely a monetary standpoint—it would be very much to the interest of the contractor; to the financial interest of the contractor—to pad his costs in every way in the negotiations leading up to the agreement on cost, would it not?

Lieutenant Brannon. That is correct.

Mr. Hiss. Do you remember specifically the figures relating to the Liberty motor contracts which were this form of contract, were they not?

Lieutenant Brannon. I know approximately what those figures were, Mr. Hiss. I do not know whether I have a copy of that memorandum.

Mr. Hiss. It is at page 14 of that memorandum, Lieutenant Brannon.

Lieutenant Brannon. I do not believe I have a copy of that particular one. That is the one I prepared.

Mr. Hiss. I think that is the one, March 1932—no, I beg your pardon. This is your memorandum.[1] Have you a copy of that?

Lieutenant Brannon. No; I have not a copy of that with me.

Mr. Hiss. May I hand you my copy?

Lieutenant Brannon. Yes.

Mr. Hiss. The figures as stated there show, do they not, that the estimated costs arrived at by negotiation prior to the beginning of manufacture were $6,087 per unit, that is, per motor?

Lieutenant Brannon. That is correct.

Mr. Hiss. Of which the fee was to be 15 percent?

Lieutenant Brannon. That is correct.

Mr. Hiss. Plus 2 percent of any saving made in the actual cost over the estimated cost?

Lieutenant Brannon. No; it was 25 percent of the saving.

Mr. Hiss. Twenty-five percent of the saving. Excuse me. The actual cost proved to be only $3,200, slightly more than one-half the estimate.

Lieutenant Brannon. That was the approximate figure. There were about five different companies which manufactured Liberty motors, and the actual cost was about $3,200.

Mr. Hiss. That meant a return, in some cases, of 100 percent on cost to certain contractors, did it not?

Lieutenant Brannon. That is not quite right either, Mr. Hiss. The 15-percent estimate was $913 per motor, and the contractor's share of the savings was $722, which was a profit of $1,635 on a motor which actually cost about $3,200. In other words, his profit was about 50 percent of the actual cost.

Mr. Hiss. And in relation to investment it might have been much higher than that in some cases?

Lieutenant Brannon. Had these contracts continued—of course, they were cut down, due to the end of the war—but it worked out that some of the plants would have been able to earn a profit of 100 percent on the plant devoted to the Liberty motor contract.

Mr. Hiss. Is not the bonus provision, to which we referred, the one which appears in paragraph 4 of article III of the adjusted-compensation contract, in essence subject to the same abuses, or does not it bring forth the same temptations to abuse, that were contained in the "bogey" contracts?

Lieutenant Brannon. There are two reasons why I think this is an improvement on the World War type of "bogey" contract:

In the first place, the contractor is not paid a flat 25 percent. It is a sliding scale, so that the greater the difference, the smaller is the percentage. As the difference increases, he gets the increased cost, the contractor, in the same percentage. The percentage rate gradually goes down.

---

[1] Memorandum presented by Lt. E. M. Brannon, J. A. G. D., Nov. 13, 1934, before a conference of officers in the Planning Branch, Office of The Assistant Secretary of War, entitled "Discussion of the Legal and Contract Phases of Production Planning", copy of which is on file with the committee.

Mr. Hiss. In terms of actual dollars, the higher your original estimate in relation to this actual cost, the greater the bonus under this bonus provision?

Lieutenant Brannon. That is correct.

Senator Vandenberg. Lieutenant, you are still tied to the integrity of the estimate, are you not?

Lieutenant Brannon. That makes a big difference in costs.

Senator Vandenberg. It is fundamental. It is governing?

Lieutenant Brannon. Yes, sir.

Senator Vandenberg. What would be the explanation that the estimate for the Liberty motor was twice the ultimate cost of the motor, if there was any reasonable attention given to the making of the estimate?

Lieutenant Brannon. I am not a technical expert on matters of that kind; but as I understand the argument advanced, it was that when they undertook to make the Liberty motor, although it was made by automobile manufacturers, I believe, by all automobile companies which made this motor, it was quite a different motor from anything made on that scale, greater than theretofore, particularly due to the fact that the relationship between the horsepower of the motor and the weight was very much less than the ordinary automobile motor, and they assumed it was going to be very much more difficult to manufacture than it actually proved.

Senator Vandenberg. Does this record show who made the estimate?

Lieutenant Brannon. Not this record; no, sir.

Mr. Hiss. Lieutenant Brannon, following out the line just being developed by Senator Vandenberg, is it not true in regard to the Liberty motor that that was a lot nearer the kind of article that those manufacturers had been producing than will be true with respect to a great many of the ordnance contractors in time of war who have to turn their attention to a totally new product, and different from the product which they have been producing, and will it not, therefore, be more difficult to determine actual costs than in the case of the Liberty motor?

Lieutenant Brannon. As I say, Mr. Hiss, it turned out to be, but one of the reasons given at the time was that it was going to be quite a different proposition, but it turned out it was not.

Mr. Hiss. Therefore, under the adjusted-compensation contract, there will be 6 percent on the estimated plant and capital at least. That is guaranteed?

Lieutenant Brannon. Not quite.

Mr. Hiss. Less a possible penalty, if they fall below their estimated cost.

Lieutenant Brannon. Right.

Mr. Hiss. That penalty is 1 percent of the fee for each percent that the cost exceeds the estimate, up to 50 percent of the fee?

Lieutenant Brannon. That is correct.

Mr. Hiss. They are sure to get 50 percent of the fee, no matter how careless they may be in exceeding the cost of the estimate. Is that correct?

Lieutenant Brannon. Unless they stop work.

Mr. Hiss. Furthermore, if their costs go beyond the estimate by virtue of raw material or labor costs due to increases sanctioned by the Government, that will not affect the penalty?

Lieutenant Brannon. The estimate will be adjusted.

Mr. Hiss. The estimate will be adjusted to fit that.

Senator Vandenberg. Excuse me.

Mr. Hiss. Yes, sir.

Senator Vandenberg. It is in evidence, let us say, that several of these prospective contractors are dissatisfied with this form of contract. Suppose, in spite of their protests, this form of contract is made effective, and they still decline in the emergency to do business with you, then what is your recourse?

Lieutenant Brannon. We have not worked out a form of compulsory order but personally I see no reason why under section 120 of the National Defense Act we could not place a compulsory order on them for the production of the item.

Senator Vandenberg. In other words, you are back to the power of commandeering.

Lieutenant Brannon. Yes, sir.

Senator Vandenberg. On that one point, may I ask you as a practical thing, what happened in connection with the personnel in those plants which you did commandeer during the last war?

Lieutenant Brannon. You may make this distinction, Senator, between the compulsory order and commandeering: In the first you place a compulsory order, under which the manufacturer simply goes ahead and makes a profit just as he would ordinarily—we do not attempt to run his plant. But if he refuses a compulsory order and we then commandeer his plant, then he is subject to a very severe fine and imprisonment.

Senator Clark. He is subject to fine and imprisonment not for refusing a compulsory order, is he; but if he undertakes to resist the commandeering of his plant, then he is?

Lieutenant Brannon. I do not understand it that way.

Senator Clark. He is not subject to fine and imprisonment for merely refusing a compulsory order.

Lieutenant Brannon. That is not the way I understand it.

Mr. Hiss. I read it as Senator Clark does.

Lieutenant Colonel Harris. I would, too.

Mr. Hiss. If he resists the order, your only recourse is to commandeer.

Lieutenant Colonel Harris. I agree with the Senator.

Mr. Hiss. If he resists that, he is subject to fine.

Lieutenant Brannon. The reason I question that, sir, is that as section 120 was originally submitted by the Military Affairs Committee, the commandeering feature was not in it. There was simply a provision for compulsory orders, and the provision about commandeering was added on the floor of the House.

Senator Clark. That may be, Lieutenant, but it certainly changed the intent of the bill in putting in the amendment because, as I read this section, if a firm refused a compulsory order, then the only recourse of the War Department is to resort to the other alternative, to commandeer, and the penalty, as I see it, if it applies to anything, only applies to the resisting of commandeering.

Senator **Vandenberg**. You mean it applies to an attempt to prevent the Government from taking physical possession of the plant?

Senator **Clark**. Yes.

Senator **Vandenberg**. As a practical proposition, Lieutenant, you did commandeer five or six plants. What happened? Did the personnel continue or was there difficulty in respect to that?

Lieutenant **Brannon**. I am not familiar with any of those cases, sir, but I may add that while we commandeered some five or six plants and we issued something like 1,000 compulsory orders, I think the Navy issued several thousand compulsory orders.

Senator **Vandenberg**. That would indicate that the compulsory order was almost completely successful in accomplishing the purpose?

Lieutenant **Brannon**. Yes, sir.

Lieutenant Colonel **Harris**. In connection with the line of reasoning of Mr Hiss, I would like to make a statement about the allocation of plants. I think it is perfectly applicable.

Out of our 12,000 plants allocated, 8,000 of them are allocated to the Quartermaster Corps, for exactly the same products they make in time of peace. All of that work will be on a fixed-price contract.

Of the remaining 4,000, I do not believe there would be 1,000 that would come in this valuation or adjusted-compensation class. The Ordnance Department has only 1,000 plants allocated to it, out of the total 12,000. Most of the plants making ordnance matériel are large plants. I do not believe that more than 100 would have this valuation or adjusted compensation come in to a marked degree. So the point I am making is, out of the 12,000 plants there are relatively few of them that would come under this particular form of contract.

Senator **Clark**. But, Colonel, even granting that is entirely correct, which I can readily see that it is, some of these things in which the question of compensation or commandeering or compulsory contract would be involved would be the most vital, essential elements of war. I, of course, grant that wheat and corn and blankets, and uniforms, and a great many other things we can sit here and enumerate, are very essential in warfare. Nevertheless, they are the kind of articles for which there might be substitution, and for which procurement is relatively easy.

The reason I am so much interested in this particular class of contracts is that it might involve one particular contract out of the 12,000, we will say, that might be able to hold up the whole prosecution of the war, as the du Ponts did with the Old Hickory plant, for 4 months.

Lieutenant Colonel **Harris**. Three months, sir.

Senator **Clark**. A little better than 3 months, I believe.

Lieutenant Colonel **Harris**. Three months and four days.

The **Chairman**. Three months and four days?

Lieutenant Colonel **Harris**. Three months and four days.

The **Chairman**. During the most critical hour of the war.

Senator **Clark**. On an essential that could not be bought on the market, as you might buy blankets—it is conceivable you might send troops into battle in overalls if you did not have the proper uniforms, or something of that sort, but it is very hard to send them in without powder. This very class that you are talking about, brought down to the minute, might represent 100 different contracts, any one of which would be sufficient to interfere very materially and very vitally with the entire conduct of the war. Is not that correct?

Lieutenant Colonel HARRIS. I admit it.

Mr. HISS. Colonel Harris, how do you expect to arrive at a fixed-price contract? Will that be the subject of negotiation?

Lieutenant Colonel HARRIS. Yes; that will bring in the question of the estimated cost, proper cost of the material.

Mr. HISS. So you will have to go into the same old question of estimated costs, just as you do under the adjusted compensation.

Lieutenant Colonel HARRIS. I will admit there is a tremendous volume of work. I guess that is what you want to show.

Mr. HISS. If those costs are not accurately stated, the same possibility of profiteering takes place there as it would if the valuation of the plant under the adjusted-compensation contract and the estimated cost schedules under the adjusted-compensation contract do not truly reflect the value and the costs?

Lieutenant Colonel HARRIS. If the Government negotiators are not on the job, there is a possibility of the Government being gypped.

Senator CLARK. Colonel, when you get back to this question of cost, I mean the base cost, or as they call it in the utilities business, the rate base, I mean the valuation at which rates are fixed on a fair return to the company, what are you going to do with the case of a concern that has gone out and built, we will say, a powder plant or a heavy ordnance plant or a small ordnance plant, or anything else you please to mention, and then, we may say, after the declaration of war, or immediately preceding the declaration of war, at a time of abnormal costs, when the costs are going up, constantly on the upgrade; if you go to figure the return, the price to be paid by the Government based on a proper return on the capital invested, what distinction are you going to make between a plant constructed at that time or even constructed with Government money after the war started, and a plant which has been built in a time of lower costs? In other words, are you going to grant more than 6 percent on a plant constructed at a time of lower prices, or are you going to allow less than 6 percent on a plant constructed at the higher price base?

Lieutenant Colonel HARRIS. I think the only fair——

Senator CLARK. It is a matter that has to be thought out, is it not?

Lieutenant Colonel HARRIS. Quite true.

Mr. HISS. Colonel Harris, in addition to the provisions you have so far described in the adjusted compensation contract, does not that in article 3, paragraph 6, page 5, of the mimeographed form contemplate a payment agreed upon at the time the contract is entered into, as rehabilitation costs? That is, the reconverting of the plant back to peace-time purposes?

Lieutenant Colonel HARRIS. That is all an agreed upon rate.

Mr. HISS. Will not that have to be a very tentatively arrived at rate, since you will be estimating in war time how much it will cost to turn the plant back in peace time? It may be a long way off at that moment.

Lieutenant Colonel HARRIS. Yes; but, on the other hand, I think that in these rehabilitation and putting back-in-shape fees, the people negotiating on that will very soon arrive at certain limits that are applicable and will know the game pretty well.

Mr. HISS. To make any estimate of that kind, would it not require the kind of detailed accounting and examination that we referred to in the valuation question, that the War Department does not intend to go into?

Lieutenant Colonel HARRIS. That activity will add to the work.

Senator VANDENBERG. Does there not have to be a pretty powerful authority behind the Government negotiator as a sort of a big stick in the corner if the price is going to be satisfactory?

Lieutenant Colonel HARRIS. Yes, sir. I have tried to state all along that we are counting on price control and we are also counting on public opinion, and we are expecting to use it.

Senator VANDENBERG. We will say you are in negotiation with a company, and they are rejecting your estimates, as the du Ponts did with respect to Old Hickory. Under your plan, what have they to fear in the event that they persist in asking for the higher prices? Have you any authority, alternatively?

Lieutenant Colonel HARRIS. In the case of the legislation proposed, which has been discussed by Senator Clark, the bill which makes the resources of the Nation available to the jurisdiction of the President for the pursuit of the war enables us to take any property at a reasonable compensation; but the question of taking an organization, as in the case of the du Pont Engineering Co., I do not know just how we would, because we would be dealing with a group of people to do a job as agent. I do not know what it would be except through the force of public opinion.

Senator VANDENBERG. That is what I am trying to get at.

Senator CLARK. You take men to carry a gun and get jabbed up with bayonets without any consultation or negotiations or haggling.

Senator VANDENBERG. I am trying to find out whether your plan has in it any correction for this lapse in the continuity of the program which has been developed heretofore.

Lieutenant Colonel HARRIS. We will have, as far as material or plants are concerned.

Senator VANDENBERG. That is not enough, is it?

Lieutenant Colonel HARRIS. I do not believe we have anything to cover the case of the du Pont Engineering Co. or a group of individuals rather than a plant, except for public opinion.

Senator VANDENBERG. And there is nothing in your program which does specifically reach it?

Lieutenant Colonel HARRIS. As a matter of fact, whether we are right or wrong, we are counting on the cooperation of industry in our plans. Personally, I do not think we can fight a war unless we can depend on industry to meet us in fair agreements. There will be cases where they want more profit than we think they ought to have—I will grant that. But, generally speaking, I for one have confidence in industry to give the same service to the Government that other people do. I may be wrong.

Senator CLARK. But the other people are drafted, Colonel, and I understand you do not want to do that with industry.

Lieutenant Colonel HARRIS. I admit the distinction, but we feel that drafting would add to the confusion instead of eliminating it.

Senator CLARK. Colonel, I do not know how much you know about the powder business—you may be an expert powder manufacturer, for all I know, but we will assume that you are not. Do you have any doubt that you could walk into the du Pont plant or anybody else's plant after the declaration of war with an eagle or a star or two stars or three stars on your shoulder, and say, "All right, boys, you have been drafted. We want you to turn out some powder."

The CHAIRMAN. Not a blue eagle?

Senator CLARK. A silver eagle is what I am talking about. "Turn it out right now." You do not have any doubt you could turn out powder and use the "know-how" of the du Pont organization, do you?

Lieutenant Colonel HARRIS. It depends absolutely on the character of the man that went in there. If he were the right type of man he could get it out, but if he started tearing down everything they were doing, started looking at everything they were doing and cross-questioning them on everything they were doing, he could paralyze the plant.

Senator CLARK. I am willing to bet you could turn out plenty of powder if you had the authority you are talking about.

Lieutenant Colonel HARRIS. I believe I could, because I know something about powder and I believe I can get along with people. I believe if you went into the du Pont plant and said that, they would cooperate with you and do the best they could. I believe every other industry would do the same thing—if you had the legal background, of course.

Senator CLARK. Of course, we assume you would have the legal authority.

Lieutenant Colonel HARRIS. I believe they would give you full cooperation, because I have a great deal of respect for industry and the American people.

USE OF COMPULSORY ORDERS IN WORLD WAR

Mr. HISS. You referred to compulsory orders some time back.

Lieutenant BRANNON. Yes.

Mr. HISS. Would you describe for the record exactly what you mean by compulsory orders?

Lieutenant BRANNON. As I say, compulsory orders are orders placed under authority of section 120 of the National Defense Act. They are simply orders on a producer which he has no option to refuse.

Mr. HISS. What do they say in regard to payment?

Lieutenant BRANNON. They will be paid a price which the Secretary of War determines to be fair and just, I think. I do not remember the exact wording, but it amounts to a fair and just price as determined by the Secretary of War.

Mr. HISS. How would that be determined by the Secretary of War?

Lieutenant BRANNON. I do not know as to the details, Mr. Hiss.

Lieutenant Colonel HARRIS. That adds, Mr. Hiss, to the volume of work you are referring to.

Mr. HISS. During the World War the compulsory orders that were used stated some compensation when they were sent out, did they not?

Lieutenant BRANNON. I have not found that the War Department had a regular form. The Navy Department did. They had two paragraphs in that order: One was a price determined in advance. The other was a tentative price which stated to the effect that "at the present time it is not possible to arrive at a final price, but we will fix this tentative price; if, upon later determination, it should be determined that this is too high it will be lowered, and if it is too low it will be raised."

Either one of those two alternative forms might be used.

Mr. HISS. Did not the Judge Advocate General's office rule that a compulsory order enables you to place orders without competition, and was it not used to some extent, at least, in order to place orders without having competitive bids?

Lieutenant BRANNON. I think ordinarily in time of war it is not necessary to have competitive bidding.

Mr. HISS. Are you familiar with the opinion of the Judge Advocate General appearing in volume 1, 1917, page 141, which says:

> Under this section the mere placing of an order for the supplies and materials required is sufficient without the execution of a formal contract therefor. No advertising for bids in any form whatever or filing of bids is necessary.

Lieutenant BRANNON. That is correct. I remember there was such an opinion. But, as I say, we issued only about a thousand compulsory orders, but I am sure there were a great many more contracts than that placed without competition.

May I add one other thought on the compulsory order, that that order takes precedence over any other contracts that the contractor may have, and it may have been used in some cases merely to take precedence over commercial orders that may have already been given the contractor.

Mr. HISS. To secure priority?

Lieutenant BRANNON. Priority; yes.

Lieutenant Colonel HARRIS. In connection with the Navy placing of compulsory orders—I am giving second-hand information—I think in many cases their placing a compulsory order did not indicate that there was any reluctance to perform the work; it was more to get this priority.

Senator CLARK. You mean to relieve the contractor from any private civil liability that he might have for not carrying out his private contract in its priority?

Lieutenant Colonel HARRIS. Contract obligations or any other obligations he had, he would be relieved of.

Senator CLARK. Yes. In other words, if he made a contract to deliver a boat at a certain time, the Government could come in and by this compulsory order acquire priority, and at the same time relieve the private contractor of any private liability he might have to this private contractor.

Lieutenant Colonel HARRIS. I think that is the principal reason it is used.

Mr. HISS. It was not used really as a means of cutting short long negotiations where two parties could not agree on competition?

Lieutenant Colonel HARRIS. When it comes to the Navy actions, I am not a first-hand witness.

Mr. HISS. I mean the Army orders that Lieutenant Brannon has referred to.

Lieutenant Colonel HARRIS. I will let him answer that.

Lieutenant BRANNON. That is still a little different from the question as you phrased it before.

Mr. HISS. Yes.

Lieutenant BRANNON. I do not know but what it was used in some cases. I say "in some cases." I think the primary purpose was simply priority. I have no doubt that in some cases it may have been used to cut short negotiations. I do not know, though, to what extent it was used in those cases.

ADJUSTED COMPENSATION CONTRACT FORM—EXTENT OF POSSIBLE PROFITS TO CONTRACTORS

Mr. HISS. In addition to the rehabilitation costs, the adjusted-compensation contract provides in paragraph 7 of article III, page 5 of the mimeographed form, for the payment in installments of an amount agreed upon at the time the contract is executed for depreciation of the plant, does it not?

Lieutenant BRANNON. Yes.

Mr. HISS. And that, in addition, will be an item that will have to be arrived at by negotiation rather than by any elaborate evaluation or technical estimates at the time?

Lieutenant BRANNON. That is correct.

Mr. HISS. Finally, there is a provision in the contract, is there not, which differs from the ordinary peace-time Government contract in that any change in the estimate due to changed conditions can be approved by the contracting officer without the provision of peace-time contracts that changes in excess of $500 must go to the head of the Department. That is correct, is it not? Article V, paragraph 1, page 6, I think, is the provision of the adjusted-compensation contract, and has not the usual limitation as to the $500 amount.

Lieutenant Colonel HARRIS. The thing that he can change is specified.

Mr. HISS. He may change drawings and specifications, direct temporary suspension of work, and direct procurement of additional facilities to provide material or facilities which the contractor agrees to furnish but is unable to furnish.

Lieutenant Colonel HARRIS. Yes.

Lieutenant BRANNON. That is right.

Mr. HISS. In paragraph 11 of article VI, page 8, there is a provision that the Government must pay for the cost of defective work rejected by the Government unless the contracting officer shall determine that the defective work was due to the fault or neglect of the contractor. Why is the burden of proof put on the Government there rather than on the contractor?

Lieutenant BRANNON. The reason for that is this: Of course, this is a cost-plus form of contract, in which the Government is paying the cost. It is used in those cases where the contractor is making something with which he is not familiar. Usually it is a very technical item of equipment or ammunition of some kind. It is assumed that there will be a certain amount of spoilage that cannot be avoided. The Government undertakes to pay that cost, unless it is shown that it is due to the fault of the contractor. In other words, it is assumed in advance that there will be some spoilage.

Mr. HISS. Would it not be better to leave it in the discretion of the Government officer to determine whose fault it was, rather than to provide payment unless he makes a finding that it was due to the fault of the contractor?

Lieutenant Colonel HARRIS. I believe that suggestion would lead to endless reluctance on the part of a contractor to enter it, because he does not know in many cases what he is going to manufacture. I do not think he would be willing to leave it to the judgment of one individual on as broad a subject as that. I would not, if I were the contractor.

Mr. HISS. Under article VIII, paragraph 1, page 9, there was a provision that purchase orders over $5,000 must be in writing. Does that mean that purchase orders under $5,000 may be oral, Lieutenant Brannon?

Lieutenant BRANNON. That simply means for subcontracts, Mr. Hiss. The contractor, it simply means, can go ahead and place orders, but if he places an order for more than $5,000 it not only must be in writing but it must contain certain provisions relative to termination of that contract.

Mr. HISS. But does that mean that if it is less than $5,000 it not only does not have to contain these clauses but could be oral?

Lieutenant BRANNON. I think it could.

Mr. HISS. Will there not be great difficulty in auditing oral purchase orders?

Lieutenant BRANNON. Of course, they may order the material by telephone. In a case of this kind a lot of small orders, no doubt, will be ordered by phone or by personal solicitation. But, of course, some kind of invoice or bill will come with them. They will have to be attached to the voucher before it is approved.

Mr. HISS. You still expect to have written records?

Lieutenant BRANNON. Oh, yes.

Mr. HISS. In regard to that paragraph on page 9, article VIII, I see no limitation on the price which a subcontractor may receive. That is not included in those clauses which must be put in subcontracts. What does the War Department do on that, Lieutenant Brannon?

Lieutenant BRANNON. In the first place, Mr. Hiss, the contracting officer has to approve expenditures. In other words, he has to approve the material, and the prices of most of this material are already fixed in advance.

Lieutenant Colonel HARRIS. Answering Mr. Hiss' question, it is contemplated that those purchases will be on a fixed-price basis.

Mr. HISS. No provision is made as to the amount of profit that a subcontractor might receive.

Lieutenant Colonel HARRIS. Not on a fixed-price contract. We might have a measuring stick in our own mind to do the best we could; but the amount of profit he receives depends on the difference between his selling and cost price.

EVALUATED FEE CONTRACT FORM—GENERAL

Mr. HISS. In regard to the construction form of contract, which we have not discussed yet, I understand, Lieutenant Brannon, that in the War Department's opinion this particular form of contract that has been offered in evidence is not considered as near its final form as is the adjusted-compensation contract. Is that correct?

Lieutenant BRANNON. No; that is not quite correct, Mr. Hiss. We plan two forms of construction contract. This is the fixed-price construction contract.

Mr. HISS. I am referring to the evaluated fee contract.[1]

Lieutenant BRANNON. I beg your pardon. That is correct, Mr. Hiss.

Mr. HISS. Item K, page 8, under article II, provides that the contracting officer may include as part of the cost any item not specifically listed in the cost of the work. That provision is necessary, in the War Department's opinion, for flexibility; is that correct?

Lieutenant BRANNON. I think so.

Mr. HISS. That means that the limitations placed in here as to what may be considered costs are subject, in each particular case, to being departed from in the judgment of the contracting officer?

Lieutenant BRANNON. That is correct.

Mr. HISS. The fee which is stated at pages 9 to 11 is really simply cost plus a percentage of cost, is it not?

Lieutenant BRANNON. That is correct.

Lieutenant Colonel HARRIS. With a maximum.

Mr. HISS. Was there not a maximum fee in many of the cost-plus contracts during the World War?

Lieutenant BRANNON. There was.

Mr. HISS. So that after 13 years of experimenting the War Department still has not been able to get a construction contract for large-scale construction that is not based on cost plus a percentage of cost?

Lieutenant BRANNON. That, of course, is a little bit confusing, if you just take that statement as you made it. In this contract the fee is cost plus a percentage, but that percentage may vary between different limits, depending upon the extent to which the contractor holds down his costs and performs the work.

Mr. HISS. Was it not true of the cost-plus-percentage contractor in the World War that at no time was a specified percentage agreed upon?

Lieutenant BRANNON. That depended upon the particular contract. Some were 10 percent, some were 12 percent, and so forth. I think I have a copy of some of those contracts.

Lieutenant Colonel HARRIS. The evidence has shown that.

Lieutenant BRANNON. I am sure that the usual case was to have a fixed percentage, which varied merely as the cost. That is, a contract under $500,000 would be one percentage, $500,000 to $1,000,000 would be a different percentage, but that percentage was fixed.

Mr. HISS. How does that differ from the present form?

Lieutenant BRANNON. It differs this way: For example, if you turn to that, to the fee clause, Mr. Hiss, you see he is guaranteed a minimum fee of 1 percent. The maximum fee may be as high as 6 percent on a job under $100,000, and it will vary between 1 percent and 6 percent, depending upon the efficiency with which he does the work. In the World War contracts the usual form was really the form of this maximum limit; in other words, to say under $100,000, 6 percent; under $500,000, 5½ percent; and so forth.

---

[1] Introduced into the record as "Exhibit No. 1226-B", Hearings, Part XV, p. 3625.

Senator CLARK. You mean everybody got the maximum?

Lieutenant BRANNON. No, sir. They did not have this provision in the World War contract, unless they ran them up. Of course, I do not know how high they went.

Mr. HISS. I would like to go into it a little bit more.

Lieutenant BRANNON. Yes.

Mr. HISS. The decision as to what the fee will actually be is retained in the person of the chief of branch, is it not?

Lieutenant BRANNON. That is correct, Mr. Hiss.

Mr. HISS. And the chief of branch may, of course, decide that this particular job is worth 6 percent.

Lieutenant BRANNON. That is correct.

Mr. HISS. So in the World War form whoever had charge of the final determination of the contract could have decided a fee of 6 percent or somewhat less if he so determined.

Lieutenant BRANNON. I do not think in the World War contract, Mr. Hiss, that the Government had that option.

Mr. HISS. I have not made my point clear. The only difference is that here the percentage is to be fixed after the contract is completed?

Lieutenant BRANNON. That is correct.

Mr. HISS. Varying between two limits.

Lieutenant BRANNON. That is correct.

Mr. HISS. In the World War there was the same flexibility, except that that would be exercised before the contract was entered into; is that not correct?

Lieutenant BRANNON. I think you can say that is correct; yes.

Mr. HISS. Will you turn to page 11 of this contract, article IV. Full payments are to be made currently, including 1 percent of the cost paid as fee. This payment is to be made on or about 2 days after a statement furnished by the contractor supported by the original papers. This statement and all payments are to be final and binding, except that the contractor may appeal to the chief of branch.

Does that mean that if upon audit at a later time, or a reaudit, an audit by an independent branch of the Government such as the Comptroller General, there is found to be error, that payment will still be final and the Government cannot recover it back, Lieutenant Brannon?

Lieutenant BRANNON. I will have to look at that a moment, Mr. Hiss.

Mr. HISS. Do you not think, Lieutenant Brannon, that in view of the difficulty with respect to Old Hickory and the audit question there, that 2 days would be much too short a time at the end of each month to have the Government make up its mind finally? This may be simply a slip the way it is drafted. I was trying to find out just what you had in mind, what this provision was meant to provide for.

Lieutenant BRANNON. I do not think that was the intent, but I will have to think a little bit before I will be prepared to argue that that is not it.

Mr. HISS. Then let us pass on to another subject.

Lieutenant Colonel HARRIS. Are you leaving contracts? I would like to make a little statement, if I might.

Mr. HISS. Certainly.

Lieutenant Colonel HARRIS. I would like to repeat what I have said before, that all these contract forms are in a development stage. There is nothing in this contract form that we feel is finally or can be definitely accepted.

Senator CLARK. Colonel Harris, you have been working on those things for nearly 15 years?

Lieutenant Colonel HARRIS. I was going to take that up in my next remark, if I might, Senator.

Senator CLARK. All right.

Lieutenant Colonel HARRIS. The development of a suitable contract form is a difficult and tremendous subject, and has engaged the best thought of a great many people. We have not arrived at a solution as yet. All the negotiations that Mr. Hiss has been stressing will have to be made after the war begins. I admit it. There is going to be a tremendous amount of negotiations. There is going to be a tremendous amount of procurement activities. Carrying on the war is going to be a tremendous undertaking in itself. The whole thing about the war is a tremendous undertaking.

PROBLEMS INVOLVED IN PRICE FIXING

Mr. HISS. Colonel Harris, we were discussing the other day this question you have referred to as the background of the entire plan, namely, the fixing of prices. There are two or three questions I would like to ask you on that. One thing that you were not sure of the other day was whether in fixing prices the cost element that would enter into it would not have to take care of possible future cost increases.[1] You thought that it ought to be based, as I remember it, on present costs. Have you had time to consider it?

Lieutenant Colonel HARRIS. I have had time to study this thing, because, as a matter of fact, I said the other day that I was not particularly well versed in this. But I have had time to study it. Instead of taking the isolated paragraph you quoted, I want to quote one or two before that:[2]

> The time for initiation of control measures is left to the discretion of the committee as are also the scope and nature of the control which is to be applied to particular commodities or groups of commodities.
>
> Whether early action is to be limited to a selected class of necessaries and essential war materials or is to be extended to include the entire price structure is dependent upon conditions which exist at the time—

That was the point I was trying to stress the other day—

> and upon the extent to which it can be shown that the action taken is reasonably necessary for the national defense and the successful prosecution of the war.

I want to quote a paragraph in the report of the War Policies Commission. This is a recommendation of the War Policies Commission:

> That the Congress should empower the President, in the event of war, to institute a program under which prices may be stabilized and thereafter

---

[1] Question of cost element in price fixing, Hearings, Part XVI, p. 4029.

[2] Industrial Mobilization Plan (Committee Print No. 2), p. 64.

adjusted at such levels as will minimize inflation and will secure to the Government the use of any private property needed in the prosecution of the war without affording the owner thereof profit due to the war. It should be clearly stated that such a program will not be placed in operation until Congress specifically directs it as a necessary measure in the conduct of the war.

I want to say one or two more words:

We look on the price control and price fixing as the broadest subject discussed in this book. It applies to every person in the United States. It is a national question. In our national planning, with which we are charged under section 5A, we felt, generally speaking, that we should only provide an organization, a structure, to carry out this responsibility; that the action of that organization would depend on the conditions at the time and the personnel composing the committee. The plan is that they are to be appointed by the President and responsible directly to him. So I feel that while we have stated in this document the historical records we thought were pertinent, and the various ways and means that seemed to have a bearing on the subject, to try to pick us to pieces on the thoughts expressed in here is really a waste of time, because we admit that it is a bigger subject than we are capable of handling. We are trying to set up the structure and the organization, rather than the answer.

Mr. Hiss. I was not trying to pick it to pieces.

Lieutenant Colonel Harris. I beg your pardon. I meant no reflection, sir.

Mr. Hiss. What I would like to try to bring out is that the paragraphs that you quoted seemed to me to be so broad and vague as not to indicate that any particular scheme under any particular set of circumstances has been worked out by the War Department.

Lieutenant Colonel Harris. I am frank to confess that beyond the recorded history which we have tried to incorporate in this document, of the last war, and the ways and methods that might be chosen to accomplish this result, we have gone very little further.

Mr. Hiss. But you have referred in relation to the contracts to price control as being fundamental to the whole thing.

Lieutenant Colonel Harris. That is true.

Mr. Hiss. Is it not necessary, then, in order to be sure that the whole problem has been taken care of, that some other concrete proposals for specific situations be had in mind?

Lieutenant Colonel Harris. We make a concrete proposal that there be price control.

Mr. Hiss. What kind of price control, under any given set of circumstances that may occur to you?

Lieutenant Colonel Harris. Mr. Hiss, if you will bear in mind the last war, there was no single action of price control put into operation until it had been personally approved by the President. You can realize our reluctance to try to prescribe the means of operation of this thing, and the result, too.

Mr. Hiss. Colonel Harris, the same thing is true as to legislation. It is not put into effect until it has been approved by Congress, but the War Department has actually suggested drafts for the consideration of Congress.

Lieutenant Colonel Harris. That is quite true.

Mr. Hiss. Has it not formulated any price-control policies for the consideration of the President—that is, specific policies?

Lieutenant Colonel Harris. We have stated specific policies, but that portion of the work is not developed to the degree that the rest of it is.

Mr. Hiss. Has it developed to the extent that you are prepared to say whether you think the fixing of prices must contemplate future increases of cost in the industries, or should be based upon past or present costs?

Lieutenant Colonel Harris. Certainly any price level that is set has to be in effect for a period of time, so that I think I can say certainly that the conditions can be considered during the period under consideration.

Mr. Hiss. As an example of that, I call your attention to the statement of Mr. Brookings at one of the price-control committee's hearings:

> We felt, after hearing all Mr. Davis—

He was the president of the Aluminum Co. of America—

> had to say about it, and taking into consideration the probable increase, as prices were going up, and we fixed the price at 32 cents.

Now, according to the Federal Trade Commission, the costs at that time of the Aluminum Co. were only 17½ cents a pound. According to the Federal Trade Commission's own data, they were only 15¼ cents. So that in any price fixing there must be, in order to take care of possible future increases, a very liberal estimate over present costs, which means a liberal estimate for profit, does it not?

Lieutenant Colonel Harris. It might; on the other hand, it might take into consideration a knowledge of what has been agreed to in certain contributing elements—for example, wage scales. It might have been agreed that the wage scales should be increased. It might be known at the time they were negotiating this that the wage scale was to be increased. They would have to take that into consideration.

Mr. Hiss. We have referred once or twice to the difficulty of determining specific costs, and you have referred to the fact that the War Department must rely upon the cooperation of industry. Is not that also true of the prices to be fixed by any price-control committee, that they will have to rely upon industry for its own cost figures, to a large extent?

Lieutenant Colonel Harris. Of course, in the price-fixing field they certainly will have the advantage of all the governmental agencies dealing with that subject, and there are a great many data on file and kept current. But the statement still holds, you would have to have cooperation with industry, I think, to deal with them.

Mr. Hiss. May I ask you a more fundamental question in this field? In your opinion, what is the primary purpose of the price-control commission or committee? Is it to limit profits or to fix such a level as will encourage necessary production needed in time of war? You remember the chart to which we referred the other day?

Lieutenant Colonel Harris. Yes. Both hold; both have a bearing.

Mr. Hiss. I would like to call your attention to a few statements by some of the people connected with price control in the last war. Can you identify this [holding up document]?

Lieutenant Colonel HARRIS. That is a galley proof of the complete report of the War Industries Board. It was not published, and that is the only copy in existence.

Mr. HISS. This was prepared by whom?

Lieutenant Colonel HARRIS. That was prepared by the War Industries Board, but it bears the name of Hugh Johnson as the editor.

Mr. HISS. I am quoting from one of the galley proofs.

Senator CLARK. Is it a fact, Colonel, that the reason that was never published was that General Johnson wrote with somewhat his usual frankness in preparing that report?

Lieutenant Colonel HARRIS. That is a very valuable report, Senator. I think the real reason it was not published was that the chairman of the War Industries Board wanted to get a report and get it out quickly, of a size that people could read, and much of the report actually that was used—that document—bears many of the fundamentals, and a concise statement of many of the features of that. That is a very much more voluminous and a very much more valuable report, if I may say so.

Senator CLARK. Therefore, it seems to me it ought to be available to Congress. I am not holding you responsible for the failure of publication, but it does seem to me if that is a basic report, of which a brief report or part was published, it ought to be published in full and given into the hands of governmental officials for determining war policies in the future.

Lieutenant Colonel HARRIS. I think it should be published.

Senator VANDENBERG. Colonel, speaking of General Johnson reminds me of this: Do you know whether there is anything in the various N. R. A. codes which subordinate these code authorities in time of war to the war control?

Lieutenant Colonel HARRIS. I don't think there is anything in the National Industrial Recovery Act that says anything about more than two years. I don't think there is anything in it that says anything about war.

Senator VANDENBERG. If you had the N. R. A. in existence during a war, you would have a tremendous clash of authority, wouldn't you?

Lieutenant Colonel HARRIS. Well, sir, we have given, of course, very serious study during the last 18 months to the effect on our war plans of the N. R. A. and its organization, its code committees. We call for war service committees and they are now code authorities. Having these code authorities is a great benefit in our industrial plan. While we only divide our industry into some 60 divisions, the N. R. A. divide their codes into some 400, we will say. For example, we have a building-materials group. I dare say there are 20 codes. There is 1 for cement, 1 for sand, 1 for lime, 1 for lumber, and so on. Now, in adapting that set-up to our set-up, we would form a war service committee, probably with one man from each of those codes involved.

Senator VANDENBERG. Wouldn't you have to absolutely control the N.R.A. code authorities in time of war?

Lieutenant Colonel HARRIS. Yes, sir; we believe so.

Senator CLARK. And your plan does really contemplate the abrogation of the N. R. A. provisions, if necessary, particularly with reference to section 7 (a), doesn't it, Colonel?

Lieutenant Colonel **Harris**. What I am trying to say is that we are planning to utilize the advantages of N. R. A.

Senator **Clark**. It has been under discussion and practically agreed on, for the abrogation of 7 (a) particularly, hasn't it?

Lieutenant Colonel **Harris**. By us?

Senator **Clark**. As far as the war planning is concerned, have not those plans been under consideration and practically agreed upon?

Lieutenant Colonel **Harris**. Our plans speak for themselves, Senator. I would not care to be drawn into that phase of it.

Senator **Clark**. I am not asking you to disclose military secrets, but my information is that the War Department's plans do contemplate the abrogation particularly of 7 (a) in time of war.

Lieutenant Colonel **Harris**. Well, you cannot have two bosses in war.

Senator **Clark**. I am not trying to argue with you about that. I am simply asking you about it.

Senator **Vandenberg**. That is the point; you have to synchronize N.R.A. with your plans or be subordinate to it.

Lieutenant Colonel **Harris**. Yes; one or the other has to become the boss; and I assume they are studying that as to whether they will take us over.

Senator **Vandenberg**. Under the present set-up you would both be bosses, wouldn't you?

Lieutenant Colonel **Harris**. Yes. Unless the limits of each were fixed, we certainly would be, and there would be confusion.

Senator **Vandenberg**. Exactly.

Mr. **Hiss**. Colonel Harris, I am just about to quote one particular statement in the report you say was prepared by Gen. Hugh Johnson on this issue as to whether the price-fixing duties are primarily concerned with limiting profits or whether they are for the larger purpose of increasing production in time of war.

This is from chapter 5, pages 18 and 19, of that bound volume: [1]

> In most of these cases the need for increased production was so great that wherever increased demand had inflated a price, the Government could not afford to fix a price so low as to cut off one single source of production.

Lieutenant Colonel **Harris**. If it was needed.

Mr. **Hiss**. Then he says further:

> It mattered not, therefore, that some highly organized business showed a cost of production low beyond all proportion to some small and independent producer. The needs of our men in France would brook no price that would decrease the output of even the high-cost producer. The proposition to fix a price on cost plus profit was explored and found utterly impracticable.

On that statement, you might have to leave this price line up to meet those people, and the profits to the low-cost producer would be simply enormous, wouldn't they?

Lieutenant Colonel **Harris**. Quite true.

Now, may I say that our plan contemplates that there are cases where we cannot avoid that sort of thing and that undue profits must be taken away by an excess-profits tax of some kind.

Mr. **Hiss**. We will come to that a little later, Colonel Harris. Specifically, to make clear the next point I want to take up, does the War Department plan contemplate the piecemeal fixing of prices that was done during the last war, or does it contemplate a freezing of the price level at some base period prior to the out-break of war?

---

[1] Committee Print No. 3, p. 38.

Lieutenant Colonel Harris. There have been a number of schemes for controlling prices presented by various distinguished people and discussed. I must in answer to that go back to the statement in that first paragraph that I read, of the conditions of the time.

Mr. Hiss. You are familiar with the price-freezing scheme, are you, Colonel Harris?

Lieutenant Colonel Harris. I am not to the degree that I would be prepared to discuss any phases of it.

Mr. Hiss. May I call your attention to two places in the minutes of the War Policies Commission? First, General MacArthur on this subject testified at page 372.

> Freezing of prices would appear to be a doubtful expedient, because so many factors are involved that injustice must follow. Evasion and court appeals are inevitable. In the end, the Government effort would probably be largely gesture. Attempts at enforcement would likely create antagonism and the Government would lose the essential elements of good will.

Later a letter was introduced in the record from General Moseley, addressed to Mr. Baruch. That letter said that General Moseley had considered the price-freezing proposition again, and he found that he was in agreement with Mr. Baruch. Do you know which is the view of the War Department at the present time—the statement that I have quoted from General MacArthur, or General Moseley's acceptance of Mr. Baruch's plan?

Lieutenant Colonel Harris. I would say that the War Department at the present time is in the position of not having adopted any specific plan.

Mr. Hiss. If we may analyze just for a few minutes the problem of freezing all prices, does that contemplate a freezing of every price or only of certain prices?

Lieutenant Colonel Harris (reading):

> Whether early action is to be limited to a selected class of necessaries and essential war material or is to be extended to include the entire price structure is dependent upon conditions which exist at the time and upon the extent to which it can be shown that the action is reasonably necessary for the national defense and the successful prosecution of the war.

Mr. Hiss. I was going to ask you to say which particular one, but I understand you say you do not know which one. But is it your understanding of price fixing that every single price is to be frozen as of one particular time?

Lieutenant Colonel Harris. I will make this statement, but I can not go beyond it. As I understand it, price fixing fixes a ceiling above which prices cannot go; they may go below. With that statement I have almost exhausted my knowledge of what they call price freezing.

Senator Clark. Colonel, that provision in that paragraph or in that pamphlet you just read does not mean anything except that we do not know yet what we are going to do; is that correct? It is a good deal like saying, "Handsome is as handsome does." In other words, it does not give any basis whatever for either Congress or the public to determine what might happen in the event of war.

Mr. Hiss. Colonel Harris, my understanding of the price-freezing proposal is that in order to avoid the dislocations caused by piecemeal fixing of prices so that there would be continual jockeying between one commodity price and another, since there is such interrelation between different products, all prices will be held at exactly a certain point, and no change would be permitted in any price except after some specific finding by a board. If so, would wages have to be frozen in the same way? Do not they constitute an element of cost that if left uncontrolled would also affect, and vitally, the price structure?

Lieutenant Colonel HARRIS. Unquestionably.

POSITION OF LABOR IN FUTURE WARS

Mr. RAUSHENBUSH. Colonel Harris, we are interested for the moment in the question of what is going to happen to labor during the next war, and I wonder whether it is to you or to Lieutenant Brannon I should address the questions on that.

Lieutenant Colonel HARRIS. We reserve the right, if the committee approves, to answer as I judge the questions should be answered.

Mr. RAUSHENBUSH. Not only is the matter of price fixing, which I believe you just discussed. involved here, where you will have to note not only the question of fixing prices and its influence on wages, but it is also important in the whole question of mobilization.

Now, very briefly, to get the set-up, I would like to run through rather quickly, and I think without any question, your set-up in regard to that. Just that you have in mind the plans of the War Department for labor during the war, I want to refer first to pages 10 and 11 of the Industrial Mobilization Plan [1] which sets up priority control. I do not particularly want to read that whole section if we can agree on this proposition, Colonel: That that priority control gives the Government the power to divert raw materials from one kind of factory to another. That in essence is the thing.

Lieutenant Colonel HARRIS. I admit that.

Mr. RAUSHENBUSH. And a bill to do that has been prepared by the War Department and is given on page 86 of the Industrial Mobilization Plan.

Lieutenant Colonel HARRIS. That is true.

Mr. RAUSHENBUSH. Cannot we agree that that will probably result in some kinds of factories being closed down for want of raw materials, some nonessential factories?

Lieutenant Colonel HARRIS. The morale of the whole people is necessary in war, and no factory would be shut down under the conditions you speak of unless it was absolutely necessary to win the war.

Mr. RAUSHENBUSH. Yes.

Lieutenant Colonel HARRIS. The needs of the people to earn a living are fully recognized in the basic fundamentals of this plan.

Mr. RAUSHENBUSH. Yes. The point I was making was a little to the side of that, that when you start diverting raw materials to the war industries, which of course you should, there may be some dislocation of industry there at times, and some nonessential factories might for a while be closed down; there is a possibility of that.

Lieutenant Colonel HARRIS. I do not like the words "closed down." Might be reduced.

Mr. RAUSHENBUSH. All right, reduced.

---

[1] Printed as Committee Print No. 2.

Lieutenant Colonel Harris. Yes.

Mr. Raushenbush. There might be some temporary unemployment.

Then the War Department has a plan to take care of the unemployment by shifting two services from the Department of Labor over to the War Labor Administration, which seems to be outlined on page 44 of the Industrial Mobilization Plan.

Section O. Mobilization

> The mobilization of the several bureaus of the War Labor Administration should be effected successively as the necessity for them becomes apparent. The employment service and conciliation service should be organized by the transfer of those functions from the Department of Labor.

That is the outline, is it not, those two services, the Federal Employment Service and the Federal Mediation Service are shifted over from the Department of Labor to the War Labor Administration?

Now, going over to pages 40 and 41, I want to point out in your language and the language of this Industrial Mobilization Plan that this point of employment services becomes somewhat different than it is at present, and I want to read that and see if you can explain away some confusion that seems to be created in my mind in that.

Section K. Employment Service

1. GENERAL

> This service is an operating agency. Its function is to bring the job and the worker together.
>
> The operations of this service differ materially from the operations of similar services in peace time, in that ordinarily the latter do not mobilize labor for a particular purpose. Peace-time employment services merely direct an applicant to a probable market for his labor and there the applicant must both sell and prove himself.
>
> In war time this lost motion should be avoided and the employment service must know the applicant's qualifications, as the result of tests or otherwise, and the certainty of the existence of the job before assigning him.

Now, that "assigning him" is the question I wanted to raise. Does that mean what it would seem offhand to mean, that this employment service, working now under the War Labor Administration, is to tell these workers they are assigned to that plant and not to that plant?

Lieutenant Colonel Harris. You mean the workers voluntarily available?

Mr. Raushenbush. No; I am asking a different question. I mean when a factory is temporarily closed to tell a man, for the purpose of making war material or priority control, that he must go to a certain place, that then he is assigned to that place?

Lieutenant Colonel Harris. I do not read that implication to that language.

Mr. Raushenbush. Can you give us some other explanation of what it does mean?

Lieutenant Colonel Harris. It means what I said. The man is voluntarily available and you know his qualifications and you have got a job for him and you say to him, "There is a job for you and that is where you are to go."

Mr. Hiss. Does that mean he cannot go anywhere else?

Lieutenant Colonel HARRIS. You mean he cannot work anywhere else?

Mr. HISS. Yes, sir.

Lieutenant Colonel HARRIS. He can work anywhere he pleases.

Mr. HISS. What is the value of the assignment, then, to a particular place?

Lieutenant Colonel HARRIS. Because he may be more available in that plant. He would be put in a place where he would give the best return. That is a perfectly sensible thing to me.

Mr. RAUSHENBUSH. The way you describe it, Colonel, to me in reading this language is the way you describe it here, or the way the War Department describes it. It starts off—

> The operations of this service differ materially from the operations of similar services in peace time—

And then it goes on after that with that assignment proposition.

Is it not a reasonable supposition to say that that is the way it will actually work? Here is an employment service that has gone under the control of the War Industries Administration or the Labor Administration. They will simply want to get people in places where they need them and will tell them very definitely to work there and nowhere else.

Lieutenant Colonel HARRIS. If there should be any legislation such as "Work or fight", and that man says, "I want to work", and he comes over for a job, under that kind of a policy they probably would assign him to that job.

Senator CLARK. Does not this language describe the difference between peace-time-employment agencies and war-time-employment agencies in terms setting forth that during peace time this man applies to an employment agency, whose function is to tell the prospective worker that there is a job available at such and such a place, and if the worker wants to go and apply for the job and the conditions are mutually satisfactory to the worker and his prospective employer, he takes the job and goes to work. But under this war-time-employment agency which is set up here, a man is assigned to a place and told to go there and work.

Lieutenant Colonel HARRIS. May I inquire, Mr. Raushenbush, suppose that was our intention, what legal authority would we have to do that?

Senator CLARK. There is a whole program of legislation outlined for Congress.

Mr. RAUSHENBUSH. Let us go into that question of legal authority, Colonel. I see in connection with that whole proposition a bill has been provided, a draft bill, which you have on page 81 of this booklet, in which in section 2 it is provided that every male person over 18 shall be registered. That is section 2. That is the subject of that section, is it not?

Lieutenant Colonel HARRIS. It is.

Mr. RAUSHENBUSH. Then we turn to section 4, on page 82, of the draft bill, and find, however, that those people liable to military service only include those between 18 and 45. So if I do not misinterpret that, what you have here is that every man in the country over 18 registers and that those between 18 and 45 are liable for military service.

Lieutenant Colonel HARRIS. I should imagine the purpose of that was to determine who was between 18 and 45. Make everybody register and then you can sift them out.

Mr. RAUSHENBUSH. Anyhow you have them registered. Now, that leaves the men over 45 registered, and under control for assignment, and the men from 18 to 45 also under control for assignment, either for peace or military service.

Lieutenant Colonel HARRIS. If you define the word "assignment" I will agree with your first statement.

Mr. RAUSHENBUSH. I was trying to get at that before, and you said, if they do pass a work or fight bill, then they will be assigned.

Lieutenant Colonel HARRIS. That depends entirely on the will of Congress.

Mr. RAUSHENBUSH. What we are trying to get at here are the recommendations and ideas of the War Department in planning on that. Along in that same connection I would like to point out that on pages 82 and 83, section 6, the President is given the power to defer service in the Army for persons engaged in industries, occupations, or employments found to be necessary to the maintenance of the national interests.

Now that is clearly, is it not, Colonel, a place to exempt certain persons. Isn't that what that is?

Lieutenant Colonel HARRIS. I did not find that as you read it.

Mr. RAUSHENBUSH. Section 6, bottom of page 82 and the top of page 83, about seven lines down. It is the ordinary section.

Lieutenant Colonel HARRIS. Yes.

Mr. RAUSHENBUSH. And exempting persons, deferring military service to "persons engaged in industries, occupations or employments, including agriculture, found to be necessary to the maintenance of the national interest."

Lieutenant Colonel HARRIS. That authorized a deferment for certain classes; yes.

Mr. RAUSHENBUSH. The President there has the power to exempt certain persons.

Lieutenant Colonel HARRIS. Yes.

Mr. RAUSHENBUSH. Now, leaving this whole question just a moment—I would like to get back to it later—I would now like to take up the question of what representation for labor you have in mind for this whole war-time set-up.

I see on page 27 of this booklet there is a provision for a Labor Division of the War Industries Administration, and I would like to read that:

> 6. Labor Division.
>
> (*a*) Composition: The Labor Division will consist of—
>
> (1) A Chief of Division appointed by the Administrator of War Industries.
>
> (2) A representative of the Administration of War Labor.
>
> (3) A representative of the War Department.
>
> (4) A representative of the Navy Department.
>
> (5) Representatives from such other governmental departments as the Administrator of War Industries may deem necessary.
>
> (*b*) Functions: This division will coordinate labor requirements and adjust conflicting requirements for labor engaged in the production of war materials. It will determine shortages of labor in war industries and will determine priorities in the use of labor accordingly. It will keep the Administrator of War Labor (appendix III) informed of such priorities, and will cooperate with him and with existing labor agencies.

(*c*) Mobilization: The Labor Division of the Army and Navy Munitions Board will, in the event of an emergency and until the Administrator of War Industries is appointed, carry out the functions prescribed herein.

Upon the creation of the Administration of War Industries, officers from the Army and Navy Munitions Board, with the pertinent records and data, will be made available to the Administrator to assist in organizing the Labor Division.

I note here in passing, Colonel, that that sort of links up, doesn't it, with the thing we were talking about before, that assignment idea, that section where it says that the Board will determine the putting of labor in war industries and determining priority in industry of labor.

Lieutenant Colonel HARRIS. I do not think so.

Mr. RAUSHENBUSH. All right; we will skip that for a minute.

Let us note the composition of that Board. That is a board of five, one of which is picked by the Administrator of War Industries, who I believe is going to be a prominent financier.

Lieutenant Colonel HARRIS. That is correct.

Mr. RAUSHENBUSH. One is picked by the War Department, and he certainly would not be a representative of labor, would he?

Lieutenant Colonel HARRIS. As long as you brought that up, I might mention that the Army officer who collaborated in writing this thing is a labor affiliate.

Mr. RAUSHENBUSH. Who is that?

Lieutenant Colonel HARRIS. He is dead now, I believe. But it is Lt. Col. C. B. Ross, who carried a union card and was in constant consultation with the American Federation of Labor in the preparation of this document. I do not say that the American Federation of Labor subscribes to this at all now. Don't misunderstand me.

Mr. RAUSHENBUSH. What was his labor connection?

Lieutenant Colonel HARRIS. You ask me what was his labor connection?

Mr. RAUSHENBUSH. Yes.

Lieutenant Colonel HARRIS. Before he came in the Army he belonged to one of the trades and had a union card.

Mr. RAUSHENBUSH. Do you take that to be a representative of labor? Anybody who carries a union card?

Lieutenant Colonel HARRIS. I did not say so. Did you think I said he was a representative of labor?

Mr. RAUSHENBUSH. I am not trying——

Lieutenant Colonel HARRIS (interposing). And you cannot make me say so.

Mr. RAUSHENBUSH. I am not trying to make you say so, Colonel. I am interested in this question.

Lieutenant Colonel HARRIS. So am I.

Mr. RAUSHENBUSH. The question was whether the representative appointed by the War Department would be a representative of labor. My statement was that he probably would not be a representative of labor, would he? And you testified that, inasmuch as Mr. Ross had helped in drafting this, that in some way labor, I take it, had been consulted in the matter.

Lieutenant Colonel HARRIS. I said he was in constant contact with the labor officials, and the point I am trying to make was that I feel sure that a sympathetic attitude toward labor was in his mind.

Mr. RAUSHENBUSH. In his mind?

Lieutenant Colonel Harris. I do believe that.

Mr. Raushenbush. I carry a union card myself, and I do not feel that I represent labor.

Then there is one representative to be appointed by the Navy Department. He would not be a representative of labor himself, would he?

Lieutenant Colonel Harris. He would be a representative of the Navy Department.

Mr. Raushenbush. Yes.

Lieutenant Colonel Harris. I do not know whom they would choose.

Mr. Raushenbush. And one or two representatives from other governmental departments. They would not be representatives of labor either, would they?

Lieutenant Colonel Harris. I do not know who they would choose.

Mr. Raushenbush. They would choose, presumably, governmental people.

There we have a board of five, sir, one of which is picked by the outstanding industrial leaders, who is head of the War Industries Administration, and the others from governmental departments. Do you see on there anywhere a representative of either organized or unorganized labor?

Lieutenant Colonel Harris. Not labeled that way, and not labeled the other way. It so happened in the last war the representative of the War Industries Board in connection with labor was Mr. Frayne, and if I am not mistaken Mr. Frayne did have some relation with organized labor.

Mr. Raushenbush. Mr. Frayne was a labor organizer.

Lieutenant Colonel Harris. So that in practical application the representative of the War Industries Board, comparable to the administration of war industries, was a labor man.

Mr. Raushenbush. That is one of the very things we are interested in, because, if you will turn to the bottom of page 35, it seems to make it clear that this time it is going to be different.

Lieutenant Colonel Harris. Wait just a minute.

Mr. Raushenbush. The War Labor Administrator this time, according to the present plans will do this, quoting from the bottom of page 35 of the industrial mobilization plan:

> The Administrator should be an outstanding industrial leader * * *.

Lieutenant Colonel Harris. I might state that that particular clause is contained in there just as you read it. There is a great difference of opinion right now. I do not happen to believe in that particular clause.

Mr. Raushenbush. Colonel, I hope this is without any personality at all. This is a War Department document, and we are trying to find out what is underlying the whole plan for labor during war, and we find that they say that the Administrator of this War Labor Administration shall be an industrial leader. So that we look the over the board of five and find no representation either for organized or unorganized labor in this particular set-up for the coming war.

May I ask, is not this even a little less representative set-up than that which we have in the N. R. A. at the moment? There the National Labor Board has at least half labor representation on it, does it not?

Lieutenant Colonel HARRIS. I think it is entirely appropriate for me to state that this Industrial Mobilization Plan, as we visualize it, is the best effort to prepare a workable plan. But we do not believe that it follows that the Administrator of War Labor, or that the Administrator of War Industries would follow the provisions set forth in here. This plan has not the basis of legislation. It is only a plan to be put in his hands, for him to take or reject as he sees fit. The only thing here which is fixed in this plan is the legislative program, that is subject to the will of Congress. The industrial mobilization plan has the approval of the War Department and the Navy Department. That is all the official status this plan has.

Senator CLARK. Colonel, that is precisely what we are doing, preliminary to the recommendation of legislation, which is part of the function imposed on this committee by the mandate of the United States Senate. We are studying the latest available plan, and this is what you state to be the best available plan, with a view to making recommendations. We are trying to find out about it.

Lieutenant Colonel HARRIS. I shall endeavor to answer any questions. I wanted to express that thought.

Senator CLARK. I want to explain to you that we are studying it not in any captious sense, to pick flaws in a plan prepared by the War and Navy Departments. It is a part of the duty of this committee, under the mandate of the United States Senate, to study this question and suggest legislation. We are taking this plan, which is described to us by you and others as the latest and best available plan which has been produced yet by the planning branches of the War Department and Navy Department, and we are trying to see what it says and examine it from that standpoint.

Lieutenant Colonel HARRIS. I recognize that, Senator, and I am here to explain it to the very fullest degree possible.

Senator CLARK. You have been very kind about that, Colonel. We are not trying in any captious sense to examine you, but trying to get the facts.

Lieutenant Colonel HARRIS. I might say, I have been covering a rather broad field in this investigation, and perhaps I have overextended myself.

Senator CLARK. We appreciate the situation, but you are the head of the planning branch.

Lieutenant Colonel HARRIS. I am doing the best I can.

Mr. RAUSHENBUSH. The proposals here affect such a large part of the country, both those to be drafted in the fighting service and those to be in the industrial mobilization——

Lieutenant Colonel HARRIS. May I interrupt you to ask one question? Is this discussion going to be very long or searching? If so, I would like to send for the officer in my office who has charge of this labor provision.

Mr. RAUSHENBUSH. Mr. Chairman, in that connection, this is, to my mind, a very important question, and the statements in this industrial mobilization plan are ones that have probably been considered at some length at various times before the War Policies Commission, and doubtless General MacArthur and others could testify on these labor matters.

Senator Clark. At least they have received the approval of the Secretary of War and the Secretary of the Navy under their official seals.

Mr. Raushenbush. And if the Chair sees fit to ask General MacArthur and anybody else who have acquainted themselves with this matter, the examination could be dropped here, if you desire.

Lieutenant Colonel Harris. I think I can answer most questions.

The Chairman. The Chair suggests that Mr. Raushenbush proceed and that Colonel Harris answer as best he can.

Lieutenant Colonel Harris. I shall be very glad to.

The Chairman. The committee is frankly anxious to complete today until after the holidays at least. So that if you can answer, as far as you know, Colonel Harris, any questions that are raised, then we cannot ask for more.

Lieutenant Colonel Harris. I will do the best I can, to the best of my ability.

Mr. Raushenbush. Colonel Harris, rather than embarrass you, when a question is asked, if you say you would prefer to have that put over, we will pass it.

Lieutenant Colonel Harris. Generally speaking, the plan speaks pretty well for itself, unless it is the use of some word or thought.

Mr. Raushenbush. That is what I cannot understand. If it speaks for itself, it speaks in a very loud and definite language at one time. If it does not speak for itself, and can be interpreted, that may be a very different matter.

Lieutenant Colonel Harris. It is a plan for a very loud occasion. It is a plan for war.

Mr. Raushenbush. For that reason, it seems worth giving it some attention, Mr. Chairman, if that can be done.

This War Labor Administration, then, has, I believe, we have agreed, no direct representative of organized or unorganized labor on it. Then we come to the next page, page 36, which sets up an advisory counsel. I think I will read that section [reading]:

> The Administrator of Labor is assisted in the formulation of policies and the adoption of means to administer such policies by an advisory council consisting of 10 members, 5 of whom shall represent industry and 5 of whom shall represent labor.

That is a 50–50 arrangement at this point, is it not? [Continuing reading:]

> Members of the advisory council are appointed by the President.
>
> The advisory council shall meet from time to time as directed by the Administrator of Labor.
>
> The Administrator of Labor or his deputy shall preside at all meetings of the advisory council..
>
> Among the principal questions to be considered by the advisory council are—
>
> 1. Measures to prevent grievances of employers or employees, whether actual or imaginary, from interfering with war production.
> 2. The right of employers or employees to organize into associations and trade unions and to bargain collectively through representatives of their own selection.
> 3. Standards of wages, hours of labor, and working conditions. (See appendix VI.)
> 4. Equality of pay for identical work.
> 5. Recognition of the statutory work day and the adjustment of hours not in conformity therewith with due regard for the necessities of the United States and the welfare of the workers.

6. Maintenance of maximum production in all war work, and the suspension for period of the actual emergency and a reasonable adjustment thereafter of all restrictive regulations not having the force of law which unreasonably limits production.

Now, before we start talking about some other thing, let me ask you this:

Is not an advisory council set up at this time to take under consideration or to consider these questions? Is not that a sort of probably useless adjunct in the sense that all the decisions on these matters will have to be made very quickly, and if they once start discussing such questions as "2", that is, "The right of employers or employees to organize into associations and trade unions and to bargain collectively through representatives of their own selection," that they will never get anywhere in war time?

Lieutenant Colonel HARRIS. That particular advisory council is under the Administration of War Labor. That is the task of all labor organizations set up in this program. Some of the other things which we were reading were in the Administration of War Industries, the labor division of that organization. That is the highest organization and the lower one is required to contact with and carry out the policies of the highest one. The highest one has its advisory council, divided between industry and labor.

Mr. RAUSHENBUSH. Are not we talking about something different? Under the section of the appendix marked "3", which is headed "Administration of War Labor", we find that the administrator of labor is to be assisted by this advisory council which I have just described. It is a body under him. It assists him. The question which I am raising is this: Here the whole War Labor Administration is set up without any labor representation, but there is an advisory council which is to assist. The very question I was raising was, whether anybody can sit down and advise or consider matters of administration, which are in a sense matters of policy and legislation? At the time that war broke out, and thereafter, could there be any agreement, for instance, between five members of industry and five of labor, on section 2, the right of employers or employees to organize? Is that just a possibility?

Lieutenant Colonel HARRIS. I am inclined to agree with you.

Mr. RAUSHENBUSH. I thought we would get an agreement here. We have had the steel industry differing and unable to agree under the present pressure for 12 months on what one section of N. R. A. meant. The textile industry, the automobile industry, and others, have spent about a similar time. What is being set up here is an advisory council, apparently, to deal with matters which are very long and complicated matters, and if they start discussing them, then one can assume, can one not, that the advisory council will never get anywhere? That is, the chances are they will never get anywhere with the help of a kind that will start being effective right from the beginning of the war?

Lieutenant Colonel HARRIS. Certainly, on a subject such as you quoted, that is true.

Senator CLARK. In other words, Colonel, is there not the strongest kind of probability that while this 50–50 council is considering these very much controverted questions, that the Administrator of Labor will have already decided them, and the head of this department, this prominent industrialist, as was stated a while ago, will already have put them into operation?

Lieutenant Colonel Harris. The Administrator will undoubtedly, if he finds it is holding up.

Senator Clark. That is the effect of the advisory council, and it is therefore more or less suggested. I am not disagreeing with the necessity for prompt action in time of war, but, as a matter of fact, this advisory council on these subjects might be more or less of a debating society, with five representatives on one side and five on the other side, discussing matters which Mr. Raushenbush has pointed out have been in very grave dispute for 12 or 18 months under present circumstances, in peace times, with all the pressure that the President of the United States and the great force of public opinion were able to bring to bear on them. Would not this be more or less just a debating society, and would not all the questions which are assigned to them for consideration have been affirmatively determined or negatively determined, one or the other, by the Administrator before the council ever got around to operate?

Lieutenant Colonel Harris. There are several factors which work to advantage under war conditions in this regard. In the first place, you have a very strong morale and strong public opinion in case of war. Moreover, this will be recognized as more or less temporary. I do not think there would be the tendency to hold out on a point in case of war as there would be under normal life of the country.

Senator Clark. We have seen the du Ponts holding out for what they considered to be a fair profit, which the War Department did not consider a fair profit for 3 months, under very great stress.

Lieutenant Colonel Harris. There were two sides and they could not agree.

Senator Clark. There would be two sides to every question submitted to the advisory council—two sides to every question, and that all makes for delay. There would be two sides, very widely separated, as proved many, many times, with each side having very much merit on its side of the contention.

Mr. Raushenbush. Before leaving the advisory council, are not the probabilities here, Colonel, that all of these matters would be nonpublic? I mean they would not go out and thresh this thing out in public, in the middle of a war, would they?

Lieutenant Colonel Harris. I do not think they would. There would be undoubtedly cases when they would do that thing. I do not say they would do it secretly, but they would not have time for public hearings. I do not think they would necessarily be secret.

Senator Clark. And they necessarily and properly would not want public notoriety given to the proposition that there was serious disagreement on these great matters while we were at war?

Lieutenant Colonel Harris. Where it was against the national interest they would feel that way.

Mr. Raushenbush. And in peace times it would be that way. Do you know off hand the number of reports published by the Advisory Labor Board or the Consumers' Council of N. R. A., recommending this and commenting on this?

Lieutenant Colonel Harris. All I have seen is in the newspapers, and I do not know.

Mr. RAUSHENBUSH. I do not remember a single one from either organization, and I asked about it the other day and found out they had been under orders, apparently, not to make anything public. Here you have a set-up like the National Labor Board, consisting of 50 percent industrial and 50 percent labor, and even in peace time they are not talking in public. So that whatever public advantage there might be of having these things threshed out, presumably in war time they would not get that benefit.

Lieutenant Colonel HARRIS. I think that is true, but I am trying to emphasize the fact that in time of war the object is not what one side will do or the other. The object is to try to win the war. I think many questions would be raised which would not cause a long-drawn-out negotiation.

Mr. RAUSHENBUSH. I want to pass that as a matter of argument and not comment upon it beyond saying that there were plenty of people who thought that the depression was serious enough for almost war-time emergency, and yet there had been almost an 18 months' discussion by the two interests in the steel industry and the auto industry. Your point is that war would be more serious than the depression, which is probably a sound point.

Coming to point 3, on the matter of some of the things the advisory committee is to decide, it says:

> Standards of wages, hours of labor, and working conditions. (See appendix VI.)

We turn to appendix VI, sir, at page 64, and find there the price-control arrangement, and find the price-control committee, on which the War Labor Administration would have 1 member out of, it seems to be, about 20; and we find that the price-control committee, reading from the chart, is described as follows:

> Quasi-judicial body for the formulation of policies and methods for the control and stabilization of prices, wages, and profits.

Does that mean fixing wages?

Lieutenant Colonel HARRIS. Would you tell me what part that is?

Mr. RAUSHENBUSH. I am reading from a chart in another part of the book. It is on page 64.

Lieutenant Colonel HARRIS. I see. In the middle of this chart.

Mr. RAUSHENBUSH. The middle of the chart describes the price-control committee as:

> Quasi-judicial body for the formulation of policies and methods for the control and stabilization of prices, wages, and profits.

Is not that a frank statement that wages are going to be under their control, and a frank statement that 1 out of this committee of about 20 is going to represent the War Labor Administration, which in turn has no direct labor representation on it at all?

Lieutenant Colonel HARRIS. The chart shows that contacts with the Department of Commerce, Department of Agriculture, Interstate Commerce Commission, United States Tariff Commission, Federal Trade Commission, and other Government research agencies, the War and Navy Departments, Treasury Department, War Trade Administration, War Labor Administration, War Industries Administration, and National War Service Corporation. It seems to draw on all the agencies of the United States Government.

Mr. RAUSHENBUSH. Yes; but not from labor. The other point is that that group is a price-control committee, and we find the advisory committee under point three is to consider "standards of wages, hours of labor, and working conditions." (See appendix VI.)

And we turn over to the price-control matter and find there a statement that wages are under the price-control committee.

Now, is it not a fairly logical question to ask what I asked: Does not that mean that wages are going to be pretty definitely fixed by the price-control committee?

Lieutenant Colonel HARRIS. It only says "for the formulation of policies and methods for the control and stabilization of prices, wages, and profits", but, of course, the thought which you have I think is justified.

Mr. RAUSHENBUSH. It is justified. And that the control committee is under the chairman of the price-control committee, which has the ultimate decision in the matter.

Lieutenant Colonel HARRIS. Please remember that this is under the President of the United States, and that the War Labor Administration is involved in this group.

Mr. RAUSHENBUSH. Yes, sir; the War Labor Administration is 1 out of 20.

Lieutenant Colonel HARRIS. And also the Secretary of Labor, as an adviser of the President, and labor is not excluded. That is the point I am making.

Mr. RAUSHENBUSH. Are you making the point that the Secretary of Labor represents organized and unorganized labor?

Lieutenant Colonel HARRIS. No; I do not see anything on this chart to show that industry is represented. I do not see industry or labor represented. I see here a Government organization.

Mr. RAUSHENBUSH. Let us stop a moment on that. The chairman of the War Industries Board is a prominent industrialist—I mean the War Labor Administration is a prominent industrialist, and the chairman of the War Industries Administration, as we agreed a while ago, is either a prominent industrialist or financier, and you will probably admit that the chances are that the War Trade Administration is going to be under that.

Lieutenant Colonel HARRIS. If you want to know my opinion, I will express it.

Mr. RAUSHENBUSH. Is not that your opinion on what it says?

Lieutenant Colonel HARRIS. That is my opinion on what it says; yes.

Mr. RAUSHENBUSH. That we are going to have probably three industrialists representing all those three groups, along with all the other Governmental agencies in price fixing.

I think we have disposed of the matter that labor does not have any direct representation there. When you go to standards of wages, hours of labor, and working conditions, Colonel Harris, it says here that that is under the control of the price-fixing committee to consider standards of wages, hours of labor, and working conditions.

Lieutenant Colonel HARRIS. It shows it in the chart. Can you tell me whether it says so other than in the chart? I do not know whether that is pertinent, but I think the chart is the only place it says that.

Mr. RAUSHENBUSH. I do not have the page reference to that. It is in the earlier part of the book, if you can check it.

Lieutenant Colonel HARRIS. I will agree that is what it says in the chart.

Mr. RAUSHENBUSH. I will try to get a reference to that later.

May we skip down to the bottom of page 36, point 6, as to the duties of the advisory council, and I would like to ask what that means:

> Maintenance of maximum production in all war work, and the suspension for period of the actual emergency and a reasonable adjustment thereafter of all restrictive regulations not having the force of law which unreasonably limits production.

Colonel Harris, does that mean such union regulations as there may be, or what other restrictive regulations as there may be, or what other restrictive regulations are there which you have in mind which do not have the force of law?

Lieutenant Colonel HARRIS. I do not feel qualified to answer questions on that matter.

Mr. RAUSHENBUSH. All right, sir.

Now turning for a moment to this mimeographed section on wartime contracts, February 2, 1934, we find on page 18 something which seems to illuminate that section which I have just read, apparently speaking of the N. R. A. codes and the way that they can be adapted to war, and it says in the second paragraph on page 18:

> Undoubtedly such provisions of emergency codes as apply to maximum hours of labor and minimum wages would have to be scrapped.

Lieutenant Colonel HARRIS. I would like to state that this thing which you are reading from has nothing to do with the Industrial Mobilization Plan, is not a part of it, and the only relation it has to it is a study of a group of officers on this subject. It has no official status except that.

Mr. RAUSHENBUSH. It is one of the elements entering into your thinking on this whole question, is it not?

I mean that here you had a group of senior officers, including Lieutenant Brannon, give their ideas on the thing, and their proposition or their ideas on what would happen are that such revision of maximum hours of labor and minimum wages would have to be scrapped during war.

Lieutenant Colonel HARRIS. If it is their opinion, it is worth what it is worth.

Mr. RAUSHENBUSH. Would you feel free to speak for the War Department in saying that the War Department would have no intention of scrapping those provisions during war?

Lieutenant Colonel HARRIS. I am not qualified to answer the question.

Mr. RAUSHENBUSH. I do not want to press you for an answer for things on which you are not qualified to answer.

But taking section VI which I have just been reading, about the removal of restrictive regulations not having the force of law, if this does have any weight as an element in the situation, it would seem that you are actually setting up a sort of plan which parallels the N.R.A., but takes out section 7–A, let us say, the provisions with regard to labor.

Lieutenant Colonel HARRIS. Of course you appreciate this document was written before section 7–A was in existence.

Mr. RAUSHENBUSH. Yes, but it is very interesting to see how the two things are along the same line. Could you say who was the brains behind that, Colonel Harris?

Lieutenant Colonel HARRIS. This is the result of studies covering many years, hearing of the War Policies Commission, and the cooperative work of many people.

Mr. RAUSHENBUSH. It is interesting to me to see how closely allied the two things are, and it seems here from the things which we have that the war-time idea would be to have an N. R. A. act without those particular sections which Congress put in.

Now turning for a moment to page 12, which has to do with this same thing, page 12 of the Industrial Mobilization Plan, under the head of labor, 3–C, I will read part of it [reading]:

> Among the more important problems to be considered are the minimizing, by an equitable distribution of war orders, of excessive migrations of labor; the prevention of unethical competition for labor by war industries; compilation for the information of the President of lists of industrial deferments required for efficient operation of war industries; the avoidance and settlement of industrial disputes; and the coordination of employment services.

Do you feel competent to tell us, Colonel Harris, what it means by "the prevention of unethical competition for labor by war industries"? That looks on the face of it—and you said the language was plain—that looks on the face of it like a plan definitely to forbid the raising of wages of any kind. I may be wrong, but that is the way it seems on the face of it, as I read it.

Lieutenant Colonel HARRIS. Do you call raising wages unethical?

Mr. RAUSHENBUSH. The phrase is used here, "the prevention of unethical competition for labor by war industries."

Lieutenant Colonel HARRIS. I am asking you if you call raising wages unethical.

Mr. RAUSHENBUSH. That is what I am asking you, sir.

Lieutenant Colonel HARRIS. I do not think it is.

Mr. RAUSHENBUSH. What is the unethical competition for labor by the war industries, then, if it is not taking labor from one to another by offering them a higher wage?

Lieutenant Colonel HARRIS. I do not know what means they would use. They might take a man who had been a foreman and make him a superintendent. I do not know the methods. Whether or not that would be proper, I am not saying.

Mr. RAUSHENBUSH. That is the question, is it not? On the face of it, it would give rise to a possible inference, certainly, that if one industry started getting labor away from another, through higher wages, that that might be considered unethical, and that that would be prevented under these control measures.

Lieutenant Colonel HARRIS. I will say that if the raising of wages had reached the point where it was against the national interest, I would say it was unethical.

Mr. RAUSHENBUSH. Where is it against the national interest?

Lieutenant Colonel HARRIS. I do not know.

Mr. RAUSHENBUSH. Has the War Department discussed that?

Lieutenant Colonel HARRIS. No; the War Department certainly has not discussed that.

Senator CLARK. Colonel, you do not think it is in the national interest to have a man working in a munitions plant, as a common laborer, who may earn during the war $15 or $20 a day, and have another man in the Army, who has been drafted, and who get $1 a day and his keep?

Lieutenant Colonel HARRIS. I think Mr. Raushenbush was talking about a man working in a munitions plant for $15 a day and another man offered him $40 a day in another munitions plant.

Senator CLARK. Mr. Raushenbush and I were talking about different things.

Lieutenant Colonel HARRIS. I will ask you to repeat that.

Senator CLARK. I say, do you think it is unethical and against the national interest for a man doing more or less common labor in a munitions plant to get $15, $20, $25, or $30 a day, as some did during the war, doing more or less common labor, whereas a man who was drafted and wearing the uniform of the United States would get $1 a day and his keep?

Lieutenant Colonel HARRIS. Yes, sir; I do; and I think it was also unethical that certain executives in industry got 10 times what I got, occupying a comparable position.

Senator CLARK. I agree with that.

That did not have anything to do with what you were talking about, Mr. Raushenbush, but it was brought up by the colonel's reply.

Mr. RAUSHENBUSH. I can understand the colonel's reply very well. It seems true. As long as the wages in industry are four or five times as big as the wages in governmental service, the situation is not quite on a par.

Lieutenant Colonel HARRIS. May I request just 1 minute's recess.

Mr. RAUSHENBUSH. Yes, sir.

Mr. RAUSHENBUSH. I call your attention again to the first sentence of that section I read on labor, which reads:

> The assurance to industry of an adequate labor supply, both in numbers and by occupational qualifications, will require the organization of a labor administration with an administrator of labor appointed by and directly responsible to the President.

I am just calling attention to the first sentence to give the appropriate purpose of these control measures. Here it is apparently to give assurance to industry of an adequate labor supply, and that that will require the organization of a labor administration.

Then right along that line, which seems to be the line of supplying industry with labor at the minimum of trouble, we got into this question of what was to prevent unethical competition for labor by war industries. I was making the point, or asking the question, as to whether any competition between industries for labor did not mean an increase in wages; and the preventing of that, whether that did not mean keeping wages down. I do not remember exactly what your answer to that was.

Lieutenant Colonel HARRIS. My answer was that I did not consider raising wages unethical, and I said that this thing stated that, raising wages within the limits of the national interest.

Mr. RAUSHENBUSH. Oh, yes; now I remember; and that the War Department had not considered as to how high wages could or could not be in the national interest.

Lieutenant Colonel HARRIS. The War Department has plenty to do to think about its part of this program and has thought about the other things to the point of preparing an organization and a structure and a recorded history of what seems to be good practice. We are going to turn it over to them and let them operate it. The War Department will be through with this thing on "M. day",[1] in the measures of most of these things you are discussing.

Mr. RAUSHENBUSH. Going from that to page 86, a bill has been prepared that allows the President to fix the value of services, does it not—I mean wages. I call your attention to the bill on page 86, the second section:

> That the President is hereby authorized, with respect to any product, foodstuff, material, commodity, right, or service—

Underlining the word "service"—

> declared by him essential for the national security and defense in the prosecution of the war, to fix and establish just and reasonable maximum, minimum, or absolute prices and/or rates at which any such product, foodstuff, material, commodity, right, or service may be bought, sold, or otherwise contracted for.

That does give the President the power, does it not, to fix those wages which they want to fix under the head of necessary war services?

Lieutenant Colonel HARRIS. Perhaps it might be construed there, but the intent of that paragraph is to speak of service as an impersonal thing, and not with reference to the individual entering into that service. The railroads are service.

Mr. RAUSHENBUSH. And also wages can be considered a service, can they not; personal services?

Lieutenant Colonel HARRIS. I said it might be construed. I am not qualified to pass on that point.

Senator CLARK. Colonel, I do not think there is any question that it is not only clearly open to that construction, but that that is practically the only view that can be taken of it.

Lieutenant Colonel HARRIS. Senator, I do not believe that the word "service" there was used to refer to wages. I think the "service" there was certain industrial or other services necessary to prosecute the industrial effort of the war. I would not say that it would not cover it. I do not know.

Senator CLARK. It says:

> That the President is hereby authorized, with respect to any product, foodstuff, material, commodity, right, or service.

The right to render personal service and earn wages thereby is certainly one of the most fundamental rights of mankind. The President is certainly given the right here to fix the compensation for those services. Understand me, I am not saying this is not right, but I do say that it clearly gives the President the right to fix the price of services.

Lieutenant Colonel HARRIS. The intent of this law is to give the President all the material resources of the country and everything that goes into them to prosecute the war.

Senator CLARK. If there is any argument as to the intendment of this act and what it says, that is an additional reason why Congress ought to be looking the thing over now and clarify those matters, instead of passing them under whip and spur after declaration of war.

---

[1] The date designated in War Department orders as the first day of mobilization. Popularly referred to as the first day of war.

Mr. RAUSHENBUSH. Colonel Harris, without too many references to this—you probably know this better than I do—is not the general plan about labor in the war to take pretty much the wages as they are at the time, and have them written into the agreements between the War Department and the contractors?

Lieutenant Colonel HARRIS. I think, generally speaking, that all price-control measures were in the hope that they could maintain the levels at which we entered the war. I think that is the purpose.

Mr. RAUSHENBUSH. The level at the time. How would you deal with a situation where, let us say, we went straight from a depression into war, and the wages were very, very low, let us say, as in Pennsylvania here a year and a half ago, when we had wages of $3 a week and under.

Lieutenant Colonel HARRIS. Was that because of the low wage per hour or the few number of hours they worked?

Mr. RAUSHENBUSH. That was the full week.

Lieutenant Colonel HARRIS. But was that due to the few hours that they worked?

Mr. RAUSHENBUSH. No. That was a full-hour week.

Lieutenant Colonel HARRIS. In that case they should be raised.

Mr. RAUSHENBUSH. That is what I am trying to get at. Here the arrangement seems to be to keep wages as is, and yet you are going to have sections of the country or certain industries, probably, where the wages are very low. What do you do in that case?

Lieutenant Colonel HARRIS. I think they would use their best judgment and apply the answer that seems to be best for the national interest.

Mr. RAUSHENBUSH. Yet have you not created a situation where the great bulk of the production for the war is going to be in the processes before they get to the ultimate manufacturer, just as they are at present? I mean, the ultimate manufacturer who sells to you in all chances adds only about 20 percent of the value; the great bulk is in the raw material processes before it gets to him.

Those people are going to have a labor problem. You are taking care of it to a certain extent by taking the employment agencies under the War Board and doing some allocating and assigning. Yet those people are going to get orders from the final manufacturers on the basis of their low costs. Is not that right?

The people you deal with are going to get orders from the other manufacturers at the lowest prices. You are establishing a situation where, as in ordinary business today, the people will want to keep their wages down. That is the only point I am making there. Is not that a reasonable proposition? It is no different from the present.

Lieutenant Colonel HARRIS. I think that generally people pay as little as they can get it for; the law of supply and demand.

Mr. RAUSHENBUSH. The one point I am raising in that connection is whether you have not made a set-up here that puts the governmental pressure terrifically behind the status quo, whatever it happens to be at the time. Do you have the power either to let the man out of the Army or to take him in, and say, especially if the " work-

or fight" bill goes through, "You have to work here or get into the Army", as Mr. Baruch said in his testimony before the War Policies Commission. You probably will have that power either directly through legislation or indirectly through what Senator Vandenberg calls "moral suasion", with a capital M-S. You have that power in one way or the other.

The question I was going to raise, somewhat more slowly than I am raising it now, is this: Here are you not creating through all these controls and these suggestions that unethical competition for labor should be cut out, a situation where you almost induce the great bulk of manufacturers producing for your final manufacturers to do their utmost to keep wages down, so that they will be the ones from whom your final manufacturers will order?

Lieutenant Colonel HARRIS. You have covered a number of points in that question.

Mr. RAUSHENBUSH. Yes. I am going too fast, under pressure of time.

Lieutenant Colonel HARRIS. This organization is provided with the hope of preventing the thing that Senator Clark said a while ago, that when the soldier goes in the Army for $1 a day it finally winds up that somebody working in an ammunition plant gets $15 a day. To that extent you might say that it is trying to hold down wages.

Mr. RAUSHENBUSH. Yet there is nothing in these plans, as I remember, that deals with that at all. If you were interested in raising wages for the boys in the combat forces, there is nothing in here about that, as I remember it. The thing deals entirely with industry and what it is to get.

But I am raising a further question whether in this very great care that is taken of industry and what it shall get, you have not additionally and sort of incidentally, perhaps, created a situation where there would be a terrific pressure on all the manufacturers in the country to keep wages down very much, especially in view of the price fixing.

If they are to get war orders in bulk and get them continuously and keep them, they will have to get set to insist the War Department do the sort of thing your various officers suggested, scrap the labor provisions of the N. R. A., and generally keep out the disturbing elements that will tend toward raising wages. Do you see the question there?

Lieutenant Colonel HARRIS. I do not see anything sinister in this industrial mobilization towards the interests of labor. I do not see anything sinister in this industrial mobilization plan to industry. It is certainly written with the hope of being fair to all elements involved in the war, because the plan is conceived in a spirit that it is a national war.

Mr. RAUSHENBUSH. One might point out in passing that certainly all our legislation, including, perhaps, the N. R. A., is an attempt to be fair to all people, yet there are certain groups who feel that they are very unjustly treated indeed.

Lieutenant Colonel HARRIS. You can never get unanimity of opinion among a large cross section of the people. You get two together and they are liable to differ.

Mr. RAUSHENBUSH. You are aware of the testimony of General MacArthur before the War Policies Commission? I do not want to read the whole thing, in the stress of time here, on the question of that draft of labor, but may I simply ask one question:

Do you know whether the War Department policy has changed since he gave that testimony?

Lieutenant Colonel HARRIS. I have read the testimony of General MacArthur several months ago. I do not remember what he said. If you will tell me what he said, perhaps——

Mr. RAUSHENBUSH. At the bottom of page 380 of the War Policies Commission hearings, perhaps this will give it. He was asked:

> Mr. COLLINS. Do you propose to draft certain men for fighting and let in voluntarily those who want to work, or do you intend to draft the workers also?
>
> General MACARTHUR. The selective service act itself, of course, inducts, as we said, all necessary men between the ages of 18 and 45.
>
> Mr. COLLINS. And you want them all drafted, whether they are to work or fight
>
> General MACARTHUR. There are no exemptions at all, but they are allocated.
>
> Mr. COLLINS. And you could allocate the Chairman of the Commission to the trenches and put me in some munitions factory, provided we were both under 45 years of age.

I want to correct Mr. Collins there. According to this thing, he might have cut out that last proviso, because everybody over 18 is registered.

General MacArthur then goes on:

> General MACARTHUR. It is to prevent such imperfections of allocations that we have devised this scheme.
>
> Mr. COLLINS. So your proposal would be to draft them all and then to allocate them to the activity that you think would be best suited to the individual?
>
> General MACARTHUR. Not that we think, but that the local board thinks.

So he comes out a little more strongly there on what allocation means than you seemed to be willing to in the matter earlier in the day.

After refreshing your memory, could you say whether there has been any change in the——

Lieutenant Colonel HARRIS. Just a minute, Mr. Raushenbush. With reference to that word "assigned" on page 41, Lieutenant Brannon has been looking up something. You read the word "assigned" and asked me if that had anything arbitrary in it. I want to call your attention to three lines above it, where it says:

> In war time this lost motion should be avoided and the employment service must know the applicant's qualifications.

The word "applicant"; what does that signify? It signifies to me that he applied. Then, having applied, going down one more line, you read the words "assigning him."

Mr. RAUSHENBUSH. Whether that man referred to by General MacArthur as being allocated is going to consider himself an applicant is a question that probably will not be decided until that war starts.

Senator CLARK. Assuming that he does become an applicant, after he becomes an applicant and gets assigned—say, if he works in a factory that is forced to shut down because this industrial mobilization authority, whatever it is in this particular case, has taken away from that factory all its raw materials, he then applies to this labor bureau that is set up here, for a job, and thereby becomes an applicant. Then he is assigned. In other words, he can do that "or else"; is not that correct?

Lieutenant Colonel HARRIS. To my mind the word "applicant" means that he is in a state of voluntarily presenting himself.

Senator CLARK. What is the distinction that is sought to be drawn between the peace-time application to an employment bureau and the war-time application?

Lieutenant Colonel HARRIS. I think what General MacArthur states ought to be ascertained from General MacArthur. I am trying to stay with this mobilization plan, and I am having enough trouble with that.

Senator CLARK. I am trying to ask you what you understand this distinction, as drawn in the industrial mobilization plan, means:

> The operations of this service differ materially from the operations of similar service in peace time, in that ordinarily the latter do not mobilize labor for a particular purpose. Peace-time employment services merely direct an applicant to a probable market for his labor and there the applicant must both sell and prove himself.
>
> In war time this lost motion should be avoided and the employment service must know the applicant's qualifications—

which is provided for in another place, as has already been pointed out, by registration—

> as the result of test or otherwise, and the certainty of the existence of the job before assigning him.

What is the distinction there, then, Colonel?

Lieutenant Colonel HARRIS. I think that the word "mobilize" probably is the distinction in your mind. I think that is probably just a use of a military term, which means to gather together.

Senator CLARK. It is not a military technical term, is it?

Lieutenant Colonel HARRIS. I think in a peace-time set-up they simply offer to the applicant a job if he wants to go and take it. I think in this other set-up they would probably exert a little more effort to gather together applicants who would like to go to work, and put a little more pressure on them, perhaps.

Senator CLARK. What is the pressure? That is what I am trying to find out, exactly.

Lieutenant Colonel HARRIS. The pressure of finding somebody to fill the job; not the pressure on the man particularly, except through his patriotism, but pressure on the activity of gathering people together.

Senator VANDENBERG. The best way to stay out of these troubles is not to get into this next war.

Senator CLARK. That is what I am trying to get at.

Lieutenant Colonel HARRIS. I have said that three or four times.

Senator CLARK. That is the purpose of all these questions, so far as I am concerned.

The CHAIRMAN. The committee finds that it cannot hope to finish this morning, and takes a recess at this time until 2 o'clock.

(Thereupon, at 12: 50 p.m., a recess was taken until 2 p.m. of the same day.)

AFTERNOON SESSION

The Committee reconvened pursuant to the taking of recess at 2 p. m., Senator Gerald P. Nye (chairman) presiding.

The CHAIRMAN. The committee will be in order. Mr. Raushenbush, you may proceed.

TESTIMONY OF LT. COL. C. T. HARRIS AND LT. E. M. BRANNON—Resumed

Mr. RAUSHENBUSH. Mr. Chairman, in the first of the examination this morning a question came up about the connection between the N.R.A. and the industrial mobilization plan. I would like to offer for the record in that connection a statement of considerable length, a long paragraph or two from this final report of the War Industries Board to the President, by Gen. Hugh S. Johnson, which is marked, and I will ask the reporter to copy it without taking it out of the room.

(The statement referred to is as follows:)

> Other nations have passed through a similar process. Governments have participated in industry, and industry and government have become parts of the same system in a manner unheard of before the war. The advantage of thus joining power, for war purposes at least, is beyond question. In the general state of world finance, these other nations will unquestionably meet us in new competition, and it is axiomatic that the prosperity of this country depends upon its ability to meet the competition. If there is unquestionable advantage in this governmental participation in national business—not as a jealous matter, and not as an auxiliary bureau, but as a planning and adjusting agency and a point of common contact, a force for coordination and cooperation and unification of American business in an efficient national system—then it would be a blunder to let this war experience pass into history, with nothing more than a final word of commendation and farewell. In this belief, it is the purpose to discuss shortly our experiences in war administration of industry, with an eye to the application of some of them to the uses of peace.
>
> Administration during the war falls naturally into departments along natural lines of cleavage. The experience should be very valuable in delineating the units of administration in case another such organization should become necessary. They were as follows: Food, fuel, railroads, shipping, soldiers, labor, finance, raw materials, finished products, exports, and imports. In the process of evolution from the nebula of the Council of National Defense, organizations for the administration of most of these subjects formed and became independent as the need for them became acute. The Food, Fuel, Railroad, Shipping, War Industries, and War Trade Administrations were formed separately, and were tied into common control through no coordinating below the Chief Executive. The Selective Service Administration developed within the War Department, and only that and the Labor Administration developed within existing executive departments of the Government. The War Industries Board was a sort of residuary unit for all subjects not properly falling within the duties of one of the others.

The CHAIRMAN. Was there not a request for the printing of the entire so-called "Johnson report"?

Mr. RAUSHENBUSH. Mr. Chairman, I would suggest that probably the War Department officials would feel at this moment that large parts of that report did not represent their own considered judgment of certain situations.

The CHAIRMAN. Colonel Harris indicated this morning something along the line of having it printed, I believe.

Lieutenant Colonel HARRIS. May I, as a representative of the Department, request that it do be printed, it being of great value to the War Department in its preparation of industrial planning?

The CHAIRMAN. You suggested this morning that it might be printed.

Lieutenant Colonel HARRIS. Yes; and I express that hope now.

The CHAIRMAN. The Chair shall offer this as an exhibit, to be printed separately from the printed record of the hearings.

(The report referred to was marked "Exhibit No. 1399" and was printed separately as Committee Print No. 3.)

Mr. Raushenbush. Do we understand, Colonel, that the War Department feels that that expresses its present views toward industrial mobilization?

Lieutenant Colonel Harris. I do not think so at all, Mr. Raushenbush, as a general principle. There may be many things we do approve. The material value that we want in that report is in its facts rather than its conclusions. It is the fact data that is in that book that we would like to have printed.

Mr. Chairman, would that mean that that book would be sequestrated from now on till this committee closes?

The Chairman. Long enough, at least, to give the printer a chance to publish it.

Lieutenant Colonel Harris. We would be glad to furnish it at that time for that purpose.

The Chairman. Thereafter we will have no use for it and, of course, will expect to surrender it to the Department thereafter.

Lieutenant Colonel Harris. I think we will be glad to let you have it as long as you are going to get it printed.

The Chairman. We will see that it is returned to you.

Mr. Raushenbush. I gather the War Department wants to stand behind the facts given in this report, but does not stand behind the opinions expressed in it; is that correct?

Lieutenant Colonel Harris. The War Department regards that as a very valuable document relating to the activities of the War Industries Board during the war. The War Department is not prepared to warrant any statements made in that book.

Mr. Raushenbush. That is all I want on that.

Colonel Harris, toward the end of the morning session we were raising several questions about the attitude of the War Department toward labor, and in that connection I would like to call to your attention for your comment some testimony by Mr. Baruch before the War Policies Commission, given on pages 44 and 45. About the middle of page 44 seems to be apparently the thing, where he says:

> There was in the selective service law a provision profoundly affecting the labor supply, which was not utilized until the spring of 1918, when it first saw the light of day as the famous "work or fight" order.
>
> Even in the classes under the draft which were otherwise available for military service, there were hundreds of thousands of able-bodied men who, by reason of their domestic relations or of late numbers in the list prescribing the order of call, were deferred temporarily or completely. The "work-or-fight" order merely said to these men "No matter what the grounds of your deferment may be, unless you are faithfully, continuously, and usefully employed in a capacity and for an enterprise determined by the Government to be essential to the prosecution of the war, your deferment will be canceled and you will immediately be called for service to the colors."

Would you care to comment on that, in view of our outline this morning of what the set-up was, without labor representation anywhere near the top of the war machinery, and with the constant suggestion of regulating and controlling what they call the unethical competition of labor, with the assignment phrase used in the industrial plan and the allocation phrase used by General MacArthur, doesn't that mean that if any labor leader or representative decides that the wages of his people are insufficient for a decent living and calls a strike, if he and his men are not continuously employed, then under a work or fight order as described by Mr. Baruch, that labor leader and such of his men as the Government may see fit to take will be immediately called to service with the colors?

In other words, here is a provision for breaking strikes by having the Government in the heat of the war pressure take whatever men are not continuously employed and send them into the Army immediately.

Isn't that a fair interpretation of what is being outlined here by Mr. Baruch?

Lieutenant Colonel HARRIS. You ask me what the War Department thinks of that, is that right?

Mr. RAUSHENBUSH. Yes.

Lieutenant Colonel HARRIS. There is a section of the General Staff handling the selective service activities and they should be called to testify to that point. I am on the industrial side and do not feel qualified to reply for the War Department on any matter relating to the draft. .

Senator CLARK. Certainly, Colonel, as a matter of common English, you cannot put any other construction on that language than the one Mr. Raushenbush put on.

Lieutenant Colonel HARRIS. Whatever the language conveys.

Senator CLARK. That is safe enough. There is only one construction to be put on that language, as I see it. You don't have any contrary view of the common acceptation of the English terms involved, do you?

Lieutenant Colonel HARRIS. I followed the thought of that paragraph.

Mr. RAUSHENBUSH. In 1925, Colonel, Colonel Simons, of du Pont, is writing a letter to Major Casey, under date of August 22, 1925, headed, "Proposed problems for War College." I would like to show you a copy of that. On the second page, under the heading of "B. Proposed problems for the War College," he raises a question which is a problem to be discussed, "Will labor be militarized? If so, what will be the type of organization?"

Could you tell us whether that was a subject of general discussion in the War Department, if common ordinary labor is going to be militarized?

Lieutenant Colonel HARRIS. I have never heard that discussed myself. I don't know whether it has been discussed.

Senator CLARK. Colonel, the War Department has had under consideration undoubtedly, because there have been several different public investigations, the activities of a man named Disque during the war, hasn't it?

Lieutenant Colonel HARRIS. The name has a familiar sound.

Senator CLARK. You are familiar with the history of Colonel Disque, are you?

Lieutenant Colonel HARRIS. I am not, sir.

Senator CLARK. I can read from an official report, being the minority report of the Graham Committee, page 91:

> Colonel Disque had been a cavalry captain in the Regular Army and resigned late in January 1917, after 19 years of service, leaving the Philippines, where he was stationed, and going to Michigan, where he took charge of the Michigan Penitentiary. He resigned his position as warden in September 1917, when he was made a lieutenant colonel, and came to Washington in that year.

Now, it is a fact, is it not, that this ex-warden of the Michigan Penitentiary, put in charge of getting some lumber requirements, particularly spruce, in Oregon and the Pacific Northwest, immediately proceeded to put his men in uniform, his laborers and everybody else, and put them under military discipline; isn't that true?

Lieutenant Colonel HARRIS. I don't know anything about it.

Senator CLARK. That is the evidence. I will read another paragraph from the same report, on page 92:

> Probably no arrangement of equal significance was ever had in this country during the war as this one, wherein the Secretary of War agreed with Mr. Gompers and Colonel Disque to farm out American soldiers in the woods and mills of Oregon and Washington and to build railways for private contractors, to work 8-hour shifts in safe places and at civilian wages, reaching as high as $8 per day, while American soldiers in France, without limit as to hours, sometimes continuously day and night, were working and fighting for $30 a month.

Now, it is a fact that this man Disque—and I assume this must have been a subject of at least comment by the War Planning Division—this Colonel Disque at one time had nearly 30,000 men employed as laborers, whom he put in uniform and subjected to military discipline during the war, at the same time paying them civilian wages of his own fixing, in conjunction with the Secretary of War and Mr. Gompers, at the same time subjecting them to military discipline, and in one case broke a strike on the Pacific Northwest coast by the use of these men in uniform; isn't that true?

Lieutenant Colonel HARRIS. I do not know anything about that, sir.

Senator CLARK. Has not that ever been a subject of discussion in the Military Planning Division?

Lieutenant Colonel HARRIS. Not during my course of duty there.

Senator CLARK. I will read another paragraph on page 93:

> After farming out the soldiers of this army in the Northwest for 6 months or more in violation of the law, the War Department called upon The Adjutant General's Office for an opinion as to the authority of the War Department to pay soldiers the prevailing civilian's wages. The Judge Advocate General's Office rendered an opinion to the Secretary of War in the matter, under date of September 11, 1918, holding that the War Department acted within its powers.

Did you ever hear of that?

Lieutenant Colonel HARRIS. I never heard of that at all.

Senator CLARK. I will read you another paragraph from page 99 of this report:

> Captain Turner, a trained officer, forceful and fearless, said that of 109 soldiers given him by Colonel Disque, only 7 were familiar with the woods, and 102 were wall painters, polishers, etc. Captain Turner had charge of 140 soldiers at Stilwater Camp, and testified that these men were working for private parties on commercial logging entirely. No spruce timber was in that section ; no airplane lumber was cut there. Two soldiers while thus working for private interests were killed by falling trees. Deserving men were not considered, he testified, but official favoritism was common.

Did you ever hear of that?

Lieutenant Colonel HARRIS. Never heard of that.

Senator CLARK. You would gather from this, wouldn't you, Colonel, that if it were possible for an Army officer in time of war to take soldiers and turn them over to private civilian companies to work on private enterprises that matters of that sort might come up?

Lieutenant Colonel HARRIS. I cannot conceive of our soldiers being handled as you have just read. A soldier is in the Army for the purpose of fighting.

Senator CLARK. I agree with you, Colonel; but this is a written report.

Lieutenant Colonel HARRIS. I do not question the report. I know nothing about the report, but it violates my idea of what a soldier is.

Senator CLARK. It violates mine, too. And, contrariwise, it violates your ideas for civilians to be simply put in uniform and subjected to military discipline, doesn't it?

Lieutenant Colonel HARRIS. Unless they were soldiers.

Senator CLARK. Unless there was specific authorization of law for that purpose?

Lieutenant Colonel HARRIS. That is my conviction.

Mr. RAUSHENBUSH. Somewhat along the line of what we discussed this morning, Colonel Harris, I have before me a report as to the Army officers serving as administrative members. There are quite a number serving on N. R. A. codes. Does that mean that they are under code authorities?

Lieutenant Colonel HARRIS. I am one of those administration members. I think I can give you some first-hand information on that particular activity. I am an administration member on the cement code, appointed last March, and have been on that duty since. It is a part-time duty. I attend the code meetings, and I receive copies of all actions in between meetings, and am in touch with the N. R. A. on the duties to which I have been assigned when necessary. The other officers are performing similar duties.

If you are interested in how this thing all came about, I had something to do with it. When the N. R. A. was established the War Department, desiring to cooperate in any national effort in an emergency, offered the services of the War Department personnel.

The Assistant Secretary of War, particularly on account of the industrial planning, wrote a letter to General Johnson offering the services of the officers under his jurisdiction for duty with the N. R. A.

Several were assigned to full-time duty. There is an officer assigned to my office, Captain Battley, who was from my office—I was not in charge at that time, but he was in my section of the office—who went to duty with the N. R. A. in August 1933 and has been there continuously. There are one or two others on full time, too.

Senator POPE. What is their compensation?

Lieutenant Colonel HARRIS. Army compensation. No other. They simply draw their Army compensation.

Along in March or February we were officers in the planning branch and keeping in touch with this N. R. A. development and its relationship to our industrial plan, and we were anxious to get a closer touch with the Code Administration. So Captain Battley and myself talked the matter over and he went over to one of the administrators—I do not know who initiated this idea—but finally we were asked if such duty would be agreeable. It was taken up with the Secretary of War and it was agreeable.

They selected from the Army personnel on industrial planning work; that is, in our office and in the field offices or the districts, certain people whom they would like to have on certain codes, myself being one of the number requested. As the result, with the approval of the War Department, these officers were assigned as administration members of the specific codes.

Mr. Raushenbush. The question I really wanted to get at, Colonel, was this: Are there any labor members on any of these authorities from your office?

Lieutenant Colonel Harris. There are provisions for three administration members, an additional one from labor, and an additional one from industry, if desired and directed by the Administrator. I do not recall on any code—I know on my own code I am the only administration member.

Mr. Raushenbush. Is there any labor member on any of these codes that you know of, Colonel?

Lieutenant Colonel Harris. You mean on the administration member side?

Mr. Raushenbush. No; on the whole code authority.

Lieutenant Colonel Harris. Of the codes that I know, there are no labor members.

Mr. Raushenbush. There are no labor members?

Lieutenant Colonel Harris. No.

Mr. Raushenbush. Could you speak for the other officers in making a statement as to whether the labor provisions of these particular codes that are in existence are enforced or not?

Lieutenant Colonel Harris. A code authority becomes cognizant of a violation from reports rather than any other single source. In some of the codes there are many labor problems arising. I would not say whether they were complaints or not. In the other codes there are very few. In the cement code there have been very few problems that have reached the code authority, on labor.

Mr. Raushenbush. But you would not care to make a statement——

Lieutenant Colonel Harris. I would not care to make a statement with reference to the code administration that I did not know about.

Mr. Raushenbush. As to whether the labor provisions were or were not being enforced?

Lieutenant Colonel Harris. No.

Senator Clark. It is a matter of common notice, is it not, Colonel, that in the industries for which there would be the greatest necessity in time of war, the so-called "heavy industries", there has been a very great delay in arriving at any code agreement as to labor conditions, as to any installation of a code, isn't that true?

Lieutenant Colonel Harris. Many industries have not reached agreements. I think probably some heavy industries and some others.

Senator Clark. Steel is one of the greatest requirements of war, is it not?

Lieutenant Colonel Harris. Yes.

Senator Clark. It is a matter of common notice that there has been very great dispute between the employers and the employees, we will say, as to labor conditions in the steel industry under the N. R. A. You read the papers nearly every morning when you wake up, don't you?

Lieutenant Colonel HARRIS. All I know is what I do read in the papers.

Senator CLARK. That is all I know, too. That is a matter of common notoriety.

Mr. RAUSHENBUSH. I would like to offer this list you prepared of War Department, Army Officers Serving as Administrative Members, as an exhibit.

(The list referred to was marked "Exhibit No. 1399–A" and is included in the appendix on p. 4444.)

Mr. RAUSHENBUSH. I think Colonel Harris very properly stated that on certain major questions stated here he himself did not feel qualified to speak, and in view of the fact that we have this whole question of what is going to happen to labor during the war and the possibilities outlined in the question wherein a situation is being created where the rights of organizaton and the rates of rising wages are all involved to some extent, might I suggest to the Chairman that the questioning along this line be left to a later hearing, so that the proper officers might be present?

The CHAIRMAN. Very well. Colonel Harris, who would you suggest as being the highest and most responsible among those in the Army to discuss this question?

Lieutenant Colonel HARRIS. Would the discussion also bring in the selective service draft? It probably would, wouldn't it?

Senator CLARK. The fact that it is selective service is all I am concerned in. Colonel, it is a fact, is it not, that plans are already drawn by the War Department and legislation prepared for submission to Congress covering a selective service act generally along the same lines as in the last war?

Lieutenant Colonel HARRIS. There is a selective service act.

Senator CLARK. And it is also a fact that the legislation prepared, as pointed out by Mr. Raushenbush this morning, does, if certain eventualities develop, more or less mean the drafting of labor, does it not? If you have any hesitancy in replying there, the testimony in the record will stand for it.

Lieutenant Colonel HARRIS. I would rather rest on that.

Senator CLARK. What I am getting at is this: Whether or not the War Department plans at the present time contemplate the drafting of man power for use as soldiers and sailors as the case may be, and at the same time contemplate an ultimate drafting of labor and at the same time set up a system of adjusted compensation or cost plus, or whatever you please to call it, in regard to the employment of capital. As far as I am concerned, that is the point I am trying to get at.

Lieutenant Colonel HARRIS. I can answer that to the best of my knowledge the War Department is contemplating the draft of soldiers.

Senator CLARK. Yes, sir; and sailors.

Lieutenant Colonel HARRIS. And sailors.

Senator CLARK. Yes.

Lieutenant Colonel HARRIS. Military personnel. To the best of my knowledge and belief, the War Department is not planning the draft of labor.

Senator CLARK. I will say that some of the language in this legislation that has been prepared has been very unhappily phrased then.

The Chairman. Whatever the plan may be called, conscription of labor, or what, is quite aside from the question. Call it what we will, who are the highest officials in the Army who might be prepared to discuss this?

Lieutenant Colonel Harris. Mr. Chairman, if you will allow me, I would like to consult with the War Department, because right now I have not given it any thought. I would like to give you the best man I can.

The Chairman. Then you will indicate to the committee, after your consultation, whom we might expect the highest information from?

Lieutenant Colonel Harris. Yes; I will.

The Chairman. Thank you. Are you finished, Mr. Raushenbush?

Mr. Raushenbush. Yes.

The Chairman. Mr. Hiss.

PROBLEMS INVOLVED IN PRICE FIXING

Mr. Hiss. Colonel, we were discussing before the recent inquiry as to labor, the general problem of fixing prices in time of war, and we had asked some questions on the point of whether the main duty of a price-fixing agency was with respect to limitation of profits or with respect to encouraging production in time of war.

I should like to read an excerpt from a meeting of the War Industries Board on March 4, 1918:

> The result of its—

Referring to the Board—

> action in fixing prices in any case should be considered in the light of the circumstances under which, and the purposes for which it acts—getting within the time required an adequate supply of war materials which the Government needs and the price question, though always important, is, after all, not the first consideration, and there should always be considered the fact, as illustrated by its action with respect to steel prices, that it uses a very broad judgment in a great emergency without regard to strictly Federal Trade Commission reports or other cost data.

One other point on the same line, a quotation from hearings of the War Policies Commission, at page 148, where Senator Robinson asked General Pierce:

> In your view, I assume, the prime necessity is the adequate supply?

To which General Pierce replied, "Yes."

Senator Robinson then said, "And prompt supply?"

The reply was, "There is no question about that."

> Were the prices you fixed made with regard to that consideration?

General Pierce answered, "Yes, sir; and the protection of the Government."

In a volume entitled, "Government Control Over Prices," written by a Mr. Garrett, who served with the Price Fixing Committee for a while, there is a statement at page 244 by Lieutenant Colonel Montgomery, who served with the Price Fixing Committee and who is a well-known accountant and expert in this field:

> The duty of stimulating production in one way or another was the policy always uppermost in the mind of the committee.

Do you feel, Colonel Harris, that in the event of another war that any different policy could be followed by a price-control committee?

Lieutenant Colonel Harris. If it relates to materials we have to have and cannot get, we have got to put the price high enough to draw out the required amount. I think that answers your question.

Senator Clark. Colonel, how much further along are we from being able to insure supplies of essential commodities which you just mentioned without exorbitant profits than we were after the close of the war in 1918?

Lieutenant Colonel Harris. You mean after the close of the war, with reference to that?

Senator Clark. After the close of the war in 1918, after 15 years' consideration of the subject, how much further are we along than we were in 1918 in our processes of keeping down exorbitant profits in the few essential things we have to have in war?

Lieutenant Colonel Harris. I think that we are considerably further along. I think the entire industrial planning activity will work toward the prevention of exorbitant prices. We know our requirements more clearly. Those requirements have been divided between districts. They have been matched against plants and the plants know what they are and, in our opinion, more than it was in the early part of the war or even at the last of the war in many cases. We know more about the material itself and about the costs.

This is a pertinent time to state that during the last war, as you know, Senator, we adapted much of the French matériel, for which the drawings even were written in French and had to be translated into English. That added immeasurably to the confusion of the war and to the delay in getting in production.

We have not got that phase again. We are better oriented.

To my mind, aside from the negotiations on what the capital is and what the estimate is and the percentage they are going to make, I think we have a better situation.

Senator Clark. Colonel, this is not an argumentative suggestion at all, but we discussed the other day the matter of Army rifles, and you and I agreed, and I think every other man who has ever paid the slightest attention to the subject would agree, that the United States in the Springfield rifle has the best army rifle in the world. I think that is generally agreed throughout the world, as you said the other day. We agreed also that during the last war it was necessary for American troops to be armed with British Enfields.

Lieutenant Colonel Harris. With an American magazine, to use American ammunition.

Senator Clark. Colonel, the particular outfit with which I happened to be connected in the World War had Springfield rifles first and they gave us British Enfields, and on the other end they took those from us and gave us another gun, so that we had three different weapons inside of 6 weeks. I think it is without dispute a fact that the American troops were for the most part armed with a far inferior infantry weapon than the weapon which had been developed in United States arsenals before the war. That is correct, is it not?

Lieutenant Colonel Harris. It was inferior to the Springfield. It was a good rifle; I think it was as good as anybody else had except the Springfield.

Senator CLARK. It was a fairly good rifle, Colonel; but in comparison with a Springfield it was a far inferior weapon, was it not?

Lieutenant Colonel HARRIS. It was not as good as the Springfield, and that is admitted.

Senator CLARK. The gist of the whole National Defense Act—I mean the most essential part of the National Defense Act, passed in 1920—was it?

Lieutenant Colonel HARRIS. 1920 was the amendment.

Senator CLARK. That which is now called the "National Defense Act", I mean.

Lieutenant Colonel HARRIS. Yes, sir.

Senator CLARK. The most essential part was the authorization of the Assistant Secretary of War to use public funds for purchasing jigs, dies, tools, and various things to make such situation as I have just described impossible in the next war. You said the other day—with which I entirely agree—that the fault is not in the War Department; that the War Department could only spend the money which Congress had appropriated, but your testimony was to the effect that Congress had only appropriated about $75,000 a year for a purpose which would necessarily require a much larger sum. So that from that very standpoint, on the preparation for war, we are practically no further advanced now than we were in 1918, are we, Colonel?

Lieutenant Colonel HARRIS. In that particular phase I think you are quite right.

Senator CLARK. Do you not think that is the most important phase of procurement?

Lieutenant Colonel HARRIS. One of the most important phases. I will say that we are better prepared than we were at the beginning of the war, because we saved from the war many gages, which have been carefully classified, carefully preserved, and are now available in storage to assist in the inauguration of another war.

Senator CLARK. I think that is a very important element. But is not one of the most economic things the United States could do the laying in of various dies and tools to enable the United States to enter production on the best weapon which the United States has knowledge of?

Lieutenant Colonel HARRIS. I entirely agree.

Senator CLARK. We have made no practical advance in that regard, and outside of an industrial census which I understand has been conducted by the War Department to enable the War Department to be familiar with the military capabilities and interchangeability of the plants in the United States, there has not been any substantial advance since the close of the last war in the matter of procurment at reasonable prices.

Lieutenant Colonel HARRIS. Yes, sir; I think there has been a marked advance. We have procurement plans for each of the major items, those plans covering the requirements, the plants we expect to make material and the specifications pertaining to that material, the estimated cost, and the raw-material situation has been carefully analyzed. The question of specifications has advanced far. And I think we have made marked advance.

Senator CLARK. In other words, Colonel, what you are saying means that the War Department and the Navy Department procurement departments have a better idea of what they may need?

Lieutenant Colonel HARRIS. They have a better idea of what they may need and a better idea of where they are going to get it, a better standardization of specifications, a better knowledge of the raw materials required for the program, and a better understanding of how they are going to do it.

Senator CLARK. But they are not at all advanced on the problem of coordinating the industry and man power and labor than they were at the close of the war in 1918, are they?

Lieutenant Colonel HARRIS. Again on that I may or may not agree to it, but I think we are. We have got a selective-service act which provides——

Senator CLARK. That was at the close of the war. We had drafted 4,000,000 men by that time.

Lieutenant Colonel HARRIS. We have got it ready to submit again.

Senator CLARK. I grant that, but I say that is no advantage over the close of the war, when you had a selective-service law. As I read this one, it does not differ in any particular from the law on the statute books at the end of 1918.

Lieutenant Colonel HARRIS. I thought you were introducing a question of drafting labor.

Senator CLARK. I am trying to find out what change, if any, has been made as to the next war over the conditions that existed at the end of the last war.

Lieutenant Colonel HARRIS. I do not think there has been any material advance in that field.

Senator CLARK. That is exactly what I was trying to find out.

Mr. HISS. I would like to offer on the general point of some of the difficulties in fixing prices two excerpts, which I will not read in, but which I would like to have copied in the record, from meetings of the price-fixing committee with the representatives of the copper industry to determine what action was to be taken in regard to the price of copper, May 22, 1918. The first excerpt is a statement by Mr. Charles Hayden, then representing the Utah Copper Co.

(The excerpt referred to is as follows:)

> We have seen a plant being built at Hog Island at an estimated cost of $42,000,000, against a normal pre-war cost of $21,000,000. At first blush this seems extravagant, but a careful analysis shows that this excess cost of this yard, if it enables our country to get ships 6 months earlier, will, by that very fact, if it only shortens the war one-half of those 6 months or one-quarter of those 6 months, save many, many times its cost, as the daily expenses of the war are in excess of all the overcost of that one yard. The same applied to the situation in aircraft production. And now what are we confronted with in the copper industry?
>
> Our allies are crying for copper; representatives of foreign governments are telling me as an individual: "What do we care about a cent or so more in price? What we want is the stuff." And here we are sitting and theorizing as to whether or not the Federal Trade examination of costs, or a theoretical discussion of margins of profits, is meaning an undue profit to the copper industry, when there is already a shortage of over 100,000 tons of copper at the present time and when, in the interests of safety, there should be a surplus of at least that amount.

Mr. HISS. And the second excerpt which I wish copied in the record is taken from the second meeting of the price-fixing committee with the copper representatives on May 22, 1918, being a statement by Mr. Joseph P. Cotton, representing the Consolidated Copper Mining Co., indicating that the prices fixed had been fixed in order to bring high-cost producers' products into the stream of supply for the Government without regard to the resulting profits for low-cost producers.

(The excerpt referred to is as follows:)

> You find the metal copper production in 1917 to be 1,888,000,000 pounds of copper. The same production in 1913 was 1,225,000,000 pounds of copper, showing an increase of 663,000,000 pounds of copper, an increase of 54 percent in the industry. Of that increase, 70 percent was produced by these large producers or low-cost producers and the other 30 percent was produced, if you please, by the companies of which I have just spoken—the smaller relatively high-cost producers. If you will analyze your figures carefully you will find that Mr. Ellis was right in his statement that these high-cost producers in the United States produced last year between 250,000,000 and 300,000,000 pounds of copper and their costs ran around 18 cents to 21 cents. That is the situation. Are they to be encouraged or are they to be cut off? Every man knows perfectly well that you cannot shut down a mine without great loss. You cannot open it up without great expense. It takes years and years to be established and to obtain an efficient organization. It takes time to do these things. Again, if you pull your pumps and let your underground mines fill up with water there is another expense. It seems to me that the Government ought to take these things into account. You don't want a shortage of copper. I cannot see for the life of me, when the statements were made here this forenoon, how these large producers are going to make up this difference. All of these companies didn't produce in 1917 as much as they did in 1916.

Mr. Hiss. Colonel, we have had some discussion at the close of the war in 1918 in regard to contracts, and the same problem comes up with respect to the fee on the question of amortization. I offer excerpts from a meeting of June 25, 1918, of the War Industries Board where consideration was given the placing of an order with the du Pont Co. for 30,000,000 pounds of lyconite. I offer that for appropriate number.

(The excerpt referred to was marked "Exhibit No. 1400" and is included in the appendix on p. 4445.)

Mr. Hiss. That reads in part as follows:

> The Board disapproves the placing of this contract so long as there is no provision made for a fair salvage value of the plant after the contract is completed; in other words, the Board is of the opinion that wherever the Government pays for a plant, all the salvage value of the same shall accrue to the Government after the contract or contracts are finished.

I also offer a memorandum from the du Pont Co. of a visit to Washington on August 30, 1917, during the war, referring to the conference that Colonel Buckner and Mr. Spruance apparently had with the War Industries Board with respect to increased orders which would necessitate building plants. I offer that for appropriate number.

(The memorandum referred to was marked "Exhibit No. 1401" and is included in the appendix on p. 4446.)

Mr. Hiss. That reads in part as follows:

> They—

apparently the War Industries Board—

> made a new statement in regard to this—that any plant which the Government amortized should belong to the Government after the war. This is a new phase in the question and one which it is going to be difficult to handle, but there seemed to be no argument to it.

In the contracts as drafted, is there any provision that amortization charged to the Government at cost is to be regarded as the Government really purchasing the plant?

Lieutenant BRANNON. Which form of contract do you have reference to, Mr. Hiss?

Mr. HISS. The adjusted compensation contract.

Lieutenant BRANNON. As I understand it, all the facilities which the Government pays for will be the property of the Government.

Mr. HISS. But does the amortization clause, to which we have referred previously, constitute a clause that was considered by the War Department as a purchase of the plant building?

Lieutenant BRANNON. I do not think there would be in that contract amortization, under that contract, Mr. Hiss. There will be a depreciation question, which we discussed this morning, and rehabilitation, but no amortization because the Government will own all the facilities which it pays for.

Mr. HISS. If the depreciation costs run long enough to constitute the entire life of the plant, who will be entitled to the salvage value of the plant?

Lieutenant BRANNON. It is hard to conceive of that situation, Mr. Hiss. As I said, the depreciation is on the plant that the contractor already owns, and it is assumed that the plant will depreciate during the life of the contract as near as it can be foreseen at the beginning.

Mr. HISS. Going from the question of contracts to the larger question of price fixing in general, if amortization is to be considered, as it was during the war, as an element of cost, on the basis of which such prices are to be fixed, is not the result of those prices that the Government, to a large extent, since it is a large purchaser, in any event, the general public—is it not the result that they become in effect purchasers of the plants, or they pay for the plants, for whatever they may be used, that are in the hands of the manufacturers at the end of the war?

Lieutenant BRANNON. Mr. Hiss, I do not think that that is covered in our discussion of price fixing, and I do not think that the War Department would care to make a statement on that. As I remember it, that question is not discussed.

Mr. HISS. I should like to refer to the question of price fixing again. I am quoting from page 796 of the War Policies Commission, from Mr. Baruch's statement:

> Those who suggest partial price fixing propose to create what amounts to an artificial price structure and * * * because they leave the generality of prices free, they will be obliged to adjust fixed prices so frequently—and always upward—that, at least in the usual circumstances of war, they would perhaps better leave the whole schedule free.

Because of Mr. Baruch's view in that regard, he, as I understand it, has proposed a price-freezing scheme. Is that correct, Lieutenant?

Lieutenant BRANNON. I understand it that way, Mr. Hiss.

Mr. HISS. I would like to bring out three or four points involved in the question of price freezing. If the War Department has considered those items, I would appreciate getting the War Department's opinion. If you do not feel qualified to discuss them, we will let it stand for the present in that way.

First, do you know as of what date price freezing would be considered? Would it be at the date of the declaration of war or would it be as of some prior date?

Lieutenant Brannon. Do you mean the date suggested by Mr. Baruch or the date which the War Department has in mind?

Mr. Hiss. My understanding of Colonel Harris' position on that is, that the War Department has not decided whether it will have partial price fixing or complete freezing of the price structure, but that that will have to be determined by conditions. So that my question is based on the supposition that the War Department decides, or whatever authority will have the decision at that time, in the event of war, that particular conditions then present require price freezing as opposed to a partial price control?

Lieutenant Colonel Harris. I do not think we are qualified to reply to your discussion on that plan.

Mr. Hiss. Is it not true that unless a period sufficiently far before the declaration of war is fixed, there will be inflation already since rumors of war generally precede war?

Lieutenant Colonel Harris. That might be.

Mr. Hiss. On the other hand, if, on a partially inflated price level, the Government decides to return to a previous price level, complications of forcing prices down throughout the country, including wages, would be an enormous one, would it not?

Lieutenant Colonel Harris. It would be great.

Mr. Hiss. The administrative task of determining whether every price and every wage on the schedule was being carried out is a difficult and enormous one, is it not?

Lieutenant Colonel Harris. That would add to the already great volume of work.

Mr. Hiss. We have requested such information as the National Industrial Recovery Administration has on the efficacy with which certain price-control measures adopted in some codes have been carried out. That has not yet been submitted.[1]

Furthermore, there is apparently provision for certain exceptions in the price-freezing scheme, in the event of costs that cannot be kept down, such as increased transportation due to the sudden shifting of need for ordinary transportation in the bringing of supplies to new supply depots and that sort of question.

As soon as exceptions are made in the general scheme, the problem reverts to the question of partial price fixing, and it is simply a question as to how many exceptions are made. Is not that true, Colonel Harris?

Lieutenant Colonel Harris. I think I do not feel qualified to follow the details of the plan, and you had so many thoughts in that particular question that I cannot quite follow you.

Senator Clark. It is perfectly obvious that if you are going to have a price-fixing scheme and provide in advance for exceptions, that the efficacy or the efficiency of the whole scheme will rest on the honesty and efficiency of the administration of the exceptions, is it not?

Lieutenant Colonel Harris. Yes, sir; I will agree to that heartily.

---

[1] This information was later submitted to the committee and appears near the end of the memorandum on "Price Control as a Means of Eliminating War Profits", which was entered into the record as "Exhibit No. 1406." See text, p. 4334, appendix, p. 4457.

Mr. Hiss. Colonel, you will remember that Mr. du Pont pointed out that the prices of raw materials, particularly farm products, play an important part in the question of costs.

Lieutenant Colonel Harris. Cotton, particularly, and alcohol.

Mr. Hiss. In the entire price structure, considering not only arms and ammunition but the entire price structure, obviously farm products, the price of farm products, is an important item in that consideration?

Lieutenant Colonel Harris. That is true.

Mr. Hiss. That means, therefore, that the prices to farmers throughout the country would also have to be frozen?

Lieutenant Colonel Harris. Under a freezing system. I do not know what system you are talking about.

Mr. Hiss. I am limiting these questions to a freezing system. Assuming that the conditions on the outbreak of war were considered by those in authority to require price freezing, I am trying to develop how certain problems arising under price freezing would be taken care of.

Lieutenant Colonel Harris. If there were a general price-freezing program, it would cover everything.

Senator Clark. The only effect is the extent to which it does cover everything, is it not?

Lieutenant Colonel Harris. Yes, sir.

Senator Clark. If you once start in on a system of exemptions and differentiations, you are breaking down the whole system right at the start, are you not?

Lieutenant Colonel Harris. The more exemptions you make, the more you weaken it.

Mr. Hiss. You will remember during the war, in order to increase the production of wheat a price of $2 and later $2.12 was fixed on wheat, Colonel Harris.

Lieutenant Colonel Harris. Yes, sir.

Mr. Hiss. And that normal expansion was increased by that.

Lieutenant Colonel Harris. I have received that impression from reading the papers.

Mr. Hiss. Without increasing the price of farm products do you think it would be possible to get increased production of any particular lines you wanted?

Lieutenant Colonel Harris. I think that that falls exactly in the "bulk line" you were speaking of before. If you require more farm products, you must pay a higher price to get farm products from marginal land, and would have to bring in high-cost producers.

Mr. Hiss. That would be a big exception to the general freezing scheme, would it not?

Lieutenant Colonel Harris. I think any freezing scheme has got to take into consideration the two points of view which we have been discussing: The fact that where you have to have a thing, as you very well illustrated the fact, that some will cost more than others.

Mr. Hiss. You are familiar with the fact that farm products and general prices in certain lines frequently run along a curve of production with peaks and troughs and varying production curves and price curves?

Lieutenant Colonel Harris. I do not feel qualified to answer on the price-freezing problems.

Mr. HISS. I just wanted to call your attention to the fact, that whatever period is chosen may be an arbitrary period, indeed it is bound to be an arbitrary period, and may be very unfair for certain industries that happen to be in a depression or trough phase of their production cycle. Also, suppose that we had gone into a war a year or so ago and had had to freeze farm products at the extremely low levels that were then existing, it would have meant an extreme hardship on the farmers, would it not?

Lieutenant Colonel HARRIS. As I recall it—I do not know anything about it—but was it not a ceiling rather than a fixed price?

Mr. HISS. On Mr. Baruch's statement?

Lieutenant Colonel HARRIS. I do not know whether it was Mr. Baruch's statement or not, but I have in mind a ceiling on prices.

Mr. HISS. I understand the freezing of prices means a return to some level considered a normal level, without inflation due to war.

Lieutenant Colonel HARRIS. I think I will have to repeat, Mr. Hiss, I am not qualified to discuss the price-freezing arrangement, and isolated questions might get a proper answer, and otherwise might not. I do not know enough to discuss that.

Mr. HISS. I would like to bring out one more point before we close this line of inquiry. When 2 million or 4 million men, or however many may be called for a war, are drafted, that means a decrease in skilled labor available for industrial processes, does it not?

Lieutenant Colonel HARRIS. If the skilled labor is drafted.

Mr. HISS. Is it not likely that if 4,000,000 men are drafted, a great many of them will be skilled labor?

Lieutenant Colonel HARRIS. The draft will cover originally skilled labor. Whether they will be deferred or not is a question for local boards to determine under the Selective Service Act, as I understand it.

Mr. HISS. Returning to the specific question, if 4,000,000 men had to be drafted, do you not think it likely that a considerable number of those four million would be reasonably skilled labor?

Lieutenant Colonel HARRIS. I think quite likely.

Mr. HISS. Their places will have to be taken by less skilled labor. Furthermore, increased production will probably require overtime. So that the less skilled labor and labor working overtime will probably be less efficient than the labor during the period chosen for the frozen system. That means an increased cost that would not be compensated for, which might require further exception.

Furthermore, many of the factories would be converted into making new items, with which they are not familiar, and that will, in addition, increase costs.

PROBLEMS OF REDUCTION OF EXCESSIVE PROFITS BY TAXATION

Mr. HISS. I would like to take up one more subject, Colonel Harris. You have referred from time to time to the use of excess-profits taxes in order to reduce excessive profits in time of war. That is part of the mobilization plan, is it not?

Lieutenant Colonel HARRIS. Yes, sir.

Mr. HISS. Are you familiar with some of the difficulties experienced during the war in the assessment and collection of excess-profits taxes?

Lieutenant Colonel HARRIS. I am not.

Mr. HISS. I call your attention to the following in a report of the United States Joint Committee on Internal Revenue Taxation, volume 3, November 15, 1927, page 41, which shows that in 1927, 9 years after the termination of the war and 6 years after the repeal of the excess-profits tax, there were still approximately 4,000 cases pending, although the Bureau had the power of compromise.

I call your attention further to a statement of Mr. P. S. Adams, of Yale University, who was formerly chairman of the advisory tax board of the Bureau of Internal Revenue. This statement is from the thirty-fifth Quarterly Journal of Economics, pages 371 and 372:

> The intricacy of the excess-profits tax is such that it is hardly an exaggeration to say that it takes more time to teach an accountant to master its mysteries than the average accountant can be retained in the service after he has attained such mastery.

Mr. Ballantine, former Assistant Secretary of the Treasury, testified before the War Policies Commission, according to a summary of his testimony appearing in a volume entitled "Documents by the War Policies Commission", being House Document No. 271, at page 21:

> The determination of what constituted invested capital was an insoluble problem during the continuance of the tax and is still unsolved. Some of the fundamental principles of invested capital are now in the courts and will be there for years to come.

He said that some of the provisions of the law were so highly complicated that they could not even be litigated because they could not be reduced to logical arguments pro and con.

In order to make exceptions for those industries or those companies who simply could not compute their invested capital, a special assessment provision was contained in the law permitting an administrative determination of the assessment not directly under the statute.

I would like to have marked as an exhibit a chart contained at page 221 of Senate Report No. 27, Sixty-ninth Congress, first session, which shows that under that system $39,000,000 less than the taxes that would have otherwise been collected were in essence refunded by virtue of such procedure.

(The chart referred to was marked "Exhibit No. 1402" and is included in the appendix on p. 4447.)

Mr. HISS. There has been some suggestion that instead of the invested-capital base, which has been referred to in these excerpts as so difficult to determine, that instead there be a tax on the excess earnings over the earnings of some base period.

I would like to read into the record a statement of Mr. Colver, the Chairman of the Federal Trade Commission, who stated:

> As a group men are patriotic; as individuals they will pay as small a tax as can be calculated and will secure as high prices and as great profits as can be extracted.

So that under any system of taxation there will always be the difficulty of collecting it under a law which must be very complicated in order to cover the entire tax field.

That is correct, is it not, Colonel?

Lieutenant Colonel HARRIS. That is correct in war and peace, both.

Mr. HISS. In time of war the income from taxes is doubly important because of the demand upon the Public Treasury, is it not?

Lieutenant Colonel **Harris**. And it is also important in time of peace to give national income.

Mr. **Hiss**. I would like to offer for the record a copy of a notice of protest filed by the du Pont Co., dated February 27, 1917.

(The document referred to was marked " Exhibit No. 1403 " and is included in the appendix on p. 4448.)

Mr. **Hiss**. This was a protest against the very light 2 percent tax in effect with respect to the taxable year 1916. The du Pont Co. claim is that that tax should not be applied to profits which would be derived from shipment of articles exported to foreign countries, on the ground that that would violate the article of the Constitution which prohibits a tax or duty on articles exported from any State.

It was shown in evidence yesterday that the du Pont foreign customers, five of them, were among those nations which received the largest war loans from the United States.[1]

I should like to offer for the record a summary of expenditures prepared by the Treasury, by classes, reported by foreign governments, which expenditures are specified as made in the United States between April 6, 1917, and November 1, 1920.

(The tabulation referred to was marked " Exhibit No. 1404 " and is included in the appendix on p. 4448.)

Mr. **Hiss**. They show that munitions expenditures out of these loans totaled $2,493,000,000.

In connection with the proposal of a tax based upon a percentage of earnings over earnings made during the base period, would it not be necessary to make some exceptions for new capitalization, in your opinion, Colonel Harris? If new capital is to be encouraged to expand production in time of war, earnings out of that capital must be permitted in addition to the normal earnings received from capital which the company had already invested? Is not that correct?

Lieutenant Colonel **Harris**. Would you mind repeating that again?

Mr. **Hiss**. I am now directing myself to the proposal which has been made that instead of a complicated excess-profits tax based upon a percentage of return on invested capital, there should be a tax based upon a high percentage of all earnings over an amount equal to the average earnings during some base period prior to the war. I am asking you in respect of that principle if it will not be necessary to make an exception for earnings derived from new capital, newly invested capital; that is, capital invested in time of war in expanding plant.

Lieutenant Colonel **Harris**. I am not an expert on financial matters. If I could have your question in front of me so I could read it over and study it, I could answer it, but I do not feel that I should answer it.

Mr. **Hiss**. May I state it another way, and try once more?

In time of war there will be certain industries which the Government will wish to encourage to expand production. Is that correct?

Lieutenant Colonel **Harris**. That is correct.

Mr. **Hiss**. That expanded production may very likely involve expanded plant and capital investment.

Lieutenant Colonel **Harris**. Yes.

---

[1] Exhibits Nos. 1390 to 1394 ", inclusive, see text, p. 4262.

Mr. HISS. If a tax were to be so phrased as to prevent any increase above peace time earnings any company which increased its capital by expanding plant in time of war would get no return on that increased capital, would it?

Lieutenant Colonel HARRIS. I agree.

Mr. HISS. Would not an exception have to be made to permit some return on that capital, in order to carry out the policy of expanding production?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Once that exception is made, you are immediately back into all the difficulties of determining invested capital, which we have been discussing, at least, as to that particular expansion. Is not that correct?

Lieutenant Colonel HARRIS. I accept it.

Mr. HISS. One final point on that:

Any corporation which was formed in time of war and which had no past earnings to which you could refer as a base, would also have to be an exception or otherwise it would not be permitted to make any earnings. That is correct, too, is it not?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Therefore there would be the danger of companies forming new corporations and transferring their assets in order to evade the tax based on average earnings?

Lieutenant Colonel HARRIS. You answer these questions for me.

Lieutenant BRANNON. The law might not be phrased in such a way as to take care of a case of that kind. I think clearly that as to new capital there would have to be some exception made.

Mr. HISS. The device of new incorporation would raise doubtful questions of interpretation?

Lieutenant BRANNON. Oh, yes; it would be difficult, but I think a law might be framed to take care of certain more flagrant cases of that kind.

Mr. HISS. I should also like to offer one more exhibit. This is a chart from the same report of the investigation of the Bureau of Internal Revenue, being report No. 27. This is a chart appearing at pages 176 and 177, summarizing amortization allowances under that provision of the tax statutes for 1918 to 1924 which allows deductions from income for amortization of war-time plants.

In that list it appears that the du Pont Co. received a final allowance for amortization of war-time plants to be deducted from income in years between 1918 and 1924 of $15,369,000, although it has already been testified that the du Pont Co. amortized its plants currently out of increased sales prices.

(The chart referred to was marked "Exhibit No. 1405" and is included in the appendix on p. 4449.)

Mr. HISS. One final point: Colonel Harris, do you know whether or not it is customary for industrial concerns to attempt to pass on to their purchasers a tax as an item of cost?

Lieutenant Colonel HARRIS. I think that is correct.

Mr. HISS. I would like to quote a statement of Mr. Colver's:

> I dissent wholly and entirely from the theory that excess-profits taxes justify unreasonable price structures and purge unreasonable profits. Not a penny of excess-profits tax has been or will be paid to the Government that has not first been collected with many other pennies from the people of the country,

either as consumers or as taxpayers. Since the Government is by far the largest of all buyers at fixed prices—

referring to the war time—

it seems to be absurd to take an excess dollar out of the Treasury in order to get 34 cents of it back in by way of excess-profits taxes. In the main, it is not industry which ultimately pays excess-profits taxes but the consumer.

Lieutenant Colonel **Harris**. Mr. Hiss, you have convinced me we should never go to war. It is too much trouble.

Mr. **Hiss**. I would like to mark as exhibits memoranda on the general subject of price control and excess profits.

(The memoranda referred to were marked " Exhibits Nos. 1406 and 1406–A ", respectively, and are included in the appendix on pp. 4457 and 4473.)

Mr. **Wohlforth**. I have just one point to clear up for the record, Mr. Chairman. Page 21 of the annual report of E. I. du Pont de Nemours & Co. for the year 1932, in part, reads as follows:

Your company—

that is, the du Pont Co.—

acquired through a New York banking house 300,000 shares of that stock—

meaning General Motors Corporation common stock—

at a price which at the time was less than the price at which it was selling on the New York Stock Exchange.

We have secured some information about that transaction. To clear up the record, I want to offer a telegram to Mr. W. S. Carpenter, Jr., of the du Pont Co., who is chairman of the finance committee, requesting such information on that transaction. I will offer that for appropriate number.

(The telegram referred to was marked " Exhibit No. 1407 ", and is included in the appendix on p. 4488.)

On further request we received a telegram from Mr. W. S. Carpenter, Jr., of the du Pont Co., addressed to Mr. Hiss, which reads as follows:

Reference your wire December 15. Shares were purchased October 29, at $24 per share, through J. P. Morgan & Co.

I will offer that for appropriate number.

(The telegram referred to was marked " Exhibit No. 1408 ", and is included in the appendix on p. 4488.)

Mr. **Wohlforth**. According to the Securities Exchange Commission, from data compiled from the Wall Street Journal and the New York Times, the price of General Motors common on October 29, 1931, was as follows:

High, 25¼; low, 24⅝; last, 25¼.

Also for the record it should be noted that two members of the firm of J. P. Morgan & Co.—Junius Spencer Morgan, Jr., and George Whitney—in 1931 were also directors of General Motors Corporation. I think the directorships and relationships between General Motors and the du Pont Co. have already been placed in the record.

I also wish at this time to submit some data for appropriate number from the Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn. The first document is titled "All Stockholders on Stock List, Dated September 8, 1934, Owning Over 1 Percent of Our Capital Stock."

(The memorandum referred to was marked "Exhibit No. 1409", and is being kept in the committee files until the Colt officials will be recalled, at which time it will appear in the appendix to that part of the hearings in which the Colt testimony appears.)

Mr. WOHLFORTH. The next item is the stockholdings of the officers and directors of Colt's Patent Fire Arms Manufacturing Co., in the form of letters in reply to a general request of this committee.

I will offer that for appropriate number, and suggest that the letters attached be numbered (a), (b), (c), (d), and so forth.

(The documents referred to were marked "Exhibits No. 1410–A to 1410–J", both inclusive, and are being kept in the committee files until the Colt officials will be recalled, at which time they will appear in the appendix to that part of the hearings in which the Colt testimony appears.)

Mr. WOHLFORTH. I also offer for the record at this time political campaign contributions and outside stockholdings of the officers and directors of the Colt's Patent Fire Arms Co. for appropriate number. They are also in the same form letters in reply to a general request. I suggest that they be given a number and (a), (b), (c), (d), and so forth.

(The letters referred to were marked "Exhibits Nos. 1411–A to 1411–L", inclusive, and are being kept in the committee files until the Colt officials will be recalled, at which time they will appear in the appendix to that part of the hearings in which the Colt testimony appears.)

Mr. WOHLFORTH. That is all I have, Mr. Chairman.

OFFICIAL STATEMENT OF WAR DEPARTMENT AS TO PRODUCTION OF MUNITIONS

The CHAIRMAN. Colonel, you had requested what would approximate a half hour in which to present a thought which you had on a given subject. Do you wish to do that at this time?

Lieutenant Colonel HARRIS. I would like to, sir.

The CHAIRMAN. Do you wish to offer anything you have prepared for the record, or do you prefer to speak to the committee on that subject.

Lieutenant Colonel HARRIS. I prefer to speak to the committee, if I may.

The CHAIRMAN. Very well, then, Colonel. Now is the time to proceed.

Lieutenant Colonel HARRIS. Mr. Chairman, I very much appreciate the courtesy you have extended to me in permitting me to present the official and approved views of the War Department on the subject of the production of munitions. I should like to read a small portion of this, and ask Lieutenant Brannon to read the remainder.

The War Department is convinced that in the event of war, American industry must produce the major portion of the required munitions. Assuming this premise, it follows that so far as practicable industry should be prepared to perform its war mission. Therefore, the War Department has consistently favored the participation of American industry in munitions manufacture and has encouraged the production of munitions not only for the United States Government but also for export where such export is not contrary to the policies of the State Department and does not divulge vital military secrets of design. This policy has been followed because it is believed that an organization or an industry that has produced munitions in peace will be better qualified thereafter to produce munitions in war.

The War Department does not oppose in any way the licensing of American industry in the manufacture of munitions, as it does not believe that control by licensing will in any way impair the efficiency of American industry for munitions manufacture in war.

The War Department does not favor the nationalization of munitions manufacture, that is, the full manufacture in Government establishments. Such a policy would fail in war and, therefore, does not appear logical in peace.

The War Department's policy in this matter agrees completely with the British policy regarding the same matter, as set forth by Sir John Simon in a statement before the British Parliament as follows [reading]:

> Our system for the supply of munitions of war to the Government combines a nucleus of state production with production by armament firms and private shipyards. A nucleus of state factories is useful not only for the weapons that they themselves produce, but as a check on the prices and qualities of those produced by private companies. The private armament firm has its skilled staff, its organization, its machinery—some of it extremely heavy and important. The armaments side of its business could not be maintained without foreign orders. If we are plunged into war, these armament firms and private shipyards are able to switch over rapidly from their level of peace production to their maximum of war production.

A statement outlining the considered thought of the War Department in connection with the production of munitions has been prepared and, with the permission of the committee, will now be read.

Lieutenant BRANNON. The production of munitions [reading]:

A. REQUIREMENTS

1. QUALITY

In time of peace the War Department spends approximately $100,000,000 annually for supplies and equipment. The present strength of the Regular Army and the National Guard is, roughly 300,000 men. During the first year of a major war we may expect this force to be expanded to at least 3,000,000 men, or 10 times the strength of the peace establishment. The requirements for food, clothing, medical supplies, and personal equipment would be increased more than twentyfold, since ordinarily less than half of the troops are on active duty. It would be necessary to obtain within a short period of time an initial supply of equipment equal to 10 times that in use by the Regular Army and National Guard. Maintenance allowances would be more than 10 times the normal, since the wear and tear in war is much greater than in peace. During the World War each machine gun in active service fired 47 times more rounds and each 3-inch field gun 180 times more rounds of ammunition than the peace-time allowance for the same period. Thus, based on World War experience, if the number of guns is increased tenfold, the expenditure of machine-gun ammunition will be increased 47,000 percent and artillery ammunition 180,000 percent. These figures give some idea of the quantity of munitions required in war.

2. COMPLEXITY

Most items of munitions are highly complex and present serious difficulties in production. Field guns are made from the finest steel. Both guns and recoil mechanisms are machine finished with a nicety unusual in commercial practice. Fire-control instruments require a high degree of precision. Motorization necessitates development of prime movers and the adapting of gun carriages, limbers, and caissons to high-speed conveyance. The manufacture of artillery ammunition presents several difficult problems. Shell casings are carefully forged and machined. The fuze for a shell is as delicate as a watch. Complete interchangeability of parts is required. Cannon powder must be as nearly uniform as it is humanly possible to make it, since even relatively slight variations in quality will cause serious variations in range. Loading shells is an especially hazardous process, due to the danger of explosion. Mechanization is opening up a comparatively new field, where the production of such engines of war as tanks and armored cars is rapidly becoming more important. The bitter experience of the United States in the World War illustrates the diffculties of producing military airplanes in quantities.

3. TIME

Not only are complex items of munitions required in enormous quantities in war, but these munitions must be available at the time and place they are needed by the troops. Time is one element in war that cannot be purchased at any price. Due to its fortunate geographical position, this country has been able to maintain a relatively lower degree of preparedness for war than most other nations. This applies both to raising troops and supplying them with munitions.

The speed with which effective mobilization can be carried out is dependent upon three factors:

(*a*) The rapidity with which personnel can be procured.

(*b*) The length of time required to organize units and train them for combat.

(*c*) The rate at which munitions can be manufactured and supplied.

For purposes of planning the rate at which men can be procured is made the standard, and every effort is bent toward increasing the speed of the other two factors.

B. Productive Facilities in the United States

1. GOVERNMENT ARSENALS

At present the Government has 6 manufacturing arsenals for the production of ordnance supplies and 1 for gas defense equipment. There are no Government facilities for making airplanes or communications equipment. Edgewood Arsenal, which is operated by the Chemical Warfare Service, manufactures all gas masks used by the Army, Navy, and Marine Corps. The six ordnance arsenals manufacture all artillery, artillery and small-arms ammunition, rifles, and pilot models of tanks and armored cars. After models have been adopted, quantity production may be secured through competitive bids or undertaken at the arsenals, depending upon comparative costs and availability of facilities. The patented Browning automatic rifles and machine guns are purchased commercially. The arsenals produce about 85 percent of the powder used by the Army. Only special powders for particular purposes are procured from private sources. At present the arsenals are producing some explosives but there are no facilities for manufacturing TNT, lead azide, and mercury fulminate.

From the foregoing, it is apparent that with some expansion the arsenals could meet all peace-time requirements except for aircraft and communications equipment. However, the maximum capacity of the arsenals is only a small part of the war requirements. Present war plans contemplate the maximum utilization of existing Government plants with such additions as are necessary to round out production. It is expected that such Government plants will be able to produce approximately the following percentages of the estimated war requirements of 12 vital items.

Item 1, 0 percent; item 2, less than 1 percent; item 3, 0 percent; item 4, 0 percent; item 5, 23 percent; item 6, 25 percent; item 7, 0 percent; item 8, 0 percent; item 9, 35 percent; item 10, 23 percent; item 11, less than 1 percent; item 12, 0 percent.

2. THE PRIVATE MUNITIONS INDUSTRY

For present purposes manufacturers of the following products may be classed as the essence of the munitions industry of the United States:

(*a*) Powder and explosives.

(*b*) Small arms and small-arms ammunition.

(*c*) Airplanes.

There are no facilities equipped for quantity production of artillery or artillery ammunition. Neither naval construction plants nor mere dealers are considered.

Generally speaking, the above plants manufacture both commercial and military items. The speed with which they can get into quantity production of particular items immediately following a declaration of war will depend upon the extent to which they have been manufacturing the same or similar items in peace. No private enterprise can be expected to maintain a plant in a stand-by condition merely because such plant may be needed by the Government in war. Military equipment is sold only to governments. Therefore, the business of manufacturing such equipment in this country can be kept alive only through orders from the United States Government or the development of an export business.

The status of each branch of the industry will be briefly considered.

(*a*) *Powder and explosives.*—Several kinds of explosives are used in war. To a very limited extent one kind may be substituted for another depending upon availability. Two kinds of powder are required—namely, small-arms powder and cannon powder. Almost every size of cannon takes a different size of powder. No substitution is practicable as even a slight change in the powder will seriously affect the range of a gun. Considerable quantities of certain types of powder and explosives are sold commercially in the United States every year. However, the total production is only a small part of the amount that will be required in war. Moreover, some of the most important military types are not used to an appreciable extent for commercial purposes. This is especially true of cannon powder. Hence, the productive capacity of existing plants will have to be expanded to the utmost. Manifestly this expansion will be facilitated if the concerns involved have peace time experience in the production of the particular types of powder and explosives they will be called upon to furnish in war.

(*b*) *Small arms and small arms ammunition.*—Between August 1914 and April 1917 the small arms industry in the United States built up a large manufacturing capacity under the stimulus of orders from the Allies. As a result, after this country entered the war, requirements in small arms and small-arms ammunition were more satisfactorily met than in almost any type of military supplies and equipment.

Generally speaking, the same firms are in business today, but are not engaged to any considerable extent in the production of military items. As has already been pointed out, the United States Government is not purchasing any standard small-arms ammunition at the present time, and only a few small arms, such as the patented Browning machine guns and automatic rifles. Except for a limited export business, these firms are engaged mostly in the manufacture of such commercial items as sporting arms and ammunition, washing machines, refrigerators, cutlery, etc. In the event of war, manufacturing experience in the production of sporting types of arms and ammunition will be valuable.

However, there will be a serious initial delay due to the necessity of installing new machinery and machine tools. While concerns cannot be expected to maintain their respective facilities in a constant state of readiness for maximum production, a small flow of Government orders would enable them to start production immediately after M-day. At present, Frankford Arsenal is the only plant in readiness to produce small-arms ammunition during the first 2 or 3 months of a war. It is apparent that either the existing Government facilities should be expanded or commercial sources should be developed.

(*c*) *Airplanes.*—The World War experience of the United States demonstrated the need for a healthy aviation industry. Since the war, that industry has developed to a point where it will compare favorably with the aviation industry of any foreign country. The development has been facilitated by civilian and Government orders and exports. Procurement plans indicate that in case of war, military airplanes would be produced rapidly and efficiently. The present rapid development of aviation with frequent changes in types and designs militates against any change to Government factories.

3. OTHER INDUSTRIAL FACILITIES

The total combined output of the existing Government arsenals and the so-called "munitions industry" will be inadequate to meet the munitions requirements of a major war. Under present conditions, a large number of facilities engaged in the manufacture of strictly commercial items would be called upon to produce munitions. The extent to which existing facilities are adapted to the particular task will vary in each case. In practically all instances new machine tools will be required, and in most, some new machinery will be necessary. Many facilities will have to be converted, and a few entirely new plants will have to be erected. The shortage of properly equipped facilities presented one of the chief reasons why anticipated production of many important items will not meet requirements in the early months of a war.

We may reasonably expect that in the event of war private plants would have fairly complete complements of personnel. One serious element of delay will be the unfamiliarity of the working forces with the manufacturing technique of noncommercial items. This will be overcome somewhat by assigning to each facility an item or items as nearly as possible like its peace-time products. It may be stated as axiomatic that an existing highly skilled organization can be instructed in a new manufacturing technique much more quickly than a new organization can be gotten together and trained.

4. PLANS FOR THE MOBILIZATION OF INDUSTRY

Under the mandate of Congress expressed in section 5a of the act approved June 4, 1920, the War Department, in cooperation with the Navy Department, has striven to improve the state of industrial preparedness of the United States. Generally speaking, this effort has taken the form of detailed plans for war procurement and for the mobilization of industry. In order to prevent confusion and delay in placing orders and to acquaint industry with what it will be called upon to do in war, tentative tasks have been assigned to particular facilities. In selecting plants for allocation, every effort has been made to secure the maximum utilization of existing facilities and manufacturing experience.

It must be recognized that while adequate plans will save valuable time, they will not alone assure immediate production of many important items. A factory can start producing at once only if the necessary machinery and machine tools are installed and the personnel is familiar with the manufacturing technique. This condition will exist only where the factory has had actual orders in peace time. Munitions in the narrow sense are sold only to governments. Hence for American plants, orders will come only from the United States Government or from export trade.

Government orders are of two classes, viz, competitive and educational. Competitive orders are placed after advertising in the same manner that other Government purchases are made. It is estimated that in the normal case a firm which receives an order will be in a position for several years to start work immediately on a new order. However, competitive orders do not always reach the firms that would be most valuable in war.

Educational orders are placed after negotiation with selected firms. Their purpose is to acquaint the firm with the work it will be called upon to do in war. In order to produce the material, machinery is installed, and factory operatives receive valuable experience. Educational orders are not necessary for all classes of munitions, but are highly desirable for items such as small-arms ammunition, which will be required in enormous quantities immediately after war is declared. At present such orders are not authorized by law.

The development of an export trade in munitions tends to keep available a certain productive capacity. The more closely exported items resemble standard United States Government items the more valuable will this capacity prove. It is for this reason that the War Department has not opposed the sale of standard items to foreign governments except where military secrets are involved.

The CHAIRMAN. Colonel Harris, would you mind being interrupted at this point?

Lieutenant Colonel HARRIS. Not the slightest.

The CHAIRMAN. As respects the ground which has just been gone over, showing the plan which has private industry in mind to be the recipient of these large orders in time of war, do we not really have a situation which has about 12,000 industrials with their tongues hanging out, so to speak, waiting for war to come?

Lieutenant Colonel HARRIS. The whole industrial structure of this country is now looking for business. In times of prosperity they are not interested in Government orders, generally speaking, except a certain limited field. Right now, if we are going to buy anything, they just run over us trying to get the order. If one firm does not get the order, they try to find some reason to go and protest to somebody to keep the other fellow from getting it. So there is a great desire at the present time to receive Government business.

The CHAIRMAN. That is not just the point I was trying to make.

Lieutenant Colonel HARRIS. I am afraid I did not understand it.

The CHAIRMAN. Is there not naturally an anticipation for the orders that would exist with a declaration of war?

Lieutenant Colonel HARRIS. If you mean that they would like to have war to get the business, I do not think they would.

The CHAIRMAN. The more severe the depression, the more keen the desire for war?

Lieutenant Colonel HARRIS. The more keen the desire for business.

The CHAIRMAN. You do not think that that is the effect?

Lieutenant Colonel HARRIS. I do not think that American industry wants us to go to war. I have a high regard for American industry, and I do not believe they want us to go to war. I do not believe these munitions firms want us to go to war.

The CHAIRMAN. Colonel, perhaps it is wrong to ask you, but there is a decided tendency here and there—you encounter it, we all encounter it—people declaring that maybe what we need to get back on our feet in an economic way is another little war. Do you suppose there is any central spot responsible for that talk?

Lieutenant Colonel HARRIS. I do not know, sir. It is certainly a wrong doctrine. Wars put us where we are today, in my opinion.

The CHAIRMAN. Exactly.

Lieutenant BRANNON (reading):

GOVERNMENT CONTROL AND OPERATION OF THE MUNITIONS INDUSTRY

1. GOVERNMENT CONTROL

It does not appear that Government control of the munitions industry would adversely affect the state of industrial preparedness of the country. For instance, the licensing of manufacture or export should not reduce productive capacity.

2. GOVERNMENT MONOPOLY IN PEACE

The construction and operation of factories for the manufacture of military aircraft would present a difficult problem. However, with a comparatively small increase in existing plants, Government arsenals could produce all other munitions required in peace. Even with such increase, the Government plants would be able to meet only a small part of the initial war load. A policy of exclusive Government manufacture would tend to deprive the country of commercial sources of supply. The curtailing of orders with industrial plants will greatly increase the importance of procurement planning.

If, for reasons of policy, a decision is reached to manufacture all peacetime requirements in Government plants, action along the following lines should be taken to offset to some extent the additional time that will be required to secure production from industry:

(a) Increase the war reserves of items that do not deteriorate and are not likely to become obsolete.

(b) Increase the manufacturing capacity of the arsenals, especially for the production of all types of ammunition. Moreover, all facilities should be kept in readiness to go into production. By utilizing regular personnel in key positions such an increase can be accomplished in a reasonable space of time. Any new construction should be located with due regard to security from hostile attack, distribution of products to any part of the country, raw materials, power, fuel, and labor. The expansion program for artillery ammunition should contemplate the utilizing of private industry for those operations that may be performed with standard machinery and little added training.

(c) Increase the present war procurement planning activities especially with regard to the preparation of factory plans, descriptions of manufacture, and the furnishing of technical information to allocated facilities.

3. GOVERNMENT MONOPOLY IN WAR

(*a*) *Initial cost of necessary manufacturing plants.*—Senate Document No. 664, Sixty-fourth Congress, second session, contains the report of a board appointed pursuant to section 121 of the act of Congress approved June 3, 1916, to investigate and report upon the feasibility, desirability, and practicability of the Government manufacturing arms, munitions, and equipment.

Let me say that is the report of the Kernan Board, that was referred to by Mr. Hiss.

On page 29 of that report is set out an estimate of the Chief of Ordnance as to the cost of additional facilities necessary to equip and supply forces of 2,000,000 and 4,000,000 men, respectively. The figures were:

(a) Cost of plants (additional to existing plants) required to run 1,000,000 men through first year of war, equip a second million men and run them through as much of that year's war as they will get into, and supply the necessary seacoast matériel (one-shift basis):

For seacoast matériel	$83,000,000
For mobile artillery matériel	246,000,000
For machine guns	15,000,000
For small arms, small-arms ammunition, and infantry and cavalry equipments	152,000,000
Total	496,000,000

(b) Cost of plants (additional to existing plants) required to run 1,000,000 men through first year of war, equip 3,000,000 more men and run them through as much of the first year of war as they could get into, and supply the necessary seacoast matériel (one-shift basis):

For seacoast matériel	$83,000,000
For mobile artillery matériel	608,000,000
For machine guns	56,000,000
For small arms, small-arms ammunition, and infantry and cavalry equipments	180,000,000
Total	927,000,000

The plants estimated for under (a) and (b) would be capable of fully maintaining and supplying during the second and any succeeding year of war the forces named.

The above estimate has not been revised to date, but it is believed reasonable to assume that the present cost would be greater. No allowance was made for the manufacture of tanks, armored cars, airplanes, and gas-defense equipment. All told, the initial cost of a complete system of Government manufacturing plants capable of equipping and supplying a force of 4,000,000 men would be not less than $1,000,000,000.

(*b*) *Upkeep.*—To the initial cost must be added the cost of upkeep. Plants start to depreciate as soon as they are built. New machinery and machine tools are necessary by improvement in types of military equipment. It is believed safe to assume that the annual charge necessary to cover upkeep, depreciation, and additions would be not less than 5 percent, or for a billion-dollar plant, $50,000,000. If to this be added 3 percent to cover interest on the original investment, it is apparent that the sum of $80,000,000 would be added to the annual cost of national defense.

The CHAIRMAN. Just at that point let me interrupt you.

This obviously is the result of a study that was made to ascertain what it would cost the Government to provide its own machinery of national defense in time of war. Has there been any like study concerning the outlay that would be required to maintain or to produce America's peace-time national defense requirements?

Lieutenant Colonel HARRIS. I do not think such a study has been made covering the aircraft and tank elements.

The CHAIRMAN. What are the other elements?

Lieutenant Colonel HARRIS. The elements as far as artillery and ordnance items are concerned, with very little expansion of the arsenals they could do that now, as stated in this paper.

The CHAIRMAN. In other words, we are virtually producing our own peace-time requirements now?

Lieutenant Colonel HARRIS. With the very important exception of aircraft and gas defense appliances and certain elements of the artillery ammunition group.

The CHAIRMAN. Colonel, there comes to my mind the experience which we encountered in September, which found the naval experts perfecting and developing an air-cooled motor, which found in 1925 a private corporation organized to go into the production of this air-cooled motor. If I remember aright, we loaned that private corporation the expert advice of the naval experts who had been perfecting and developing this motor. From 1925 up to the present time a very large proportion of that corporation's business has been with the United States Navy.

There were introduced in September figures revealing that this corporation's return upon its investment, its return by reason alone of the business done with the United States, was something like 1,144,000 percent, upon its invested capital.

Now, obviously, the Navy afforded the largest part of that profit for that corporation. Why could not, to its advantage, the Navy produce its own air-cooled motors? What has the private corporation contributed to our war-time requirements that would not have been produced if we had been turning out our own air-cooled motors?

Lieutenant Colonel HARRIS. I hesitate to express an opinion on Navy affairs. The answer seems to be obvious.

Senator POPE. Colonel, at this point may I ask you this question: Who took part in the preparation of this statement, exactly?

Lieutenant Colonel HARRIS. You have us before you. You say the preparation of this paper?

Senator POPE. Yes.

Lieutenant Colonel HARRIS. Here we are.

Senator POPE. The two of you?

Lieutenant Colonel HARRIS. Yes.

Senator POPE. And no others?

Lieutenant Colonel HARRIS. We used records, we used data available throughout the Department. This paper has been examined by all of the authorities of the War Department and approved, but in the preparation, answering your question, Lieutenant Brannon and I did that.

Senator Pope. Did General MacArthur approve of this statement?

Lieutenant Colonel Harris. I think General MacArthur has seen it.

Senator Pope. Did Secretary Dern see it?

Lieutenant Colonel Harris. Yes.

Senator Pope. And approve of it?

Lieutenant Colonel Harris. Yes.

Senator Pope. He did not take part in the preparation of it; the two of you prepared it?

Lieutenant Colonel Harris. We prepared it, because it is our job.

The Chairman. Colonel, having done that, are you prepared now or would you wish to add to your statement an approximation of 1 year's cost for all of the additional supplies that a war such as you plan for would call for?

Lieutenant Colonel Harris. I do not believe I get the question, Senator.

The Chairman. Can you approximate what 1 year's cost would be of the added supplies that the Government would need to have to carry itself for 1 year's war?

Lieutenant Colonel Harris. You mean to properly fill this out, to take into consideration these items?

The Chairman. Yes.

Lieutenant Colonel Harris. I think it is possible we would have to consult people. And, by the way, Senator, don't think that is a creation of our minds. This is a compilation of all of the experience and records of the War Department.

Senator Pope. Yes; I understand that.

The Chairman. And the studies that have been made by the War Department?

Lieutenant Colonel Harris. Yes.

Senator Pope. Yes; I understood that, but I was interested to know if Secretary Dern, for instance, is thoroughly familiar with the contents of this and he approved it, this statement that you are now making.

Lieutenant Colonel Harris. This has been given me as being approved by the Secretary of War.

Senator Pope. Given to you as being approved?

Lieutenant Colonel Harris. Yes. It was sent to me yesterday morning. I received it yesterday morning in this room.

Senator Pope. It was not prepared by you, then?

Lieutenant Colonel Harris. It was prepared by Lieutenant Brannon and myself and submitted to the Secretary of War for approval.

The Chairman. Coming back to the question, can you approximate the first year of cost to the Government for the supplies it will need under the plan which has been outlined?

Lieutenant Colonel Harris. I believe that would be possible; yes, sir.

The Chairman. Can you tell the committee now about what it might be?

Lieutenant Colonel Harris. I believe if you added $200,000,000, you would cover the items we have omitted.

The CHAIRMAN. No; I do not think you get my question, Colonel. In the early part of your paper there was a discussion of the plan to utilize industry, in turning out the production that the Government would require in time of war. What would the outlay for the first year be to cover the cost of production of industry?

Lieutenant Colonel HARRIS. In giving productions, I explained how the Government——

The CHAIRMAN. Oh, no.

Lieutenant Colonel HARRIS. You mean on procurement planning?

The CHAIRMAN. That is right.

Lieutenant Colonel HARRIS. Oh, I misunderstood you entirely, sir.

The CHAIRMAN. Yes.

Lieutenant Colonel HARRIS. I should like to give serious thought to that subject, Senator.

The CHAIRMAN. We have discussed, rather privately, what the cost would be as respected certain industries, Colonel, in our conversations from day to day, and there was an approximation by you on one morning of what a certain number of industrials would be receiving in the event of war. Could you not extend that now and say what the entire program would call for?

Lieutenant Colonel HARRIS. I am afraid I am not following you. Do you mean the cost of 1 year of war?

The CHAIRMAN. Yes.

Lieutenant Colonel HARRIS. I think the cost of 1 year of war would be in the neighborhood of $4,000,000,000.

The CHAIRMAN. You mean for procurement purposes alone?

Lieutenant Colonel HARRIS. For the industrial phase of war.

The CHAIRMAN. Yes. That does not cover the pay of the military?

Lieutenant Colonel HARRIS. I am excluding that.

Senator VANDENBERG. You mean the Army alone; you do not mean the Navy.

Lieutenant Colonel HARRIS. I mean the Army. It is almost impossible for the human mind to conceive the expenditure of artillery ammunition and the cost involved in that expenditure in modern war.

The CHAIRMAN. You may proceed, Lieutenant.

Lieutenant BRANNON (reading):

(*c*) *Personnel.*—Manifestly the capacity of plants sufficient to supply an army of either two or four million men in war would be far in excess of the needs of the peace establishment. Under any reasonably economic method of operation the number of persons employed in peace would be only a small part of the total number required in war. It would be necessary, therefore, after an emergency arose, to build up a large force of skilled mechanics, foremen, and superintendents. As a result, considerable time would elapse before the plants could be expected to reach maximum production.

(*d*) *Location.*—A large percentage of the existing private plants that would be relied upon to furnish munitions in war are located near the North Atlantic seaboard, where they are dangerously exposed to hostile attack. The same is true of most of the present Government manufacturing establishments except Rock Island Arsenal. The heavy concentration of industry in the northeast section of the country increases the problems of labor, power, fuel, and transportation in war. Should the Government build new facilities, these could be located in the interior where they would be relatively safe from attack and where distribution to all parts of the country would be facilitated. However, location away from the centers of industry would increase the difficulty of securing adequate skilled labor.

(*e*) *Expansion.*—Plans for war procurement must be sufficiently flexible to allow for the maximum capacity a country can reach. No one can tell what kind of situation may develop in war. When the World War started the French Army had very complete plans for the production of ammunition. The following table gives the daily production as planned in 1914, actual daily production during the closing months of the war, and the rate of increase:

	Planned 1914	Produced 1918	Ratio 1918 to 1914
Small-arms ammunition, rounds	2,470,000	4,661,500	1.89
Artillery ammunition, rounds	14,065	222,030	15.78
Powder, pounds	48,000	577,000	12.00
Workers in munition plants	50,000	1,600,000	32.00

(*f*) *Artillery and ammunition.*—It is in the field of artillery and artillery ammunition that exclusive Government manufacture would be most uneconomical. Both are required in enormous quantities, and their manufacture is highly intricate. However, many of the processes of manufacture may be performed with standard machines. Both lend themselves readily to the production of component parts in different plants and later assembly at a central point. Should the Government undertake to erect plants for the exclusive manufacture of these classes of equipment, it would mean that in time of peace there would be standing idle several hundred million dollars' worth of machinery. In time of war this machinery would be devoted to work that might just as well be done by utilizing the machinery in a hundred private plants. In other words, the Government plants would represent a needless duplication and sheer economic waste.

Under this system there will be a serious delay following a declaration of war before anything like maximum production can be reached. This situation will not be quite so serious with respect to cannon, since a relatively long time is required for manufacture under the most favorable conditions. On the other hand, early production of artillery ammunition presents one of the most important problems of war procurement.

5. RELATIVE EFFICIENCY OF GOVERNMENT AND PRIVATE PLANTS

In time of peace Government arsenals can manufacture at slightly less cost than commercial facilities. It has been estimated that this saving will average 11 percent.

The CHAIRMAN. Pardon me. A few days ago, Colonel, or possibly day before yesterday, I believe we had introduced here the results of a study made by the private industries revealing the cost of production of .30-caliber ammunition in the Government arsenals and in private manufacture.[1]

Lieutenant Colonel HARRIS. Yes.

The CHAIRMAN. Has the War Department made any study along similar lines?

Lieutenant Colonel HARRIS. You mean with reference to Frankford Arsenal production?

The CHAIRMAN. Yes; but more particularly with regard to the general subject of the Government production of ammunition.

Lieutenant Colonel HARRIS. It so happens that small-arms ammunition is the most favorable item to develop a good cost on, because it is the one thing we are producing in volume and of uniform production. The rest of our arsenal production is more jobbing shop work, and it is more difficult to form an estimate under jobbing shop conditions. We naturally keep a record of the cost of all of the stuff we are producing, but I do not think our records would be as favorable in comparison with industry on some other items as in that case.

---

[1] "Exhibit No. 1294", Hearings, Part XVI, p. 3953.

The Chairman. Lieutenant Brannon has just spoken of 11-percent differential. As shown through this study by private industry as respects .30-caliber ammunition, it reached a differential of about 33 percent.

Lieutenant Colonel Harris. Yes.

The Chairman. Does this 11 percent refer to the entire picture?

Lieutenant Colonel Harris. The entire field.

The Chairman. Not to ammunition alone?

Lieutenant Colonel Harris. No, sir. That is correct.

The Chairman. All right.

Lieutenant Brannon (reading):

> The difference is due in large part to the following factors:
>
> (a) Arsenals make no allowance for profits.
>
> (b) Overhead expenses are slightly lower in the arsenals and there are no selling costs.
>
> (c) Depreciation charges are less in the arsenals because there is no question of future business. Sporadic Government orders necessitate private plants entering a relatively high depreciation charge against each other.
>
> It does not follow, however, that because arsenals now manufacture more cheaply than private plants they could do so if operated as a war monopoly. During years of peace the enormous carrying charges on reserve facilities would more than double present costs; i. e., instead of costing 11 percent less, current supplies would cost from 90 percent to 100 percent more than if procured commercially. In war the necessity of building up new organizations from untrained personnel would tend materially to increase unit costs. It takes more time and costs more money to acquire these organizations than any other element of manufacture. It is doubtful, therefore, whether Government plants could show any operating advantage in war to offset the deficits that would have accumulated in peace.
>
> ### D. WAR PROFITS
>
> Present procurement plans should go far in preventing contractors making excessive profits. Government departments will not compete with each other in the purchase of supplies. Forms for war contracts are being developed by which it is expected contractors' profits will be limited to a reasonable amount. Should any manufacturer refuse to accept a Government contract at a reasonable price, the law authorized the placing of a compulsory order; and in the event of further refusal, the commandeering of his plant or factory. Attempts of the War and Navy Departments to prevent profiteering will no doubt be supplemented by Government regulatory measures and excess-profits taxes. However, any control measures that may be adopted should not be so binding as to prevent reasonably prompt negotiations and agreement with industry to produce materials required, since any failure to procure munitions when needed may have to be paid for, not in dollars and cents but in the consequences of possible defeat.
>
> It should be remembered that war profits are not limited to munition makers. The exorbitant demands for food, farm products, raw materials, labor, power, and fuel, and the withdrawal of a substantial part of industry from the ordinary channels of trade, tend to cause a sharp rise in the general price level. Under any control measures that may be instituted by the Government to prevent excessive prices, munition makers will fare no better than anyone else.

The Chairman. Colonel, can you furnish for the information of the committee the base figures which were used in reaching these conclusions relative to governmental costs?

Lieutenant Colonel Harris. The 11-percent figure?

The Chairman. Yes.

Lieutenant Colonel Harris. I shall endeavor to get those. The minutes of the Kernan Board which cover this do not seem to come to light. I do not know where they are. We all have been searching for them, and we shall endeavor to search further and shall be glad to furnish any information we have concerning the matter.[1]

The CHAIRMAN. Do not the findings of that board show lower production costs on all of the items they investigated?

Lieutenant Colonel HARRIS. I cannot answer that question. Can you, Lieutenant Brannon?

Lieutenant BRANNON. In most of them they did, I think.

The CHAIRMAN. On the most of them they did?

Lieutenant BRANNON. Yes. I do not recall for sure that they did on all of them or not, sir.

Mr. WOHLFORTH. It was on all of them, was it not, Lieutenant?

Lieutenant BRANNON. I do not remember, Mr. Wohlforth.

Lieutenant Colonel HARRIS. Mr. Hiss, you haven't that Kernan Board record, have you?

Mr. HISS. We have been looking for it ourselves.

Lieutenant Colonel Harris. So have we.

The CHAIRMAN. Your conclusion that the cost would be 190 percent in time of war——

Lieutenant Colonel HARRIS. That is based on two figures—that we ordinarily spend about $100,000,000 in time of peace and then we have this carrying charge of $90,000,000.

The CHAIRMAN. Is that the sum total of what you consider basic to that conclusion?

Lieutenant Colonel HARRIS. Yes, sir. It is the carrying charge plus the base.

The CHAIRMAN. You may proceed.

Lieutenant BRANNON. A very pertinent paragraph of the foreword to the industrial mobilization plan is here quoted.

> The tendency to overemphasize administrative efficiency and underempnasize national effectiveness has been guarded against. The objective of any warring nation is victory, immediate and complete. It is conceivable that a war might be conducted with such great regard for individual justice and administrative efficiency as to make impossible those evils whose existence in past wars is well known. It is also conceivable that the outcome of a war so conducted might be defeat. In all plans for preparedness and policies to be pursued in event of war it must never be overlooked that while efficiency in war is desirable, effectiveness is mandatory.

The CHAIRMAN. Speaking of the Kernan Board findings again, what other studies has the War Department made on that subject of war costs?

Lieutenant Colonel HARRIS. I will ask Lieutenant Brannon to state that phase of it. I think this study is based almost entirely on the Kernan Board findings.

The CHAIRMAN. Can you state, Lieutenant?

Lieutenant BRANNON. It is based almost entirely on Kernan Board findings.

The CHAIRMAN. It occurs to me that your study, which has just been summarized, affords a study of costs for an offensive war. Has there been any study made on the cost to the Government on a strictly defensive war?

Lieutenant Colonel HARRIS. The kind of a war, whether defensive or offensive in base—in other words, a defensive war may turn into an offensive war. You may be in danger of being attacked. To repulse that attack you may have to attack, and it then becomes an offensive war.

---

[1] Hearings, Part XVI, footnote, p. 3975.

Senator VANDENBERG. Offense is the best defense sometimes.

Lieutenant Colonel HARRIS. That is an expression often used. That is a military axiom, incidentally.

Senator VANDENBERG. Yes.

The CHAIRMAN. Colonel, we do not have exact figures, but for the purpose of making clear the record, I wonder if we can agree as to the approximate strength of our military force at the present time as respects the Army. The Regular Army is about 118,000?

Lieutenant Colonel HARRIS. Yes, sir.

The CHAIRMAN. The National Guard approximately 196,000?

Lieutenant Colonel HARRIS. Yes, sir.

The CHAIRMAN. The Organized Reserves, 125,000?

Lieutenant Colonel HARRIS. The 300,000 we used here was only the Regular Army and the National Guard.

The CHAIRMAN. In addition to that you have Organized Reserves of approximately 125,000?

Lieutenant Colonel HARRIS. We have, of whom a limited number are trained 2 weeks each year.

The CHAIRMAN. What of the so-called "Auxiliary Reserve"; what is its strength?

Lieutenant Colonel HARRIS. I have not the strength of that.

The CHAIRMAN. About 20,000?

Lieutenant Colonel HARRIS. I could not express an opinion, because I do not know.

The CHAIRMAN. How many in the R.O.T.C.?

Lieutenant Colonel HARRIS. Do you know, Lieutenant Brannon?

Lieutenant BRANNON. It is something over 100,000, I think, but I am not sure of it. The R.O.T.C. I am not sure about.

The CHAIRMAN. Approximately 100,000?

Lieutenant BRANNON. I do not know about that. I was thinking of the Reserve Officers Corps.

Lieutenant Colonel HARRIS. The R.O.T.C. cannot be that large, I don't think, sir.

Lieutenant BRANNON. No.

The CHAIRMAN. Do you know of the Junior R.O.T.C.?

Lieutenant Colonel HARRIS. I do not know.

The CHAIRMAN. The committee is advised that approximately 50,000 are there. Do you know how many civilian employees there are in the War Department?

Lieutenant Colonel HARRIS. I have not those figures.

The CHAIRMAN. Does 70,000 approximate it?

Lieutenant Colonel HARRIS. I could not take issue with that figure, but I could not check it from memory very accurately. That probably is a proper figure.

The CHAIRMAN. In addition to all of that there are those receiving instruction and being furnished by the Government with rifles for practice, are there not?

Lieutenant Colonel HARRIS. There are, sir.

The CHAIRMAN. Would an estimate of 125,000 be too much for that?

Lieutenant Colonel HARRIS. I would have thought it would be too much, but I do not know.

The CHAIRMAN. I wonder if you could furnish to the committee more accurate figures covering that entire picture.[1]

Lieutenant Colonel HARRIS. All of the elements?

The CHAIRMAN. All of the elements; yes.

Lieutenant Colonel HARRIS. I would be very glad to, sir.

The CHAIRMAN. As it is before the committee at the present time, it is something in excess of 800,000.

The committee has contemplated, before completing its study, a very extended investigation of the matter which Colonel Harris and Lieutenant Brannon have been discussing for the last half hour. Sometime in January the committee hopes to go into the matter in a thoroughly technical way, so far as it has to, to ascertain, as well as it can ascertain, the comparative costs as between Government production and production of munitions by private industry, which, incidentally, is a matter which we are under instructions to go into more thoroughly by far than we have.

Is the War Department engaged at the present time in any studies along that line?

Lieutenant Colonel HARRIS. The War Department will engage—I am not familiar with any instructions issued on that basis—the War Department will engage in studies to be prepared to give you the data, having notice served upon it.

The CHAIRMAN. Very well.

Senator POPE. I just want to ask one question, Colonel Harris.

Are there now any Army officers, to your knowledge, United States Army officers, employed in foreign countries in their military plants, training armies and the like?[2]

Lieutenant Colonel HARRIS. We have some officers in language schools in the Far East. I do not think we have any officers loaned to foreign governments at the present time, but I would like to verify that and supply the information.

Senator POPE. Do you happen to know about the Navy, whether there are any officers of the Navy who are in the employ of foreign governments, engaged in that service?

Lieutenant Colonel HARRIS. No, sir; I do not know.

The CHAIRMAN. The committee is adjourned until further call of the Chair.

(Whereupon, at 4 p. m., Friday, December 21, 1934, the committee adjourned, subject to the call of the Chair.)

---

[1] Under date of Apr. 4, 1935, the War Department furnished the committee with a compilation showing military strength of the United States with the exception of the Auxiliary Reserve and Civilian Rifle Clubs. The latter were submitted on May 14, 1935. Both lists appear in the appendix on p. 4515.

[2] Under date of Apr. 4, 1935, the War Department notified the committee that there is a total of four officers on duty with foreign governments. One of these is in charge of the Military School in Guatemala and three are instructors in the Military School in Brazil.

APPENDIX

EXHIBIT NO. 1342

MEMORANDUM ON FOREIGN COMPANIES WITH WHICH THE DU PONT COMPANY HAS OR HAS HAD RELATIONSHIFS OF VARIOUS KINDS

The following is a list of foreign companies in which the du Pont Company has a stock ownership (direct and indirect):

Associated Securities of Canada, Ltd., holding company for du Pont Co. interest in Canadian Industries, Ltd.

British Australian Lead Manufacturers Proprietary, Ltd., Duco plant, Australia.

Canadian Industries, Ltd., manufactures dynamite, chemicals, sporting ammunition, finishes, artificial leather in Canada, and imports other products for resale. (See note 1.)

Canadian Safety Fuse Co., Ltd., manufactures safety fuse in Canada.

Canadian Pyrites, Ltd., holding company.

Compania Mexicana de Explosivos, S.A., dynamite plant, Mexico. (See note 1.)

Compania Sud-Americana de Explosivos, S.A., dynamite plant, Chile. (See note 1.)

Deutsche Gold und Silber Scheideanstalt, manufacturer of chemicals in Germany, du Pont investment is less than 5 per cent.

Duco, A.g., Duco plant, Germany.

Duco Societa Anonima Italiana, Duco plant, Italy.

Du Pont, S.A., imports certain du Pont products for resale in Mexico.

Dynamit Actien-Gesellschaft, manufactures commercial explosives, celluloid, etc., in Germany. Du Pont holding is less than 10 per cent and is entirely of an investment nature. (See note 1.)

Explosives Industries, Ltd., buy du Pont commercial explosives for resale in various South American countries.

I.G. Chemische Unternehmungen, A.G., I.g. Chemie Basle & I.G. Farbenindustries, A.G., du Pont investment is considerably less than 1 per cent and is entirely of an investment nature. (See note 1.)

Industries Quimicas Argentinas Duperial, S.A. This company which is in process of formation is taking over the business of du Pont-Argentina. It is engaged in the manufacture of chemical products in the Argentine and in the import of other products including du Pont products for resale there. Also manufactures sporting ammunition.

Leathercloth Proprietary Ltd., fabrikoid plant, Australia.

Frederick Crane Chemical Company & Nobel Chemical Finishes, Ltd., plants for paints and lacquers in England.

Remington Arms Union Metallic Cartridge Company, Ltd., imports Remington ammunition and components for resale in England and conducts shot shell loading operation.

Remington U.M.C. of Canada, Ltd., nonoperative.

Societe Francaise Duco, S.A., Duco plant in France.

Societe Francaise Fabrikoid, S.A., fabrikoid plant in France.

Societe Italiana della Celluloide & Societa Anonima Mazzucchelli, celluloid sheeting and articles plants in Italy.

Travancore Minerals Company, Ltd., produces ilmenite in India, large quantities of which are purchased by Krebs Pigment and Color Corp.

Ventube, G.m.b.h., in liquidation.

Du Pont do Brazil, S.A., imports certain du Pont products for resale in Brazil.

NOTE 2.—The above list is believed to be complete although there may be indirect holdings of minor importance which have not been included. Indirect holdings through companies owned less than 10 per cent have been omitted.

The following foreign companies and individuals are major shareholders in one or more of the companies listed under no. 1 above:

Imperial Chemical Industries, Ltd.

Kokswerke Chemische A.G.

Soc. Montecatini (through its subsidiary Soc. Italiana dinamite Nobel).

Mr. Silvio Mazzucchelli.

Societe Centrale de Dynamit S.A.

Du Pont has or has had arrangements involving licenses under or purchases and/or sales of patents and/or secret processes with the following companies in addition to some of those listed above:

Soc. Rhone-Poulenc, fine chemicals (perfume, photographic, etc.), cellulose acetate, rubber chemicals.

Comptoir des Textile Artificiels & Associated Companies, rayon.

Deutsche Hydrierwerke, organic chemicals such as hydrogenated hydocarbons and sulphonated higher alcohols.

H. Th. Boehme, organic chemicals such as sulphonated higher alcohols.

Kalle, A. G., transparent viscose sheeting.

Soc. La Cellophane, France, transparent viscoe sheeting.

Etbls. Kuhlmann, France, license under two individual dye patents for France.

Ammonia Casale, S.C., Ammonia, American rights for process for synthesis of ammonia.

Air Liquide, ammonia, American rights for process for synthesis of ammonia.

Laporte & Co., Ltd., chemicals, American rights to hydrogen peroxide process.

Chemische Fabrik Pott, A.G., chemicals (perfume materials).

Mitsui, Japan, sale of our hydrogen conversion process in Japan.

Alexander Wacker, A.G., licenses under certain U.S. patents on chemicals. (Chlorinated hydrocarbons and acetylene derivatives useful as solvents and synthetic resins).

Lurgi, A.G., Germany; Chimstroy, Russia; Union Chimique Belge, Belgium; rights to our ammonia oxidation process.

Schering-Kahlbaum, A.G.; J. D. Riedel-de Haen, A.G.; Elchemie G.m.b.H.; Leolowenstein, Berlin, Germany; Schering-Lowenstein hydrogen peroxide process.

Edmund von Herz, priming compounds aud detonators.

Dynamit, A.G., commercial explosives.

Pathe Cinema, American rights to film process.

Imperial Chemical Industries, Ltd., licenses under patents covering a wide field of commercial chemicals and related products. Military powders specifically excluded from patents and processes under which their licenses were granted.

Montecatini, license under Italian Neozone patent (rubber accelerator).

General Note.—The above is intended to include the companies with whom we have common financial interest or from whom we have bought or to whom we have sold processes and manufacturing information. The list does not include every firm from whom we may have purchased individual processes and/or patents of relatively minor importance nor does it include all the foreign firms who may have purchased or to whom we may have sold materials. In view of the diversity of the interests of the du Pont Company and the many fields in which it operates and the nature of the chemical industry, such a list would include most every chemical company of any importance in the world. The preparation of such a list would involve the examination of all of our sales and purchases accounts not only of the parent company but of the subsidiary companies and would be little else than a partial list of our customers in export markets and of suppliers of raw materials.

So far as we know none of the inventions listed above refer to military explosives or ammunition except the Von Herz tetrazene agreement, which involves priming mixtures which can be used in either military or commercial ammunition.

Note 1.—The Mexican, Chilean, Canadian, and D.A.G. companies are the only ones who manufacture explosives, none of which is military. The Remington Company, Ltd., of England, Duperial, and Canadian Industries, Ltd., manufacture commercial ammunition. As a possible exception, though not a material one, to this general statement, Canadian Industries, Ltd., did at one time manufacture TNT which may be used as a military explosive as well as a commercial one. Canadian Industries, Ltd., also manufactured military ammunition during the war but is not so engaged at present. Military inventions are excluded from our contractual relations with this company.

Exhibit No. 1343

Memorandum re Valuation

1. VALUATION WORK OF THE INTERSTATE COMMERCE COMMISSION

The difficulties attendant upon valuation are perhaps illustrated most graphically by the work of the Interstate Commerce Commission in connection with its valuation of the railroads of the country.

"* * * the Interstate Commerce Commission in valuing only the properties of the railroads of the country has spent more than 13 years on the task and more than $27,000,000, and the carriers themselves in working on these same valuations have spent the same period of time and more than $85,000,000." (Mr. Ernst's Report, Senate Investigation of the Bureau of Int. Rev., report 27, pt. 3, page 4, 2/1/26.)

This statement is all the more significant in view of the fact that railroads have for a long time had their rate of profit regulated in the public interest by both State and Federal Governments.

"For years past railroads, pipe lines, and express companies have been obliged to keep their books in accordance with accounting methods prescribed by the Interstate Commerce Commission. * * * There are also State and municipal regulations prescribing the form of accounting to be followed by various public utilities, banks, insurance companies, and other forms of business closely connected with the public interest." (Couzens' Report, Senate Investigation of the Bureau of Int. Rev., rep. 27, pt. 2, pp. 130–131, 2/1/26.)

Since the rate of profit which has been allowed public utilities has characteristically been based on a fixed return on "value", it is apparent that a considerable store of information must have been present on the subject of valuation and on the techniques of attacking the problem. If so great difficulty has been encountered in connection with a business which was the first to be subject to supervision in the public interest; it is impossible to set forth the extent of the difficulties which will be encountered in connection with the valuation of industries not subject to similar prior scrutiny.

Expenditures in connection with valuation work of the Interstate Commerce Commission have kept on since the time of the Couzens' Report. In the account of the appropriation and expenditures of the Interstate Commerce Commission for each fiscal year there appears an item:

"Valuation of property of carriers: To enable the Interstate Commerce Commission to carry out the objects of the act entitled 'An act to amend an act entitled "An act to regulate commerce," approved Feb. 4, 1887, and all acts amendatory thereof,' by providing for a valuation of the several classes of property of carriers subject thereto and securing information concerning their stock, bonds, and other securities, approved Mar. 1, 1913."

For the respective years 1926–29, the amounts listed under this item were as follows:

Year:	*Amount*
1926	$1,883,232.97
1927	1,715,140.97
1928	2,563,214.00
1929	2,336,670.00

(See 40th–43rd Annual Report, Interstate Commerce Comm., 1926–29.)

The size of the appropriation in these years is all the more significant in view of the note of optimism present in the 1922 report of the Interstate Commerce Commission to the effect that the valuation job had been practically completed.

"We have reached the state in valuation of the steam railroads of the country where, except for rechecking, the inventorying of roads recently constructed, and a few minor details, the original field work has been completed. Underlying reports are being issued in large numbers, and hearings and final arguments on protested tentative valuations are in progress. Of 287 tentative valuations served, 101 have become final through absence of protest, which under the act any interested party may file within 30 days after service of the tentative valuation. Full hearings upon protests have been had in 39 cases. Six cases have been partly heard and 33 cases are assigned for hearing before December 31, 1922. Final arguments have been had in three cases and 12 were set for argument in

November. Issues raised by protestants in 19 cases have been submitted without argument."

* * * * * * *

"We have completed the transfer of all forces and records of the Bureau to the central office in Washington, and have closed the San Francisco, Kansas City, Chicago, Chattanooga, and Washington district offices. This has been accompanied by reorganization and closer coordination. The number of employees has been reduced to approximately 550, or about one-third of the maximum reached in 1918. Expenditures have been reduced from approximately $3,000,000 per annum during the first few years, $2,735,911 for the fiscal year 1920–21, and $1,597,572 for the fiscal year 1921–22, to approximately $1,300,000. This reduction has, in large part, been made possible by the termination of original field work." (36th Annual Report of Interstate Commerce Commission, 1922, p. 70.)

The report of the Commission two years later is much less hopeful in outlook.

"Based on our experience thus far we estimate that the hearings to be held on protests to tentative valuations will exceed 500 in number. We cannot estimate their length. It is apparent that satisfactory completion of the work, already over 10 years in progress, is seriously menaced by delay in completing these primary valuations. Most of them are already from 6 to 10 years old. In administering the act present-day valuations are needed, but before they can be had primary valuations must have been completed to serve as bases for carrying the valuations forward. There is serious disadvantage in the lapse of so many years between the primary and the present-day valuations. With the passage of time come cumulative changes in the property by reason of additions, betterments, and retirements, thus rendering the original inventories increasingly unrepresentative of present conditions." (38th Annual Report of Interstate Commerce Commission, 1924, p. 14.)

The above cited passage supplies clear indication that it is much more than a mere routine matter to keep a valuation, once arrived at, up-to-date. The 39th Annual Report of the Interstate Commerce Commission (1925) is in agreement.

" * * * Our valuation order no. 3 requires carriers to keep a record of additions, betterments, and retirements made subsequent to date of the primary valuation; to render annual reports to us showing, by primary accounts, the cost of such property; and to report the units of property installed and retired at such times and for such periods as we may request.

"During the year the force assigned to the administration of this order averaged 54 persons. Of this number an average of 29 were assigned to policing and checking the carriers' records in the field. * * * " (39th Annual Report of the Interstate Commerce Commission, 1925, p. 16.)

This same report also contains a significant statement as to the difficulties of securing sufficient competent personnel at salaries that the Government can afford to pay. Explanation of the difficulty of keeping a valuation current is to be found in the 1930 Report of the Commission, which describes the extent to which property values in the railroad industry fluctuate in the course of a year.

"Changes in the property of the carriers, consisting of additions, betterments, and retirements, varying in amounts from more than one-quarter billion to more than one billion dollars, occur annually. Price levels, likewise, fluctuate continually. Therefore, unless, as provided by paragraph Fifth (f) of section 19a, we keep informed of such changes, both in the property and its value, the valuations quickly become obsolete. The United States Supreme Court has held that substantial fluctuations in price levels affect values, and it is the settled rule of that Court that the lawful rate base is present value. It follows, therefore, that if valuations are to be of practical use they must not become obsolete." (46th Annual Report of the Interstate Commerce Commission, 1932, p. 89.)

It was not until 1932 that the Interstate Commerce Commission completed the valuation process which it had so hopefully described in 1922 as practically complete as far as field work was concerned and which had been entrusted to it by Congress in 1913.

"During the year we have completed the last of the primary valuations of the 1,685 steam railroads listed for valuation as existing on March 1, 1913, the date of the enactment of the valuation act. These valuations are incorporated in 1,035 final valuation reports, although a few have not yet been published." (46th Annual Report of the Interstate Commerce Commission, 1932, p. 86.)

The recapture provision of the Transportation Act of 1920 added very measurably to the work of the Bureau of Valuation of the Interstate Commerce Commission:

"* * * By increased appropriation we have been enabled to assign a somewhat increased force to the administration of this order. This has averaged 64 employees, 40 of whom have been engaged in the field work of policing and checking the carriers' records. Up to the present time preliminary examinations have been made in the offices of 460 carriers. Complete field examinations, covering an average period of seven years subsequent to the various dates of valuation, have been made of the records of 205 carriers, aggregate mileage 68,000. Field examinations covering an average period of eight years are now in progress on 30 carriers, aggregate mileage 48,000. The present force available for this work still falls short of the requisite number." (40th Annual Report of Interstate Commerce Commission, 1926, p. 15.)

In fact, in one year, 1930, the Interstate Commerce Commission reported that its valuation bureau restricted itself in large measure to recapture cases.

"The activities of the Bureau of Valuation have in a large measure been restricted during the year for which this report is made to valuation work in recapture cases. This is in conformity with instructions issued July 18, 1929, that the 'Bureau give precedence in its valuation work to recapture cases'." (44th Annual Report of Interstate Commerce Commission, 1930, p. 59.)

It should be noted that the valuation work commenced in 1913 was, in comparison with the recapture valuations, a more or less disinterested scientific inquiry. Valuation in connection with recapture was specifically linked up with the enforcement of a policy designed to limit the profits of the more favorably situated carriers. Anticipation of the resultant legal difficulty in courts which it was feared the recapture provision would run into, necessitated an even more elaborate personnel and much fuller investigation than valuation carried on from a purely scientific basis.

"* * * It soon became manifest that the protests were to test with meticulous detail the inventories, prices, methods, theories, and conclusions, and even administrative procedure, and that as to any and all of these there would probably be appeal to the courts. Consequently the work had to be done with the greatest care, not only for the sake of the undertaking itself but also to withstand attack in the courts. This in turn required an army of experts consisting of engineers, land appraisers, auditors, accountants, and attorneys. Protests were filed in 748 cases and hearings held in 503 cases. Under the broad latitude afforded by the law, which gave to every protestant his right fully to be heard, hearings on individual properties ran many months. In addition there have been suits attacking our decisions. To these long-drawn-out proceedings during the later years is attributable much of the delay in the completion of the primary valuations.

"It is obvious that this act requires the most extensive, detailed, and exhaustive investigation, culminating in a valuation of the complex property of the railroads extending over 250,000 miles of main track, and 400,000 miles of all tracks, together with equipment, terminals, and all other holdings. The result was a much greater undertaking than those who wrote the many detailed requirements into the law could realize at the time of its enactment." (46th Annual Report of the Interstate Commerce Commission, 1932, p. 88.)

That a provision such as the recapture provision demands excessive policing is apparent from comparing the amount of excess income which the carriers reported, with the Interstate Commerce Commission's estimate of the recapturable excess which they had actually earned.

Recovery of excess net railway operating income, general railroad contingent fund

Period	Number of reports	Number of reports in which excess income is reported	Total amount of excess income reported
Applicable period, 1920	993	34	$2, 505, 006. 03
Calendar year:			
1921	975	27	458, 535. 72
1922	931	50	1, 867, 239. 33
1923	902	53	6, 909, 296. 66
1924	902	23	1, 196, 261. 90
1925	897	32	2, 402, 198. 71
1926	882	24	1, 090, 490. 78
1927	870	10	177, 566. 32
1928	851	19	1, 115, 087. 16
1929	843	27	5, 378, 101. 20
1930	810	9	381, 266. 47
1931	753	2	67, 821. 48
Total excess			25, 548, 871. 76

While the carriers reported a total excess income of only $23,548,871.76, one-half of which is subject to recapture, for the period 1920 to 1931, inclusive, our estimates of recapturable excess income for the period 1920 to 1930, inclusive, amount to considerably over $300,000,000. * * * (46th Annual Report of Interstate Commerce Commission, 1932, p. 93.)

Finally, despite all of the Commission's wrestling with the problem of valuation for recapture purposes, the Supreme Court in the *O'Fallon case*, 279, U.S. 461 (1929), by insisting that the Commission had not paid sufficient attention to the factor of reproduction cost in its valuation, necessitated a wholesale revision of the Commission's work.

"The amount due from the carriers, according to preliminary computations made in the manner outlined above, is approximately $300,000,000 for the years 1920–28. As a result of the Supreme Court's decision in the St. Louis & O'Fallon case, this estimate must be changed. It is estimated that under the present system of quasi-judicial hearing procedure a minimum of six years would be required to dispose of the present arrearage, and even at the end of that period the work would hardly be current, owing to accumulations during the interval" (43rd Annual Report of Interstate Commerce Commission, 1929, p. 87.)

Even with the recapture provision repealed, the appropriation for valuation available to the Interstate Commerce Commission was $1,000,000 for the year 1933–34, and its active personnel included 381 employees.

"The amendment above referred to, together with repeal of provisions of section 15a relating to excess net railway operating income, greatly simplify the valuation work. Together with the completion of the primary valuations it has enabled us to reduce materially the personnel and expenditures in the Bureau. The reduction was possible, also, because of the progress made in correcting and revising the original inventories and underlying records and data. For the last fiscal year 1932–33) the appropriation for the Bureau was $2,750,000. Its personnel on June 1, 1933, consisted of 910 employees. The appropriation for the current fiscal year (1933–34) is $1,000,000, and its active personnel on July 1, 1933, consisted of 381 employees" (47th Annual Report of the Interstate Commerce Commission, p. 74, 1933).

This appropriation is insufficient to allow the Commission to make any considerable progress far in connection with the valuations of carriers other than railroads.

"Section 19a is applicable to all carriers subject to the provisions of the act. Insufficient appropriations have prevented us from proceeding with the valuations of carriers other than railroads with the exception of the Pullman and telegraph companies. The valuation of these latter companies is being prosecuted as far as appropriations permit. Requests for additional appropriations to value other carriers such as pipe line and telephone companies have been made from time to time" (47th Annual Report of the Interstate Commerce Commission, 1933, p. 76).

This situation exists in an industry with a well-established tradition of regulation in the public interest, and an industry whose books and records were consequently in much better shape than the mass of American industry. Furthermore, the statute (37 Stat. 701; 48 Stat. 221) was liberal in its provisions in aid of investigation; also to a certain extent comparative checks could be made with data which had been acquired by the State public-utility commissions which had preceded the Interstate Commerce Commission in the field.

2. GENERAL DIFFICULTIES OF PUBLIC-UTILITY VALUATION

The difficulties which have only sketchingly been brought out in connection with the valuation of interstate carriers are paralleled throughout the public-utility field. Frequently, of course, the issues which are raised in specific controversies do not directly concern themselves with the problems of valuation. If there be an incentive on the part of the utility to provoke delay, obstacles or confusion, resort is often had to legal technicalities and to statutory issues. The real motive underlying the attempt to thus confuse and becloud the issue will, in the usual instance, be the utility's contention that it is being unconstitutionally deprived of a fair return on its investment. The two major considerations which are germane to such a contention are the value of the utility's investment, and the rate of return on its investment to be accorded the utility. Complexity, volume, delay, and the other features which characterize rate regulation can in the usual instance be referred to the problem of valuation.

Voluminous records are the rule in public-utility rate controversies. Thus, "An illustration of the experience of the commissioner is found in the case of *The Pacific Northwest Public Service Company* v. *Oregon Public Utilities Commissioner* in the district Federal court at Portland, Oreg.

* * * * * * *

"The commissioner's hearing developed a transcript record of 500 pages and 43 exhibits. Among these exhibits was a voluminous study and analysis prepared by the engineers of the commission." (Hearings before the Committee on the Judiciary, House of Rep., 73d Cong., 2d session, on S. 752, Serial 4, p. 18, February 27, 1934.)

Mr. Minton, of the Public Utilities Commission of Indiana, testified before the House Committee on the Judiciary, as to one case involving his commission:

"Mr. MINTON (Public Utilities Commission of Indiana). If we are taken into the Federal court, as we are threatened with in the *Electric case*, as we have just heard, we will be confronted, of course, with the great array of volumes of exhibits, as to the inventory and appraisal of that property, some sixty-odd volumes of it, and perhaps another array of engineers." (Hearings before the Committee on the Judiciary, House of Rep., 73d Cong., 2d session, on S. 752, Serial 4, p. 49, February 27, 1934.)

He had an even better illustration in his testimony, that of the *Indianapolis Water case* which re-opened a controversial situation which the Supreme Court had already passed once.

"The *Indianapolis Water case* was before the Supreme Court of the United States in 1926; its title was *McArdle* v. *Indianapolis Water Company.* The higher rates were sustained by the Supreme Court of the United States. During the time of the depression out there, they instituted a proceeding against this water company to reduce their rates again. And the case was again taken into the Federal court.

"Now, that the case started early in the fall of 1931. The commission wrote its order in April 1932. They were promptly enjoined in the Federal court, and in May 1933, we appeared before the special master in the Federal court to start to take testimony in that case. The special master in that case is a distinguished ex-judge in our State, a former United States attorney, and he was master in chancery, who has heard a number of utility cases before. We started on the 1st of May to take testimony, took the testimony all summer long, and finished about the middle of August; and we had compiled the largest record of testimony that had ever been taken in the Federal court in Indianapolis, according to the statement of the reporter who reports in that court, and has been reporting there for 30 years; a record of 15,000 typewritten pages, with hundreds of pounds of exhibits—books of exhibits, running from 200 to 400 pages each.

"Now, that utility had been before the commission, with its engineers and its experts, and had gone into this thing rather thoroughly before the Commission. They brought this firm of engineers from New York, a distinguished firm; and when they came into the Federal court, the record which was made before the Commission was utterly ignored, and there was no attention paid to it at all. They started *de novo.* And they used not only the engineers used before the Commission, but they employed in the meantime an additional firm of engineers in the city of New York, a very distinguished firm, I understand the outstanding firm in New York—and they brought both firms out there.

"And so we had two great firms of engineers out there in that water case. And in addition to that they brought a very noted utility expert from New York to testify about the rate of return. They brought New York counsel out there.

"So we spent the whole summer there taking the testimony in that case. The briefs have just been filed on behalf of the attorney general, who represents the commission in that matter and he just last week filed his brief before the master. The brief is a document of some 200 or 300 pages, and the brief filed by the utility is some 300 pages, I suppose." (Hearings before the Committee on the Judiciary, House of Rep. 73d Cong., 2nd session on S. 752, Serial 4, pp. 48–49, February 27, 1934.)

The expenses entailed by such a procedure are very considerable.

"in the *Indianapolis Water Co. case*, they were still amortizing the expenses of the 1926 rate case at the time we heard the last case out there in the Federal court; and they were still amortizing in Indianapolis, to the tune of $30,000 per annum in expenses of that case.

"The Chairman. What were the expenses in the case?

"Mr. Minton. Some $200,000. I do not recall the exact figure. In preparing this case to present to the master last summer, the Public Service Commission, through its attorney general and legal representative, employed additional engineering help, when we were confronted with their engineers on behalf of the utilities; and we spent $25,000 of the people's money trying to prepare that case to present it again in the Federal court. And so we are spending thousands and thousands of dollars in that one case." (Hearings before the committee on the Judiciary, House of Rep., 73d Cong., 2nd session, on S. 752, serial 4, Feb. 27, 1934, p. 49.)

Other illustrations may be adduced of investigations which not only cost the State considerable money, but also as a consequence of court litigation involved delays in effective administrative action. Thus, the State of Kansas spent almost $100,000 upon an investigation of gas rates charged by a company serving a hundred or more towns. Yet, by virtue of an injunction in the Federal district court, this case was delayed one year. (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, 2nd session, S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 258.) In New Jersey a valuation of public utility property took two years and cost more than $100,000. (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, 2nd session, S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 214.) In the Pacific Telephone and Telegraph Company and Home Telephone Company cases, after three years of proceedings within the State, new evidence taken before a special master in Federal Court; the State of Washington and its municipalities were subjected to more than $100,000 in the way of expenditures. (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, second session on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 262.)

A classic instance of delay caused by litigation is supplied by the Chicago Telephone case, referred to four times in the hearings before the House Judiciary Committee on the Johnson bill (hearings before the Committee on the Judiciary, House of Rep., 73rd Cong., 2d session on S. 752, serial 4, pp. 23, 70–71, 138, 224, Feb. 27–Mar. 1, 1934). The mere printing of the record in this case for the United States Supreme Court cost $25,000.

"What the 10 years of litigation has cost we can only guess; but we know from the opinion of the United States District Court that the city of Chicago was obliged to seek delays because it lacked funds to meet the costs which fell upon it, all of which might have been avoided had the company been willing to accept the method of review provided by Illinois law, under which the record before the commission would have been transferred to the court, without the calling of additional witnesses, and upon which na expeditious decision might have been had." (Hearings before the Committee on the Judiciary, House of Representatives, 73d Congress, 2d sess., on S. 752, serial 4, March 1, 1934, p. 224). The history of this case illustrates the potentialities for delay present in our Commission court system of rate regulation, with its emphasis on valuation.

"Mr. Benton (continuing). Some reference has been made here to the Illinois Bell Telephone case. I will be glad to spend a little time pointing out what occurred with respect to that case.

"On August 16, 1923, the Illinois commission, after investigation and hearing, made an order reducing the charges for certain classes of coin-box telephone service of the Illinois Bell Telephone Co. in the city of Chicago. The company applied to the United States District Court for an injunction on the ground of alleged confiscation.

"On December 21, 1923, upon a showing by affidavits, the district court granted an interlocutory injunction.

"October 19, 1925, the United States Supreme Court affirmed the interlocutory injunction in a per curiam opinion. *Smith* v. *Illinois Bell Telephone Company* (269 U. S. 531).

"January 30, 1930, after a hearing in which 3,000 pages of evidence was taken and 281 exhibits were introduced, the court granted a permanent injunction. *Bell Telephone Company* v. *Moynihan* (38 F. (2d) 77).

"On December 1, 1930, the United States Supreme Court reversed the lower court, and sent the case back for further finding of facts, the injunction continuing in force in the meantime. *Smith* v. *Illinois Bell Telephone Company* (262 U. S. 133).

On April 29, 1933, upon consideration of evidence taken in a hearing which extended over 5 months, the district court handed down another opinion again finding the rates confiscatory, and ordering the same permanently enjoined.

Illinois Bell Telephone Company v. *Gilbert* (3 F. Supp. 595). From this decision the Commission prosecuted an appeal, which is now pending before the United States Supreme Court.

This case has been in the Federal court for more than 10 years. It has been before the United States Supreme Court four times during that time and is now there the fifth time. Whether this is the end nobody knows." (Hearings before the Committee on the Judiciary, House of Representatives, 73d Cong., 2d sess., on S. 752, serial 4, Feb. 27, 28, March 1, 1934., pp. 70–71).

Another illustration of the opportunities for delay which litigation affords, one which can be adequately appreciated only, is presented by the following summary of proceedings in the case of *Great Northern Utilities Co.* v. *Public Service Commission of Montana*, 88 Mont. 180, 293 Pac. 294; 52 F. (2d) 802; 1 F. Supp. 328, 289 U. S. 130.

September 21, 1927: Commission, on its own motion, instituted inquiry into reasonableness of rates charged by Great Northern Utilities Co. for natural gas at Shelby, Mont.

November 29, 1927: Public hearing at Shelby, Mont., on issues involved.

October 1, 1928: Further public hearing at Shelby, Mont., on issues involved.

December 20, 1928: Public hearing upon reasonableness of new schedule of rates proposed by Great Northern Utilities Co. for competitive purposes.

January 22, 1929: Order of commission rejecting proposed schedule of utility and requiring utility to establish a specific schedule of rates effective February 1, 1929 (P.U.R. 1929–B, 176).

February 8, 1929: Action instituted by utility in State court to have order declared null and void and enforcement thereof enjoined.

November 15, 1929: Second amended complaint of utility filed.

November 22, 1929: Answer of commission filed.

November 30, 1929: Motion for judgment on pleadings filed by utility.

February 4, 1930: Motion for judgment on pleadings granted.

February 4, 1930: Judgment rendered against commission declaring order null and void and permanently enjoining its enforcement.

February 8, 1930: Commission files appeal to Supreme Court of Montana.

April 3, 1930: Commission files motion to advance appeal on docket. Granted. Argument on appeal set for June 9, 1930.

June 9, 1930: Appeal argued and submitted.

July 29, 1930: Supreme Court reverses lower court and remands cause for proceedings not inconsistent with views expressed (88 Mont. 180; 293 Pac. 294).

September 2, 1930: Utility petitions for rehearing.

September 9, 1930: Commission files objections to petition for rehearing.

November 25, 1930: Petition for rehearing denied (88 Mont. 232).

December 22, 1930: Utility files action in Federal court (U. S. Dist. for Montana) alleging same identical facts as in State case and requests injunctive relief on theory order violates fourteenth amendment to Constitution of the United States. (Same grounds urged, inter alia, in State courts.)

December 22, 1930: Utility moves for injunction pendente lite.

January 2, 1931: Commission moves State court for setting of State case for trial. Granted and case set for trial for January 23, 1931.

January 15, 1931: Commission files motion to dismiss in Federal court case.

January 21, 1931: Utility files praecipe for dismissal of case in State court.

June 29, 1931: Application of utility for interlocutory injunction comes on for hearing before Sawtelle, circuit judge, and Bourquin and Pray, district judges, at Helena, Mont.

June 29, 1931: At suggestion of court cause is submitted on final hearing with the right of commission to file its answer to bill of complaint on same date.

June 29, 1931: Answer of commission filed raising the same identical issues of fact as were raised in the State case.

July 22, 1931: Stipulation between parties agreeing that the case is submitted on application for interlocutory injunction only and not on final hearing.

August 18, 1931: Decision of three-judge court filed (Bourquin and Pray award interlocutory injunction to plaintiff—Sawtelle dissents). (52 F. (2d) 802.)

August 19, 1931: Interlocutory injunction issued against commission.

September 15, 1931: Petition for appeal filed and order of allowance made.

September 28, 1931: Sawtelle, C. J., files special concurring opinion (52 F. (2d) 805).

February 24, 1932: Appeal argued in Supreme Court of United States.

February 29, 1932: Per curiam order affirming action of special court issuing interlocutory injunction "without prejudice to the consideration and determination at final hearing of all questions of law and fact * * *" (United States Daily, issue of Mar. 1, 1932, p. 5, col. 1).

September 19, 1932: Final hearing before a three-judge Federal Court.

October 5, 1932: Three-judge Federal Court issued permanent injunction against the Commission's order (1 F. Supp. 328).

November 26, 1932: Commission filed appeal to the Supreme Court.

March 23 and 24, 1933: Argument on appeal before United States Supreme Court.

April 10, 1933: Decision of United States Supreme Court upholding Commission's order (289 U. S. 130; 77 L. Ed. 1080).

May 15, 1933: Mandate from the United States Supreme Court was filed with the clerk of the lower court.

June 7, 1933: The Commission moved for a decree in accordance with the mandate. The utility countered with a motion to file a supplemental bill on the ground of changed conditions. Before decision thereon the utility submitted a new tariff to the Commission and upon receiving the approval of a majority of the members of the Commission it secured an order of dismissal of its action in the Federal Court.

June 26, 1933: Order of dismissal entered. (Hearings before the Committee on the Judiciary, House of Representatives, 73d Congress, second session on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 267.)

Further examples of procrastination are furnished by *Smith* v. *Illinois Bell Telephone Company* (Hearings before the Committee on the Judiciary House of Representatives, 73d Congress, 2d session on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 308); the *Worcester Electric Light rate case* (Hearings before the Committee on the Judiciary, House of Representatives, 73d Congress, 2d session on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 225); the *Los Angeles Gas case* and the *Pacific Gas and Electric case* (Hearings before the Committee on the Judiciary, House of Rep. 73d Congress, 2d session on S. 752, serial 4, p. 215, March 1, 1934); the *Central Kentucky Gas Company* v. *Kentucky Railroad Commission* (Hearings before the Committee on the Judiciary House of Representatives, 73d Congress, 2d session, S. 752, serial 4, Feb. 27, 28, March 1, 1934) (p. 69); and the case of *The St. Louis and O'Fallon Railway Company and Manufacturers' Railway Company* v. *United States of America and Interstate Commerce Commission*, 279 U.S. 461, which finally upset, in the year 1927, the valuation for recapture purposes, for the recapture periods of the years 1920, 1921, 1922, and 1923, respectively.

An estimate of average delay was supplied by the Alabama Public Service Commission, with respect to injunction suits generally:

"(1) Such an injunction suit is attended with great delay. After the suit is filed and the preliminary orders of the court are made, under the rules of the Federal courts, a master is appointed to take testimony. The taking of testimony is rarely completed in less than a year, and in our opinion, the average time so employed will be found to exceed 12 months. Upon the conclusion of the taking of testimony, there is then a submission before the master. Upon this submission, the master usually takes several months in considering the testimony and in preparing and writing his report. The case then goes to the trial court. It requires, as a rule, several months to get the case submitted to the trial court and after the submission, as a rule, several other months before there is a decision by the trial court. In this way it requires, ordinarily, 2 years to get the case to a decision by the trial court. It will require in most cases most of another year to get the cause submitted, heard, and determined by the Supreme Court of the United States.

"Certainly, it is safe to say that it is rare if any such injunction proceeding can be heard and determined both by trial court and the Supreme Court of the United States within less than 2 years. The records will show that many of such cases have consumed from 3 to 5 years in the final determination thereof." (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, 2nd session, S. 752, serial 4, Feb. 27, 28, March 1, 1934 (p. 262).)

Reference to the *Consolidated Gas case* corroborates this statement. Hearings before the Committee on the Judiciary, House of Representatives, 73d Cong., 2nd session, on S. 752, serial 4, pp. 14–15, February 27, 1934.

In addition to the customary cost and volume indicia of the difficulty of utility inquiries, Mr. Reis, General Counsel of the Wisconsin Public Service Commission, supplies useful data in connection with the problem, often overlooked of the staff required to administer a utility investigation.

"*Mr. Reis* (General Counsel, Wis. Public Service Comm.).

"We cited you in our memorandum to the *Wisconsin Telephone case*, which is the most stupendous utility inquiry ever undertaken in Wisconsin. Over 20 accountants, 45 engineers, rate specialists, and others of the commission's staff will have worked for almost 3 years on this investigation, compiling a record to date of 7,500 pages of testimony and 361 exhibits, at a total cost, before it is all over, of roughly a quarter of a million dollars.

"Parenthetically, I may say that a substantial portion of this quarter of a million is charged back to the utility (and doubtless ultimately as an operating expense to the ratepayer). This charge is made under a law of Wisconsin, which allows the commission to assess against the utility, for regulation, up to four-fifths of 1 percent of the gross annual revenue, together with a remainder assessment of one-fifth of 1 percent of gross against all utilities. This gives us a budget of approximately $1,000,000, one of the largest in the country." (Hearings before the Committee on the Judiciary, House of Representatives, 73, Cong., 2nd session, on S. 752, serial 4, pp. 22–23, Feb. 27, 1934.)

The New York Telephone case is almost staggering in the voluminousness of its records and the number of stages at which comprehensive preparation was required, plus the delay consequent upon the taking of the various steps possible in commission-court procedure.

"Reference has been made by Senator Johnson and by the President of the United States to the *New York Telephone case*. I just want to give you a few of the dates regarding that case—just a few of them. The President said that it had taken 7 years. Well, that was true at the time when he had last heard of it, at a certain stage that they had reached. But it has taken nearly 10 years to get it through, from the time the case was started until the last decision in the United States Supreme Court.

"Now, what happened? Going back to 1923, before the Public Service Commission of the State of New York, there were proceedings; over 18,000 pages of testimony were taken in those proceedings. There were 728 exhibits and 129 hearings had been held.

"Then some time later, in 1924, there were further proceedings, nearly 8,000 pages of testimony were taken and 307 exhibits were received.

"But on January 23, 1924, when the company applied to the Commission for increases in rates, which were not promptly granted, they proceeded very shortly thereafter, on April 26, 1924, to seek to obtain an order from the Federal court restraining the enforcement of rates by the Commission. On May 1 they received an order for the enforcement of rates, allowing a surcharge of 10 percent, that is, allow those rates, plus 10 percent, in the city of New York, but no increase outside of New York. A master was appointed, and 710 hearings were held in that case, after all of the hearings that had been held before the Commission; 710 hearings were held before the master. That is, they started de novo. They did not take any of the record made before the Commission. They started to make a new record entirely. Over 36,000 pages of testimony were taken before the master in that case and 3,800 exhibits were received.

"Mr. OLIVER. And most of those were duplicates, were they not, of those that had been received in the State court?

"Mr. MALTBIE. I would say so, or substantially so. You see this was started in 1924, and they did not finish the taking of testimony until 1928. So they were 4 years in there, after starting in 1924; and you have always to take additional testimony for additional years; and the proceedings lasted 4 years before the master.

Mr. Maltbie speaking, Mr. Condon (Rep.).

"The taking of testimony was finished on September 10, 1928. That was over 4 years later than his appointment. Briefs were submitted and on March 11, 1929, the master made his report to the court. Then there was oral argument, and the statutory court made its decision November 7, 1929, about 6 months later. Of course, it was a very elaborate record and the findings were elaborate, and about 6 months were taken." (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, second session, on S. 752, serial 4, Feb. 27, 28, March 1, 1934, pp. 10–11.)

Despite his extensive investigation, the court found the master's valuation erroneous.

"The statutory court refused the master's valuation over $120,000,000, but found that the rates did not allow a fair return, and consequently, that the order of the Commission was confiscatory.

"Now that was in the fall of 1929. Then, of course, the Commission had to take testimony to fix rates in accordance with that order, and the Commission proceeded to do so. But the company was not satisfied with the decision, and filed an appeal to the United States Supreme Court. That was done in the early part of 1930; and here we are in the early part of 1934, and there has just been a decision made dismissing the appeal." (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, second session, on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 11.)

Compare also, *New York Telephone case*, hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, second session, on S. 752, serial 4, Feb. 27, 28, March 1, 1934, pp. 12, 13, 14, 23–24, 138, 141. The complexity of this particular valuation proceeding is all the more significant when taken in conjunction with the frequency with which the New York Telephone Company has been involved in litigation.

"there have been cases affecting the New York Telephone Co. beginning a long time ago—well, I will not go back before the war; but there was one in 1915 and there were some before that. But there were other cases affecting the New York Telephone Co., beginning in 1919 and 1920, and they had been before the Commission constantly from 1919 and 1920 until 1930, and we have had two or three since. He may be entirely right. I am not positive." (Hearings before the Committee on the Judiciary, House of Representatives, 73rd Congress, second session, on S. 752, serial 4, Feb. 27, 28, March 1, 1934, p. 16.)

3. VALUATION DIFFICULTIES IN CONNECTION WITH TAXATION

The practical administrative difficulties which valuation for rate-fixing purposes has encountered is well matched in valuation procedure related to taxation. The number of taxpayers with valuation difficulties is much larger than that of the public utilities, and the pressure caused by mere numbers has produced a tendency to settle most of these controversies outside of the courts. For that reason, instances of delay in connection with taxation valuations are characteristically found to be cases of administrative delay. Some indication of the complex and involved procedure that may be undergone in connection with valuation for tax purposes, and the amount of time that this consumes, is given by the following summary of proceedings in the case of the Union Natural Gas Co. of Pittsburgh, Pa.

"A review of the files of this case shows that there is still pending an additional tax of approximately $200,000 for the year 1917. There have been apparent delays on the part of the taxpayer and the department has not been able to close this case for any year.

"The following chronology best illustrates the conditions prevailing in this case:

"May 29, 1918: Schedules filed answering questions in the 1917 tax returns.

"March 19, 1919: Taxpayer requested to file valuation data.

"April 3, 1919: Second request asking for valuation data.

"April 4, 1919: Taxpayer desires to comply with request for valuation data and asks extension of time and conference.

"April 8, 1919: Conference granted for April 16.

"April 16, 1919: No conference memorandum.

"January 26, 1920: Taxpayer asks for ruling regarding drilling expenses.

"April 19, 1920: Taxpayer asked to file affiliated questionnaire.

"May 26, 1920: Second request for affiliated corporation questionnaire.

"July 21, 1920: Third request for affiliated corporation questionnaire, given to August 16 to reply.

"December 4, 1920: Taxpayer refers to letter of January 26, 1920, asking for ruling on method of handling labor and drilling costs for gas wells.

"January 4, 1921: Taxpayer reminds Department in answer received in reply to letters of January 26, 1920, and December 4, 1920.

"December 9, 1920: Affiliated corporation questionnaire received by Department.

"January 13, 1921: Coal valuation section asks for data to substantiate coal land values.

"January 22, 1921: Taxpayer asked to file consolidated income- and profits-tax return for 1919.

"February 4, 1921: Coal valuation reports mailed by taxpayer.

"February 12, 1921: Taxpayer advised regarding drilling costs per request of December 4, 1920.

"August, 1921: Form O, oil and gas valuation data for 1917, 1918, and 1919, received.

"October 10, 1921: Taxpayer asks for conference. Conference arranged for October 18.

"December 13, 1921: Taxpayer preparing amended returns for 1917 to 1920, asks status of case.

"December 27, 1921: Valuation oil and gas properties in progress by oil and gas section.

"January 3, 1922: Taxpayer asks for extension of time for filing amended returns.

"January 10, 1922: Extension granted to February 15, 1922.

"February 18, 1922: Taxpayer asks for 90 days' extension to file amended returns.

"February 28, 1922: No extension granted.

"March 1, 1922: Taxpayer asks further extension.

"March 18, 1922: No extension granted.

"November 7, 1922: Letter to taxpayer explaining valuation methods.

"January 29, 1923: Revenue agent's report filed showing additional tax for 1917, $232,440.70.

"February 1, 1923: Conference, oil and gas section.

"April 30, 1923: Taxpayer asks for conference.

"May 2, 1923: Conference granted May 10.

"May 11, 1923: Conference, oil and gas section, discoveries disallowed.

"January 10, 1924: Assessment letter showing additional tax for 1917, $198,190.75; for 1918, $2,719.30. This letter shows that taxpayer paid for 1917, $446,676.13, and for 1918, $289,400.58. The consolidated net income for 1917 was $3,330,798.48, while the aggregate net income for 1917 was $4,553,827.21. The consolidated invested capital for 1917 was $13,448,957.62.

"February 8, 1924: Protest filed regarding A-2 letter January 10, 1924.

"May 2, 1924: Taxpayer asks for conference May 13, 1924.

"May 13, 1924: No conference memorandum.

"July 22, 1924: Conference held in oil and gas section.

"August 21, 1924: Conference held in consolidated audit section with request that another conference be held September 12.

"September 12, 1924: Conference, consolidated audit section; certain balance sheets requested.

"September 23, 1924: Balance sheets received by Department.

"October 21, 1924: Conference, consolidated audit section.

"December 1, 1924: A 300-page revenue agent's report received covering the years 1918 to 1921, inclusive, showing additional tax due of $29,865.01.

"March 14, 1925: Department refers to taxpayer's appeal and asks for additional information.

"April 2, 1925: Taxpayer granted extension to April 24, 1925, to file additional information." (Senate Report No. 27, 69th Cong. 1st Sess., January 7, 1926, pp. 96–97.)

This might be compared with the long and involved court procedure in the Great Northern Utilities Co. case described on pp. 4359 of this memo.

The delay involved in this connection has important consequences, inasmuch as frequently the statute of limitations bars assessments and controversial issues cannot be raised because the statute has run. For example:

"In the Kennedy and Springer case (2981), the Government lost a tax of about $200,000, on $2,903,353 of profits from the sale on an oil lease, because of delay until the statute of limitations barred an assessment." (Senate Report No. 27, 79th Cong. 1st sess., January 7, 1926, p. 97.)

The valuation sections of the Bureau of Internal Revenue are even more hopelessly unable to keep up with their work than the similar units in the Interstate Commerce Commission, see pp. 4353 of this memo. Thus, in connection with the work in the oil and gas valuation section:

"The work of this section is so far behind that up to March 1, 1925, practically all effort was concentrated on valuations for 1919 and preceding years.

"In March 1925, the engineering division had 1,318 more 5-year-old cases undisposed of than in March 1923, a loss of progress of 207 percent in two years." (69th Cong., 1st sess., Senate Report No. 27, p. 96, 1/7/26.)

Valuation still remains a very vague and variant factor. Frequent indications are present as to the rapid growth of amount of valuation that properties are likely to acquire as they develop. This is in the main due to certain intangible factors such as good will. For example:

Houston Coal & Coke Co.—"On this basis the lease is given a value of $918,884.60 and the depletion unit is given 21.3 cents. As a royalty of 10 cents was stipulated in the lease, the coal in the ground was thus valued at 31.3 cents, when it was established, undisputed fact, agreed to between the income tax unit and the Pocahontas operators, that the market price of coal in the ground on March 1, 1913, was 17.9 cents. . . .

"In this case nearly $718,000 of value, due entirely to good will and selling ability, is attributed to coal in the ground and returned to the taxpayer as tax-free depletion" (69th Cong., 1st sess., Senate Report No. 27, p. 52, 1/7/26).

Appreciation in the value of patents may also be conducive to enormous accelerations in value. Take as an illustration:

Union Sulphur Co.—"In 1896 Herman Frasch, who had invented and patented a process which it was believed would be successful, organized the Union Sulphur Co. with a capital of $200,000. The property in question was acquired, subject to a mortgage of $165,000 in exchange for $100,000 par value of the capital stock of the company. The remaining $100,000 of capital stock was issued to Frasch in exchange for his patent.

"The value of the deposit, as of date of acquisition, allowed by the income-tax unit for invested capital purposes, was $3,000,000" (69th Cong., 1st sess., Senate Report No. 27, p. 65, 1/7/26).

Compare also the following illustrations of a valuation far above the original investment.

United States Graphite Co.—"This property was acquired in 1893 in exchange for stock of the taxpayer of the par value of $35,000. The value allowed for invested capital purposes for 1917 was $335,000, or $300,000 in excess of the par value of the stock, . . ." (69th Cong., 1st sess., Senate Report No. 27, pp. 60, 61, 1/7/26).

Texas Gulf Sulphur Co.—"The value allowed for depletion purposes is $38,920,000, and the depletion unit allowed is $4.86 per ton. The property in question was purchased in 1909 for $250,000" (69th Cong., 1st sess., Senate Report No. 27, p. 68, 1/7/26).

An unusually sudden accretion of value is illustrated by the case of the Temple Coal Company.

"The mining property of this company was acquired on June 24, 1914, at public auction, by the promoter of the company for $5,609,423.33 cash. This cash bid was based upon and exactly equaled the value which had been placed upon the property by an engineer employed by the vendor.

"On July 1, 1914, seven days after its purchase for cash, this property was turned over to the taxpayer in exchange for capital stock.

"The value allowed upon this property, for invested capital purposes, as of July 1, 1914, was $10,443,678.29" (69th Cong., 1st sess., Senate Report No. 27, p. 59, 1/7/26).

Differences as to the valuation to be placed on properties are a natural consequence of the difficulties of the valuation process. Extreme instances of such differences between the amount of valuation claimed by the taxpayer and the amount of valuation fixed by the Bureau of Internal Revenue follow:

Border Island Co.—"The valuation of $130,000, as of June 15, 1912, for invested capital purposes was accepted by the taxpayer, but a protest was filed as to the valuation of $121,082.25, as of March 1, 1913, for depletion purposes, and the case was reviewed by the solicitor's office. * * * The solicitor's office made a valuation, by an analytic appraisal, of $196,159.99 as of March 1, 1913. . . ." (69th Cong., 1st sess., Senate Report No. 27, p. 61, 1/7/26).

United States Graphite Co.—"The taxpayer claimed a March 1, 1913, value on this mine, for depletion purposes (1342), of $516,926.45. Mr. A. R. Shepherd, a special conferee, designated by and working directly under Mr. S. M. Greenidge, head of the engineering division, was permitted to overrule the nonmetals section and allowed a March 1, 1913, value of $1,043,044.56 (1348)" (69th Cong., 1st sess., Senate Report No. 27, p. 48, 1/7/26).

New Jersey Calcite Co.—"The taxpayer claimed a value of $130,000 on these leases as of April 1916, to be depleted in annual installments between April 1916 and the expiration of the leases. . . . The valuation engineers fixed the value of these leases at $8,950.93 (1294, 1295).

"The taxpayer appealed from this determination to the committee on appeals and review, which allowed a value of $106,000 on these leases (1299)" (69th Cong., 1st sess., Senate Report No. 27, p. 53, 1/7/26).

An insight into more typical discrepancies in valuation allowances and claims between the Government and the taxpayer is supplied by "Exhibit No. 1405", a table of amortization allowances and claims. It is, of course, axiomatic that valuation, as in the rate regulation field, will differ with respect to the purpose for which the property is being valued. As an illustration:

Celite Products Co.—"This taxpayer acquired a deposit of diatomaceous earth, used for filter and insulation purposes, in February 1916 for $325,000, par value of its capital stock. At this time the company had done no business, earned no profits, and its stock had no market value, except such as would be attributable to the property acquired.

"A value for invested capital purposes, as of date of acquisition (February 1912), was allowed at $325,000. A value for depletion purposes, as of March 1, 1913, was allowed at $1,550,000. * * *" (69th Cong., 1st sess., Senate Report, No. 27, pp. 62 and 63, 1/7/26).

These discrepancies are all the more impressive when viewed in gross. Thus, the differences between the original valuations and the revaluations of eleven silver mines is given by the following statement:

"Of the 11 valuations completed, the original valuations are $37,517,093. The revised valuations made by the metals valuation section are $23,867,624, a difference of $13,649,169. The original valuations are 157.19 percent of the revised valuations" (69th Cong., 1st sess., Senate Report No. 27, p. 110, 1/7/26).

Two valuations of the copper mines of forty-seven companies recorded the following differences:

"The totals of the March 1, 1913, value for depletion purposes of the property of the 47 companies which was revalued as follows:

First valuation	$1, 750, 024, 787
Second valuation	530, 217, 893
Difference	1, 219, 806, 894

"The first valuation, as of March 1, 1913, averages 330 percent of the second valuation.

"As of January 1, 1919, the totals of the first and second valuations of these 47 companies were as follows:

First valuation	$1, 456, 327, 002
Second valuation	323, 707, 404
Difference	1, 132, 619, 598

"The first valuations, as of January 1, 1919, average 449.9 percent of the second valuations" (69th Cong., 1st sess., Senate Report No. 27, pp. 109–110, 1/7/26).

Similarly striking figures are presented for other types of mines.

"* * * The revaluation of the mines in limestone replacement deposits show that the first valuations average 191.87 percent of the proper values. The first valuations of vein mines average 307.39 percent of the proper values, and the first valuations of the porphyry mines average 412.90 percent of the proper values" (69th Cong., 1st sess., Senate Report No. 27, pp. 109–110, 1/7/26).

A detailed example of the way in which two engineers' appraisals of the same property may differ is given by the following table:

"The hypothetical appraisals of the same property and the percent of the difference between the lower and higher estimates are as follows:

	First engineer's appraisal	Second engineer's appraisal	Percent of difference
Reserve in mine pounds	30,000,000	35,000,000	16⅔
Life of property	12 years	15 years	25
Expected selling price per pound	16 cents	15 cents	6⅔
Estimated operating cost per pound	12 cents	13 cents	8⅓
Profit per pound	4 cents	2 cents	100
Total operating profits	$1,200,000	$700,000	71. 4
Discount rate	8 and 4 percent	10 and 4 percent	25
Hoskold's present value factor	$0.568,624	$0.44619	28
Present worth, plant and ore	$682,348.80	$311,233.30	119
Estimated plant cost	$150,000.00	$200,000.00	33⅓
Present value, ores only	$532,348.80	$111,233.30	378. 59
Depletion unit	$0.017745	$0.003178	458. 57

"The greatest percent of difference in any of these factors is the plant cost which is 33⅓ percent, yet the difference in the depletion unit is 458.37 percent" (69th Cong., 1st sess., Senate Report No. 27, p. 114, 1/7/26).

It is not purported here to endorse the criticisms of the majority of the committee which prepared the report from which most of these illustrations have been selected and, to this end, any possible reflections therein contained on the character of the work of the Bureau of Internal Revenue have been deleted. Even the minority report in the Couzens committee concurred in the general proposition that honest men could differ as to the valuation which they would set on various properties, as will be apparent from their interpretation of the *Witherbee* v. *Sherman* case.

"In this case the valuation which the engineers of the committee thought should have been placed upon the property differed by approximately $5,000,000 from the valuation which the Bureau had set. At the same time the valuation of the committee's engineers differed by approximately $5,000,000 from the valuation set upon the property by Mr. Grimes, another engineer of the Bureau (69th Congress, 1st sess., Senate Report No. 27, pp. 4–5).

One should also examine their statements on page 13. In any event, it is immaterial whether the differences in valuation be the result of dishonesty or a reasonable difference in opinion. Both alternatives remain ample evidence of the administrative difficulty of arriving at valuations which will be accepted by parties with adverse interests in ascertaining the amount of the valuations. One may close with the opinion of Dr. T. S. Adams, of Yale University, long associated in a very responsible capacity with the Treasury Department:

"I think that no one thing so conduces to delay and complexities of the tax laws as the necessity for valuation.

"I think it may be possible, and I hope that the department, some representatives of which are present, will bestir themselves to make suggestions to get away from * * * problems of valuation, the solution of which problems means the exercises of judgment and differences of opinion, mistakes, and delay. If there is any human way of getting away from that, the Government of the United States ought to get away from it". (69th Congress, 1st sess., Senate Report No. 27, 1/7/26, p. 116).

Exhibit No. 1344

Explosives Department (1933)

NET RECEIPTS

Net receipts and average selling prices for the month of February were as follows:

	Net receipts	Selling price
Dynamite (per 100 lbs.)	$1.13	$12.09
Granular "B" blasting (per keg)	.17	1.80
Pelleted "B" blasting (per 25 lbs.)	.41	2.14
du Pont caps (per 1,000)	1.47	11.21
E. B. caps (per 100)	1.62	5.64

NOTE.—Taken from Executive Committee Report of Explosives Department for month of February 1933, page 5.

TREND OF BUSINESS

Dynamite sales in February were 660,000 pounds below forecast, and the March order rate is disappointing. The indications now are that the volume for March will be somewhat below February's, whereas there is usually a seasonal increase of 13%. No material improvement can be forecast at this time, though there seems to be a general feeling of confidence that the times are on the mend.

PRICE CHANGES MADE AND CONTEMPLATED

On February 27th du Pont made a general revision of dynamite prices, and balanced the schedule by reducing the differentials between grades, particularly in the higher-strength powders. Revised quantity differentials were instituted and sales groups realigned at the same time. Approximately 4,000 special prices were eliminated. It is estimated that this department's gross value of sales will be decreased some $140,000 annually, but prices are now logical in comparison with costs and the whole price structure should be considerably improved. All competitors have promulgated similar price schedules.

Exhibit No. 1345

Excerpts from an Unsigned Mimeographed Memorandum Prepared in the War Department, Dated March 28, 1932, Headed "Explanatory Notes. Contract Forms for Use in Time of War"

From the fall of 1917 to the armistice approximately a hundred contracts a day were made in the Ordnance Department, and upwards of 350 persons were employed in the negotiation and preparation of these contracts. Usually when an agreement was reached, the contractor was given a procurement order which recited the quantity and description of the articles to be manufactured, together with the drawings and specifications, the price to be paid, the rate of delivery, and date of completion. The procurement order also contained the statement that a formal contract would follow. The preparation of these formal contracts, their approval by the negotiators, and execution by the contractor consumed considerable time. (By execution I mean the signing of the contract by the contractor and contracting officer.) Sometimes contractors took exception to some of the language of the contracts, then correspondence ensued to clear up disputed points, and it is a matter of record that sometimes contracts were not executed until several months after the date of the procurement order. In the meantime, the contractor, realizing that there was an urgent need for the supplies, proceeded with the work and relied on the good faith of the Government to satisfactorily adjust any inaccuracies between the contract as written and the agreement as made with the negotiators (page 1).

It was impossible for the few contracting officers who were stationed in Washington to read and digest the hundred and more contracts per day that were laid on their desks, and they delegated the duty of signing these contracts to officers whom they believed were thoroughly capable of studying the contracts and seeing that the interests of the United States were properly protected (pages 1 and 2).

* * * * * * *

* * * As soon after the armistice as conditions would permit, contractors were requested to suspend operations and submit claims arising out of contracts on which work was terminated. Most contractors were eager to cease operations on the manufacture of munitions and resume their peace-time avocations. For the most part, all work was stopped in December 1918, and upwards of 26,000 claims were filed with the Ordnance Department (page 3).

To add to their troubles, contractors who did not have formal contracts were now required to prove the actual amounts expended for labor, material and overhead, and these amounts were checked by government auditors and accountants. It was exceedingly difficult to determine with accuracy the cost of work in process, to fix the amortization on buildings and machinery, to determine the amount of overhead and the items that should be included therein which were applicable to the work. Disputes arose between the claimant and the claims board representatives, weeks and months were spent on investigations, and appeals to the War Department Claims Board in Washington were numerous. This was the unfortunate position that thousands of contractors who had not executed formal contracts found themselves in when the war was over. Many believed that they had been unfairly treated and vowed never again to take a war contract from the United States. Officers of the Government did everything possible to expedite settlement. They provided for partial payments whenever the facts warranted, in order to relieve the claimant of financial embarrassment; but the great difficulty was in securing the facts. * * * (page 3).

When the work of the claims board was finished, the Secretary of War appointed a board to draft standard forms of contracts to be used in time of war or other national emergency. This board was composed of officers of the supply services of the War Department, all of whom had experience in war-time procurement or in the settlement of claims arising out of the termination of contracts after the armistice. The board sought to produce a form of contract that would be fair alike to the Government and the contractor, and which would eliminate the difficulties I have referred to previously. They began by drafting (pages 3, 4).

* * * * * * *

In view of the prohibition against the use of cost-plus contracts, and for the purpose of procuring articles or work which could not be procured under fixed-price contracts, it was necessary to draft a contract which would eliminate the objectionable features of the cost-plus contract, and at the same time enable the Government to procure its munitions quickly and without loss to the contractor. This contract has been designated—

THE ADJUSTED COMPENSATION CONTRACT

The purpose of this contract is threefold: 1st, to insure the contractor against loss; 2nd, to provide an incentive to produce the munitions in the shortest possible time; and, 3rd, to provide an incentive for their production at the lowest possible cost (page 7).

* * * * * * *

* * * that portion of them which is applicable under the contract; the wages of the workmen; the cost of all material required; the plant overhead; the depreciation on plant and facilities used; the cost of preparing the plant for performing the work; the cost of any machinery or tools which may be required for the performance of the work; and, when the contract is completed or if it is terminated before completion, the cost of rehabilitating the plant or restoring it to its original condition. In addition to being paid its cost, it will be paid a predetermined fee. Thus the contractor is insured against loss. This saves the contractor the trouble incident to borrowing large sums of money from bans and paying high rates of interest. It enables the contractor, if the work is terminated, to receive the payment of any balance due without the necessity of filing a claim * * * (page 8).

* * * * * * *

All buildings, machinery, materials, etc., for which the contractor has been reimbursed are the property of the United States, and the Government has the right to remove such property even though the buildings and machinery may be in- stalled upon land not belonging to the United States.

All scrap resulting from materials paid for by the Government is the property of the Government (page 12).

Exhibit No. 1346

Meeting of the War Industries Board Held Tuesday, September 11, 1917, at 10:00 a.m., in Room 945, Munsey Building

Present: Judge Lovett, acting chairman, Mr. Baruch, Mr. Brookings, Admiral Fletcher, Mr. Frayne, Col. Pierce, Mr. Bingham, secretary, and Mr. Eugene Meyer, Jr.

Representatives of copper interests: Mr. J. D. Ryan, Mr. Joseph Clendenin, Mr. Murry Guggenheim, Mr. James McLean, Mr. T. Wolfson, Mr. R. L. Agassiz.

Copper.—Judge Lovett stated that the War Industries Board felt that a price of 22¢ per pound f.o.b. N. Y. for copper was a fair price and would allow the copper companies a reasonable profit. This price would hold for a certain period only when it could be revised either upwards or downwards. Likewise, that the wages being paid for labor at the present time should remain the same, notwithstanding the sliding scale agreements. The price to the public should be the same as to the Government and the Allies. The enforcement of this last could be accomplished by the copper interests.

Mr. Ryan stated that the copper interests could not control the price to the public and that 22¢ per pound for copper would create a condition where the small high-cost producers would not voluntarily cooperate in selling at the fixed price. They would however come in if 25¢ per pound were fixed.

He stated that to disturb the sliding scale rates now in force would be very harmful and would later lead to the curtailment of the production of copper. He further said that it would be impossible for the Government to commandeer all of the small high-cost mines as there are such a great number.

He suggested further that possibly the best solution of the problem would be for the Government to buy all the copper and distribute it to consumers and then if the price fixed was high enough to stimulate production, it should held for a considerable period, while if at a price which would tend to curtail production because of the small profit allowed and the impossibility of mining low-grade ores at a profit, the Government should buy for as short a period as possible.

The representatives of the copper interests present gave assurances that they would do all they could to assist at whatever price was fixed but that if a price below 25¢ per pound were fixed, they felt sure that many mines would refuse to sell to the Government unless forced to do so.

The meeting adjourned at 12:30 o'clock p.m. to reconvene at 10:00 a.m. Wednesday, September 12th.

(sgd.) H. P. Bingham, *Secretary.*

Exhibit No. 1347

Excerpts From Meeting of the War Industries Board Held Friday, November 16, 1917, at 10:00 a.m., in Room 703 C. N. D. Building

Chemicals, Aetna plant at Howard for smokeless powder: Col. Pierce presented a communication from the Chief of Ordnance dated November 16th, stating the the Ordnance Department wished to use the Howard plant of the Aetna Explosive Company for the manufacture of smokeless powder to be at the rate of 1,000,000 pounds per month and which plant was not vacant.

It was stated that the Aetna Company refused to operate this plant unless they received an order at over 64¢ per pound, which was 15¢ higher than the price being paid the du Pont Company. This was referred to Mr. Brookings with power to act.

The meeting adjourned at 12:45 p.m.

(Signed.) H. P. Bingham, *Secretary.*

[Insert 7E. Refer to page 386]

Excerpts From Meeting of the War Industries Board Held Friday, December 21, 1917, at 10:00 a. m., in Room 54 C. N. D. Building

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Mr. Frayne, Judge Lovett, Col. Pierce, Mr. Bingham, secretary.

Chemicals, order for smokeless powder with Aetna Explosives Company: Mr. Brookings presented a communication from the purchase section, gun division dated December 20th No. GP 471.5/799 asking the approval of the War Industries Board of proposed order for 12,000,000 pounds of smokeless powder with the Aetna Explosives Company on terms stated.

The meeting adjourned at 12 o'clock noon.

(Signed) Mr. Bingham, *Secretary.*

Excerpts From Minutes of Meeting of War Industries Board, January 2, 1918

Chemicals; order for 30,000,000 pounds of smokeless powder from the Hercules Powder Company.—Mr. Brookings presented a communicatilon from the Purchase Section, Gun Division, Ordnance Department, dated December 29th, relative to order for 30,000,000 pounds of smokeless powder to be placed with the Hercules Powder Company and recently approved by the Board at the price of 63¢ per pound and advising that the proposed price had been changed to 70¢ per pound.

Excerpts From Meeting of the War Industries Board Held Wednesday, January 2, 1917, at 10:00 a. m., in Room 54, C. N. D. Building—Continued

Under the advice of Mr. Brookings the Board approved of the amended contract with the opinion that while the Board considers 70¢ a high price and that as 7¢ per pound charged was for amortization of a new plant, that this should have been so shaped that this plant paid for by the Government in price should have been the property of the Government but that, however, as Captain Peters reports, it was impossible to secure this and that it was either necessary to pay the 70¢ per pound or go without this powder, and that having had nothing to do with the negotiations and acting only on Captain Peters' statement of the case and considering its emergency nature, the Board can see no reason why the contract should not be made.

Chemicals; action to secure necessary raw materials for explosive program.—Mr. Willard was asked to form a communication to the Secretary of War making definite recommendations as to actions to be taken to secure the necessary amount of raw materials to carry out the explosives program and to submit this communications to the Board for approval.

Chemicals; request for assistance in securing explosives from Ordnance Department.—A communication from the Purchase Section, Gun Division, Ordnance Department dated December 26th, No. GP 023.1/138, asking the War Industries Board for advice as to a general policy for providing additional capacity for military high explosives, was presented and referred to the special explosives committee of this Board for attention.

Exhibit No. 1349

May 29, 1934.

To: General Hugh S. Johnson, Administrator for National Recovery.
From: Code Committee, small-arms and Ammunition Mfg. Industry.
Subject: Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry.

The order approving the above-named Code of Fair Competition contained as conditions thereof, among others, that article XVI and article XVIII be deleted.

The undersigned code committee for said industry desires to cooperate with the National Recovery Administration, but it is not willing that it or any of the members of said Industry waive any constitutional rights or any right to object to future modifications of the code.

This letter is filed with the National Recovery Administration as notice to that Administration that any action on the part of the industry or any member thereof in compliance with any of the provisions of said code or in conformity with the standards therein contained, is taken with the express and continuous reservation of the right of the Industry and each of its members to object to any future modification of said code and to assert any constitutional right in connection therewith, and that in taking any such action or actions it and the members of the industry do not thereby waive such rights or either of them.

———— ————,

Code Committee, Small Arms and Ammunition Manufacturing Industry.

Frankford Arsenal,
Philadelphia, Pa., May 22, 1934.
VD/LD

Remington Arms Company,
Bridgeport, Conn.

Gentlemen: 1. Reference is made to the bid which you recently submitted in response to our advertisement 34-539 for supplying 100,000 rounds of shotgun shells, 12 gauge, loaded with smokeless powder and #7½ chilled shot, in accordance with the specifications of the advertisement.

2. You will recall that you declined to execute the bid affidavit furnished with this advertisement. This matter has been referred to the Secretary of War, who, in turn, communicated with the Administrator for Industrial Recovery to learn whether or not in this case an exception should be made and the certificate waived.

3. This arsenal has just been informed that no exception can be granted in this case and that in order to obtain consideration of your bid, it will be necessary that the bid certificate incorporated in the procurement form #2, copies of which are enclosed, be signed. In view of the refusal of the Administrator for Industrial Recovery to grant an exception in this case, information is requested as to whether or not you will execute the certificate on the enclosed form. If so, will you please have both copies signed and returned promptly, as this matter has now been delayed some little time, and it is desired that it be disposed of as promptly as possible.

4. In the event that you are still disinclined to accomplish this certificate, an early reply, so stating, is requested.

Yours very truly,

Incl. in dup.

(Signed) J. E. Munroe,
Colonel, Ord. Dept., U.S.A.

Exhibit No. 1351

Colonel J. E. Munroe,
Commanding Frankford Arsenal, Philadelphia, Pa.

May 24, 1934.

Dear Sir: Replying to your letter of May 22nd, also confirming telephone conversation with you today, the following statement clearly sets forth our position with respect to the proposed Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry:

On March 22nd, 1934, the proposed Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry was approved by the National Recovery Administration. In approving this code, the administrator deleted articles XVI and XVIII, reading as follows:

"Article XVI: By presenting this Code, those assenting hereto are not thereby waiving any of their constitutional rights which might be infringed by any of the provisions of the National Recovery Act."

"Article XVIII: By presenting this Code, the members of the Industry do not thereby consent to any modification thereof, and they hereby reserve the right to object individually or jointly to any such modification."

In deleting these two articles, the administration is denying the small arms and ammunition industry the right to object, either individually or jointly, to any modification of this proposed code, also the administration is asking this industry to waive its constitutional rights insofar as they might be infringed by any of the provisions of the National Recovery Act.

Because of these deletions more than 90% (from the standpoint of numbers and dollar volume of sales) of the small arms and ammunition industry, including 100% of the ammunition manufacturers, have informed the administration that the proposed code is not acceptable.

We therefore regret that we are unable to execute the certificate of compliance as requested by you.

Yours truly,

——— ———, *Vice President.*

PROPOSED EXCHANGE OF LETTERS BETWEEN THE INDUSTRY AND THE ADMINISTRATOR, RE DELETION OF ARTICLES XVI AND XVIII FROM CODE

GENTLEMEN: Pursuant to instructions given to us at the July 20th meeting of the Industry, Judge Gregg and I went to Washington on July 26th prepared to complete the proposed exchange of letters between the Industry and the Administrator, which ineffect, would cancel the Executive Order of Approval insofar as it deleted Articles XVI and XVIII from the Code.

At that time, a more satisfactory method of handling this matter was suggested by certain members of the Administration. This contemplated rewriting the original Order of Approval leaving out any reference whatever to Articles XVI and XVIII, and the matter was therefore left in the hands of the Assistant Deputy Administrator for final action. Several days ago, it developed that this revised procedure could not be carried out, as it had failed to receive the approval of Administration representatives who passed on matters of policy.

We were, therefore, requested to again visit Washington to negotiate the exchange of letters originally proposed. Accordingly, Mr. Gregg and I called on Assistant Deputy Administrator Roswell B. Clark on Tuesday morning, August 21st, and learned that he had been succeeded by Dr. W. L. Schurs. Conference with this gentleman developed that it would be necessary to further discuss the matter with Division Administrator Barton Murray, and during the day, letter was prepared for signature by General Johnson in the event the proposal met with his approval. He failed to act on Tuesday, and Mr. Gregg suggested that I remain in Washington the following day (Wednesday) in order to complete the exchange.

I did so, but General Johnson did not visit, or communicate with his office during the entire day. Hence, the Administrator's letter was not signed, and as our instructions specifically provided that the letters should be exchanged, I withdrew the Code Committee's letter, and certified extract from Minutes of the July 20th meeting authorizing the exchange. Copies of the proposed letter and the Administrator's reply were left with Assistant Deputy Administrator Schurs, who stated the matter would be taken up with General Johnson when he returned from his vacation two weeks hence. This statement by Dr. Schurz was the result of our intimation that the industry was desirous of having the Administration's letter signed by General Johnson personally.

From the foregoing, it will be seen that the status of the Code remains unchanged, and until further word is received from Washington, apparently neither the Code Committee nor this office can take further steps.

Yours very truly,

(Signed) C. STEWART COMEAUX,
Secretary Code Committee Small Arms and Ammunition Manufacturing Industry.

EXHIBIT NO. 1353

APPROVED CODE NO. 354

CODE OF FAIR COMPETITION FOR THE SMALL ARMS AND AMMUNITION MANUFACTURING INDUSTRY AS APPROVED ON MARCH 22, 1934

ORDER APPROVING CODE OF FAIR COMPETITION FOR THE SMALL ARMS AND AMMUNITION MANUFACTURING INDUSTRY

An application having been duly made pursuant to and in full compliance with the provisions of Title I of the National Industrial Recovery Act, approved June 16, 1933, for approval of a Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry, and hearings having been duly held thereon and the annexed report on said Code, containing findings with respect thereto, having been made and directed to the President:

NOW, THEREFORE, on behalf of the President of the United States, I, Hugh S. Johnson, Administrator for Industrial Recovery, pursuant to authority vested in me by Executive Orders of the President, including Executive Order No. 6543-A, dated December 30, 1933, and otherwise; do hereby incorporate by reference said annexed report and do find that said Code complies in all respects with the pertinent provisions and will promote the policy and purposes of said Title of said Act; and do hereby order that said Code of Fair Competition be and it is hereby approved; provided, however, that (1) the provisions of Article II, Section 1, dealing with working hours be amended by inserting after the word "than" in the second line the words "eight (8) hours per day or", by deleting the period in the fifth line and inserting the words "; provided further that no employee shall work in excess of nine (9) hours a day or six days a week except as hereinafter provided"; (2) the provisions of Article II, Section 1, Subsection (c) dealing with employees working additional hours be amended by deleting the period and inserting the words ", and provided further, that such hours shall not be availed of in more than fifteen (15) weeks in any year, nor more than forty-eight (48) hours in any week."; (3) the provisions of Article II, Section 2, Subsection 2 dealing with minimum hourly rates be amended by deleting the remainder of the Section after the word "females" in the fifth line and inserting a period; (4) the provisions of Article VII, Section 1, Subsection b, paragraph 1, dealing with resale price schedules be amended by deleting the words "resale price schedules", in the fourth line, by deleting the words "or resale" in the sixth and seventh lines, by deleting the remainder of the paragraph after the words "this Industry" in the seventh line; (5) the provisions of Article VII, Section 1, Subsection (b), paragraph 2, dealing with distribution of price schedules be amended by deleting the period at the end of the Section and inserting the words ", provided that the respective schedules of prices for each class of trade shall be available at all reasonable times to the bona-fide members of each class of trade served by the Industry; provided further, however, that consumers' prices shall be open to the public."; (6) the provisions of Article VII, Section 1, Subsection b, paragraph 5, dealing with resale price maintenance, be amended by deleting this entire section and inserting the following words "The Industry shall study and report to the Administrator recommendations in regard to resale price maintenance"; (7) Article XVI, dealing with waiving of constitutional rights, be deleted from the Code; (8) Article XVIII, dealing with consent by the members to modification, be deleted from the Code.

HUGH S. JOHNSON,
Administrator for Industrial Recovery.

Approval recommended:
W. A. HARRIMAN.
Division Administrator.

WASHINGTON, D. C.,
March 22, 1934.

REPORT TO THE PRESIDENT

The PRESIDENT,
The White House.

SIR: This is a report on the Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry, and on the hearing conducted thereon in Washington, D. C., September 27, 1933, in accordance with the provisions of the National Industrial Recovery Act.

PROVISIONS AS TO WAGES AND HOURS

This Code establishes a forty (40) hour week with permission to increase this to forty eight (48) hours per week for not more than twelve (12) weeks in any one (1) year. Employees in an administrative or an executive capacity, supervisors, planners, and technical research engineers, receiving not less than $35 per week, and outside salesmen are excepted from the foregoing provision. Also the above minima do not apply in the case of emergencies involving possible loss of life or property. Repair men, shipping and delivery crews, and cleaners are also excepted, but it is provided that they may not work more than 10% in excess of the forty (40) hour or forty eight (48) hour maximum. Watchmen may work fifty six (56) hours per week, but not more than six (6) days in any one (1) week.

Any employer may request an employee to work additional hours beyond those specified above, providing such additional hours shall be paid for at the rate of time and one-half.

Minimum wages for accounting, clerical, office, service, or sales employees are fixed in accordance with the President's Reemployment Agreement which provides a sliding scale of from fifteen dollars ($15) per week to fourteen dollars ($14) per week, according to population. For all other employees, a minimum wage of forty cents (40¢) per hour is established for males and thirty two and one-half cents (32½¢) per hour for females, provided, however, that, in case the rate per hour for any female employee was, on July 15, 1929, less than the rate above specified for the same class of labor, the minimum rate paid on July 15, 1929, may be paid, provided further that in no event it be less than thirty cents (30¢) per hour. Beginners without experience may be employed for a period not to exceed sixty (60) days, at a rate not less than eighty per cent (80%) of the standard minimum wage, provided the total number of such beginners shall not exceed five per cent (5%) of the total number employed by any employer in any calendar month.

The employment of any person under 16 years of age is prohibited, with a further provision that no person under 18 years of age may be employed in any hazardous occupation.

GENERAL STATEMENT

This Industry consists of companies which manufacture small arms and ammunition therefor, components thereof except propellent powder, and clay targets and traps. Some companies manufacture small arms only and some ammunition only. Others manufacture small arms and ammunition and clay targets and traps, and still others manufacture only clay targets or clay targets and traps.

There are approximately 25 manufacturers in the Industry, each of whom had an opportunity for active participation in the preparation of the Code, and it is interesting to note that those who did participate therein represented 100% in numbers and volume of those engaged in the manufacture of both small arms and ammunition and more than 90% of those engaged in the manufacture of small arms.

As there has been no trade association covering the entire Small Arms and Ammunition Industry, statistical information is quite meager.

The following figures illustrate the shrinkage which has taken place in the past five years:

Year	Invested Capital	Net Sales
1928	$48, 127, 329	$50, 218, 850
1933 (Estimate)	40, 221, 537	20, 000, 000

As a matter of national preparedness for defense, it is vitally important that this industry should be maintained in a sound and stable condition; to enable it to function promptly and effectively in support of the Government it is essential that its trained personnel be kept intact. These are the workers who after long periods of training have acquired the skill and experience necessary in directing operations in an Industry requiring a very high degree of mechanical and professional skill.

To insure retention of this trained personnel the Industry is obliged to conduct its manufacturing operations so as to secure the greatest possible volume, and this makes it necessary to meet peak demands. Its inability to control these peak demands is due to the fact that its product is distributed largely to the consumer during the latter part of the year. The volume of this distribution is affected by various factors which cannot be foreseen, among which may be mentioned: sudden changes in state and federal regulations regarding open seasons, purchasing power of the farmer and conditions generally affecting hunting.

It has been customary for the Industry to operate on a fifty five (55) hour weekly basis during peak periods. Under the President's Reemployment Agreement operations were reduced to forty (40) hours per week averaged over a three (3) months' period, with a resulting increase in employment of 28.6%. With the application of the provisions of this Code there will be a further increase in the number of employees, although it will not be substantially greater than that already in effect as a result of the President's Reemployment Agreement. The application of the minimum wages included in said Agreement has brought about an increase in the payrolls of the Industry at the rate of $1,500,000 annually. In this case also the effectuation of the provisions of this Code will augment this rate. It is not possible at this time to judge just what this increase will be; however, it should be borne in mind that the Code establishes a minimum wage for female employees of thirty two and one-half cents (32½¢) per hour as compared to the rate of thirty cents (30¢) effective in July. Before this July period this class of employees was being compensated at a rate as low as twenty cents (20¢) per hour.

An important feature of the Code is the prohibition contained in Article XI against the sale in the United States of machine or submachine guns or parts thereof, except to governmental subdivisions or to organizations having regularly organized police departments where such sale is authorized by the United States Attorney General. This provision was suggested by the Department of Justice and has been accepted by the Industry. I believe it to be a forward and effective step in the Campaign against crime in this country.

The Code makes provision for resale price maintenance. It does not establish any price maintenance as regards the sale of products to the consumer, but deals with open price lists and agreements of price maintenance between the manufacturers and the wholesalers in selling to the retailers.

FINDINGS

The Assistant Deputy Administrator in his final report to me on said Code having found as herein set forth and on the basis of all the proceedings in this matter;

I find that:

(a) Said Code is well designed to promote the policies and purposes of Title I of the National Industrial Recovery Act, including removal of obstructions to the free flow of interstate and foreign commerce which tend to diminish the amount thereof and will provide for the general welfare by promoting the organization of industry for the purpose of Cooperative action among the trade groups, by inducing and maintaining united action of labor and management under adequate governmental sanctions and supervision, by eliminating unfair competitive practices, by promoting the fullest possible utilization of the present productive capacity of industries, by avoiding undue restriction of production (except as may be temporarily required), by increasing the consumption of industrial and agricultural products through increasing purchasing power, by reducing and relieving unemployment, by improving standards of labor, and by otherwise rehabilitating industry.

(b) Said Industry normally employes not more than 50,000 employees; and is not classified by me as a major industry.

(c) The Code as approved complies in all respects with the pertinent provisions of said Title of said Act, including without limitation Subsection (a) of Section 3, Subsection (a) of Section 7, and Subsection (b) of Section 10 thereof; and that the applicant group is an industrial group truly representative of the aforesaid Industry; and that said group imposes no inequitable restrictions on admission to membership therein.

(d) The Code is not designed to and will not permit monopolies or monopolistic practices.

(e) The Code is not designed to and will not eliminate or oppress small enterprises and will not operate to discriminate against them.

(f) Those engaged in other steps of the economic process have not been deprived of the right to be heard prior to approval of said Code.

For these reasons, therefore, I have approved this Code, provided, however, that (1) the provisions of Article II, Section 1, dealing with working hours be amended by inserting after the word "than" in the second line the words "eight (8) hours per day or", by deleting the period in the fifth line and inserting the words "; provided further that no employee shall work in excess of nine (9) hours a day or six days a week except as hereinafter provided"; (2) the provisions of Article II, Section 1, Subsection (c) dealing with employees working additional hours be amended by deleting the period and inserting the words ", and provided further, that such hours shall not be availed of in more than fifteen (15) weeks in any year, nor more than forty-eight (48) hours in any week"; (3) the provisions of Article II, Section 2, Subsection 2 dealing with minimum hourly rates be amended by deleting the remainder of the Section after the word "females" in the fifth line and inserting a period; (4) the provisions of Article VII, Section 1, Subsection b, paragraph 1, dealing with resale price schedules be amended by deleting the words "resale price schedules", in the fourth line, by deleting the words "or resale" in the sixth and seventh lines, by deleting the remainder of the paragraph after the words "this Industry" in the seventh line; (5) the provisions of Article VII, Section 1, Subsection (b), paragraph 2, dealing with distribution of price schedules be amended by deleting the period at the end of the Section and inserting the words ", provided that the respective schedules of prices for each class of trade shall be available at all reasonable times to the bona-fide members of each class of trade served by the Industry; provided further, however, that consumers' prices shall be open to the public."; (6) the provisions of Article VII, Section 1, Subsection b, paragraph 5, dealing with resale price maintenance, be amended by deleting this entire section and inserting the following words "The Industry shall study and report to the Administrator recommendations in regard to resale price maintenance"; (7) Article XVI, dealing with waiving of constitutional rights, be deleted from the Code; (8) Article XVIII, dealing with consent by the members to modification, be deleted from the Code.

Respectfully,

Hugh S. Johnson,
Administrator.

March 22, 1934.

Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry

To effectuate the policies of Title I of the National Industrial Recovery Act, the following provisions are submitted as a Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry, and upon approval by the President, shall be the standards of fair competition for this Industry.

ARTICLE I—DEFINITIONS

(a) "Act" means the National Industrial Recovery Act.

(b) "President" means the President of the United States of America.

(c) "Administrator", as used in this Code, means the ADMINISTRATOR appointed by the President to administer Title I of the National Industrial Recovery Act, and at the time in office.

(d) The "Industry" means and includes the business of manufacturing and/or selling by the manufacturer or selling by one known to the public as a manufacturer selling principally for resale, small arms and ammunition therefor; and components thereof, except propellent powders; and clay targets and traps therefor; but does not include jobbers, mail order houses, chain stores, and/or dealers.

(e) "Code Authority" as used herein, means the Code Authority Committee created and described in Article VI hereinafter.

(f) "Secretary" means the person designated by the Code Authority to act in that capacity for the Industry.

(g) "Member of the Industry" means any one engaged in the Industry as an employer.

(h) "Employee", as used herein, includes any person engaged in any phase of the Industry in any capacity receiving compensation for his services, irrespective of the method of payment of his compensation.

(i) "Employer", as used herein, means any one by whom any such employee is compensated or employed.

ARTICLE II—HOURS OF LABOR AND RATES OF PAY

Section 1—Hours of labor

1. No person employed in the Industry shall be permitted to work more than forty (40) hours per week, provided that when necessary to meet seasonal demand, forty-eight (48) hours per week for twelve (12) weeks in any one year may be worked.

(a) Provided, however, that repairmen, shipping and delivery crews, and cleaners shall be permitted to work not more than ten (10) per cent in excess of the hours prescribed in this Section 1.

(b) Provided that watchmen may work fifty-six (56) hours per week, but not more than six (6) days in any one week.

(c) Provided further that any employee at the request of the employer may work additional hours beyond those specified in the three preceding paragraphs, provided such additional hours shall be paid for at the rate of time and one-half.

(d) Provided further that the above hours do not apply in the case of emergencies involving possible loss of life or property.

(e) Provided further that nothing in the foregoing employment provisions shall apply to employees in an administrative or executive capacity, supervisors, planners, and technical and research engineers, receiving not less than $35.00 per week; and outside salesmen.

(f) No employer shall knowingly permit any employee to work for any time which, when totalled with that already performed with another employer or employers in this industry, exceeds the maximum permitted herein.[1]

Section 2—Minimum wages

1. No employer in the Industry shall pay any accounting, clerical, office, service or sales employee at less than the rate of $15.00 per week in any city of more than 500,000 population, or in the immediate trade area of such city; at less than the rate of $14.50 per week in any city of between 250,000 and 500,000 population or in the immediate trade area of such city; or at less than the rate of $14.00 per week in any city of less than 250,000 population.

2. No employer in the Industry shall pay any employee other than as specified in the next preceding paragraph (1), less than forty (40) cents per hour for males and thirty-two and one-half (32½) cents per hour for females; provided, however, that in case the rate per hour for any female employee was, on July 15, 1929, less than the minimum rate above specified for the same class of labor, then the minimum rate for such class of labor shall be the rate paid on July 15, 1929, but in no event less than thirty (30) cents per hour.

3. This article establishes a minimum hourly rate of pay, which shall apply irrespective of whether an employee actually compensated on a time rate, piece work, or other basis.

4. Equitable and reasonable adjustments of pay schedules of employees, above the minimum, shall be made within thirty (30) days after the effective date of this Code by any employer who has not theretofore made such adjustments. The first reports of wages required to be filed under this Code shall contain all wage increases made since May 1, 1933.

5. Female employees performing the same class of work as male employees shall receive the same rate of pay as male employees.

6. Beginners without experience may be employed for a period not to exceed sixty (60) days, at the rate of not less than eighty (80) per cent of the minimum wages covered by Section 2 of this Article II, provided the total number of such beginners shall not exceed five (5) per cent of the total number employed by any employer in any calendar month.[1]

ARTICLE III—MINORS

On and after the effective date, no employer in this Industry shall emploly any person under the age of sixteen (16) years, and no person under the age of eighteen (18) years shall be employed in any hazardous occupation. Each member of the Industry shall furnish the Code Authority a list of such hazardous occupations, if so requested.

---

[1] See paragraph 2 of order approving this Code.

ARTICLE IV—STATUTORY LABOR PROVISIONS

1. Employees shall have the right to organize and bargain collectively through representatives of their own choosing, and shall be free from the interference restraint or coercion of employers of labor or their agents, in the designation of such representatives, or in self-organization or in other concerted activities for the purpose of collective bargaining or other actual aid or protection.

2. No employee and no one seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing, or assisting a labor organization of his own choosing.

3. Employers shall comply with the maximum hours of labor, minimum rates of pay, and other conditions of employment, approved or prescribed by the President.

4. Labor agreements now in force between members and their employees shall be affected only by such provisions of this Code as may prescribe higher wages and shorter hours than are provided for in such agreements.

5. Employees may be assigned to different kinds of work, but employers shall not reclassify employees or duties of occupations performed by employees so as to defeat the purpose of this Code.

6. Every employer shall make reasonable provision for the safety and health of his employees at the place and during the hours of their employment, by complying with the laws of the State in which such employer's plant is located.

7. All employers shall post copies of that portion of this Code pertaining to hours and wages in conspicuous places accessible to employees.

ARTICLE V—PARTICIPATION

The expenses of administering the Code shall be borne by the members of the Industry. The Code Authority may, from time to time, cause to be made such assessments against the members of the Industry as the Code Authority shall deem proper, and such assessments shall be payable as such Code Authority shall specify. The assessments herein referred to shall be divided among the members of the Industry according to the relation each member's dollar sales bear to the total dollar sales of the Industry for the last preceding year.

ARTICLE VI—ADMINISTRATION

1. To further effectuate the policies of the Act and to supervise and enforce the provisions of this Code, a Code Authority, consisting of not more than nine (9) or less than seven (7) members, including the Chairman, no two (2) members of said Code Authority to be chosen from one company, shall be selected by the members of the Industry at a meeting thereof, after reasonable notice of said election has been sent to all members of the Industry, by a majority vote of those members of the Industry who are represented at the meeting, in person or by proxy, in number, and value of sales for the last preceding year. The members of the Code Authority shall serve for one year, or until their successors shall have been chosen; and members of the Code Authority shall, by a majority vote, elect their own Chairman. The surviving members of the Code Authority shall fill any vacancy or vacancies occurring therein for the unexpired portion of the particular term. In addition to the foregoing, the ADMINISTRATOR may appoint from one (1) to three (3) members of said Code Authority, without vote, and whose terms of office shall be so arranged that they do not expire concurrently.

2. The Chairman of the Code Authority shall cause reasonable notice to be sent to all members of said Code Authority for all meetings thereof, specifying the time and place for holding the same. Each member of the Code Authority shall be entitled to one vote and a majority of the Code Authority shall be necessary to constitute a quorum for the transaction of business. The Code Authority shall select a Secretary and make such arrangements as may be necessary for administering this Code, subject to disapproval by the ADMINISTRATOR.

3. Meetings of all the members of the Industry may be held from time to time for the purpose of considering and acting upon any matters relating to the administration of this Code. Upon request to the Code Authority, signed by any three members of the Industry, for an Industry meeting, the Code Authority shall forthwith call such meeting, by causing notice, not less than five (5) days in advance of such meeting, to be given to all other Industry members, specifying therein the purpose of the meeting and the time and place for holding the same.

4. Each member of the Industry shall be entitled to one vote, either by company representative or duly authorized proxy, who would have power to act.

The presence of not less than seven (7) members of the Industry shall be necesarye for the holding of an Industry meeting. Provided, however, that a majority vote in numbers, and value of sales for the last preceding year of those members who are in attendance or who are so represented at any such meeting, shall be necessary for the determination of any question, but a lesser number may adjourn the meeting from time to time. In the event of an equal division upon any question, the Chairman shall cast the deciding vote.

5. The Code Authority shall, subject to review by the ADMINISTRATOR, or when requested by the ADMINISTRATOR or his representative, cause to be obtained from the members of the Industry, statistical data and information in such form and manner as not to disclose the individual figures, data and information of the respective members, except to the ADMINISTRATOR, if required by him, or to such disinterested person, or persons, as may be designated by the Code Authority, and as may be necessary to enforce the provisions of this Code.

The Code Authority shall make available to the ADMINISTRATOR such reports, data and information, in the manner herein specified, or as may be required by the ADMINISTRATOR, and will assist in keeping the ADMINISTRATOR fully advised, and confer with such representative of the ADMINISTRATOR from time to time as requested, to consider and study any recommendations presented on behalf of the ADMINISTRATOR or any member of the Industry regarding the operation, observance or administration of this Code. The Code Authority may delegate any of its duties to such agents as it may appoint, which would not involve the disclosure of the individual data or information of the members of the Industry, or any information required to be treated confidentially as herein specified, except as otherwise herein permitted to be disclosed. The ADMINISTRATOR, or his representative, with the approval of the President, may enter into agreements with the Code Authority on behalf of the members of the Industry, with their consent and approval relating to matters affecting the Industry, if, in the judgment of the President, such agreement will aid in effectuating the policy of the ACT, which agreements may be made in accordance with paragraph (a) of Section 4 of the ACT, and which do not conflict with clause (2) of sub-section (a) of Section 3 of the ACT.

ARTICLE VII—REPORTS

1. To provide for making available to the ADMINISTRATOR and members of the Industry, information to assist in further effectuating the policy of the ACT, each member of the Industry shall furnish, from time to time to the duly selected Secretary, reports, pertinent to the administration of this Code, properly certified when requested by the Code Authority, in such form and manner as herein, and as hereafter may be provided by the said Code Authority, subject to review by the ADMINISTRATOR, including the following:

(a) *Hours of Labor and Wages.*—(1) Report showing hours of work and rates of wages.

(b) *Publicity of Price Lists.*—(1) As used in this Article VII, the term "schedules" means and includes price schedules and discount sheets, resale price schedules, terms of payment, freight equalization points, and any allowances or conditions relating to or in any wise affecting the sale or resale of the products of this Industry. However, the term "resale" or "resales" as mentioned in this Article VII shall relate only to sales by those, who purchase from the members of this Industry, to others who buy to resell and who do not buy for use or consumption.[1]

(2) As soon as possible, after the effective date, as determined by the members of the Industry, and when so determined thereafter, all members shall file such schedules of prices with the Secretary from time to time, as and when made or issued, for immediate distribution to only those members of the Industry who manufacture and sell similar products.[1]

(3) Revised schedules covering said products may be so filed by any member of the Industry, for such immediate distribution from time to time thereafter to become effective upon the date or dates therein specified, but such revised schedules shall be filed with the Secretary five (5) business days in advance of the effective date or dates thereof. Any revised schedules subsequently filed by other members of the Industry during such five (5) business day period may be made effective on the same effective date of the revision previously filed, provided such subsequently revised schedules do not contain prices relatively lower than those in said previously filed revision,—otherwise the five day provision shall apply. Schedules raising prices shall not require the above five (5) day notice

---

[1] See paragraph 2 of order approving this Code.

and shall be subject to immediate cancellation by notice to the Secretary at any time within two (2) weeks of the date of filing of such schedules increasing prices.

(4) No member of the Industry shall sell, directly or indirectly, by any means whatsoever, any product of the Industry covered by the provisions of this Article VII, at a price lower or at a discount greater, or on more favorable terms or conditions than those provided in his current schedules.

(5) The products of this Industry, to a very large degree, are resold and distributed by wholesalers, jobbers, and distributors to dealers, retailers and others, and the resale of such goods by such wholesalers, jobbers and/or distributors at a price or prices less than the manufacturers' schedules, would be in conflict with the principles of the open price provisions contained in this Article VII. Accordingly, members of this Industry may enter into agreements not to resell the products of this Industry at prices and upon terms, discounts or conditions which are less or more favorable to the purchasers thereof, than those contained in the schedules of the manufacturers, who may be parties to such agreements, in effect at the time of any such resale or resales.[1]

(6) Except as otherwise specified herein, all reports mentioned in this Article VII, shall be filed with and distributed by the Secretary at such times and in such form and manner as may be determined by the Code Authority.

ARTICLE VIII

The practices and methods as set forth in the following paragraphs numbered 1 to 12 inclusive, including the sub-paragraphs thereof, in this Article VIII, are hereby designated as unfair methods of competition, and indulgence by any member of the Industry in any of the same shall be a violation of this Code.

1. *Interference with Existing Contracts.*—To knowingly interfere with an existing contract with a third party for the sale and purchase of products of this Industry, or to induce, attempt to induce, or assist a party to break any such existing contract;

2. *Gratuities, Free Small Arms and Ammunition, Samples and Tournament Program Advertising.*—(a) To give prizes or contributions, or supply free, small arms, loaded paper shells or metallic cartridges to individual shooters, gun clubs or associations, rifle clubs or associations, dealers or jobbers for the purpose of stimulating interest in and good will for such products of any particular member of the Industry;

(b) To quote prices lower than one's own current published resale prices on small arms or ammunition to individual shooters, gun clubs or associations, or rifle clubs or associations, for the purpose of stimulating interest in or good will for such products of any particular member of the Industry;

(c) To pay, furnish, give, or grant to any shooter or shooters any salaries, compensation, benefit, small arms, ammunition or special prize money for winning of matches or tournaments for the purpose of inducing such shooter or shooters to use the small arms or ammunition of the particular manufacturer;

(d) To give samples or free small arms and/or ammunition to jobbers, dealers or others, except to bona fide and well-known writers of arms and ammunition articles for their personal use only; a report of each such gift to be made to the Secretary at time of shipment;

(e) To place directly or indirectly in any shooting program, any advertisement for or on behalf of any member of the Industry or representative thereof;

(f) To fail to abide by and support the rules and regulations of any shooting association or any similar organization which defines the amateur status of a shooter, and in any way, directly or indirectly, or through a representative, supply, free of charge or at less than the particular member's own resale prices to dealers, any amateur shooter with any of said products, or anything of value contrary to the rules and regulations of any such association or organization;

Provided nothing herein shall preclude bona fide employees of any member of the Industry from competing in tournaments, or from using any of such described products of his own employer therein, without personal payment therefor.

3. *Commercial Bribery.*—No member of the Industry shall give, permit to be given, or directly offer to give, anything of value for the purpose of influencing or rewarding the action of any employee, agent, or representative of another in relation to the business of the employer of such employee, the principal of such agent or the represented party, without the knowledge of such employer, principal or party. Commercial bribery provisions shall not be construed to prohibit free and general distribution of articles commonly used for advertising, for commercial bribery as hereinabove defined;

---

[1] See paragraph 2 of order approving this Code.

4. *Defamation of Competitors.*—To make, cause or permit to be made, or published any false statement or misrepresentation of or concerning the business, policies, methods, or products of a competitor;

5. *Piracy of Trade Marks.*—To imitate trade marks, trade names, slogans or other marks of identification, in which another has acquired good will, for the purpose and with the effect of misleading purchasers;

6. *False Advertising.*—To make, cause, or permit to be made or published any false, untrue, or deceptive statement by way of advertising or otherwise;

7. *Misbranding.*—To falsely mark or brand packages or products of this Industry, for the purpose or with the effect of misleading or deceiving purchasers or others with respect to quality, quantity, character, grade or substance thereof;

8. *False Invoicing.*—To withhold from or insert in an invoice anything which would make the invoice a false record, wholly or in part, of the transaction in question, or make any arrangement which would contemplate payment or settlement contrary to the face of the invoice;

9. *Post-Date or Pre-Date Contract or Invoice.*—To post-date or pre-date any contract or invoice covering products of this Industry;

10. *Guaranty Against Price Decline.*—To guarantee against price decline except as the same may be limited to the decline of the particular member of the Industry, and such guaranty shall apply only to small arms purchased directly from the manufacturer in the same calendar year, and to ammunition purchased directly from the manufacturer during any twelve months commencing with March 1, and in each instance which are not delivered or which are in the hands of the purchaser and unsold;

11. *Consignments.*—To make or enter into any agreement or contract, the effect of which will amount to the sale and/or delivery on consignment of any products of this Industry, except powder supplied to ammunition companies, or to the lending of products for display purposes only; provided however, that no existing agreements of this nature shall be continued on and after the effective date of this Code;

12. *Secret Rebates.*—To pay or allow secretly, rebates, refunds, commissions or discounts, whether in the form of money or otherwise, except such as are obligatory under existing agreements, but in no case shall any such agreement apply to any transactions or shipments on and after the effective date of this Code.

ARTICLE IX

1. If formal complaint has been made to the Secretary that any provision of this Code has been violated by any such member, the Code Authority shall cause the facts to be investigated, and to that end may cause such reasonable examination or audit as may be necessary, by a competent or disinterested person or persons mutually agreed upon by the Code Authority and such member against whom the complaint has been made, or by such person or persons nominated by the Code Authority and approved by the ADMINISTRATOR. PROVIDED, if it should appear that any reports or data called for by this Code were willfully made inaccurate or not filed by any such member when and as herein required, or that any such member had indulged in any trade practice in violation of this Code, the expenses of such verifying work shall be paid by the party so in default.

2. Since any violation of the provisions of this Code will cause injury to members of the Industry and the amount of such injury would not be readily ascertainable, it is therefore agreed by and between all such members of the Industry who have so expressly, in writing or otherwise, assented to the provisions of this Article IX that each of such members who violates any provision of this Code shall pay to the Secretary, or such person as the Code Authority may designate, as and for liquidated damages, such sum as the Code Authority, or the ADMINISTRATOR, may determine, not exceeding, however, five hundred dollars ($500.00) for each violation, in addition to any other sums required to be paid by the provisions of this Code. Any and all moneys which may be paid to the Secretary as and for such liquidated damages, shall be used for the expense of administering the Code, or otherwise, as may be determined by the Code Authority.

ARTICLE X

1. The Code Authority may investigate and inform the President or the ADMINISTRATOR on behalf of the Industry: 1st: As to the importation into the United States of commodities competitive with products of this Industry selling on a price basis which undersell said products of domestic manufacture; and

2nd: As to the manufacture of articles competitive with products of this Industry by the Government of the United States at its various Arsenals under longer schedules of hours of labor and/or lower rates of pay than the standards of hours and rates of pay established by this Code, and selling on a price basis which undersells such commodities by members of this Industry; and

3rd: As to the extent to which such underselling of said imports and United States Government manufactured articles, as well as the extent to which the schedule of hours of labor and rates of pay adopted and followed by the Government of the United States in the manufacture of such goods, renders ineffective or seriously interferes with the maintenance of this Code.

2. The conditions as set forth in the preceding three subparagraphs, may be made the basis for complaint to the President or the ADMINISTRATOR on behalf of this Industry.

3. Except as may be subsequently set forth in a specific or supplementary Export Code for the Industry, the provisions of this Code now or hereafter adopted with regard to prices, discounts, deductions, allowances, extras, commissions, or methods and/or terms of sale, are not to apply to direct export sales or to sales in course of export (i.e., sales destined ultimately for export) or to sales of materials used in the manufacture of products for export.

ARTICLE XI

Members of the Industry shall have the right to sell or otherwise dispose of machine guns or sub-machine guns or parts therefor only to the United States Government, any State, Territory, or possession of the United States, and political sub-division thereof and the District of Columbia; provided that with the consent of the United States Attorney General they may be disposed of to National, State banks or to corporations or other business associations having regularly organized police departments, and to manufacturers of ammunition in the United States for testing purposes; provided further, that such members shall have the right to sell machine or sub-machine guns or parts thereof for export under such rules and regulations as may be promulgated by the United States Secretary of State.

ARTICLE XII

During any emergency involving actual or possible National defense, the provisions of this Code establishing maximum hours of labor shall not apply to the manufacture of such of the products of this Industry as are demanded by the War and Navy Departments.

ARTICLE XIII

Such of the provisions of this Code as are not required to be included herein by the National Industrial Recovery Act may, with the approval of the ADMINISTRATOR, be modified or eliminated as changes in circumstances or experience may indicate. It is contemplated that from time to time supplementary provisions to this Code or additional Codes will be submitted for approval of the ADMINISTRATOR, to prevent unfair competition in price, and other unfair and destructive competitive practices, and to effectuate the other purposes and policies of Title I of the ACT. Such supplemental provisions or additional Codes when approved by the ADMINISTRATOR shall have the same force and effect as any other provisions of this Code.

ARTICLE XIV

If any employer in the Industry is also an employer in any other Industry, the provisions of this Code shall apply to and affect only that part of the business of such employer which is included in this Code.

ARTICLE XV

The President, in accordance with the provisions of subsection (b) of Section 10 of the National Industrial Recovery Act, may from time to time, cancel or modify any order, approval license, rule or regulation issued under Title I of said ACT.

ARTICLE XVI

By presenting this Code, those assenting hereto are not thereby waiving any of their constitutional rights which might be infringed by any of the provisions of the National Industrial Recovery Act.[2]

---

[2] Deleted as per paragraph 2 of order approving this Code.

ARTICLE XVII

Within each State members of the Industry shall comply with any laws of such State imposing more stringent requirements upon employers than as set forth in this Code relating to hours of work, wages, or age of employees.

ARTICLE XVIII

By presenting this Code, the members of the Industry do not thereby consent to any modification thereof, and they hereby reserve the right to object individually or jointly to any such modification.[2]

ARTICLE XIX

No employer shall use any subterfuge to frustrate the spirit and intent of this Code.

ARTICLE XX

Any action taken by the Code Authority or other group within the Industry for the purpose of making effective provisions of this Code may be submitted to the ADMINISTRATOR for approval, and shall, in any case, be subject to the disapproval of the ADMINISTRATOR.

ARTICLE XXI

Nothing contained in this Code shall constitute the members of the Code Authority partners for any purpose. Nor shall any member of the Code Authority be liable in any manner to anyone for any act of any other member, officer, agent, or employee of the Code Authority. Nor shall any member of the Code Authority exercising reasonable diligence in the conduct of his duties hereunder, be liable to anyone for any action, or omission to act, under this Code, except for his own wilful misfeasance, or nonfeasance.

ARTICLE XXII

No provision of this Code shall be so applied as to permit monopolies or monopolistic practices or to eliminate, oppress or discriminate against small enterprises.

ARTICLE XXIII

The effective date of this Code shall be 12.01 A.M. the second Monday after this Code shall have been approved by the President.

Approved Code No. 354.

Registry No. 1109-1-01.

Exhibit No. 1353–A

APPROVED CODE NO. 354—AMENDMENT NO. 1

Amendment to Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry as Approved on March 29, 1934

ORDER MODIFICATION OF CODE OF FAIR COMPETITION FOR THE SMALL ARMS AND AMMUNITION MANUFACTURING INDUSTRY

The Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry having been approved in my Order dated March 22, 1934, subject to certain conditions and

WHEREAS the condition that the provision in Section 3, Article VII of said Code allowing a waiting period prior to the effective date after the filing of revised schedules be stayed for a period of sixty (60) days from the effective date of this Code does not appear as a condition of the approval of the Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry.

NOW, THEREFORE, on behalf of the President of the United States, I, Hugh S. Johnson, Administrator for Industrial Recovery, pursuant to the authority vested in me by Executive Orders of the President, including Executive Order No. 6543-A, dated December 30, 1933, and otherwise, do hereby modify and amend my said Order of approval of said Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry to read as follows:

---

[2] Deleted as per paragraph 2 of order approving this Code.

"That the provision of Section 3, Article VII, of said Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry allowing a waiting period prior to the effective date after the filing of revised schedules be stayed for a period of sixty (60) days from the effective date of this Code, or after the completion of a study of open price associations now being conducted by the National Recovery Administration."

HUGH S. JOHNSON,
Administrator for Industrial Recovery.

Approval recommended:
A. R. GLANCY,
Division Administrator.

WASHINGTON, D. C.,
March 29, 1934.

REPORT TO THE PRESIDENT

The PRESIDENT,
The White House.

SIR: This is a report on a proposed Supplemental Administrative Order amending the Order of Approval for the Code of Fair Competition for the Small Arms and Ammunition Manufacturing Industry.

This Code was approved by me on March 22, 1934, and Article VII, Section 3, of this Code provides a waiting period prior to the effective date, after the filing of revised price schedules.

In conformance with Office Order 63, dated January 25, 1934, the Supplemental Administrative Order amends my Order of Approval of this Code to provide a stay for a period of sixty (60) days from the effective date of this Code, or after the completion of a study of open price association now being conducted by the National Recovery Administration, before the provisions in Article VII, Section 3, pertaining to a waiting period become effective.

For these reasons, therefore, I have approved this Amendment.

Respectfully,

HUGH S. JOHNSON,
Administrator.

WASHINGTON, D.C.,
March 29, 1934.

Approved Code No. 354. Amendment No. 1.
Registry No. 1109–1–01.

("Exhibit No. 1354" appears in text on p. 4193.)

EXHIBIT No. 1355

[D-2572]

JUNE 30, 1932.
*54-Esthonian Gov't
MS–80–A
MS–64

COLONEL W. N. TAYLOR,
16 Place Vendome, Paris, France.

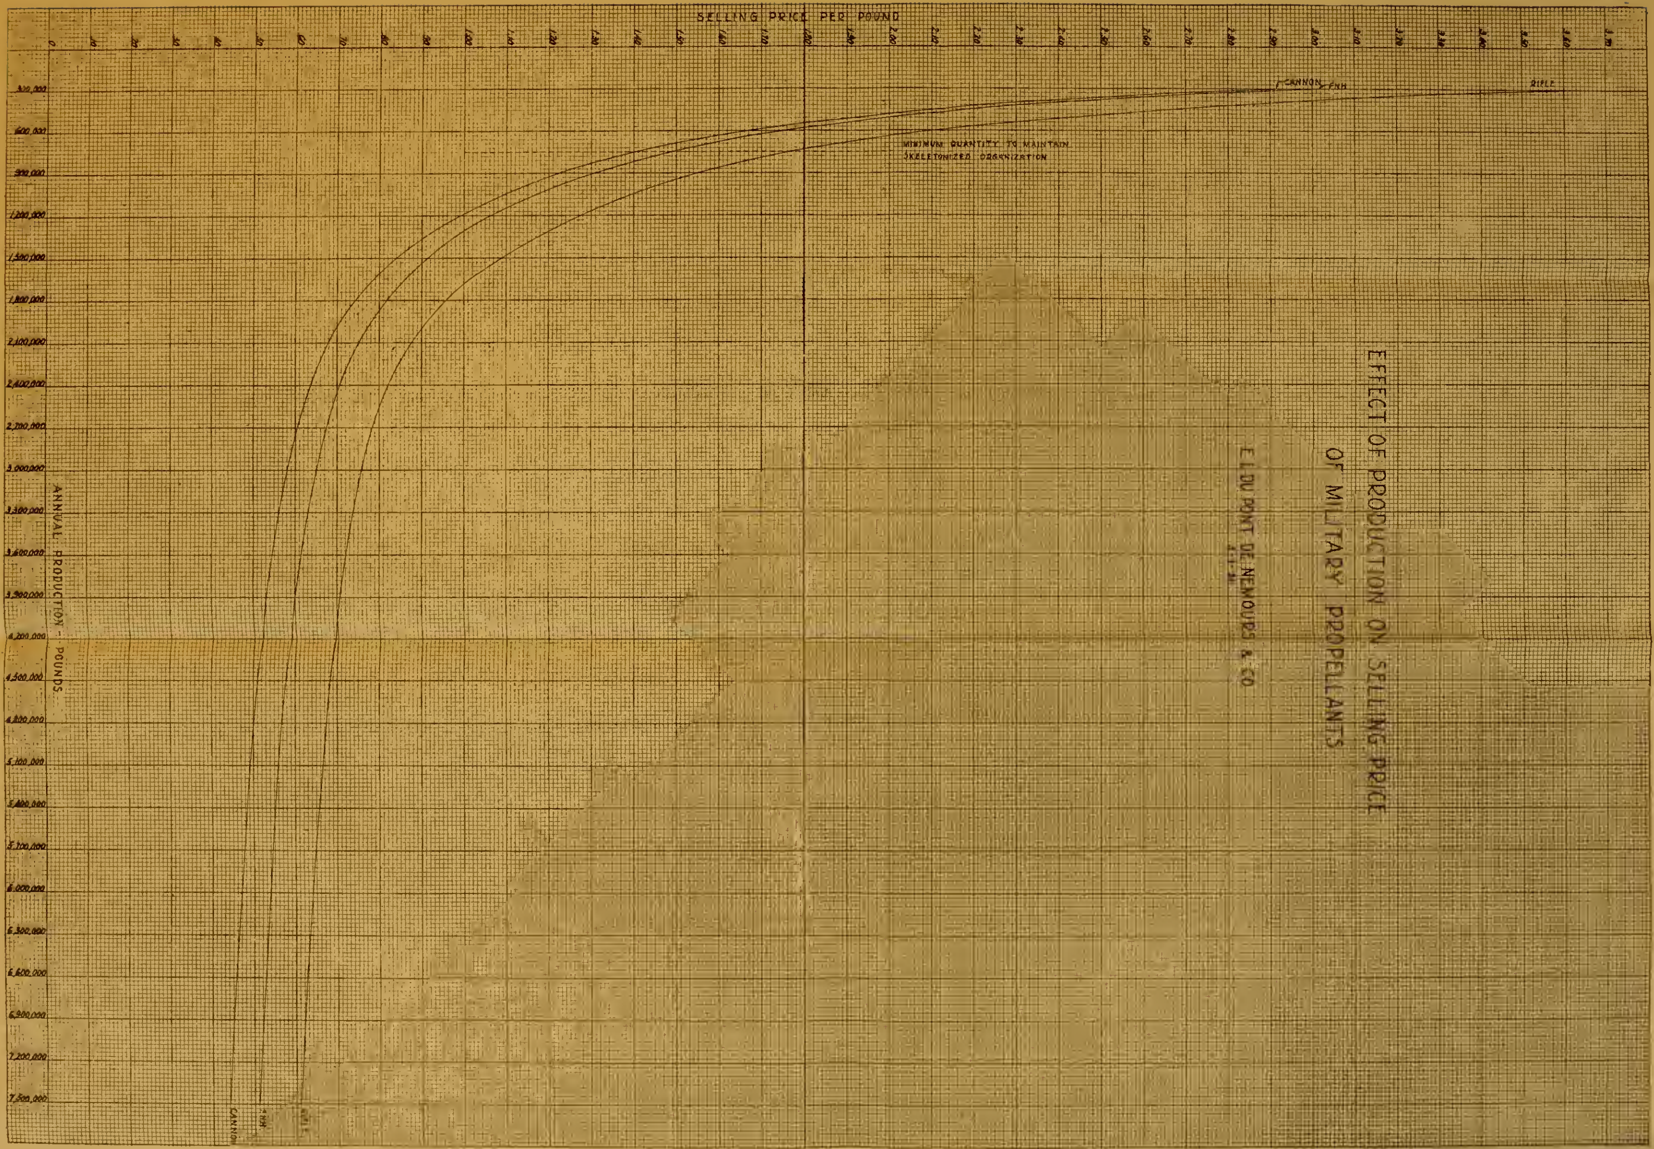
DEAR SIR: We are attaching confirmation of your cable no. 991 and our reply no. 824. We have noted carefully your cable no. 991 indicating that Esthonia are requesting bids to be opened July 1932, on 15,000,000 cartridges, delivery specified in autumn 1933.

The competitive prices quoted by I.C.I. and Bofors disrupt our price schedule and made a noticable differential in favor of the competitors insofar as made-up ammunition is concerned. You have advised that our maximum prices must be $1.40 per kilogram c.i.f. England insofar as I.C.I. is concerned, which price includes 3% commission and $1.50 per kilogram c.i.f. Belgium on sales to Fabrique Nationale, which price includes 5% commission.

---

*Pencil marking.

EXHIBIT No. 1357



Our cablegram has authorized you to quote these prices and naturally since they are considerably below our usual export schedule they must be considered our minimum figure. You must realize that our price schedule on rifle powder sales to the U.S. Government is 71 cents per pound f.o.b. Carney's Point, excluding boxes. The prices you have quoted figures, in the instance of sales to England, a gross selling price f.o.b. Carney's Point, including boxes, of 54½ cents and in the instance of Belgium a price of 57.6 cents, thereby reflecting a noticeable reduction.

Since our sales to the United States total approximately 700,000 pounds of rifle powder annually, we cannot take the chance of this reduced figure being divulged. Therefore, you must arrange some plan in submitting your proposal so that you will be absolutely satisfied that the prices quoted will be regarded with the utmost secrecy. We wish to make ourselves very emphatic on this point, and in the event you cannot work out the required arrangement or feel that our idea cannot be accomplished then we must advise you not to quote.

K. K. V. Casey, *Director.*

("Exhibit No. 1356" appears in text on p. 4198)

("Exhibit No. 1357", chart on effect of production on selling price of military propellants, appears facing this page.)

Exhibit No. 1358-A

(Copy to Lammot Du Pont, Wm. Coyne)

June 14, 1919.

Major-General C. C. Williams,
Chief of Ordnance, U.S.A.,
Washington, D.C.

Dear Sir: This will acknowledge your letter of June 7th, subject, Military Explosives.

We are in sympathy with your opinion that it would be well if the du Pont Company could continue efforts to improve military explosives and propellants.

Confronted with a situation which makes it appear very doubtful whether adequate reward can be expected if the efforts to improve were successful, makes it seem as though from a commercial point of view the du Pont Company should discontinue research.

Therefore, before making a recommendation that research along these lines be discontinued, I want to feel that every possibility of obtaining a financial incentive has been considered. Will you, therefore, give me some additional time to consider the question and also give the benefit of any thoughts which you have as to how the du Pont Company could justify expenditure of money with such a desperate chance of an adequate reward.

Very truly yours,

Irenee du Pont, *President.*

Exhibit No. 1359

War Department,
Office of the Chief of Ordnance,
Washington, August 26, 1919.

To insure prompt attention in replying refer to MA, No. 471567/5.
Ref'd. to K. K. V. Casey.
Subject: Military Explosives.

President, E. I. du Pont de Nemours & Co.,
Wilmington, Delaware.

Dear Sir: Your letter of June 14, 1919 has been received and has been given due consideration.

I am very glad to hear that the du Pont Company is interested in a continuance of their research into military explosives and propellants, and I quite appreciate that the immediate financial outlook is none too promising in this regard.

The Ordnance Department, however, has several problems of prime importance, connected with propellants, that make it advisable to urge you to lend your efforts in helping to solve. The principal immediate problem is the development of a nonhygroscopic flashless propellant. A letter has been written to the Military Sales Department outlining the data available in this office and discussing the most probable line of research.

As to the financial incentive I might state that funds are available to reimburse you for your outlay in this connection and it is believed that proper arrangements can be made toward this end.

If a satisfactory propellant is developed having the quality of a nonhygroscopic flashless propellant and at the same time giving equal ballistics to the present propellant, undoubtedly the Ordnance Department will have to purchase considerable amounts of such propellants.

Will you please let me hear from you again on this matter.

Respectfully,

C. C. Williams,
Major Gen. Ord. Dept., U.S.A.
Chief of Ordnance.
CTH

Major General C. C. Williams,
Chief of Ordnance, U.S.A.,
Washington, D.C.

Subject: The Development Work on Flashless Nonhygroscopic Propellant.
Reference: Your file OMA 471.5/180.

Dear Sir: We are in receipt of your letter of September 25th which disregards your letter of September 16th and answers our letter on this subject dated September 9, 1919. We have carefully gone over the eight paragraphs in detail and the interpretations as set forth in your letter are agreeable to us.

In order to make the matter entirely clear, we mention specifically paragraph #5 and hereby confirm the understanding that when the experimental work on any sample has progressed to the stage to where it is submitted to the Government for firing test, the du Pont Company will submit to the Government all information regarding its manufacture.

In paragraph #8 your interpretation regarding royalties is satisfactory and your added stipulation that no sale of such propellant be made to other Government without prior notice being sent to the Ordnance Department, U. S. Army, is hereby accepted.

As we believe this thoroughly clears up the situation, we shall immediately proceed with the experimental and development work in an endeavor to produce the desired explosive.

Yours very truly,

——— ——— *President.*

[Publicity Bureau. History of smokeless DuPont powder.]

UNITED STATES GOVERNMENT SMOKELESS POWDER

H. F. Brown.
Charles E. Munroe.
Lt. J. B. Bernadou.

It was about 1893 that Francis G. du Pont and Pierre S. du Pont invented a smokeless powder, "dead-shot powder." About two years later they produced the sporting smokeless powder called "du Pont smokeless." The du Ponts had also been experimenting with military smokeless powder. They tested those produced abroad.

---

* Pencil marking.

One of the earliest of the formulas in this country was that to produce "indurite" first made by Charles E. Munroe, chief chemist at the Naval Torpedo Station at Newport. This powder was finally abandoned because it showed a tendency to decompose when kept in storage for any length of time.

The Ordnance Bureau officials furnished the du Ponts about this time with specifications for a powder closely resembling the French B.N. powder which was called "Naval smokeless powder."

1893. Prof. Munroe resigned as Chief chemist of the Newport Naval Torpedo Station and was succeeded on February 1, 1893, by H. F. Brown. H. F. Brown continued to work for a satisfactory powder under the direction of Admiral G. A. Converse and Lt. J. G. Bernadou.

1895. In 1895 these officers took out a patent for a smokeless powder closely resembling Vieille's Powdre B. which had been adopted by the French Government.

1898. In 1898 the International Smokeless Powder and Chemical Company was formed. Mr. W. W. Gibbs, of Philas., Pres. of the Marsden Co., manufactured pith cellulose employed principally in making cofferdams for battleships. The demand for pith cellulose was not very large, and President Gibbs believed it could be employed in the manufacture of smokeless powder.

The first plant was erected at Parlin, N.J., under the direction of Carl Volney but this had to be abandoned because it did not answer the purpose. Henry G. Lang, who had been engaged in manufacturing powder machinery in California, came east to succeed Carl Volney. He brought a lot of blue prints showing how the plant should be built, but he was so long in erecting it that the directors of the company accepted his resignation.

The International Co. then turned to H. F. Brown, and in 1900 engaged him as chief chemist. On his recommendation the company purchased the Bernadou-Converse patent. A plant was erected under Mr. Brown's direction in the spring of 1901 when manufacturing began. The powder turned out was superior quality and the Government gave the company large orders.

1903. The capacity of the plant was doubled, and in 1903 the company had orders for more powder than it could manufacture even though it worked a double shift of men and produced 7,000 lbs. a day.

1904. On Feb. 4th, 1904, the control of the International Company passed to the du Ponts.

* * * * * * *

1895. Two years more were spent in experimenting, and then Francis G. du Pont and Pierre S. du Pont produced "du Pont smokeless." This was manufactured at the Carney's Point, N.J., works erected in 1890–1 for the production of guncotton for the United States Government but which were afterwards enlarged by the addition of a complete smokeless-powder plant.

1895. The experts at the Newport Naval Torpedo Station, H. F. Brown, Admiral G. A. Converse, and Lt. J. B. Bernadou, produced a smokeless powder closely resembling Vieille's powder.

1898. While the torpedo station was investigating, investigations into smokeless powder were also made by the du Pont Company, the Calif. Powder Works, and the Lafflan and Rand Powder Company. In 1898 the largest production of powder was at the Santa Cruz plant in which the du Ponts were largely interested. Just before the destruction of the *Maine* the Government placed orders of 100,000 lbs. each with the Santa Cruz plant and the Carney's Point plant. When the Spanish War started, the plant at Carney's Point, Haskell, and Santa Cruz were much enlarged. The Navy during that war used brown prismatic powder.

* * * * * * *

1889. Hudsom Maxim, who began his investigations of smokeless powder in England as early as 1888, took out his first patent in 1889.

Col. W. G. Tschappat,
Ordnance Department,
Washington, D. C.

March 5, 1928, *Dict. March 2.*

Dear Sir: You wrote to us on February 9th in reference to the semiautomatic rifle which the Government wished to develop either through the Ordnance Department or a commercial concern. You, of course, appreciate that the development of a rifle of this type, which is entirely new, would entail a very heavy expense, and unless we were reimbursed for this expense it would not be possible for us to give any consideration to the proposition. If there was any assurance that this rifle would be adopted by the new Government and we received from the Government a volume of business that would justify our expending money for experimental work we would be inclined to give this matter some favorable consideration, but there is no assurance that the Government will adopt this rifle after it has been developed and, therefore, all expense connected with this development work which we would have would most likely bring us no return.

The development of a rifle such as described is undoubtedly of great importance to the Government and it is our feeling and thought that the Government should be perfectly willing to pay for any experimental work in connection with the development of an arm of this type. If the Government do not feel that they can spend money in the development work we will be unable to proceed because we do not know what this would amount to and we feel that we are entitled to compensation for any work of this kind just as we would expect if we were doing it for some individual or a commercial firm. We are sure that you appreciate our position as we appreciate yours.

Yours very truly,

REMINGTON ARMS COMPANY, INC.,
——— ———,
General Sales Manager.

SALE OF SURPLUS GOODS

[Source: Graham Report No. 1400, pp. 81 ff., vol. p. 665, ff.]

"On the signing of the armistice many contracts, executed only in part, were canceled. So enormous had been the number of contracts made that there were in the factories of contractors over the country almost inconceivable quantities of raw materials and partly finished products of all kinds. It is probably not an exaggeration to say that the greater part of all the manufactured products of the country had been withdrawn from the civilian population and were in Government warehouses or private factories awaiting Government orders.

"Immediately after the cancellation of the myriads of contracts, the Government was confronted with the choice of either taking these materials, raw and partially finished, which had not already been delivered, and reselling the same to the public or permitting the contractors to keep them at an agreed price. The War Department adopted as its fixed policy in every case possible the plan to permit the contractor to keep the materials. Repeatedly throughout the hearings appears testimony showing that the policy of the Secretary of War was to protect the market of the contractor by preventing any of his manufactured product from being sold to the public by the Government in competition with the product of such manufacturer. Therefore we find everywhere one of two things happening, either the raw materials and partially manufactured products sold back to the contractor at salvage prices, fixed only the the comparative honesty of the contractor, or such product taken by the Government and withheld from the market by failing to declare the same surplus.

"An example of one of these settlements is the sale of surplus copper. In order to intelligently understand the matter, the subcommittee has gone extensively into all the copper purchases and sales of surplus copper and reports the same as follows:

Copper

[Source: Graham Report No. 1400, pp. 81–95, vol. p. 666–679]

"It was evident at the time of the entrace of the United States into the World War that large amounts of metallic copper would be needed, not only to supply the demands of the United States, but as well to supply, in part at least, the needs of the nations allied with the United States in that war. This fact was also apparent even before April 6, 1917, when Congress passed the resolution declaring that a state of war existed. Copper enters largely into the making of munitions of war and is especially an essential in the making of shells and projectiles of all calibers.

"Prior to the declaration of war the War Department had failed to lay in any supply of copper for its prospective needs. In view of this situation the Government, in the production of copper for our war-time needs, was forced to rely upon the judgment and plans of those who had copper to sell. The facts disclose that from the very initiation of our attempts to procure and purchase copper for our war-time needs up to the time of the final disposition by the Government of its surplus stocks of copper after the signing of the armistice the situation as regards the production and sale of copper was entirely within the control of the copper producers. At no time was the Government a free agent in the purchase of such supplies.

"On the 11th day of October 1916 the President appointed an Advisory Commission to the Council of National Defense, which last-named body had been authorized by an act of Congress passed before that time. This Advisory Commission met first on the 7th day of December 1916. Mr. Bernard M. Baruch, banker, was chairman of the Commission.

Organizing to sell to the Government.—"These gentlemen, originally appointed as an advisory board, on February 12 adopted a resolution to the effect that a series of conferences be held with the leading men in each industry, so that the industries could organize themselves and deal through one man or a small committee. It will be seen from the facts hereinafter stated that the plan originally was—and which plan has been fully consummated in the subsequent proceedings—that the copper industry, as well as other producing industries, should be so centralized that it could be dominated and controlled by one man, or a very small number of men, and that this control, once established over the industries, continued throughout the war, was the paramount influence toward price fixing and price control and is one of the causes of high-priced commodities at this time (1921). The plan of the Government was to centralize all industries, irrespective of the results that might ultimately follow.

* * * * * * *

"At the meeting last above noted Mr. Baruch was given charge of raw materials, minerals, and metals; and it is manifest, among other matters, that he was in conference with the copper producers at the time of the declaration of war, a little less than two months afterward. This is evident from the fact that about 10 days or 2 weeks before the President sent his message to Congress, on April 2, 1917, Mr. Baruch and Mr. John D. Ryan were in conference at Washington, and at that time arranged, evidently with the approval and after conference with the governmental authorities, a combination of copper producers and a sale to the Government of 45,000,000 pounds of copper at 16⅔ cents per pound. Mr. Tobias Wolfson, vice president of the United Metals Selling Co., and next to Mr. Ryan the principal official in that company, came to Washington on or about the 2d of April, on telegraphic advice from Mr. Ryan, and at that time was advised by Ryan to take charge of the matter of arranging the sale aforesaid and to have the proper conferences with the copper producers interested to that end. It will thus be seen that before the declaration of war Mr. Baruch, chairman of the Advisory Commission of the Council of National Defense, and Mr. John D. Ryan, president of the United Metals Selling Co., had arranged a combination and consolidation of the copper producers for the purpose of selling copper to the Government through the United Metals Selling Co. Mr. John D. Ryan was president of the company. Its stock was owned by the Anaconda Copper Mining Co., of which Mr. Ryan was president also. The companies who thus united in the combination that authorized the United Metals Selling Co. to act as their agent were the Anaconda Copper Mining Co. and 26 other companies.

"It is in testimony that the United Metals Selling Co. under this arrangement represented practically all the copper producers in the United States. This arrangement was known to the Government and agreed to by it and, in fact, was arranged by officials then connected with the Government.

"The purchase of 45,000,000 pounds of copper was completed, and the same was allocated to the military and naval departments of the Government. Immediately thereafter, however, it became apparent that much larger quantities of copper would be needed.

The men in charge.—"The Government purchased during the war 592,258,674 pounds of copper, of which 523,338,735 pounds were purchased from the United Metals Selling Co., 66,846,000 from the American Smelting & Refining Co., 290,000 from the Cleveland Brass & Copper Mills, 800,000 from J. B. Wise, and 983,939 pounds from the Gorham Manufacturing Co.

"In the three last-named instances the companies were not copper-producing companies but had stocks of metallic copper on hand which they sold to the Government. It has been heretofore mentioned that Mr. Baruch was appointed by the Advisory Commission to take charge of raw materials, minerals, and metals. Thereafter, and early in the year 1917, Mr. Baruch appointed a cooperative committee on copper which consisted of the following-named persons: John D. Ryan, R. L. Agassiz, W. A. Clark, Murry M. Guggenheim, James McLean, Charles MacNeill, and Stephen Birch.

"Mr. John D. Ryan, one of the cooperative committee, was, in addition to his connection with the Anaconda Copper Mining Co., in practical control, through his company, of the Greene-Cananea Copper Co. and the Inspiration Consolidated Copper Co., companies who were represented by the United Metals Selling Co., together with several other copper-producing companies. Mr. C. A. MacNeill, another member of this committee, was president of the Utah Copper Co., which, in turn, controlled the stock of the Nevada Consolidated Copper Co., both companies being in this combination, and was an officer in the Chino Copper Co., the Ray Consolidated Copper Co., the American Smelting & Refining Co., and the Wolverine Copper Mining Co., and others. The Kennecott Copper Co. owns controlling interests in the stock of the Utah Copper Co. and the Braden Copper Mines Co., all controlled by the United Metals Selling Co., and which are in the group of mines ordinarily known as the "Guggenheim interests." Mr. James McLean, another member of said cooperative committee is a vice president of the Phelps-Dodge Corporation, was a director in the Greene-Cananea Co., and Old Dominion Co. Mr. Murry Guggenheim, another member of this cooperative committee, is an officer and stockholder in the Chile Copper Co. In addition to the above, the Guggenheim interests were heavily represented in the Braden Copper Mining Co. Mr. W. A. Clark, another member of this committee, in the United Verde Mining Co. and the Magma Copper Co.

"It will thus be seen that every member of this cooperative committee was deeply interested in the copper industry and in the success of various properties owned or controlled in part by them. This was the committee whose function it was to assist in or advise as to the purchase of copper for the Government.

"The committee above named was functioning after the first purchase of copper.

The legality of the arrangement.—"During the month of August 1917 there was a very considerable discussion in Congress as to the propriety of the practice which it was thought was then prevalent of men attached to the various advisory committees of the Council of National Defense being intrusted with the purchase of supplies, in some cases from companies or interests in which they had a financial interest or were otherwise connected. As a result of an inquiry by the War Industries Board, on the 29th of August 1917 the Attorney General directed a letter to Mr. Scott, chairman of the War Industries Board, in which he stated, in substance, that it was illegal for a person who was interested in the subject matter of a contract to enter into such contract on behalf of the Government.

"Very shortly after the rendition of this opinion the various members of the cooperative committees that had been heretofore appointed by the Advisory Commission of the Council of National Defense began to tender their resignations. Section 3 of the so-called "food-control act" evidently was aimed at the practice that had been theretofore indulged in and made it necessary for any members of companies interested to sever their connection with the Government service so long as the companies in which they were interested were contracting with the Government. On the 3d of October 1917 the War Industries Board held a meeting, and at that time considered the matter raised by the opinion by the Attorney General and section 3 of the act of Congress aforesaid, and deliberated at considerable length on ways and means by which the effect of this act of Congress might be avoided by the appointment of committees to act for the various trades and industries represented, and by which the same result might be obtained as before.

"Thereafter, on the 9th day of November 1917, the director of the Council of National Defense stated, in a communication to the National Chamber of Commerce, that 'in order to prevent a continuance of the embarrassing situation wherein members of the committee were called upon to act as both Government agents or advisors and, at the same time, as representatives of their respective industries that these resignations have been accepted', and notified the National Chamber of Commerce to at once form committees to represent their industries which might deal with the Government. Thereafter, as a matter of fact, in most instances the former cooperative committees were continued, but were known as committees from the various trades and industries. There was no difference thereafter in the method of procedure. The copper cooperative committee resigned between September 19 and October 9, 1917. Up to the time that the cooperative committee on copper resigned all purchases of copper and negotiations relative to same were taken up through this committee.

Organization advantages.—"It is in evidence, and conceded to be the fact, that the cooperative committee on copper practically controlled the companies that in turn controlled the price of copper in the United States, and it is further shown, especially by the testimony of Mr. Clarkson, director of the Council of National Defense, that because of the connection of these gentlemen with the Council of National Defense, and thereby with the Government of the United States, their authority was more coherent and their impact much greater in dealing with the other members of the copper industry, and that because of this official status they could more effectively control the price of copper than they could have done as individuals. As individuals they could not have coordinated the entire resource of copper in the country as well as they could do when officials. In other words, by virtue of their official standing all producers of copper could be compelled to pool their interests.

"In the matter of the production of copper, as in all other industries and trades, the various cooperative committees who were appointed were selected, not by the Government, but by the respective trades and interests, and, as naturally would be expected, these gentlemen had in mind the condition of their various trades and were supposed and expected to represent them in their various transactions with the Government. On the other hand, on the part of the Government, there was no one who knew anything about the various trades or interests involved, excepting in the most casual and fragmentary way, and this condition continued to a very considerable extent throughout the entire war and certainly throughout the war so far as the purchases of copper were cocnerned.

"As soon as the arrangement was made with the Government by the cooperating copper companies through the common agent, the United Metals Selling Co., four things were accomplished; first, all competition was eliminated; second, all expense of selling and finding a market was eliminated; third, the possibility of all loss from bad accounts was eliminated; fourth, the market was absolutely under the control of the American producers of copper.

"While the United Metals Selling Co., in its inception, did not represent all the copper producers in the United States, this apparent difficulty in the organization was obviated as the result of an action of the War Industries Board early in 1917. Mr. Baruch, a member of the War Industries Board, appointed one Eugene Meyer, Jr., as his representative, and who in turn requested all copper producers to arrange for a copper producers' committee. Mr. Meyer, at that time, had large copper investments and was heavily interested in the business. In this matter he was acting as a member or agent of the War Industries Board. On September 28, 1917, he came to the copper producers and asked them to appoint a committee which would represent all the copper companies, not only those represented by the United Metals Selling Co., but all other companies. That meeting was held at 120 Broadway, and there were present at the meeting the following persons:

"Joseph Clendennin, Charles Earl, S. S. Rosenstamm, L. Vogelstein, Julius Loeb, Julian Beatty, M. H. Crege, T. Wolfson, Sidney Jennings, Charles Nichols, W. Parsons Todd, G. W. Drucker, James McDonald, H. M. Brush, and Eugene Meyer, Jr.

"There were no Army officers at this meeting. It is not known exactly what happened at this meeting, but the question of furnishing copper to the Government was fully discussed. On the 21st of September 1917, Mr. Robert S. Lovett, acting chairman of the War Industries Board, wrote a letter to Mr. John D. Ryan, at New York, in which Mr. Lovett stated as follows:

"'DEAR SIR: I am pleased to advise you that the President has approved the oral agreement as to copper arrived at by the War Industries Board and the copper interests represented by you, and which is correctly set forth in the following statement made public by the President.'

"The second purchase of copper made by the Government from the United Metals Selling Co. was no the 15th day of October 1917, after the President had approved of the new price,* and was a purchase of 11,595,346 pounds, at 23½ cents per pound, or an increase of approximately 6.84 cents per pound. No reason appears in the record for this increased price. The price of 23½ cents per pound was continued in effect until June 15, 1918, when further increase of price was made to 26 cents per pound.

The new War Industries Board.—"The War Industries Board, appointed by the Council of National Defense, ceased to function early in the spring of 1918. On the 4th of March the President wrote to Mr. Baruch appointing him Chairman of a War Industries Board, and in this letter of appointment gave him power by implication to fix prices. This War Industries Board was fully established on May 29, 1919, although it had been functioning practically since the 4th of March preceding the date of appointment by the President. From that time forward the War Industries Board was not under the control of the Council of National Defense, but was a body functioning by itself.

"The price fixing of copper, as well as many other commodities, was in the beginning fixed by the cooperative committees appointed by the advisory Council of National Defense. This was particularly true of copper. Following the resignations of these various committees, the function of purchasing and price fixing was continued by the War Industries Board, appointed by the Council of National Defense, and particularly through Mr. Baruch, a member of that board. This continued until the spring of 1918, when the War Industries Board was organized as a separate entity, and of which, as has been said, Mr. Baruch was Chairman. After the appointment of this presidential War Industries Board, certain committees were appointed by the Board to have charge of various industries and production. Almost at once there was appointed by Mr. Baruch what was called a nonferrous metals section. This section had charge of, among other things, copper. Its personnel was Pope Yeatman, chief; E. C. Thurston, assistant; Andrew Walz, assistant. From the time of the appointment of Mr. Yeatman and his section it was not permitted to place an order relative to copper except through him. A clearance from Mr. Yeatman was a prerequisite to such an order. Mr. Yeatman was a mining engineer, and at the time of his appointment was working for the Guggenheim interests, and was drawing $100,000 a year salary from them for this service in their mining interests. He left this position and was serving the Government for $1 per year, at which employment he continued until immediately after the armistice, when he left the Government service and went back to his original employment.

"During the year 1918, Mr. Yeatman, under the direct supervision of Mr. Baruch, had complete charge of the copper situation in the United States.

"During the period of the war the business of selling copper to the Government was conducted by Tobias Wolfson, vice president of the United Metals Selling Co., and by Mr. Mosehauer, who was located at Washington, and who was the representative of the United Metals Selling Co. and the American Smelting & Refining Co. An arrangement had been made between these two companies by which the American Smelting & Refining Co. was to handle all copper for export and the United Metals Selling Co. was to handle all copper for domestic use. They were, however, both represented by the same Washington representative, as above stated.

The position of the Army.—"During the entire period of the war the uncontradicted testimony shows that the Ordnance Department and its officers had nothing to do with the fixing of prices on copper, and the Army officers in what they did simply followed Executive orders in that regard, and followed the directions of civilians in the War Industries Board or other price-fixing bodies constituted from time to time. As to the prices, the representatives of the Ordnance Department has no negotiations at all.

"After the signing of the armistice it was determined that there was approximately 100,000,000 pounds of copper in the hands of the War Department that could be counted as surplus copper and was not needed by the Government for war purposes, and it was evident that some disopsition must be made of it, either by a sale of it to the public generally or in some other manner.

"On February 5, 1919, Mr. Mercer, chief of the raw materials and scrap division of the director of sales office, addressed a letter to Mr. E. C. Moore, assistant director of sales, in which he stated as follows:

"'It would be my recommendation that Mr. Hare, or some one whom he might delegate, have a conference with Mr. Ryan, and any other representative of the copper interests, that we may arrive at some plan of distribution in accordance with the plan outlined in the correspondence which you handed me as passing between Mr. Ryan, Secretary Baker, Mr. Hare, and Gen. Williams.'"

"It appears from this letter that before that time Mr. Ryan, Secretary of War Baker, Mr. Hare, director of sales, and Gen. Williams, Chief of Ordnance, had had a conference and had arranged upon some plan for selling the excess copper. The exact nature of that correspondence is not disclosed by the record and was not produced by the witnesses testifying on that subject. Prior to this time, however, and early in January, it was evident that the Government would have a surplus of copper, and the representatives of the United Metals Selling Co. approached the Secretary of War asking that all copper be held off the market for at least six months, basing its request upon the proposition that during the months of November and December they had continued production paying a wage rate corresponding to 26-cent copper, and had enormous surplus, and that reports from abroad were pessimistic as to a possibility of immediate sales.

Avoiding a collapse in copper.—"The sales department then arrived at a policy as to this copper, which was to the effect that the copper would not be dumped upon the market, but that it should be the policy of the Government to absorb as much of the surplus as was possible in the War Department itself by sale or transfer to other War Department bureaus, other governmental departments, and semigovernmental commissions, and that every precaution should be taken to avoid the disturbance of the industry of the copper producers. About the time the negotiations were being had with the copper producers, representatives of the United Metals Selling Co., certain conferences were called in the Department of Labor between the representatives of the copper miners and representatives of the Government and representatives of the copper producers. These conferences were held the last week in January 1919. The official report shows that on the 30th day of January 1919, the conference of mine workers requested the Secretary of War and the Secretary of the Navy to cooperate with the producing and consuming industries to the end that a way of handling their stocks may be found to remove the existing lack of confidence in the market and that the methods thus determined upon shall be rigidly enforced by the officers of the respective departments. The resolutions requesting this action were signed by 30 representatives of the copper miners. At that time wages were being paid on a war basis, and it was feared that if a return was had to low prices on a sliding scale, the wages of the workmen would be greatly reduced. At about this time or a little afterwards, also, it appears that there was a conference between Mr. Ryan and the Secretary of War, in which Mr. Ryan impressed on the Secretary of War what was said to be the demoralized condition of the copper industry, and asked the Secretary of War to use his discretion in disposing of this copper in order that this demoralized condition would not be made worse, and that the situation be taken up with the copper producers to see if some mutually agreeable way could not be worked out whereby the condition would be helped as much as possible, and the Government dispose of its surplus. It is probable that even before this time the Government had been in communication with the copper producers relative to the sale of this surplus.

"Almost as soon as a director of sales was appointed, Mr. John D. Ryan sent Mr. Wolfson as his agent to Washington, directing him to have a conference with Mr. Hare, the director of sales, and to show to Mr. Hare what effect the surplus copper was having on the copper market. In pursuance of this direction, Mr. Wolfson came to Washington and saw Mr. Hare on February 13.

"On the same date a meeting was called in the office of the director of sales, Mr. Hare, in the Munitions Building, Washington, and at which meeting there were present certain representatives of the office of the director of sales and of the United Metals Selling Co.

The disposition of the surplus.—"A smaller conference was had within this conference, as shown by the official minutes, at which were present Col. Boggs, Col. Lehman, Col. Tenney, Capt. Mercer, Mr. Morse, Mr. Wolfson, and Mr. Bancker, who prepared certain principles which were to be the method of procedure of the Government in the sale of this surplus copper, the second of these principles being—

"'It is felt that it would be to the best interest of the War Department, the producer, and the laboring class to have the War Department surplus copper and brass marketed by the producers, or some agency under their control, the marketing to be at the same price as similar material that they may sell during the same period.'

"The minutes also show the following:

"'The representatives of the copper industry were to go back and see their principals, get together all the copper producers, and present these principles to them, returning as soon as possible for further conference with the War Department representatives with a definite proposition.'

"On the 14th of February Mr. Hare, director of sales, notified Mr. Wolfson, of the United Metals Selling Co., of the action of the conference and requested him to at once call the principal producers of copper throughout the country together—

"'To discuss among themselves the terms upon which they will be willing to handle for the War Department the sale of surplus copper and brass now in the hands of that Department.'

"Thereafter there were two conferences of copper producers held in New York, one on February 20, 1919, and one on March 3, at which all the copper producers were represented.

The contract terms.—"At these conferences it was arranged for the copper producers to take over the surplus copper of the Government, and on April 10, 1919, a formal written contract was entered into between the War Department and the United Metals Selling Co.,.by which 100,000,000 pounds of electrolytically refined copper was sold to that company on the following terms:

"First, the price was to be the monthly average New York price for electrolytic copper as quoted by the Engineering and Mining Journal of New York, with lesser prices for copper not in commercial shapes and scrap copper. Second, the price was to be determined on the 5th day of May and on the 5th day of each succeeding month. Third, the price was to be paid on or before the 15th day of the second month for each month's quota. Fourth, a deduction of 1 percent also would be made from the price to cover storage, and so forth. Fifth, the copper also would be delivered by the United States, with all expenses of loading and freight to be paid by the Government. Sixth, the copper was to be delivered 5,000,000 pounds per month, beginning with April 1919, with the further arrangement that if the producers of copper represented by the purchaser in any one month up to January 1920, should sell more than 50,000,000 pounds of copper and from February 1920, to June 1920, more than 100,000,000 pounds, in such event the amount of 5,000,000 pounds per month should be increased by an amount equal to 20 per cent of the excess over 50,000,000 and 100,000,000 pounds, respectively.

"The signing of the armistice created in the copper market, as in all other markets in the United States, a serious depression and stoppage of trade. The 26-cent price of copper continued automatically in effect until December 5, 1918. From that time up until practically the signing of the contract with the United Metals Selling Co. there was no market for copper. During December and January there were no sales being made of any kind. From February 1 up to July 30 the prices of copper were as follows: February 1, 1919, the Journal gives the price at 18⅜ cents; February 15, 16¾ cents; March 1, 14¾ cents; March 15, 14⅞ cents; April 1, 15.35 cents; April 15, 15.15 cents; May 1, 15.35 cents; May 22, 16.35 cents; June 2, 16.35 cents; June 16, 17⅝ cents; July 1, 19 to 19.10 cents; July 15, 21.30 to 21.90 cents; July 30, 22.85 to 23.35 cents.

Stabilizing the copper market.—"It will be observed from these quotations that from April 1, the approximate date of the contract with the United Metals Selling Co. for the Government surplus copper, copper increased until on July 30 it had risen to 23.35 cents, or 8 cents per pound, while from February 1 to March 15 it had fallen close to 4 cents per pound. The immediate effect of the sale of copper to the United Metals Selling Co. and the control of the copper market by this company was to stabilize the market and to increase the price.

"That this was the intent of the Government agents and the copper producers there can be no doubt. In addition to the testimony of Mr. E. C. Morse, hereinbefore noted, his testimony shows that no minimum price was agreed upon in the contract with the copper producers, because to fix such a minimum price would be to depress the price. Mr. Morse also testified that the sale of copper was negotiated with the copper producers in this way for the purpose of keeping the market stable and not disturbing it and disposing of the Government surplus as rapidly as possible.

"It is the uncontroverted testimony that about the time conferences were initiated between the copper producers and the Secretary of War the Director of Sales issued an order directing that pending these negotiations no copper be sold by the War Department to any person. This order was as follows:

"FEBRUARY 7, 1919.

"Director of Sales, Order No. 8.

"Subject: Sale of copper and brass.

"1. No further sales of either copper or brass, as new material or as scrap, are to be made under any circumstances until further notice.

"By authority of the Director of Purchase, Storage, and Traffic.

"C. W. HARE, *Director of Sales.*

"This inhibition against the sale of copper continued until after the contract was made with the United Metals Selling Co. for the Government surplus copper, and then, on April 18, the Director of Sales made an order permitting the sale of copper.

The avowed purpose of the sale.—"Mr. A. G. Peter, secretary of the committee having charge of the disposal of copper from the Ordnance Department during that period, testified that if he had been permitted he could have sold at least part of the copper of the Government at the market price during that time; as a matter of fact many offers were had for the Government copper, but owing to the order of the Director of Sales, none could be sold. The object of the sale to the United Metals Selling Co., and the holding of the same off the market, is well indicated by the testimony of Maj. L. J. Quinn, of the Ordnance Department, and who stated that the sale was to keep the market from being depressed; in other words, that the price of copper on the market should not go lower.

"Mr. Wolfson said on this subject:

"'It was essential to get it out of the way, or we thought it was better that it be handled through the same channels that sold the copper. It did not matter whether it was sold by us or not, so long as it was gotten out of the way. We felt so long as that hung over the market there would be no stability. * * * I found I could not do any business with this hanging over the market.'

"Under the contract for the sale of copper the base price fixed on May 5, for the month of April, was 15.246 cents per pound; on June 5, for the month of May, it was 15.864 cents per pound; and on July 5, for the month of June, it was 17.61 cents per pound. In April the United Metals Selling Co. sold 83,000,000 pounds of copper, and hence took on their contract 13,000,000 pounds of Government copper at the average April price. During the month of May there was sold by the United Metals Selling Co. 207,649,189 pounds of copper, and accordingly there was taken by the United Metals Selling Co. of Government copper on June 5, for the month of May, 3,652,837 pounds. Practically the entire balance of the surplus copper to be taken by the United Metals Selling Co., under this contract, was taken on July 5, on the average June price.

"On the signing of the armistice the copper producers, represented by the United Metals Selling Co., had on hand approximately 750,000,000 pounds of copper aside from the purchase of the Government surplus copper, so that the price at which the Government surplus copper was sold to the consumers regulated not only the price of such copper as was being produced at the mines, but also the price of approximately 750,000,000 pounds of other copper already on hand.

Price-fixing and cost of production.—"The profits of the copper producers from their negotiations with the Government during the period of the war, and in the purchase of the surplus copper after the war was over, were enormous, and it must have been apparent to the Government agents that such was the case. It is said that the high prices paid for copper were paid for the purpose of stimulating production. However, the facts do not seem to indicate that it was necessary to pay as great a profit as was paid to accomplish that purpose. It has also been said in defense of the price fixing by the Government and its other negotiations that the market price of copper was approximately 32 or 33 cents per pound when we entered the war, and that the price fixing by the copper producers was far below what they might have obtained on the open market. However, it will be remembered that the copper producers were at the mercy of the Government at that time, and that under section 8 of the act of August 10, 1917, the Food Control Act, the Government had the right at any time to commandeer the mines and to practically fix its own price on copper.

"Two methods of computation were issued by the committee in ascertaining the cost of producing copper: One was in the examination of such reports of the copper companies as were available to accountants for the committee; the other was a report of the Federal Trade Commission made to the War Industries Board, and a copy of which was before the committee. This last-named document, confidential when received but now a public document, had evidently gone through the hands of the price-fixing committee of the War Industries Board, and this committee was fully conversant with the situation and the profits being made by the copper companies, as appears by their marginal notes upon the original copy. The custodian of these files produced the same, and from the marks made upon it, supposedly by the price-fixing committee, it appears that that committee knew that the profits most of the principal producers in the United Metals Selling Co. combination were making at a price of 23½ cents per pound, were from 8 to 12 cents per pound. These marginal notations show that the whole list of copper producers whose records were examined by the Federal Trade Commission the net profits at 23½ cents per pound were from 12 to 14 cents a pound, and that the principal companies in the United Metals Selling Co. group, and in which Mr. Ryan and the members of the cooperative committee on copper were most intimately interested, were from 8 to 12 cents per pound. Mr. Melville C. Wooster, chief accountant of the Federal Trade Commission, testified that the average cost of production of all the companies within the United Metals Selling Co. group for 1917 was 13.618 cents per pound, and in 1918, 15.326 cents per pound. In 1917 the cost of production per pound in the Utah Copper Co. was 10.4 cents, and in 1918, 12.3 cents. The cost of production in the Calumet & Hecla Mining Co. in 1917 was 12.9 cents, and in 1918, 15.7 cents. The cost of production in the Inspiration Consolidated Copper Co. in 1917 was 11.3 cents, and in 1918, 11.7 cents. The cost of production in the Kennecott Copper Co. in 1917 was 12.4 cents, and in 1918, 18.7 cents. It is useful to notice also that of the four companies last above named, each one, except the Inspiration Consolidated Copper Co., reported a decreased production for 1918; and from their reports it is evident that these companies were mining their lower-grade ore and making their mines ready for a time of higher prices, when higher-grade ore might be produced at a lesser expense.

Profits in copper.—"To illustrate the profits made during this period by some of the copper companies, four instances are cited:

"The Utah Copper Co. in 1917 made a profit of $32,000,000, which was 200 percent of its capital stock, and in 1918 a profit of $24,750,000, which was 150 percent of its capital stock. The Calumet & Hecla Mining Co. in 1917 made a profit of $9,500,000, or 800 percent of its capital stock, and in 1918, $3,500,000, or 300 percent of its capital stock. The Inspiration Consolidated Copper Co. in 1917 made a profit of $12,260,000, or 55 percent of its capital stock, and in 1918, $9,250,000 or 40 percent of its capital stock. The Kennecott Copper Co. in 1917 made a profit of $11,826,000, or 70 percent of its capital stock, and in 1918, $9,390,135.90, or 60 percent of its capital stock. It is probable that other companies in the list made similar profits, but the exact information is not available without a careful and detailed audit of the books of these various companies.

"The profits given here are net.

"The companies represented in this consolidation were mostly low-priced producing companies. It is claimed that they had to make this price to make a profit for the high-cost-producing mines, and therefore the mines that had a low cost of production necessarily made more profit. As a matter of fact, all the figures available to the subcommittee taken from the reports of the companies show that this price had the effect on copper of reducing the production, notwithstanding the increase in price. In 1919 three of the four big copper companies, of which the subcommittee had the figures for production, were companies mining a low-grade ore—that is, a cheap ore—and they were doing it while the price was low in order when the price became high that they could manufacture high-grade ore and get a higher price. So the effect of the proposition was to fatten this trust, which had its fingers on the throat of the country, and let it make profits entirely unjustified by the needs of the Government. There was no necessity for it. The Government had ample legal authority to have commandeered all the copper it needed and to compel the operators to furnish it at reasonable prices.

Stabilization and profits.—"The profits made by the copper producers out of the purchase by them of the surplus copper of the Government after the armistice would be hard to compute. It is certain that if this 100,000,000 pounds of copper had remained in the hands of the Government or had been sold by the Government to retailers or to the consumer, the price of copper would have remained at least stationary. However, by its purchase, the producers were enabled, by their combination and by the allocation of business among them as they chose, to control the market absolutely, and being permitted by the Government to combine and pool their interests the market immediately turned and started upward. Even in the matter of the contract itself it is evident that the copper producers were buying on the 5th day of May, June, and July, large sums of copper at a price that was the average price for the month before, and on a constantly rising market, so that any margin there might be in price, by way of an increase, would accrue to the copper producers and be lost to the Government. Just what this loss to the Government would be could only be ascertained by careful computation. In addition, the copper producers were given 1 percent of the cost as a condition of the trade. In addition every pound of the approximately 200,000,000 pounds of copper a month they were selling had an added value given to it by the rising market which the copper producers were creating. It is reasonable to assume that if, during the period the copper producers were taking the Government copper, their aggregate sales were 600,000,000 pounds, including the Government copper, their profit by virtue of the increase in price was approximately $50,000,000.

"Not all the copper producers shared equally in these profits, it is true. Mr. John D. Ryan, in the first purchase of copper by the Government from the United Metals Selling Co., dictated the proportion which each company in that combination should furnish of the copper, and this schedule or percentage obtained throughout the war. The same was true in the allocation of the surplus copper purchased from the Government. Some companies, and these were so far as can be seen usually the low-cost production mines, furnished most of the copper. An example of this will be found in the group of mines represented by Mr. John D. Ryan. The United Metals Selling Co. originally represented a small group of mining companies, 13 in number, and to these companies were alloted 152,500,287 pounds. Of this amount there was allotted to the Ryan companies—the Anaconda Copper Mining Co., Inspiration Consolidated Copper Co.—121,615,919 pounds.

* * * * * * *

"A fair and candid résumé of the whole situation cannot fail to convince the reader that the arrangement thus entered into was one extremely favorable to at least a few of the copper producers, and that from this arrangement, and because of the necessity and demands of the Government during the war, those who operated these copper-producing properties were enabled to make and did make extravagant and extraordinary profits."

Olive drab duck

[Source: Graham Report No. 1400, p. 96, vol. p. 680]

"On account of excessive purchases, the War Department had a large amount of surplus olive drab duck, 72 inches, some of which was stored at Jeffersonville, Ind. One H. Miller, 59 White Street, New York City, bought from the Surplus Property Division, on January 12, 1920, 239,104 yards of this material, at an agreed price of 65¼ cents per yard, amounting to $156,015.36. The duck cost the Government $1.938 a yard, and was packed in its original bales of 150 pounds each, size 15 by 15 by 73. and protected by being wrapped in paper and burlap. This was a negotiated sale by some one—no written offer for the same being in the files, and, so far as can be found, no competitive bidding having been had. This duck had theretofore been selling at $1.25 a yard. * * * On February 12, following the first sale, the price was canceled by Col. L. M. Purcell, Quartermaster Corps, and the price reduced to 47½ cents a yard, the reason for such action being that the purchaser represented that the material, when opened, had been found to be waterproof fabric and heavily oiled, and not as represented. There does not appear, anywhere in the record of the War Department any guarantee or representation as to the quality of this material, or any request for such.

"By this informal order of Col. Purcell the purchaser deducted from the price to be paid the Government $42,440.96, and settlement was made that way.

"H. Miller & Co., with whom the purchaser was associated, afterwards offered and sold this duck to the public at $1.41 a yard."

Frozen meat

[Source: Graham Report No. 1400, pp. 99–100, vol. p. 683–684]

"Throughout the year 1919 immense quantities of frozen meat had been kept without a declaration of surplus on any considerable amount of it. However, some was being sold from time to time. About April 15, when Maj. W. O. Watts became executive officer of the Surplus Property Division, frozen meat was being sold by that division at 10½ cents a pound. The meat had been purchased from the packers at approximately 30 cents a pound, and they were found to be the principal buyers of the same meat from the Surplus Property Division at 10½ cents a pound.

"On the matter being brought to his attention Maj. Watts protested and called the fact to the attention of his chief, Col. Yates, that under the provisions of a resolution of the House of Representatives the meat should be sold direct to the consumers and in such a manner that it would find its way into the homes of the country. Such meat as was being sold to the public was sold for from 13 to 15 cents a pound, while it was being sold to the packers in large quantities at 10½ cents a pound, less 1½ percent discount for shrinkage.

"Although Maj. Watts protested against this, out of a total of 25,000,000 pounds of surplus at that time, the packers secured 15,000,000 pounds at their reduced price.

"To illustrate the value of the meat, on March 15, 1920, 15,000,000 pounds were sold to Belgium for export at 15 cents a pound. On April 10, 1920, 30,000,000 pounds were declared surplus. Fully one-half of this was sold to the packers, while the rest went to the country, through municipal stores and other similar agencies. What was sold to the packers netted the Government only 10½ cents a pound, less 1½ per cent.

"Some of the officers who had charge of this surplus meat testified that it could have been sold with great ease at the price they received from the general public, namely, from 13 to 15 cents a pound.

"No reason appears anywhere why this meat should have been resold to the packers who had already made large profits on it, and the only solution to that problem is in the thought, which has heretofore been presented in the reports of this committee, that it was the avowed policy of the War Department to protect those who had furnished supplies to the Government on contract, against having the same product put on the market in competition with other productions and to keep the prices paid during the war stable and without decrease after the war ceased."

Shirting flannel

[Source: Graham Report No. 1400, p. 100–101, vol. p. 684–685]

"On July 8, 1920, at the request of Col. Yates, Chief of the Surplus Property Division, a statement of the quantity of surplus shirting flannel on hand was prepared, and showed at the various quartermasters' depots 2,383,445 yards of of this material. Such of this material as had heretofore been sold to the public had been sold at from $1.25 to $1.50 a yard. Immediately upon the completion of the inventory without calling for bids, Col. Yates and the director of sales approved the sale of the total quantity to Sigmund Eisner, of Red Bank, N.J., at $1.10 a yard. The material was 54- and 56-inch.

"No other dealer, so far as the subcommittee could ascertain, had on opportunity to obtain this flannel under such favorable conditions. On July 2 a fixed price had been established on this material of $1.05 a yard. The sale price to Mr. Eisner was $1.10 a yard, but he was allowed a discount of 10 percent, which brought the cost price of the flannel down to 99 cents. The total value of this material exceeded $2,000,000, and Mr. Eisner's discount was $213,000.

"The sales of outing flannel to other persons were made in pursuance to advertisements, issued from time to time on small amounts of material, and at no time, except on the occasion of the sale to Eisner, was the whole quantity of material ever offered to any one person or company.

"It was the opinion of responsible officers that the entire amount of this material could readily have been sold for the fixed price of $1.05 a yard."

Lumber

[Source: Graham Report No. 1400, p. 102–104, vol. pp. 686–688.]

"At the signing of the armistice the country was denuded of lumber for civilian use; prices were sky-high. Notwithstanding this situation, and notwithstanding the fact that every foot of lumber that could have been offered to the public at fair prices would have been rapidly absorbed at the time this contract was made, the War Department deliberately conveyed it back to the combination of lumber interests from whom it had been bought and by whom it was resold to the public at fabulous prices.

"If a profit was to have been made from this lumber, it could have been as readily made by the Government as by those who bought it from the Government."

Leather goods

[Source: Graham Reports No. 1307, p. 1, ff., vol. p. 559]

Under the Council of National Defense, two cooperative committees were appointed, on shoe and leather industries and on leather equipment. These were composed entirely of civilians affiliated with prominent shoe and leather concerns. Later the War Industries Board was created, and at least part of its commodity section on hides and leather was composed of such civilians. "From the declaration of a state of war until the signing of the armistice, the control of the shoe, leather, and horse equipment purchases of the Government was controlled (sic) by the leather manufacturers, including the fixing of prices therefor (p. 2. (560)).

"Throughout the whole period of the war agencies of the Council of National Defense and War Industries Board, largely made up of representatives of the various trades interested, arranged the prices of leather and leather materials sold to the Government. . . .

"There was no advertising for bids. That was dispensed with by an order entered by the Secretary of War April 12, 1917. There was no competition. The manufacturing interests, through the various trade committees and through the various branches of the War Industries Board, divided the business as they thought advisable. Not only were the prices fixed by committees and commissions, largely made up from the trades, but the amounts to be ordered were, to a similar degree, controlled by the same influences" (p. 3 (561)).

The personnel.—"Early in the war the War Department, following its usual practice in such cases, in addition to the organization of the various committees, hereinbefore stated, called civilians into the various branches of the service, gave them commissions as officers, and delegated them to deal with the purchase and disposition of the various types of military supplies needed. Almost universally such civilians were detailed to duties, in the performance of which duties they were dealing directly with the particular trade or industry from which they came, and with which in many instances they retained their business connections.

"Early in the war one of the officers who was thus called into the War Department from civilian life was George B. Goetz, from Ranson, W. Va., who at that time was vice president and secretary of the firm of A. D. Goetz & Co., harness manufacturers. During the entire time he remained in the War Department he drew a salary of $100 a month as vice president and secretary of the A. D. Goetz & Co., as well as his salary as an officer in the United States Army. Col. Goetz was head of the harness department and directed the purchase of leather equipment for the Army from July 1917, until August or September 1918.

"By official order the leather equipment supplies were transferred from the Ordnance to the Quartermaster Department some time in July 1918, and from that time forward the purchase of all leather supplies needed by the Army was controlled by Col. Goetz, and from this time until the signing of the armistice Col. Goetz practically directed the leather situation and was responsible for the distribution of contracts let by the War Department for leather supplies of various kinds.

"Almost immediately after the armistice he was appointed a member of the board for the settlement of leather contracts and July 1, 1919, was appointed a salvage member of the claims board of the War Department having to do with the settlement of war contracts. He continued acting in that capacity until September 4, 1920, when he resigned his commission" (p. 4 (562)).

Closely connected with Col. Goetz was Maj. Joseph C. Byron. Maj. Byron owned several tanneries, with which he retained his affiliation during his service in the War Department. The two had been associated in business prior to receiving their commissions. After the armistice Maj. Byron was appointed to the General Claims Board of the War Department. Associated with Goetz and Byron were Capt. Azel F. Cochran and Capt. Henry W. Benke. "At all times there were the most intimate relations between Byron, Goetz, Benke and Cochran, and, during the period of procurement of supplies they had complete control of the purchase and inspection of leather goods for the Army" (p. 6 (564)). The firm of A. D. Goetz & Co., of which Col. Goetz was a salaried officer, received orders for leather from the department of which he was the head totaling four to five hundred thousand dollars, of which he was cognizant (p. 7 (565)).

In 1919 considerable amounts of leather equipment were from time to time declared surplus. Before they could be sold, however, clearances had to be obtained from the director of sales, E. C. Morse. These were almost invariably refused. In the spring of 1920 five "campaigns" were carried on for the sale of leather goods. Small lots were advertised and a few sales made. Officers connected with the Surplus Property Board testified that in their judgment "if proper clearances had been granted and they could have offered the property in proper lots, they could have readily sold all of it" (p. 9 (567)).

"Your committee is convinced that there was a continued effort from the date of the signing of the armistice to the time of making the United States Harness Co. contract, to wit, September 24, 1920, to prevent the surplus leather equipment of the Army from being placed on the market in competition with leather products of manufacturers. Attention has been called by this committee repeatedly to the standing rule of the War Department that no surplus goods or property of any kind should be put upon the general market so that it might interfere with the prices being charged by private manufacturers for similar articles. In the leather transaction, as in all other transactions, this appears to have been the established practice, a practice which is not denied or excused in any way by the War Department. It was the understanding of the officers in charge of the Surplus Property Division that the War Department was endeavoring to prevent this material going onto the market" (p. 9 (567)).

Allaying the manufacturers' fears.—On December 23, 1918, a meeting of the representatives of leading leather-goods manufacturers was held at the office of Maj. Byron in the War Department, Col. Goetz also being present. Maj. Byron there stated to the manufacturers:

"The surplus stock officer is going to protect the manufacturer as much as he can. I am trying, particularly in the leather, to keep him from getting the stuff; then he can't throw it on the market" (p. 9 (567)).

Apparently the manufacturers were apprehensive.

"Those who had furnished the leather goods to the Government, many times at exorbitant and usually their own prices, seriously opposed the Government selling this material to the public, and in this way reducing the high war prices" (p. 19 (577)).

At a meeting of harness manufacturers at Chicago in 1919, Col. Goetz suggested that the surplus be exported and sold abroad, and Mr. Carver, representing the manufacturers, said that they should be thought of by the Government and not the "rich farmers" (p. 10 (568)).

Around the War Office the impression was obtained that Maj. Byron and Col. Goetz were conveying to the public the information that the surplus harness was of little value. Col. Goetz occasionally stated as much to a prospective purchaser. On one occasion Byron, Goetz, and Benke obtained a harness which had been in water and mud and exhibited it at their Washington office (p. 11 (569)).

On September 3, 1920, an option was given by E. C. Morse, the director of sales, to the United States Harness Co. on the surplus leather equipment. According to an order issued by Morse on January 5, 1920, pursuant to a ruling of the Judge Advocate General, the granting of an option to prospective purchasers of Government property was beyond the authority of the War Department. Nevertheless, the contract was formally executed on September 24.

The United States Harness Co.—"The United States Harness Co. was organized for the purpose of entering into this contract, and the chief characters in its organization were Maj. Joseph C. Byron, Lieut. Col. George B. Goetz, Capt. Azel F. Cochran, and Capt. Henry W. Benke, all of whom had, during the war, been connected with different phases of the Department's leather acquirements, purchases, and inspection." (It should be noted that this candid statement comes from the minority report (p. 24 (582)) which either approved or ignored all the facts revealed by the majority.)

"The company was organized with $500,000 stock, $300,000 paid up. Goetz, Byron, Benke, and Cochran took $130,000 of this, and distributed $170,000 among seventeen leather-goods companies, each of which companies takes $10,000 of stock. These companies were so distributed over the United States as not to interfere with each other's territory (p. 5022): L. Frank Saddlery Co., San Antonio, Tex.; Louis P. Rice & Co., New Orleans, La.; Harpham Bros., Lincoln, Nebr.; Strecker Bros. Co., Marietta, Ohio; Morley Bros., Saginaw, Mich.; A. N. Edwards, Chicago, Ill.; the Strauss Co., St. Louis, Mo.; D. B. Traxler, Greenville, S.C.; Scheffer & Rossum Co., St. Paul, Minn.; Nashville Saddlery Co., Nashville, Tenn.; Northern Saddlery & Mfg. Co., Duluth, Minn.; McIntyre-Bunall Co., Green Bay, Wis.; Herman Sandford Saddlery Co., Springfield, Mo.; Hess & Hopkins Leather Co., Rockford, Ill.; Walter Boyt Co., Des Moines, Iowa; Indianapolis Saddlery Co., Indianapolis, Ind.; A. D. Goetz Manufacturing Co., Ranson, W.Va."

Col. Goetz, who was president of the corporation, resigned his commission on September 4. Byron was secretary, and Cochran and Benke were first and second vice presidents (pp. 16–17 (574–575)).

There had been some earlier intimations of this plan. "In a letter dated April 12, 1919, to the director of sales, Col. Goetz stated that 'he would like personally to sell all the surplus harness on commission basis, preferring to resign his commission to handle the work, or he will stay in the service long enough to organize a sales force, provided he be allowed to select assistants having the necessary qualifications'" (p. 10 (568)).

"On the 7th of May 1920, Col. Goetz ordered a set of artillery harness sent to his factory at Ranson, W.Va., for experiment, to see if it could be converted. He had no authority to issue this order, but the order was complied with. While he agreed to report the results of this experiment to the Department, he did not do so prior to the making of the contract, although requested to do so September

14, 1920, by Col. Hanson" (p. 12 (570)). In the same month, May, Goetz and Byron were discussing with Morse the plans that culminated in the contract.

A proposal to take over the surplus was submitted by Byron to Morse in July. A Boston firm named Thompson & Kelly objected, desiring to bid, but were told, after a temporary withdrawal of the proposal, to "keep off." D. B. Traxler, of Greenville, S.C., protested against the contract and was made a stockholder. Harbison and Gathright, leather dealers, of Louisville, Ky., wrote a strong letter of protest to Secretary Baker, and in reply received a letter from the Secretary and from Goetz, the latter offering to let the Louisville firm into the new corporation. On the other hand, Capt. George C. Bosson, Jr., in charge of leather goods, who objected to the contract, was discharged from the Army. Major W. O. Watts, who was objecting to the method of disposing of leather goods, and to whom certain tanners were hostile, was placed in charge of clothing and equipage, a division that had nothing to do with leather (pp. 14–15 (572–573)).

Terms of the contract.—The contract "covers all harness, saddles, leather, spare parts for harness and saddles, hardware and accessories for harness and saddles, and cut-leather stock on hand September 24, 1920, or declared surplus within one year thereafter . . . The Government stores the material at its own risk and expense, until called for by the company, repacks it in boxes of component parts, reconditions it, and puts it on the cars, billed to the contractor, at Government expense. All this harness is new and unused. The peculiar proposition is presented that if the harness is not reconditioned it grades at $19.46 and $17.07 a set, while if the Government reconditions it and treats it with neats-foot oil, it grades lower into $14.60 and $12.80 a set. Every bit of it is being reconditioned by the Government. . . . The contractor may sell the harness just as it was received, without reconditioning it. It is admitted the contractors might do this and make 25 percent profit without touching the harness. The contractor may either sell 'as is' or remake the harness and then sell it. If the property covered by the contract is sold for more than the minimum prices fixed in the contract, the contractors shall receive from 15 percent to 40 percent of selling price for selling. The old factory of A. D. Goetz & Co., at Ranson, W.Va., has been taken over by the United States Harness Co., and the company is now remaking some of the harness there, on all of which the United States Harness Co. will receive 40 percent of the proceeds of sale. The amount of profit to the United States Harness Co. from this contract is uncertain, but must, in the aggregate, be very large. On the harness alone, the 40 percent will amount to, approximately, $1,000,000. While Col. Goetz states that his company will make only 8 percent on capital invested, Byron will not so limit himself. By means of this control of the surplus leather the United States Harness Co. absolutely controls the situation and fixes the prices on surplus leather goods the country over. It is admitted by both Goetz and Morse, that what the United States Harness Co. is now doing, the War Department could have done equally well without the payment of this 40-percent commission. No apparent effort, however, was made to do so. The probabilities are that the Government will not receive to exceed 15 percent of the cost value of its surplus leather goods," estimated at about $20,000,000 (pp. 17–18 (575–576)).

The reaction.—"Maj. Byron submitted to the subcommittee a statement of sales of materials by the United States Harness Co. up until January 1, 1921, showing a return to the Government on sales of $345,771.23 and to the Harness Co. $230,514.15, during the period from September 24, 1920, to January 1, 1921" (pp. 18–19 (576–577)).

"As soon as the tanners found that the contract with the United States Harness Co. had been made, the Tanners' Council of the United States, one of the creatures of the Council of National Defense, met at New York on November 27, 1920, and addressed a circular letter to the harness-leather tanners of the country calling the attention of the tanners to the fact that the execution of this contract would hurt their business and asking that they communicate with their Members of Congress, asking them to attempt to have the contract rescinded. The harness and saddlery jobbers also met at Chicago, May 20, 1919, and criticized the proposed action of the Government in selling harness, and proposed to keep it off the market by taking it over and dividing it among themselves. If the Government would not do this, they proposed that all leather goods be sold at one time, at public auction, at Washington, D.C. . . . There is nothing in the attitude of the members of the Tanners Council or the various leather war-service committees that commends itself to the subcommittee. On the contrary, their attitude was grasping and unfair to their Government. Nor was the attitude of Byron and Goetz and the other officials in charge of the leather transactions of the Government any more worthy of praise. The whole affair from the time of the armistice seems to have been a concerted movement of all the leather men, both inside and outside the War Department, to protect the leather interests at the expense of the Government, until the time came when those inside the Government, having full control of the situation, and seeing their opportunity to realize great profits, deserted their former colleagues and secured the contract of September 24, 1920, to the consternation of their former associates. Thus, by the falling apart of the original combination, your subcommittee, and Congress, is able to ascertain, for the first time, the sordid details of these transactions; they reflect no credit upon the country" (p. 20 (578)).

Carbolic acid

[Source: Graham Report No. 1400 p. 54, vol. p. 638]

"The War Department purchased, in all, 47,506,822 pounds of phenol, commonly called carbolic acid, at an average price of 34 cents a pound. Very large quantities of this were on hand on the signing of the armistice. Thereafter much of it was declared surplus, and on August 15, 1919, a contract was entered into with the Monsanto Chemical Co., of St. Louis, Mo., by which contract the director of sales authorized the Monsanto Co. to sell for the United States its surplus phenol, estimated at 27,521,242 pounds, for a market price to be fixed from time to time by the representative of the contracting officer of the United States, but with a minimum price of 9 cents a pound. The United States was to pay all expense of every kind, and was to load and ship to any point designated by the Monsanto Co. For this service the company was to receive 2 percent of all sales, and in case any phenol was found to be below grade, was to redistill it for ¾ cent a pound, all expenses of shipment, freight, and of every kind to be paid by the Government. At the end of two years the contractor was to take all left at 9 cents a pound. Another striking provision of this contract was the provision that not more than one twenty-fourth of the entire amount to be sold would be sold in any one month by the contractor. The contract is almost identical in form with that mentioned in a former report of this subcommittee on leather.

"It is stated by the sales department that the average price received on such sales has been 12 cents a pound. From information obtained from the Bureau of Mines it appears that the Journal of Industrial and Engineering Chemistry quoted the price on phenol, water whiteU. S.P. 39 to 41° C., which was the grade purchased usually by the Government on August 9, 1919, the approximate date of the contract, at 15 to 16 cents a pound" (p. 54 (638)).

Byproducts coke ovens

[Source: Graham Report No. 1400, p. 55 ff. vol. p. 639 ff.]

The manufacture of trinitrotoluol (T.N.T.) requires toluene as one of the ingredients of the explosive, and toluene, at the time of the war, had been produced in commercial quantities only from byproduct coke ovens or from the stripping of coal gas in public gas plants (p. 55 (639)).

The Government made contracts with twelve companies for the erection of byproduct coke ovens. After the armistice, the contract of nine were cancelled and settlements were made. Three contracts were carried through to completion, as follows:

"The Fairmont By-Products Co. made a contract, on September 9, 1918, with the Government to erect a considerable number of by products ovens at Fairmont, W. Va. The Fairmont By-Products Co. was one of the numerous coal and allied products companies controlled by Col. C. W. Watson, of the Ordnance Department, who was the assistant of Col. Samuel McRoberts, who negotiated most of the by products coke oven contracts. For some reason the Fairmont By-Products Co. desired to relinquish its contract for the erection of the ovens at Fairmont, and accordingly, in September 1918, the Domestic Coke Corporation took over the contract of that company with H. Koppers Co. for the erection of 60 of the ovens covered by that contract. This contract thereafter proceeded under the name of the Domestic Coke Corporation.

"All the evidence in the matter of the Domestic Coke Corporation shows that the company was really a dummy, cloaking the operations of the Standard Oil Co. All of its financial business is transacted by the Standard Oil Co. The three dummy directors, when the contracts are completed or the business settled, expect to be paid in stock or otherwise for their services (1322).

"Until September 30, 1919, these various properties were controlled by the Ordnance Department and construction continued. After that date what remained to be done was turned over to the Construction Division of the Army.

"The contract with the Birmingham Coke & By-Products Co. was continued to completion, and cost the War Department $3,358,000. The War Department then caused the plant to be appraised, and on June 30, 1920, the Secretary of War approved a sale of the plant to the Birmingham Co. for $2,600,000, its appraised value, this being $758,000 less than it cost.

"The contract with the Donner Union Corporation is continuing. This plant was also sold on June 30, 1920, to the Donner Union Coke Corporation by approval of the Secretary of War. By the terms of the sale the corporation is to pay to the United States $4,140,000 for the first $6,000,000 of cost to the Government and actual cost over $6,000,000. It is estimated the cost will be $7,500,000. Payments of principal and interest are arranged, interest to begin December 31, 1921, 6 percent the first year and 5 percent annually thereafter.

"The Fairmont By-Products contract was completed. It cost the War Department $2,864,000. On January 2, 1920, the Secretary of War, on recommendation of a board of appraisers, approved a sale of the plant to the Domestic Coke Corporation for $1,664,000, on deferred partial payments extending over a term of years at 5-percent interest. By this settlement the Standard Oil Co. was enabled to procure this plant at $1,200,000 less than actual cost." (Pp. 62–63 (646–647).).

Shoes

[Source: Graham Report No. 1400, pp. 63–66, vol. p. 647–650]

"A great many thousand pairs of shoes that had been used to some extent were repaired and practically rebuilt after the signing of the armistice. After the repairing process many of these shoes were declared surplus, and at the time of the hearing 1,411,682 pairs of reclaimed shoes had been declared surplus."

* * * * * * *

"A confidential minimum price of $1.50 a pair on these reclaimed shoes was established in the department. Whether or not it was known to the public the committee is not informed. However, it appears that of the reclaimed shoes sold in the United States, on one occasion the United Salvage Corporation of New York purchased 33,400 pairs at $1.51 a pair, while to other purchasers the price ranged from $1.93 to $2,33."

Food products

[Source: Graham Report No. 171, p. 1, ff., vol. p. 3"]

"The present high price of food products and the need of the Government for money suggests to your committee the necessity of a preliminary report relating to the War Departments nonactivities in the sale of the very large quantities of food supplies now held in storage in the United States.

"At the time of the signing of the armistice, the Army was composed of approximately 3,700,000 men, 2,000,000 of whom were in France and about 1,700,000 in continental America. An increase of this force to 5,000,000 men had been agreed upon by the War Department, and food for this enlarged army for 8 months in advance was being contracted for and accumulated at the time active hostilities suddenly ceased.

"The demobilization of the Army began immediately upon the signing of the armistice and 800,000 soldiers were discharged by January 11, 1919. "This demobilization continued at the approximate rate of 80,000 per week, so that on the 24th of May 1919, 2,252,000 of the soldiers had been discharged and were definitely out of the service.

"In view of the tremendous quantities of food, the Government had on hand on November 11, 1918, and the demobilization of the armed forces, it at once became apparent that the War Department possessed an immense quantity of food beyond the needs of the Army.

"Actuated by this condition, General Peyton C. March, Chief of Staff, on November 30, 1918 (19 days after the armistice), issued an order authorizing the declaration of the surplus on all perishable food products.

"The next step was the declaration of surplus by the Quartermaster General; and the last step was the sale of the surplus supples by the Director of Sales. Notwithstanding the authorization of surplus by the Chief of Staff on the 30th of November, no action was taken with reference to declaring a surplus until the month of May 1919, or 6 months after the declaration was authorized. In the meantime the food deteriorating and becoming of less value to the Government, and the high cost of living for the American people continued. This inexcusable delay resulted in the spoiling of millions of pounds of ham and bacon, to the great loss of the American people who were in need of food products." (The minority of the committee found that only a small amount of food had suffered deterioration. Report page 7, vol. p. 9). "The inactivity of the Government and the disposition of these food supplies was, and is, the result of a well-defined policy of the Secretary of War to withhold them from the domestic market and to protect the interests from which these products had been purchased with the ultimate intention of disposing of them abroad so far as circumstances would permit." (It should be added that a member of the minority stated that at a conference he held with the Secretary of War, the latter had denied having such a policy. (Ibid.)

"This policy finds expression not only in testimony given to the committee by the officers of the War Department, but in discriminatory evidence as well. As an instance of such intention to prevent the American people from purchasing those products, the Quartermaster General's Department, through Gen. R. E. Wood, Quartermaster General, entered into an agreement with the Canners' Association that some 200,000,000 cans of canned vegetables would be kept off the domestic market during this season; this agreement was subsequently extended by an order of the Quartermaster General adding these canned vegetables to the soldier's ration in the expressed hope that they would be entirely consumed and that none would be left for sale. This order would have resulted in a loss to the Government of millions of dollars to be derived from the sale of this surplus, as well as depriving the American people of a large quantity of food.

"The purpose as shown by the testimony was to protect the canners who had sold the produce from competition with the governmental surplus.

"On July 8, 1919, the surplus of food stored in the United States over and above the needs of the Army was as follows:

Corn beef	$24, 000, 000
Bacon	23, 000, 000
Hash, corn beef	10, 000, 000
Roast beef	20, 500, 000
Fresh frozen meats and poultry	20, 000, 000
Canned vegetables	23, 000, 000

"This surplus is constantly growing larger, because of the continued demobilization of the Army. In addition to these items, there is a surplus of millions of cans of fish and milk, and tons of sugar, coffee and tea. It is utterly impossible to estimate the exact value of the tremendous quantity of food supplies in the hands of the Department, a large portion of which is deteriorating and becoming less valuable.

"During the 8 months which has elapsed since the signing of the armistice, only $12,000,000 of food supplies has been sold by the War Department in the United States and a very large quantity of that sold was spoiled and unfit for the general market, otherwise it would not have been placed on sale.

"On July 11 of the present year, and after the war expenditures committee was appointed, the Director of Sales issued to the press a publicity statement with reference to the sale of meats and vegetables. This statement provides that meat and vegetables shall be purchased only by municipalities, and municipalities to pay the freight from the nearest warehouse, and to have 10 days in which to make payment to the Government. This plan adopted by the Government will not result in the sale of these products to any great extent, for the reason that most municipalities, under their charter, have no legal authority to purchase food products for sale. Many municipalities which have indicated a desire to purchase this food for the benefit of their people, have been met with the threat of injunction on the part of the local dealers, which threat has been sufficient to prevent a purchase of the goods.

"This committee makes recommendation that these food supplies be sold without delay on the domestic market to the American people who, at great sacrifice, bought and paid for them, and the committee looks with disfavor on the policy of exporting them from America to foreign nations for sale and consumption. This committee further recommends that plans be devised by the Secretary of War, through the War Department, for the early disposition of all surlpus food products on the domestic market under a system which will grant to the American people the opportunity to secure the same for food purposes. The Committee therefore recommends the adoption of the following resolution:

"*Be it resolved by the House of Representatives of the United States of America*, That the Secretary of War be, and he is hereby, requested to place on sale, without delay, the surplus food products in the hands or under the control of the War Department now stored in the United States under such plan as will safeguard the interests of the Government and insure an opportunity to the people of the United States to purchase the same directly from the Government.

W. J. GRAHAM, *Chairman*,
CLARENCE MACGREGOR,
C. F. REAVIS,
OSCAR E. BLAND,
WALTER W. MAGEE,
ALBERT J. JEFFERIES,
JAMES A. FREAR,
ROYAL C. JOHNSON,
JOHN C. MCKENZIE,
ROSCOE C. MCCULLOUGH,
Committee."

Aviation

"Airplanes costing the Government $20,000,000 were resold to the Curtis factory for $2,700,000 or about 13 percent of cost. Thousands of American aviators were compelled to buy at full price from the Curtis Company if they wanted these machines."

[Source: Graham Report No. 637, p. 16, vol. p. 78.]

"In May 1918 the Siems-Carey-Kerbaugh Corporation received a cost-plus 7-percent contract for supplying spruce for airplanes from the State of Washington. Under the contract over $23,000,000 were expended, the corporation being assured of a profit of $1,400,000 to $3,000,000. Director of Aircraft Production, John D. Ryan, who became 2nd Assistant Secretary of War, August to November, 1918 and who was then and until his death in 1933 an important executive of the Anaconda Copper Mining Company, wrote to the Secretary of War regarding this contract. Part of his letter follows:

"'Carey stated at the beginning of the negotiations in which I had part that they did not expect to ever secure profit from the contract except to the extent that they were able to amortize and reduce the cost of the plant to the Government and take it over on an appraisal that would enable them to engage in the lumber business. That was, I believe, the chief incentive in their making the contract and never disguised, as far as I know.'"

[Source: Graham Report No. 637, p. 63, vol. p. 125]

On February 15, 1919, the estimated salvage value of the property bought and constructed under this contract was less than $4,000,000, as the following schedule shows:

Schedule on property accounts from the balance sheet filed by the spruce army officers as of Feb. 15, 1919

	Cost	Estimated salvage	
		Percent	Value
Land and timber lands	$775, 696. 68		$745, 500
Haulage equipment	951, 512. 77	25	238, 000
Donkey-engine equipment	1, 475, 783. 66	20	295, 000
Railroad equipment	651, 933. 13	20	130, 000
Railroad equipment (rails, etc.)	1, 000, 000. 00		250, 000
Marine equipment	85, 191. 09	20	17, 000
Towage and rafting equipment	49, 825. 95	25	12, 500
Tools and appliances	600, 146. 34	10	60, 000
Furniture and fixtures	354, 469. 86	20	71, 000
Railroad construction	8, 742, 100. 20		750, 000
General construction	69, 449. 20		
District construction	191, 349. 76		
Camp construction	1, 083, 932. 80		
Construction overhead	322, 265. 56		
Construction, Siems-Carey-H. S. Kerbaugh Corporation sawmill	2, 395, 345. 14	10	239, 000
Construction, Vancouver cut-up plant	1, 100, 073. 31		100, 000
Construction, Toledo mill	985, 487. 73		200, 000
Construction, Vancouver warehouse	21, 710. 79		
Supplies on hand	2, 402, 790. 58	33⅓	800, 000
Stumpage rights	26, 516. 64		
Total	23, 285, 581. 39		3, 908, 000

SETTLEMENT OF CLAIMS ARISING OUT OF THE CANCELLATION OF WAR CONTRACTS

[Source: Graham Report No. 1400, p. 66 ff., vol. p. 650 ff.]

"Even on a casual inspection of the operations of the War Department Claims Board and its auxiliary boards it is evident that every effort was made to do two things: (1) To speedily settle with the claimant; (2) to leave the manufactured and partly manufactured goods in the hands of the contractor. If there was any doubt about any proposition, such doubt was practically universally settled in favor of the contractor.

"The basis of all settlements was a circular issued by the Division of Purchase, Storage, and Traffic, November 9, 1918, before the armistice, called Supply Circular No. 111, which fixed the basis of all future settlements. It was written by Mr. Gerard Swope, an assistant to Maj. Gen. G. W. Goethals, and by Mr. Max Thelen, another assistant. A part of the circular prescribed that in such settlements the following items should be considered:

" '(1) Raw materials on hand: Cost plus inward handling charges plus such portion of overhead as is directly applicable.

" '(2) Partly finished products on hand: Cost of raw material and labor plus such portion of overhead as is directly applicable.

" '(3) Finished products on hand: Contract price, less freight charges if the contract or order specifies delivery at point other than factory.

" '(4) Special facilities: Cost of facilities specially provided and paid for by the contractor for the performance of the contract, the necessity of which was contemplated at the time the bargain was made and the cost of which was included in the contractor's original estimate. From the cost of such facilities deduct their fair value at the time the contract or order is terminated and state such portion of the remainder as is represented by the ratio of the uncompleted portion to the whole contract or order.

" '(5) Commitments: The contractor's commitments to suppliers, subcontractors, and others for contributing materials or work to be determined, insofar as applicable, in the same manner as indicated in (1), (2), (3), and (4).'

"From the time of the adoption of this circular as the rule of settlement, settlements became largely mechanical. The rules were such that the settlement largely depended upon what the contractor claimed. If he was honest, there was an honest settlement, if he was inclined to take advantage of the Government, he did so. Those claims were going through the claims boards at the rate of about 35 a day, aggregating millions of dollars. Therefore, little time was given for their examination. The process was largely mechanical. In most cases, also, the contractors were shrewd business men, well versed in their line, and were more than a match for the comparatively inexperienced members of the settling boards, most of whom knew nothing at all, and so admitted to the committee, about the business they were dealing with.

"No one with any knowledge of the situation doubts that millions of dollars were paid out on these claims to which the contractors were not entitled; but, taking advantage of the situation and the inexperience of the employees of the War Department, in some cases they wrung extortionate amounts from an already impoverished Public Treasury.

"The practice of permitting the contractor to keep raw materials also led to great abuses. The people were clamoring for all sorts of raw materials for certain uses. But, irrespective of this, most of this raw material was given to the contractors at low prices and afterwards, doubtless, sold to the public at war prices.

"To illustrate the situation, a few claims that have been brought to the attention of the subcommittee are here mentioned. They are not the best, nor the worst, but are probably fair examples of the ordinary run of settlements.

"(A) *Henry Moss & Co.*—The contract of Henry Moss & Co. was entered into in the latter part of September 1918, and was for 195,000 branding irons. What tactician in the War Department engineered this purchase will probably be unknown to fame. The committee was unable to learn his name. Altogether during the war and until after the armistice the War Department owned 580,182 horses and mules of all kinds, over 90,000 of which died. Evidently, with a branding iron for every three horses, the country ought to have been safe. There were four contracts, but no branding irons were delivered on them before the armistice. The contractor bought 79,952 pounds of copper to make these, for which he said he paid 39½ cents a pound. The specifications said cast copper. When he came to settle, the Government made a chemical analysis of his copper on hand, found it impure, and hence only worth 11 cents a pound and sold it back to him for that. Instead of penalizing him for not following specifications they allowed him full pay at 39½ cents per pound. There was 20,000 pounds more copper furnished then he needed. They bought it from him at 39½ cents and sold it back to him at 11 cents. The Government paid this firm about $40,000 in settlement, at least $27,000 more than it was entitled to.

"(B) *The American Can Co.*—This company took seven contracts to make 89,000,000 hard bread cans. The prices ranged from 5⅒ to 6½ cents each. Three independent can makers, with large manufacturing capacity, were trying to get contracts to make them at from 4 to 5 cents each, but the Government would not contract with them. The company delivered 49,738,608 cans. Tin plate had fallen in price but 9 percent. This was admitted by the secretary of the company on the stand. In spite of this fact this company was permitted to keep this tin plate at 68 percent of its cost price. At the same time, as is generally known, all sorts of tin products have risen in price. Every scrap of this material was no doubt used in the 55 factories of this company. An independent producer of tin plate, who had agreed to sell tin plate to the American Can Co. and who wanted to cancel his order on the armistice, was forced to deliver every pound. There was $867,732.37 worth of tin plate, and the Government lost on this tin plate $147,514.50 more than it ought to have lost. In addition, tools and machinery that cost the Government $165,705.56 were sold to this company at $35,695.47. The testimony showed that this machinery would readily last for 12 years of ordinary wear and was ordinary can-making machinery. We lost a quarter of a million dollars by this settlement.

"(C) *Stein Burn Camp & Field Equipment Co.*—This contractor had three contracts, one for fireless cookers, one for bread boxes, and one for cooks' chests. These were entered into about the last of August 1918. The contractor delivered 66 fireless cookers, 25 cooks' chests, and 7 bread boxes. They cost us $171,687.06. This was the amount paid to the contractor in the settlement of his claim. The fireless cookers and cooks' chests were to be made of black steel sheets, the bread boxes of tin plate. The sheets required were all of standard material and sizes. The testimony of steel men and of Government experts—one a man who had been employed by Hibbard, Spencer & Bartlett for 40 years—was to the effect that the sheet steel was worth at the time, reasonably, 95 percent of its cost price. The Claims Board let them take the sheet steel at the price of scrap iron and the tin plate at $20 a ton—plate which was worth on the market at least $140 a ton. A colonel in the Claims Board went to a metals expert attached to the board, a Mr. Birkenstein, of Chicago, a scrap dealer. Birkenstein told him there ought to be $25,000 come out of the claims Then Stein, of the Stein Burn Co., came down and saw Birkenstein, and Birkenstein told the colonel about =2,800 would be right. And then they settled. The least inspection of this matter would convince anyone that this company received at least $114,051.91 more than they were entitled to" (pp. 71–74 (655–658)).

"(D) *Briar Hill Steel Co.*—The Briar Hill Steel Co. is engaged in the manufacture and sale of steel products, billets, ingots, sheets, and the like. They had three orders for 776,600 sheets of corrugated steel roofing, dated about the middle of October. Nothing was ever delivered to the Government on these contracts. It was allowed $164,519.86 in cash, and allowed to retain all the raw materials and special facilities. It had 9,267 gross tons of steel ingots on hand. These it charged to the Government at $48.17 a ton and bought them back for $31.57 a ton. There was a large amount of corrugated sheet steel on hand. It offered $2 a hundredweight for this. A Government investigator sent a written statement to the board showing the market price of such sheets was $4.35 a hundredweight, and that $2 was entirely insufficient. Disregarding this, the material was sold to the company at $2 a hundredweight. The material was the very material needed by the contractor in its business. There can be little doubt that the Government lost in this settlement $75,000, approximately.

"(E) *The Standard Steel Car Co.*—As has been said this company contracted to build nine hundred and sixty-four (964) 9.5-inch howitzer carriages. Although the Government prepared several contracts, the company would never enter into one. The Government did not receive a single carriage that we could use prior to the armistice. The War Department spent in this venture $18,582,428.88. After the armistice the Ordnance Department had them finish 200 of these carriages. The company placed in the record a statement that the cost of production of these carriages was about $23,000 each. At this rate the total cost of production was about $4,600,000. The balance of this vast sum, or about $14,000,000, was used in overhead and in building an immense plant, filled with costly machinery, all of which the contractor now has. The company was permitted to take buildings and machinery that cost $2,987,200 for $600,000, and materials that cost approximately $5,558,000 for $300,000. There was a bid for this latter material of about $700,000 from another reliable firm, which Col. E. S. Hughes, negotiating officer, concealed from his associates. The arsenals of the United States were clamoring for this raw material and machinery, but they were handed over to the contractor. There was fraud and bribery admitted by the Government agents in some of the subcontracts, but all such accounts were allowed in full" (pp. 74–75 (659)).

("Exhibit No. 1367" appears in text on p. 4214).

Exhibit No. 1368

[188–Sal. Ms–19]

(188–Pdr. stored at Old Hickory)

April 30, 1929.

Mr. E. S. Nickerson,
Fabrics and Finishes Department:

Your letters April 9th and April 25th—Scrap smokeless powder.

We do not fully understand your letter of April 25th because we fail to see the necessity for your department to determine the future policy insofar as scrap smokeless is concerned on rumors, when facts are available.

The information contained in your letter of April 9th is, as you see, a rumor on the other hand, we have reported to you the facts of the case as handed to us by the Ordnance Department. These facts are as follows:

The War Department has in storage at Old Hickory more than twenty million pounds of smokeless powder, which at present is stored under water. Ballistic tests on samples of this powder indicate that it is ballistically unstable. It is therefore useless to the War Department. The Ordnance Department has decided to dispose of a portion of the twenty million pounds this year. It is estimated that five to six million pounds will be placed on the market in exchange for F.N.H. The balance, or upwards of fifteen million pounds, will also be disposed of but the Ordnance Department has not stated as to the approximate date when the greater portion of the powder will be made available for exchange. We believe that the fifteen million pounds will be placed on the market over the next two-year period.

Other advices given to you were to the effect that the Peters Cartridge Company were anxious to buy one or two million pounds of powder at 8¢ per pound and that the Western Cartridge Company would most likely bid on scrap powder. Both of these companies use scrap cannon powder as a basis for making shotgun powder, which is used in cheap priced shotshells. They could readily afford to pay as high as 10¢ to 15¢ per pound and as their present stocks of cannon powder are low, it would not be surprising if they submitted a higher price to the Government on the next exchange of smokeless for F.N.H. powder.

W. H. O'Gorman, *Asst. Director.*

Military Sales Division

[Memorandum]

DETERIORATED SMOKELESS POWDER AT OLD HICKORY

At the close of the war there was at Old Hickory an enormous quantity of smokeless powder which had been produced at that plant in preparation for the campaign of 1919. Since there was not sufficient magazine capacity for all of this powder, some of its was stored in ordinary powder buildings alongside of the machinery, where it remained until the Government decided to dismantle and sell Old Hickory. While this was in process a fire was started in one part of the plant and very large quantities of powder were destroyed, as well as the machinery and buildings adjacent.

It has been reported that the French and British were successfully storing smokeless powder in under-water storage and in view of the lack of magazine capacity at Old Hickory or elsewhere, it was decided that under-water storage would be made of this powder, utilizing the concrete water reservoirs available at Old Hickory.

When the writer visited Old Hickory in October 1925 the process of placing this powder in the basins was going on.

The question of the ballistic and chemical stability of this powder has arisen since then, as well as in France where the powder stored in lakes in the Pyrenees Mountains has shown serious deteriorations.

The Ordnance Department decided that it would be best to dispose of this powder as the commercial market was able to take it, since the military value of the powder was very small.

The Ordnance Department, U.S.A. was instructed by the General Staff to put in a formal request for permission to sell the deteriorated powder in under-water storage at Old Hickory, amounting to approximately 25,000,000 pounds.

When this letter was received by the General Staff, an inspector general was appointed to investigate the matter and the Ordnance Department was informed that they had been negligent in placing the powder in under-water storage and should the investigations of the inspector general fix the personal responsibility, charges would be preferred against the individuals involved on the grounds that these individuals had been culpable and negligent in placing the powder under water.

It was brought to the attention in General Staff that to move the powder to a safe place for dry storage and to build suitable storage magazines would have involved an expense of several million dollars and cover a greater period of time than was available. It was also brought to the attention of the General Staff that the French Government had placed much larger quantities of powder under water and that it was generally considered good practice to do so.

Nevertheless, Col. Louis Van Schaick of the Inspector General's Department has been appointed to make the investigation. The inspection being inaugurated by the Chief of Staff, General Summerall, and not by the Secretary of War as was rumored. Col. Van Schaick is an Infantry Officer, who is reported to have little or no experience in ordnance matters in general, or powder in particular. An investigation was conducted in Washington, but stopped rather abruptly about Labor Day. It is now rumored in Washington that the investigation is being further carried on and that several officers have been asked if they own du Pont stock, etc.

It is said that Col. Van Schaick will soon come to Wilmington to interrogate du Pont employees, although the exact nature of his questions cannot be ascertained.

Exhibit No. 1371

This agreement entered into this 1st day of June 1921, between Bethlehem Chemical Company, a corporation of the State of Delaware (hereinafter referred to as the "seller"), party of the first part, and E. I. du Pont de Nemours and Company, a corporation of the State of Delaware (hereinafter referred to as the "buyer"), party of the second part, witness:

Whereas the seller represents that it entered into a contract, under date of March 24, 1921, with the United States of America for the purchase from the United States of finished smokeless powder, and that the seller has heretofore acquired from the United States under said contract approximately thirty-three million (33,000,000) pounds of finished smokeless powder; and the seller further represents that under its said contract with the United States, the United States has the option of submitting from time to time in writing to the seller such additional quantities of finished smokeless powder as may be declared surplus by the United States, to be purchased by the seller, as and when any such additional quantities are accepted by the seller, at the same price and under the same terms and conditions as provided in the said contract of March 24, 1921; and

Whereas the seller desires to enter into a contract with the buyer for the purchase by the buyer from the seller of the aforesaid quantity of approximately thirty-three million (33,000,000) pounds of finished smokeless powder, and any additional quantities of finished smokeless powder which the seller accepts from the United States under the provisions of the contract aforesaid, dated March 24, 1921; and

Whereas the buyer is willing to enter into a contract with the seller for the purchase of the aforesaid quantity of approximately thirty-three million (33,000,000) pounds of finished smokeless powder, and any additional quantities of finished smokeless powder which the seller may accept from the United States under the provisions of the contract aforesaid, dated March 24, 1921, and which the buyer may accept under the conditions hereafter specified in article VI hereof:

Now, therefore, in consideration of the premises and of the mutual agreements herein contained, the parties hereto have agreed and by these presents do agree with each other, as follows:

I

Material.—The seller hereby agrees to sell to the buyer, and the buyer hereby agrees to purchase from the seller, under the terms and conditions hereinafter in this agreement set forth, approximately thirty-three million (33,000,000) pounds of finished smokeless powder (hereinafter referred to as "material"), located at the points designated on "appendice A" hereto attached and hereby made a part hereof.

It is understood and agreed that while the seller believes that the total quantity of said material shown on appendice A hereto, is approximately correct, the seller does not guarantee accuracy as to the total quantity of material shown on said appendice A, nor does the seller warrant the analysis of said material, its condition, or its suitability for any purpose whatsoever, it being understood that the buyer is to take said material in its present condition and in its present containers at the locations shown on appendice A hereto.

II

Removal of material.—The seller agrees to cause present railroad track facilities at the points named in appendice A hereto to be retained for the purpose of removing the material sold and purchased hereunder, or in the event such track facilities are to be removed prior to the removal of said material, at least thirty (30) days' written notice thereof shall be given by the seller to the buyer prior to the removal of such facilities.

All cost and expense of and preparation for removal and the removal of said material from the locations named on appendice A hereto shall be borne and paid by the buyer, in addition to the purchase price per pound specified in article III hereof.

The seller guarantees delivery of the material sold and purchased hereunder, and it agrees to obtain permission from the United States Government for the buyer and its representatives to go on the property where the material is located for the purpose of preparing for removal and removing the material sold and purchased hereunder.

The entire quantity of said material, except the quantity located at the Old Hickory Ordnance Reserve Depot, Jacksonville, Tennessee, shall be removed and paid for by the buyer within a period of one year and three months from the date of this agreement, deliveries to be taken at the rate of not less than one million (1,000,000) pounds per month, beginning June 1, 1921.

As to the material which is located at the Old Hickory Ordnance Reserve Depot, Jacksonville, Tennessee, the buyer shall remove said material at such time or times as the buyer may desire, but the buyer shall remove all of said material located at said Old Hickory Ordnance Reserve Depot prior to March 24, 1926.

The buyer shall not be required to pay any storage or other charges for or on account of any of the material sold and purchased hereunder prior to the removal of said material by the buyer from the locations shown on appendice A hereto, nor shall the buyer assume any responsibility whatever for the loss, damage or destruction of any or all of said material prior to such removal.

It shall be incumbent upon the buyer to furnish the cars necessary for shipment of the material sold and purchased hereunder, but the seller will render such assistance as it can in furnishing said cars, but without assuming any obligation therefor.

III

Purchase price.—The prices to be paid to the seller by the buyer for the material sold and purchased hereunder, shall be as follows:

(*a*) Twenty-three million (23,000,000) pounds of the material sold and purchased hereunder is acquired by the buyer in its present form for the purpose of reworking and placing in commercial form, and the price to be paid to the seller by the buyer for said quantity of twenty-three million (23,000,000) pounds of material shall be one and one-half cents (1½¢) per pound, net weight, which price of one and one-half cents (1½¢) per pound includes ten cents (10¢) for each container in which the powder is packed.

(*b*) Ten million (10,000,000) pounds of the material sold and purchased hereunder is acquired by the buyer in its present form for use as smokeless powder, and the price to be paid to the seller by the buyer for said quantity of ten million (10,000,000) pounds of material shall be three cents (3¢) per pound, net weight, which price of three cents (3¢) per pound includes ten cents (10¢) for each container in which the powder is packed.

The buyer agrees to remove and pay for not less than two million (2,000,000) pounds of material each year during the period from June 1, 1921, to May 31, 1926, of the quantity of ten million (10,000,000) pounds of material which is sold and purchased hereunder in its present form for use as smokeless powder, as provided in subdivision (*b*) of this article III. It is agreed that the removal of and payment for two million (2,000,000) pounds of said material each year shall constitute a part of, and not an addition to, the deliveries provided under article II of this agreement.

IV

Weights.—The weight of the material sold and purchased hereunder shall be determined at the time of loading, and the buyer agrees to accept the stenciled net weights as given on containers where the material loaded is packed in containers. In other cases, the buyer agrees to accept certified net weights as determined by the representatives of the United States at the time of loading on cars at the point of shipment.

V

Default.—In the event that the buyer shall, through its own fault, fail to accept deliveries in accordance with the provisions of this agreement, or shall otherwise default in the terms hereof to be by it performed, the seller shall thereupon give the buyer thirty (30) days' notice in writing of the default, and unless the buyer shall within said period remedy the default, the seller shall thereupon have the right to cancel this agreement, and the buyer shall be liable to the seller for any damages due by reason of the default.

If the seller shall fail to make deliveries in accordance with the provisions of this agreement, or shall otherwise default in the terms hereof to be by it performed, the buyer shall give the seller thirty (30) days' notice in writing of the default, and unless the seller shall within said period remedy the default, the buyer shall thereupon have the right to cancel this agreement, and the seller shall be liable to the buyer for any damages due by reason of the default.

Provided, however, That in the event the seller is prevented from delivering, or the buyer is prevented from accepting any of the material sold and purchased hereunder by reason of strikes, force majeure, car shortages, or embargoes, the seller shall be excused from making delivery of material and the buyer shall be excused from accepting delivery of material while prevented from so doing by any one or more of said causes, and this agreement shall, as to the material so affected, but not otherwise, be suspended during the time such cause for delay is present, but all such material shall be delivered and accepted as soon as possible after such disability is removed.

VI

Options.—In the event that the United States shall offer to the seller any quantity or quantities of finished smokeless powder during the period of this agreement, in addition to the thirty-three million (33,000,000) pounds sold and purchased hereunder, the seller shall thereupon submit such offer to the buyer for acceptance or rejection by the buyer at the same prices and under the same terms and conditions as are provided in this agreement for the purchase of the thirty-three million (33,000,000) pounds herein specifically contracted for. Upon the submission of any such offer by the seller to the buyer, it is agreed that the buyer shall accept or reject such offer in writing within thirty (30) days from the date of the submission of any such offer.

VII

Assignment.—This agreement shall not be transferred or assigned by the seller hereunder to any individual, partnership, or corporation without the consent in writing of the buyer hereunder.

VIII

Notice.—Any notice from the seller to the buyer under this agreement, when not actually delivered in writing to the buyer, shall be deemed to have been sufficiently given when mailed in a sealed, post-paid wrapper, addressed to the buyer at Wilmington, Delaware.

Any notice from the buyer to the seller under this agreement, when not actually delivered in writing to the seller, shall be deemed to have been sufficiently given when mailed in a sealed, post-paid wrapper, addressed to the seller at 1519 Connecticut Avenue NW., Washington, D.C.

IX

This agreement shall be binding upon the legal representatives, successors, and assigns of both the parties hereto.

In witness whereof the parties have caused this agreement to be executed, in duplicate, by their respective officers thereunto duly authorized, the day and year first above written.

Exhibit No. 1372

This contract made and entered into this 1st day of December 1923 by and between the United States of America, by Charles R. Baxter, major, Ordnance Department, U. S. Army, acting under the direction of the Chief of Ordnance and under the authority of the Secretary of War, party of the first part, and du Pont Fibersilk Company, a corporation organized and existing under the laws of the State of Delaware, party of the second part, witnesseth:

Whereas on November 22, 1920, the United States of America, by Dwight K. Shurtleff, major, Ordnance Department, U.S. Army, acting under the authority of the Secretary of War, entered into a certain contract with the Nashville Industrial Corporation, a corporation organized and existing under the laws of the State of New Jersey, for the sale and delivery to said Nashville Industrial Corporation of the United States smokeless powder plant and facilities (generally known and hereinafter referred to as the Old Hickory powder plant) located at Jacksonville, Tennessee; and

Whereas the United States on July 25, 1923, instituted a proceeding in equity in the United States District Court for the Middle District of Tennessee against said Nashville Industrial Corporation, and others, praying that the said contract be declared fraudulent and void by the court and no longer binding on the United States and that the said sale by proper orders of the court be vacated, annulled and held for naught, and that receivers be appointed to take over and hold, subject to the orders of the court, all and singular the property, assets, and facilities of said Old Hickory powder plant, wherever situated, with full power and authority to take into their possession all of the property of said plant, and the said plant itself, and to hold, manage, control, and operate the same under such orders and directions as the court may make from time to time, with power to sell and dispose of said plant, or any part thereof, or take any action with respect thereto as the court may direct; and

Whereas on July 30, 1923, the said suit came on to be heard on bill of complaint and answer, whereupon the court on said date, by order and decree, appointed B. P. Morse and William P. Smith, residents of Davidson County, Tennessee, receivers to take possession of all property, real and personal, known as the "Old Hickory powder plant" as of midnight July 31, 1923, and to manage, maintain, and operate same from and after said last-named date, and to complete and carry out contracts for the sale and delivery of property and material theretofore made by said Nashville Industrial Corporation, the said receivers, however, being ordered and directed by the court before accepting and closing any deals for the sale and transfer of the real estate of said plant, or any part thereof, to report the offer or offers therefor to the court for confirmation, or such other orders as the court may see fit to enter with reference thereto; and

Whereas DuPont Fibersilk Company, party of the second part herein on August 16, 1923, made an offer in writing to said receivers of $650,000.00 cash, for the purchase and acquisition of a part of the property at said Old Hickory powder plant, the property for which said offer was made being outlined and described in appendix A and on map U. S. N. No. 10, exhibit 1, hereto attached, and made a part hereof; and

Whereas the offer aforesaid made by DuPont Fibersilk Company was on August 16, 1923, formally approved in writing by the United States and by the Nashville Industrial Corporation, as shown by exhibit II hereto attached and made a part hereof; and

Whereas the offer aforesaid made by DuPont Fibersilk Company, together with the approval aforesaid by the United States and said Nashville Industrial Corporation were submitted on August 16, 1923, by the receivers to the court for confirmation and approval; and

Whereas the court on August 18, 1923, entered an order and decree approving the offer aforesaid made by said DuPont Fibersilk Company, and authorized and directed said receivers to enter into such formal contracts and agreements of sale with DuPont Fibersilk Company as to fully and completely assure and make effective all the terms and conditions set forth and described in appendix A hereto, and directing the clerk of the court to execute and deliver to said DuPont Fibersilk Company deeds of conveyance upon the payment by said DuPont Fibersilk Company of the sum of Six Hundred and Fifty Thousand Dollars ($650,000.00) cash, to the end that title to the property aforesaid shall completely vest in DuPont Fibersilk Company, free and clear of all encumbrances; and

Whereas on October 1, 1923, the United States Government, the Nashville Industrial Corporation, and said DuPont Fibersilk Company, filed with the receivers aforesaid an agreement in writing with respect to differences between the surveys actually made and surveys as shown in appendix A and on exhibit I hereto attached. The surveys as actually made, showing the meets and bounds of the property to be conveyed, and the character and nature of the meets and bounds of the rights-of-way to be sold, to said DuPont Fibersilk Company, being shown, described, and outlined in and on exhibits 3 and 4 hereto attached; and

Whereas the court on October 1st, 1923, entered an order approving the changes aforesaid which had been agreed to by the said parties in interest, and ordered and directed the clerk of the court to execute his deed as theretofore ordered, but in accordance with said changes; and

Whereas in view of the suit hereinbefore referred to now pending between the United States and the said Nashville Industrial Corporation, and in the event that said suit is finally decided by the court in favor of the United States, it is anticipated that any part of the property of the Old Hickory powder plant not disposed of at the time of such determination, will revert to the United States; and

Whereas even though the court finally decides the said suit in favor of the said Nashville Industrial Corporation, the United States, under the contract aforesaid dated November 22, 1920, between the United States and the said Nashville Industrial Corporation, will be entitled to its pro rata share of the profits derived from the sale of the property to be conveyed to said DuPont Fibersilk Company; and

Whereas it is the desire of the United States to give, and of the DuPont Fibersilk Company to receive, certain assurances from the United States that in the event that the suit aforesaid shall be finally decided by the courts in favor of the United States, the DuPont Fibersilk Company shall have free and unencumbered title to the property conveyed to it, and shall enjoy all the rights and privileges mentioned in appendix A hereto attached, except as hereinafter provided in article III of this agreement.

Now, therefore, in consideration of the premises and the mutual agreements herein contained, the parties hereto have agreed and by these presents do agree, with each other, as follows:

ARTICLE I

In view of the fact that one of the conditions named by DuPont Fibersilk Company under which it is willing to purchase the property outlined and described in appendix A and exhibit I hereto, is that DuPont Fibersilk Company shall be assured of permanent maintenance and operation of the spur line railroad which extends from Stone River Junction to the Old Hickory powder plant property, ncluding switching yards, and that DuPont Fibersilk Company shall be guaranteed Nashville freight rates or better, it is understood between the parties hereto that the United States cannot bind itself to guarantee Nashville freight rates or better to DuPont Fibersilk Company; the United States, however, will sell and convey the spur line railroad and switching yards above referred to to the Tennessee Central Railway Company, for a consideration of one dollar ($1.00) upon the condition that the Tennessee Central Railway Company will give to the DuPont Fibersilk Company a guarantee in writing that it will permanently operate and maintain said spur line railroad and switching yards, and establish Nashville freight rates or better at the Old Hickory powder plant property.

ARTICLE II

In order that DuPont Fibersilk Company may enjoy the use of the concrete road running through the Old Hickory powder plant property and the use of the suspension bridge over the Cumberland River at the end of said road, the United States will convey said road and said bridge to Davidson County, in the State of Tennessee, for the benefit of the public, upon the condition that Davidson County accepts the same as one of its county roads.

ARTICLE III

In the event that the suit aforesaid between the United States and the said Nashville Industrial Corporation is finally decided by the courts in favor of the United States, the United States will in such event do and perform all of the matters and things, then remaining unperformend on the part of the receivers aforesaid, set forth in appendix A hereto under the heading, "Additional rights and privileges"; with the exception that under paragraph 7, "Electric light", and paragraph 9, "Water", it is understood that the United States shall only be obligated to furnish electric power, light, and water so long as the United States maintains and operates these facilities in connection with its own property.

ARTICLE IV

It is understood and agreed that the foregoing covenants and agreements on the part of the United States are dependent upon the payment by du Pont Fibersilk Company to the court of the total sum of $650,000.00 cash, for the property to be conveyed to it; and the United States further agrees that simultaneously upon the payment of said sum by du Pont Fibersilk Company, the United States will, in order to fully protect du Pont Fibersilk Company, execute and deliver to said company a quitclaim deed to the property outlined and described in and on exhibits 3 and 4 hereto attached, together with grants of rights-of-way as set forth in and on the last-named exhibits; and the United States further agrees that simultaneously upon the payment of the sum aforesaid and of the payment of the sum of $1.00 by the Tennessee Central Railway Company, the United States will execute and deliver a quitclaim deed covering the spur line railroad and switching yards to the Tennessee Central Railway Company.

In witness whereof the parties hereto have caused this agreement to be executed, in sextuplicate, by their respective officers, duly authorized, on the day and year first above written.

UNITED STATES OF AMERICA,
By (S.) CHAS. R. BAXTER,
Major, Ord. Dept., U. S. Army.
DU PONT FIBERSILK COMPANY,
By (S.) L. A. YERKES, *President.*

Attest:
[SEAL]

B. M. MAY, *Secy.*

(S.) FLORENCE G. HOGAN.

APPENDIX A

NASHVILLE, TENN., *August 16, 1923.*

Messrs. B. P. MORSE and WILLIAM P. SMITH,
Receivers for Nashville Industrial Corporation,
Nashville, Tennessee.

GENTLEMEN: du Pont Fibersilk Company, a corporation of the State of Delaware, hereby makes an offer to purchase, for the total sum of six hundred and fifty thousand dollars ($650,000) cash, a part of the Old Hickory Powder Plant property, the said property, and the terms and conditions upon which this offer is based, being set forth and described in appendix A and outlined on map marked "U.S.N. No. 10", hereto attached.

In addition to the said sum of six hundred and fifty thousand ($650,000) dollars, du Pont Fibersilk Company will contribute a sum not to exceed five thousand ($5.000) dollars towards the moving of the nitrate of soda in present storehouse no. 6 should the requirements in locating du Pont Fibersilk Company's plant necessitate the moving of the soda. The balance of the expense of moving the soda to be borne by you. It is understood that you will move the soda within 30 days after written notice from us to you that we desire the soda moved.

Very truly yours,

DU PONT FIBERSILK COMPANY,
By (S.) L. A. YERKES, *President.*

APPENDIX A. SCHEDULE OF PROPERTY, RIGHTS, AND PRIVILEGES

REAL ESTATE AND BUILDINGS

Parcel A

Beginning at the point of intersection of the easterly right-of-way line of the industrial railway spur leading from the Tennessee Central Railroad and the Nashville, Chattanooga and St. Louis Railroad to the Old Hickory Works with the center line of 15th Street in the Old Hickory Village, as shown on map U.S.N. #10, exhibit 1; thence east with the center of said 15th Street to low water mark on the west bank of the Cumberland River; thence northerly along the said west bank of the Cumberland River to the point where coordinate line 160 of the system of coordinates, as shown on map U.S.N. #10, exhibit 1, intersects said river bank at low water mark; thence west along said coordinate line 160 to its intersection with coordinate line M 3; thence north along coordinate line M 3 to its intersection with coordinate line 176; thence west along said coordinate line 176 to its intersection with coordinate line 04—60; thence southwesterly at an angle of 45 degrees with coordinate line 176 to a point in the northeast right-of-way line of a concrete road on the northeast side of the railroad classification yards of the beforementioned industrial railroad, said right-of-way line being parallel to and distant 25 feet from the center line of said concrete road; thence southeasterly along said right-of-way line and right-of-way line produced to its point of intersection with the easterly right-of-way line of the railroad spur and classification yards above mentioned, said railroad right-of-way line being a line 75 feet from and parallel to the center line of the easterly track, of said railroad spur and classification yard; thence in a general southeasterly direction along said railroad right-of-way line to the point of beginning, containing within said bounds 495 acres, more or less, as shown on map U.S.N. #10, exhibit 1.

In addition to parcel A and to be considered a part thereof, the following parcel of land is included:

Being that parcel on which the Ketchum house is now located and beginning at a point in the center line of said 15th Street approximately 200 feet east of coordinate K–2; thence running east approximately 175 feet to a point on the west side of the river road; thence southeast along the west side of said river road approximately 350 feet to a point; thence southwest at an angle of 90 degrees a distance of 125 feet to a point; thence northwest by an angle of 90 degrees a distance of approximately 437 feet to the point of beginning, containing 1.2 acres more or less, being the parcel of land mentioned on the exhibit 1, map U.S.N. #10, in these words: "Includes plat for 1 Ketchum House."

All of the permanent village within the bounds of parcel A consisting of 346 permanent houses, including all replacements of plumbing, heating, and lighting fixtures in good usable condition that may have been removed from said permanent houses. Said replacements of fixtures to be delivered to the buildings by the receivers at their expense and to be installed by du Pont Fibersilk Company at its expense.

In addition to the said permanent houses, the following houses within the bounds of parcel A are to be included:

166 so-called "six-room" temporary bungalows, which are frame structures covered with either rubberoid or tar paper, including all of the plumbing and lighting fixtures in same. Replacement parts in good usuable condition to replace any of the fixtures which have been removed are to be delivered to the buildings by the receivers at their expense and to be installed by the du Pont Fibersilk Company at its expense.

60 two-story, six-room, six-apartment houses, which are frame structures covered with rubberoid or tar paper, including all plumbing and lighting fixtures. Replacement fixtures in good usable condition to replace such fixtures as have been removed are to be delivered to the buildings by the receivers at their expense and to be installed by the du Pont Fibersilk Company at its expense.

19 one-story, four-room, six-family apartment buildings, of frame construction covered with rubberoid or tar paper, including all plumbing and lighting fixtures. Replacement fixtures in good usable condition to replace such fixtures as have been removed will be delivered to the buildings by the receivers at their expense and to be installed by the du Pont Fibersilk Company at its expense.

A brick building known as the "Pearcy House."
Police headquarters.
Soda storehouse no. 5 (excepting contents).
Y.M.C.A. with the equipment.
Y.W.C.A.
Hotel, including two dormitory or rooming-house buildings, and one dining-hall building.
Two-bed hospital with all equipment.
Post office with all equipment.
Fire house and equipment, including 1 Brockway hose truck and 1 Ford chief's car.
Retail store building, occupied by the H. G. Hill Grocery Co., together with adjoining building, and such equipment located therein as does not belong to H. G. Hill Grocery Co.
Dry goods store.
Paint shop.
Garage.
Drug store.
Commissary store.
Bank building.
Farmhouse near the Hill store.
Swimming pool and bathhouses.
2 community garages in village and other garages and maids' quarters on property.
The village reservoir and pump house, including all pumps, piping, and electrical equipment therein. The second motor-driven fire pump, which has been removed, is to be replaced by the receivers at their expense—that is, the said pump is to be delivered on foundation by the receivers when the du Pont Fibersilk Company's water plant is in operation and the necessity of purchasing water no longer obtains.
Village water tank and towers.

all of which are indicated on map U.S.N. no. 10, exhibit 1.

All railroad tracks now located on parcel A, together with the tracks and right-of-way for same connecting said tracks with the classification yard and main railroad spur, and the right to construct new railroad spurs across the railroad right-of-way and road right-of-way to connect such additional tracks as the du Pont Fibersilk Company may find it necessary to install on parcel A with the main railroad spur and classification yard.

All pipe lines of any nature above or below ground within the limits of parcel A, together with valves and fire hydrants and manholes, inlet boxes, etc., on sewers, all pole lines, electric-transmission lines, telephone lines, fire-alarm and all other signal lines within the limits of parcel A.

Parcel B

Beginning at a point at low-water mark on the west bank of the Cumberland River on the east side of Hadley's Bend 260 ft. upstream from the south end of the more southerly of the two concrete pump houses located on said river on the east side of Hadley's Bend; thence northerly along said west bank at low-water mark of the Cumberland River 450 ft.; thence west 600 ft.; thence south

340 ft.; thence in an easterly direction to the point of beginning, containing 5 acres, more or less, as shown on map U.S.N. no. 10, exhibit 1.

Included with parcel B are—

Concrete pump house and intake, together with all pipe lines connecting same and all other pipe lines located either above or underground, together with their supports on said property, as well as all transmission lines, telephone lines, and signal lines of any kind and the poles on which they are carried. Included with the pump house are two 8,500 g.p.m. pumps, with motors, together with all of the equipment, piping, electrical equipment, wiring, conduits, and switchboard inside of the building. The other 8,500 g.p.m. pumps and three 600-kw. transformers are to remain the property of and to be removed by the receivers within four (4) months from date of deed of conveyance.

Parcel C

Beginning at a point N. 82 degrees 30′ E. and 250 ft. distant from the southeasterly corner of the concrete Imhoff tank of the main sewage-disposal plant of the Old Hickory Village; thence southwesterly at right angles to the center line of the filter bed of said sewage-disposal plant 600 ft.; thence northwesterly parallel with the center line of said filter beds 2,000 ft.; thence northwesterly at right angles with the last-mentioned line 600 ft.; thence southeasterly 2,000 ft. to the point of beginning, containing 27 acres, more or less, as shown on map U.S.N. no. 10, exhibit 1.

Included with parcel C are—

Sewage-disposal plant consisting of septic tank and filter beds, including all necessary pipe lines delivering to and discharging from same, all operating devices and equipment in connection with said sewage disposal plant. All pipe lines above or below ground, all transmission lines, telephone or signal lines, and pole lines within the limits of parcel C—excepting, however, powder-storage magazines and contents and railroad tracks as specified in the written instrument dated November 22, 1920, between Nashville Industrial Corporation and United States of America, as respects this tract.

RIGHTS-OF-WAY

The following rights-of-way to be granted by the receivers to the du Pont Fibersilk Company:

(1) A right-of-way 50 ft. wide from parcel A to parcel B, for the erection and maintenance of pipe lines, roads, electric lines, transmission lines, telephone lines, signal lines, and pole lines necessary for the operation of the pumping unit and other facilities which may be placed on parcel B and for access to parcel B, together with the right to enter upon said right-of-way at any and all times to inspect, maintain, repair, or replace any or all of the structures or facilities placed on same. The metes and bounds of said right-of-way to be determined after survey on the ground.

(2) A right-of-way 50 ft. wide from parcel A to and down the ravine north of parcel A to the mouth of said ravine and from the mouth of said ravine to the Cumberland River, for the flowage of plant wastes and surface water and the right to construct such ditches and sewers on said right-of-way as the du Pont Fibersilk Company may desire, together with the right to enter upon said right-of-way at any and all times to inspect, maintain, repair, or replace said ditches and sewers. The metes and bounds of said right-of-way to be determined after actual survey on the ground.

(3) A right-of-way 50 ft. wide for and use of present waste sewers leading from parcel A through property of the Old Hickory Powder Plant to open ditch on west side of main railroad spur and right-of-way for and use of said open ditch from this point to the Cumberland River, together with the right to enter upon said right-of-way and inspect, maintain or replace the present sewers and ditches and to construct, inspect, and maintain such additional sewers and ditches as may be necessary to properly handle the wastes from industrial plants of the du Pont Fibersilk Company located on parcel A. The metes and bounds of said right-of-way to be determined after actual survey.

(4) Two rights-of-way each 50 ft. wide for the existing sanitary sewers from parcel A to the sewage disposal plant on parcel C, together with title to the existing sewers and manholes on said rights-of-way, and the right to enter upon said rights-of-way at any and all times to inspect, maintain, replace, or to repair any of said sewers or manholes, and to construct and maintain such additional sewers and manholes on said rights-of-way as the du Pont Fibersilk Company may

deem necessary. The metes and bounds of said rights-of-way to be determined after actual survey.

(5) A right-of-way 50 ft. wide from the filter beds of the sewage disposal plant on parcel C to the Cumberland River, together with the right to enter upon such right-of-way at any or all times to inspect, maintain, repair or replace said sewers and ditches or to install new sewers and ditches when necessary. The metes and bounds of said right-of-way to be determined after an actual survey.

(6) In the event that the du Pont Fibersilk Company should decide to purchase electric power for operation of the fibersilk plant, the receivers agree to grant to the du Pont Fibersilk Company a right-of-way across properties now owned or repurchased by the receivers for transmission lines to parcels A, B, and, C, together with the right to enter upon such right-of-way for the inspection maintenance, repair, or replacement of said transmission lines.

(7) A right-of-way for present water pipe line from parcel A to parcel C, together with title to said pipe line; also the right to enter upon said right-of-way at any and all times to inspect, maintain, repair, or replace said water line, and to lay such additional water lines as the du Pont Fibersilk Company may deem necessary.

(8) A right-of-way 50 ft. wide for a road from parcel A to parcel C whereon the du Pont Fibersilk Company may construct, maintain, repair, and make use of a road for access to parcel C for the operation of such facilities as are located or may be located on parcel C, and for the handling of such materials as may be desired from parcel A to and from parcel C, together with the right to build, maintain, operate, and replace such pipe lines, pole lines, electric lines, telephone lines, signal lines, and tramways on said right-of-way as the du Pont Fibersilk Company may deem necessary, reserving to the United States such rights as are specified in the written instrument dated November 22nd, 1920, between the United States of America and the Nashville Industrial Corporation. The metes and bounds of said right-of-way to be determined after an actual survey.

There is reserved to the present owners of the adjoining lands and their successors or assigns the right to cross all of the above-described rights-of-way at convenient places provided that the crossing of such rights-of-way does not materially interfere with or impair the rights aforesaid granted to du Pont Fibersilk Company, its successors or assigns.

On the 100-acre factory site of parcel A said 100-acre tract being marked "AA" on exhibit 1 the du Pont Fibersilk Company purchases of the improvements on this factory site only the following:

All broad-gauge tracks.
All poles in use.
Electric light and power wires and accessories.
Water lines of every description.
Sewers.
Hydrants.
Pearcy House and its outlying buildings.
Police headquarters.
Soda store house #5 (excepting contents).

All other improvements and property on said 100-acre factory site are reserved to the receivers for removal as hereinafter provided.

On the 395-acre village site being the remainder of parcel A, exhibit 1, the receivers reserve of the improvements and property only the following:

Freight house #1292.
Traffic office #1291.
Watchman's shed near #1292.
Oil house #1290.
Machine shop 14′ x 25′.
One-story section house gas-car shed.
All loose, dismantled lumber, brick, and salvage material.
Main gate and office building.
All plant fencing.
159 P3 Jersey mess.
Small frame building 158–O–50/3.
Small frame building 156–N/3.
One frame house #22072.
One large mess hall opposite frame house #22072.
Carmichael House, building #146–K/3.

Shed 45 ft. west of same 14′ x 30′.
The old Sullivan dry-goods store building.
Building #144–J/3.
The disinfectant house and contents.
Building #143–W/3.
Buildings 141, 143, 144, 60, and 12
Village heating plant and trestle and warehouses immediately adjacent.
Building #148–50–Y/2.
All unused chestnut poles.
Hotel heating plant, as is with filter plant.
Kindergarten building now used as church.
Building #125–F/3.
Building #124–C/3.
Bob Elliott's plumbing shop.
2 partly dismantled 36-room apartments.
One retail store.
2 36-room apartments between 14th St. and 15th St.
2 partly dismantled 6-family one-story apartments.
Bell tower near village water tank.
On parcels B and C all improvements are to become the property of du Pont Fibersilk Company.

ADDITIONAL RIGHTS AND PRIVILEGES

The following additional rights and privileges are granted and assured to du Pont Fibersilk Company by the receivers:

1. *Cumberland River water rights.*—The receivers agree to transfer to du Pont Fibersilk Company 50% of their right to take water from the Cumberland River, and to obtain from the War Department of the United States Government at the expense of the receivers the necessary permits for taking water from the Cumberland River and to transfer such permits to du Pont Fibersilk Company.

2. *Cumberland River rights.*—du Pont Fibersilk Company to be given the use in common with the receivers and their successors of all rights now possessed by the receivers to discharge industrial wastes and sanitary sewage into the Cumberland River at the points of discharge of sewers and ditches, for which rights of way are granted hereunder.

3. *Water-pollution restriction.*—The receivers and their successors shall not permit any industry to be located on property owned or repurchased by them or their successors at Old Hickory Powder Plant, which will discharge any factory wastes or sewage into the Cumberland River south of the first dam north of parcel B which would in any way contaminate the water of the Cumberland River or make it less satisfactory for use in artificial-silk manufacture than it now is.

4. *Industrial restriction.*—No plant manufacturing artificial silk or plant used for silk or artificial silk throwing purposes shall be located on any part of the Old Hickory Powder Plant property by the receivers or their successors without first having the permission of the du Pont Fibersilk Company. The following industries will not be located at Old Hickory Powder Plant by the receivers or their successors within half a mile of any bound of parcel A: Cement mill; flour mill; causticizing plant; any industry emitting acid or alkaline fumes or gases or offensive or obnoxious odors; nitric acid; sulphuric acid; chlorine, hydrofluoric acid; bromine; calcium carbide; chlorphenol, organic sulphur compounds (mercaptanes); phosgene; fertilizers; petroleum oil refinery; or any industry using any of the substances stated in sufficient quantity to emit fumes or odors damaging to the manufacture of artificial silk on parcel A.

5. *Railroad covenant.*—The receivers have furnished to du Pont Fibersilk Company as of August 16, 1923, satisfactory assurance in writing from Tennessee Central Railway Company that the railroad spur line connecting the N. C. & St. L. R.R. and the T. C. Ry. with the plant will be permanently operated and maintained as a common carrier by the Tennessee Central Railway Company, and that they will establish freight rates to and from the plant on the basis of Nashville rates or better as evidenced by letter dated August 16th, 1923, of H. W. Stanley, president, T. C. Railway Company, to L. A. Yerkes, president du Pont Fibersilk Company, which offer has been accepted by the du Pont Fibersilk Company.

6. *Title and abstracts.*—The receivers shall promptly furnish du Pont Fibersilk Company, free of charge, original abstracts or copy of abstracts of title in possession of the United States of America to said land. Upon approval of this purchase by the court, the receivers will cause the property aforesaid to be conveyed

and transferred by good and sufficient deed to du Pont Fibersilk Company, on or before September 12th, 1923, and the receivers shall obtain from the U.S. Government and Nashville Industrial Corporation quitclaim deeds to the du Pont Fibersilk Company covering the property to be conveyed hereunder.

7. *Electric light.*—Electric power and light to be furnished by the receivers and their successors at current rates if desired by the du Pont Fibersilk Company to any or all of the parcels purchased until du Pont Fibersilk Company has its plant constructed and desires to furnish its own electric current. Proposal to furnish power and light, including electric rate schedule, to be submitted to du Pont Fibersilk Company by the receivers not later than August 31, 1923.

8. *Tenants.*—Tenants will be removed from any houses purchased by the du Pont Fibersilk Company within thirty days from date of notification by the du Pont Fibersilk Company that it desires said houses to be vacated, except as hereinafter provided.

9. *Water.*—At the option of du Pont Fibersilk Company the receivers agree to furnish service water at current rates to any or all of the parcels purchased until du Pont Fibersilk Company has its plant in operation and desires to furnish its own service water. Proposal is to be made by the receivers not later than August 31, 1923, that will give the basis of such water cost.

10. *Telephone and telegraph.*—The receivers for themselves and their successors to grant du Pont Fibersilk Company access to parcels A, B, and C for telephone and telegraph lines without charge.

11. *Water and sewer line replacements.*—The receivers, within a period of sixty (60) days following the date of deed, will furnish and deliver at their expense replacement parts for all defective portions of the cast-iron water pipe and terra-cotta sewer pipe, and fire hydrants and fittings purchased hereunder by du Pont Fibersilk Company, as and when requested so to do, within said period of sixty (60) days. The cost of installing such replacement parts so furnished to be borne by du Pont Fibersilk Company.

12. *U.S. Government and receivers tenants.*—The du Pont Fibersilk Company agrees that it will rent until November 22d, 1925, to U.S. Government officials and employees at current rates the (10) ten permanent houses, (20) twenty temporary houses now rented to such Government employees if desired; and du Pont Fibersilk Company agrees to furnish to the receivers employees' houses for rent at current rates, subject to du Pont Fibersilk Company's rules and regulations, until such time as such houses may be required for its own employees.

13. *Land clearance.*—The receivers to tear down to the ground level and remove from premises all buildings, contents, and equipment and structures (foundations excepted) not purchased by du Pont Fibersilk Company, situated on parcel A, within thirty (30) days after notice so to do is received by the receivers from du Pont Fibersilk Company. In the event the receivers do not remove any or all of said buildings within (30) days after such notification, then du Pont Fibersilk Company, at its option, may remove said buildings without incurring any liability, and at the cost and expense of the receivers.

MISCELLANEOUS PROVISIONS

1. A survey is to be made to more definitely fix the boundaries of parcels A, B, and C for purposes of the contemplated deeds—the acreage and dimensions mentioned herein having been scaled from blue prints.

2. The DuPont Fibersilk Company agrees to permit the school area district as shown on map U.S.N. no. 10, exhibit 1, and marked thereon "School area" to connect to the main sewer line leading to said filter beds and for this privilege to make a reasonable charge on a pro rata basis for such service.

3. Insurance, rentals, and taxes to be pro rated as of the date of the delivery of deed.

4. The DuPont Fibersilk Company agrees to allow, subject to its rules and regulations, the use of land on which Traffic Office Building #1291 is located, so long as the building is used for railroad purposes, together with convenient egress and ingress to same.

(There was no exhibit marked No. "1374")

Exhibit No. 1375

[File 105]

March 17, 1920.

Personal.

Mr. Irénée du Pont,
The Breakers, Palm Beach, Florida.

My Dear Irénée: We had several conferences with Sir Harry yesterday. Settled the Chili proposition and signed up the agreements.

No definite decision reached on the dye question, but Sir Harry met our views fully and agreed to use his best efforts to have the old Levinstein agreement replaced by a new one if we drew the proposition up and presented it in writing. It was understood that no further payment would be forthcoming.

The main purpose of this letter is to tell you of the ammonia proposition. Sir Harry has not done anything to block Mr. Gold, and does not give any assurance that he is able to block him, but he has expressed himself as agreeable to either seeing Mr. Gold (who is probably still in this country), or cabling or writing to him, giving it as his advice (Sir Harry's) that Brunner-Mond had better not enter any negotiations with Bosch while ours are on. We understand he will put it entirely on the basis of Brunner-Mond's ultimate advantage.

I do not believe you appreciate the situation on passports. You doubtless know we have no Secretary of State, and Ruly gives it as an opinion that there may not be a Secretary for a month or more. In the meantime, no passports can be had to the United States and, as far as we know, none can be had out of the United States. You are familiar with the reasons why the passports to this country could not be obtained. Garvin stated he could not secure them under the circumstances, and we saw that efforts on his part to secure them, or independent efforts on our part to do the same, might well jeopardize his position politically, and we dare not make a move in the matter for fear of getting at odds with him, which might be ruinous to our other prospects. This condition is not likely to be removed for sometime, so that it is clear that we will be able to obtain passports and send a commission abroad much earlier than we could secure admission of others to the United States. All hands here agree this morning that the proper thing to do is to wire Berg to come over as promptly as possible, in order to get full information on the situation. Spruance has about converted everybody to the belief that the whole problem will be simplified by another effort to reach an agreement with Mr. Gold before further conferences with Bosch are undertaken. We are wiring Berg this morning to come over.

Ruly tells me that Walter has decided to stay on with you. Am sorry to hear that he has not been so well, and feel sure that his decision to remain will be the best. Everything seems O. K. here, and I am quite certain that there is nothing he could do at all comparable in value with his returning in good shape.

I am feeling considerably better, and am glad I did not take your advice and go to Palm Beach. I had the inside of my cheek bone cleaned out, also a tooth pulled and hair-cut, Monday, and this seems to have improved my cold in the head considerably. The doctor thinks there is no question but that the whole trouble has been due to the infected tooth, and I believe he is right, because the improvement, even in forty-eight hours, is quite marked. I did "stunts" with the insurance men yesterday afternoon, and believe that is the last to secure my insurance. We hope you are continuing to have as good a time as Sir Harry reports, and that all are keeping well.

Affectionately, your brother,

LAMMOT DU PONT.

LduP/MD

P. S.—The A. I. deal seems to be all blown up. Nobody knows definitely what happened, and apparently nobody seems to care much. The more recent developments make me feel that we are just as well off letting it alone, as I believe we can take care of the secondary purposes to good advantage in other ways, and we surely have plenty of use for the Securities Company money.

L.

("Exhibit No 1376" appears in text on p. 4236)

("Exhibit No. 1377" appears in text on p. 4240)

EXHIBIT No. 1378

JANUARY 27, 1931.

Mr. LAMMOT DU PONT,
Room 9044, Building.

DEAR LAMMOT: Referring to my retirement on March first, as verbally outlined to you, I would like very much to maintain a contact with the affairs of the company, especially along the lines of executive personnel work, remain on board of Grasselli Company, president's advisory contact on political matters which may arise, and be considered available for consultation, and for any emergency which may arise.

Outside of being away once in a while, the chances are I will be at my office more or less regularly, when not at the banks in Philadelphia.

It is also possible that I can be of some value in reorganization matters surrounding either parent company or new subsidiaries. It is the intention also that I at least complete the office status for new building.

Assuming above is satisfactory to you, I would, of course, insist that my salary after March first be reduced to that of a retired vice president. I have selected the offices adjacent to yours, same not being in demand at this time, in order that I will be near to your office and available on above matters, as well as Delaware Realty, Christiana Securities, etc.

I would suggest the appointment of Harrington as purchasing department advisor in my place. He is particularly well fitted and also Mr. LaMotte's choice.

Does above meet with your approval?

Yours very truly,

R. R. M. CARPENTER.

C–1a.

Exhibit No. 1379

September 15, 1931.

To: W. S. Carpenter, Jr.
From: R. R. M. Carpenter.

I am returning to you your development department report on the Remington-Winchester consolidation. While I am not extremely enthusiastic over our getting mixed up in this, my conclusion is that we are more or less at the parting of the ways and that we will be compelled to either consider that our smokeless-powder business is on the wane or that we can put it back on its feet by going into this deal. I am more or less influenced by this opinion for the reason that if Western should take over the Winchester, our road would be pretty hard. I do not think there is very much in the thought that we should maintain our smokeless-powder position for the Government in time of war as I believe if we ever had another war the Government would take over important industries the same as they did the railroads, which would not be a very pleasant experience as any of the railroad people will tell you.

I think if this does go through that we should have one or two very strong men inserted into the organization and I believe that if Steers would accept it that the Remington crowd would be very glad in a year or so to accept him as president. It might also be a very good move to get Doremus into their organization in some important sales capacity as this is a business in which he is thoroughly experienced and would be stronger for that than anything I can think of, and I believe that would make an excellent team to look after our interests.

R. R. M. Carpenter.

Exhibit No. 1383

[Copy: Senator Daniel O. Hastings. Copy: Senator John G. Townsend, Jr.]

April 27, 1933.

Senator Marcus A. Coolidge,
Senate Office Building, Washington, D.C.

My Dear Mr. Coolidge: I suppose you are flooded with all kinds of letters nowadays, but I cannot resist the temptation to appeal to the few well-balanced Senators to think well before supporting the wild inflation plans of some of the careless thinkers like Thomas, the adoption of whose plans would set this country back fifty years. His speech was most dangerous and even more radical than Lenin or some of his following.

I can't believe these men are serious. To put a penalty on thrift, to attempt to take from creditors, bondholders, etc., and turn over to some else, as Thomas says, would simply mean that many men who now employ large numbers would have to lay them off. Someone must do the employing. For instance: I have employed during the depression about fifty men, many unnecessary. Should such schemes as Thomas' go into effect and be successful, there is no question but what I would be compelled to lay off half of them or even more.

Mr. Roosevelt made a wonderful start and gained the confidence of men of both parties. It would be too bad for him to allow these wild plans to lose it all again. It is most unfortunate that he has selected as his chief financial advisors long-haired, radical college professors of no business or banking experience. During March there was a considerable upturn and a great recovery of confidence. I conscientiously believe three months would have seen recovery well under way, but now everyone is scared to death of Washington. We are all afraid to invest in anything. Why should a man buy a bond, municipal or Government, when Washington talks of legislation to legalize abrogation, to make laws to allow cities to default their bonds? And again, talk of forcing the thirty-hour week and at the same time lower the tariffs to let in foreign goods in competition. Isn't this inconsistent? Where will American labor come out in this?

I am enclosing you a brief statement and hope you can get time to read it. I believe it gives a clear statement of facts as most people see them.

The latest suggestion to give the President power to debase our currency at will and introduce so-called "controlled inflation"—the pet of the academic theorists of Europe, who have propagandized our own institutions of learning—is more pernicious than anything yet proposed. If this power is granted, our Constitution and all private contracts will be repudiated.

The experience of all countries throughout all ages on this matter has been just the same: The more unsound money is issued, the more is called for. Purchasing power of the ultimate consumer can never be increased in this artificial manner as rapidly as his cost of living goes up against him as a result of artificially stimulated prices. In the end all the thrifty and all who have property are in danger of being destroyed.

What the administration is now proposing strikes at the very vitals of every savings-bank depositor, every insurance policyholder, every institution and foundation in the United States. Gilt-edged bonds and sound investments inevitably depreciate, because the interest thereon is payable in a fixed amount of dollars whose value may even decline to zero.

In view of the recent experience of all European countries with inflation, and in view of the experience of the ages, are we to allow national insanity to go much farther in this country, and are we going to let ourselves be bought and sold by the insidious propaganda which has been disseminated on this subject, particularly from British sources?

I hate to trouble you with all this, but the situation in Washington is so critical we are forced to call upon our friends for help.

With kindest regards, I am,

Sincerely yours,

R. R. M. C.

P. S.—Wilmington is not far from Washington. Why don't you run up over some Sunday for a day's rest?

C.

Exhibit No. 1384

[Copy sent to Senator D. O. Hastings 3/27/34; copy made for Mr. P. S. du Pont 4/5/34]

March 16, 1934.

Mr. John J. Raskob,
809 Empire State Bldg., New York, N.Y.

Dear John: Some months ago you stated in director's meeting that people as a whole should support the President. Many people are today at a loss to understand why the administration is doing many things. The majority of the people I believe, would like to think that the President is honest in his endeavors. People are unable to learn much of the truth for the reason that through some method unknown the President has strangled free speech both over the radio and by the daily papers. It has been a great mystery to me why someone close to the administration (if anyone is, other than Frankfurter and his ilk) has not attempted to determine the following:

1. Unless the administration is embarked on a campaign to buy the popular vote of the country through the C.W.A., the C.C.C., etc., together with the gifts to certain classes, why should they compete with industry for labor, and put rates in farming districts way above what any farmer could compete with, and way beyond what such labor ever received? I mention a few cases I am familiar with:

An architect in town offered a position to a young draftsman recently at a fair salary. He turned down the job saying he had a position with the C.W.A. at $1.25 an hour.

Five negroes on my place in South Carolina refused work this spring, after I had taken care of them and given them house rent free and work for three years during bad times, saying they had easy jobs with the Government.

Planters in our vicinity were unable to get enough labor to harvest crops in the fall due to C.C.C. employment.

A cook on my houseboat at Fort Myers quit because the Government was paying him a dollar an hour as a painter when he never knew a thing about painting before.

If one person has had all this experience, how many thousands of men are leaving employment to accept easy jobs with the Government, paid for with the taxpayers' money, and under the guise of relief? Many trades are on strike, being encouraged from Washington, and these same strikers employed by the Government and paid with the taxpayers' money.

2. Why should the administration, without trial, condemn a number of corporations, cancel their contracts, and leave them with blackened reputations, an act absolutely against the law, the Constitution, and common decency? In time, no corporation nor business could afford to have any dealings with a Government who has no respect for contracts entered into.

3. Why should a man of Roosevelt's education and birth, if honest in his convictions, or honest in his endeavors to bring back prosperity, carry on a campaign of labor against capital, and a campaign to eliminate wealth? Who can possibly give employment to labor if wealthy men and capital are eliminated? Why should he lend his assistance to legislation publishing salaries of employees of corporations which can possibly have no effect except to prejudice certain classes? They were very careful not to explain that the net amount of most of these salaries after payment of income tax, were far less than the President's, who receives in total about $250,000.00, and this free of income rax

A man like yourself, a supporter of his, and persona grata in Washington could do a lot of good and set many minds at rest by getting the administration to answer these queries, that is, if you yourself are convinced that he is honest in his endeavors. As a loyal Democrat, I would appreciate your views a lot. Maybe you could set some of our minds at rest.

Sincerely yours,

C. R. R. M. CARPENTER.

EXHIBIT NO. 1385

[Copy made for Mr. P. S. du Pont 3-5/34]

EMPIRE STATE,
New York City, March 20, 1934.

R. R. M. CARPENTER, Esquire,
du Pont Building, Wilmington, Delaware.

DEAR RULY: In reply to your letter of March sixteenth, which is just received, would advise that I have been entirely out of politics since July 1932, and I am anxious to keep out.

My statement at the directors' meeting was not that the people should support the President, but that the people should not attack the President without knowing what they are talking about. At the time, I resented the action of the United States Chamber of Commerce calling upon the President for a sound-money policy in language that would lead the people to believe that he was for some other kind of policy, particularly when a few days before he had definitely declared that two things were paramount: One was a sound-money policy and the other was the maintenance of the credit structure and good faith of the United States.

You haven't much to do and I know of no one that could better take the lead in trying to induce the du Pont and General Motors groups, followed by other big industries, to definitely organize to protect society from the suffering which it is bound to endure if we allow communistic elements to lead the people to believe that all business men are crooks, not to be trusted, and that no one should be allowed to get rich. There should be some very definite organization that would come out openly with some plan for educating the people to the value of encouraging people to work; encouraging people to get rich; showing the fallacy of communism in its efforts to tear down our capital structure, etc.

The reason I say that you are in a peculiarly good position to do this, is that you are young enough to undertake the work, you have the time, you are wealthy enough to not have to depend upon a job or salary for a living, and are in a position to talk directly with a group that controls a larger share of industry through common-stock holdings than any other group in the United States. When I say this, I mean that I believe there is no group, including the Rockefellers, the Morgans, the Mellons, or anyone else that begins to control and be reponsible for as much industrially as is the du Pont Company.

I, of course, know you won't do it, but I personally think you should, as I think it is encumbent upon all citizens to try to make this world and particularly the country of which they are citizens a better place in which to live. Our ancestors did it and handed down a fine form of government to us. There are very few people situated as you are.

Pierre, as a citizen, has set us a fine example and I think you and Irénée, if you undertake this job in a really big way, will find tremendous support and will be able to do one of the finest jobs that could be done for the Nation and for the future of society everywhere.

Sincerely yours,

(S) John J. Raskob.

Exhibit No. 1388

Chart by Arthur Ballantine introduced in War Policy Commission Hearings, House Document No. 163, Seventy-second Congress, first session.

D.—*Corporation income and profits tax rates, exemptions, and credits under the revenue acts of 1909–1928, inclusive* [1]

[Applicable to domestic and foreign corporations]

Revenue act	Applicable to incomes for the years—	Exemption [2]	Income tax		Excess-profits tax [3]		
			Taxable income	Rate per cent	Credit	Amount subject to tax	Rate per cent
1909 (excise tax)	1909 to Feb. 28, 1913.	$5,000	All net income [4] in excess of exemption	1			
1913	Mar. 1, 1913, to Dec. 31, 1915.	None	All net income	1			
1916	1916	None	do	2			
1917	1917	None	Dividends out of earnings from Mar. 1, 1913, to Dec. 31, 1915.	1	$3,000 [5] plus an amount equal to the same percentage of invested capital [6] for the taxable year as the average annual pre-war income was of pre-war invested capital (not less than 7 nor more than 9 percent).	Net income equal to 15 percent of invested capital less credit.	20
						Net income in excess of 15 percent of invested capital but not in excess of 20 percent of invested capital.	25
			Net income in excess of the sum of— The excess-profits tax for the current year and Dividends received out of earnings from Mar. 1, 1913, to Dec. 31, 1915.	2	If not established during at least one whole year of the pre-war period, 8 percent.	Net income in excess of 20 percent of invested capital but not in excess of 25 percent of invested capital.	35
1917	1917	None	Net income in excess of the sum of— The excess-profits tax for the current year and Dividends received out of earnings from Mar. 1, 1913, to Dec. 31, 1917.	4	If, during pre-war period, corporation had either no net income or a very small net income, or if invested capital cannot be determined, same per cent as that of representative corporations. (See sec. 210, revenue act 1917.)	Net income in excess of 25 percent of invested capital but not in excess of 33 percent of invested capital.	45
						Net income in excess of 33 percent of invested capital	60
1918	1918	2,000	Net income in excess of the sum of— The exemption, Excess profits and war profits taxes for current year and Interest on United States obligations issued after Sept. 1, 1917.	12	$3,000 plus 8 percent of the invested capital for the taxable year.[6]	Net income equal to 20 percent of invested capital less credit.	30
						Net income in excess of 20 percent of invested capital.	65

1918	1919 and 1920	2,000	Net income in excess of this sum of— The exemption, Excess-profits tax for current year, Excess-profits and war-profits taxes on income from Government contracts, and Interest on United States obligations issued after Sept. 1, 1917, and War Finance Corporation bonds not exempt.	10	Same as 1918 [6]	Net income equal to 20 percent of invested capital less credit. Net income in excess of 20 percent of invested capital.	20 40
1921	1921	[8] 2,000	Same as 1919 and 1920	10	do	Same as 1919 and 1920	(11)
	1922 and 1923	[8] 2,000	Net income in excess of exemption	12½			
1924	1924	[8] 2,000	do	12½			
1926	1925	[8] 2,000	do	[9] 13			
	1926 and 1927	[8] 2,000	do	[9] 13½			
1928	1928	[8] 3,000	do	12			
	1929	[8] 3,000	do	11			

---

[1] All corporations are required to file returns regardless of amount of net income or loss, except those specifically exempt as mutual, cooperative, fraternal, civic, charitable, scientific, etc., not operating for profit. From Jan. 1, 1918, to Dec. 31, 1921, personal-service corporations were treated as partnerships. Prior and subsequent to said dates, such corporations were taxed as other corporations. Under the revenue act of 1909, corporations were required to file returns on a calendar-year basis; under subsequent revenue acts, corporations were permitted to file returns on a fiscal-year basis, other than the calendar year; except that under the act of 1921 and subsequent acts, life insurance companies were required to file on a calendar-year basis in accordance with the State laws regulating insurance companies.

[2] For 1918 and subsequent years foreign corporations not allowed specific exemption.

[3] For 1918–1921, inclusive, war-profits and excess-profits tax of foreign corporations is computed by comparison with representative corporations whose invested capital can be satisfactorily determined and which are engaged in a like or similar trade or business and similarly circumstanced. (See sec. 328, revenue acts 1918 and 1921.)

[4] Net income means "statutory" net income, i. e., the excess of gross income over deductions as defined in the various revenue acts. Foreign corporations report only the net income from sources within the United States. Net income has been adjusted from time to time as follows:

(*a*) Amortization of buildings, machinery, equipment, or other facilities constructed or acquired on or after Apr. 6, 1917, for the production of articles contributing to the procesution of the war, are included to a reasonable amount in business deductions for 1918, 1919, 1920, and 1921.

(*b*) Dividends of domestic corporations were entirely tax exempt for 1918 and subsequent years.

(*c*) Net loss for prior year. The revenue act of 1918 provides, in the case of a net loss for any taxable year beginning after Oct. 31, 1918, and ending prior to Jan. 1, 1920, for the deduction of such loss from the net income of the *preceding year*, a redetermination of taxes for the preceding year being made. If the net loss exceeds the net income for the preceding year, the amount of such excess is to be deducted from the net income of the *succeeding* taxable year. For 1921 and subsequent years the revenue acts provide for net loss in any year beginning after Dec. 31, 1920, to be deducted from the net income of the succeeding taxable year and if such net loss exceeds the net income for the succeeding year, the amount of such excess is to be allowed in the *next* succeeding year.

(*d*) For insurance companies see special provisions in the various revenue acts.

[5] Foreign corporations not allowed the $3,000.

[6] Invested capital within the meaning of the statute is the capital actually paid in to the corporation by the stockholders, including surplus and undivided profits (exclusive of that for the current year), stocks, bonds, and other obligations (other than obligations of the United States) the dividends or interest from which are not included in computing net income, and excluding inadmissible assets. (See art. 831 of Regulations 45.) For 1917 foreign corporations reported that proportion of invested capital which net income from sources within the United States was of the entire net income. For 1918–1921, inclusive, it was not necessary for foreign corporations to report invested capital. (See note 3.)

[8] Allowed domestic corporations with net income of $25,000 or less.

[9] Income of insurance companies, exclusive of mutual companies other than life, taxable at 12½ percent.

[11] Same as 1919 and 1920.

D.—*Corporation income and profits tax rates, exemptions, and credits under the revenue acts of 1909–1928, inclusive*—Continued

Revenue act	Applicable to incomes for the years—	War-profits tax [3]			Tax on income from Government contracts			Tax credit for income and profits taxes paid to foreign countries or United States possessions
		Credit	Amount subject to tax	Rate percent	Exemption	Amount subject to tax	Rate percent	
1909 (excise tax)	1909 to Feb. 28, 1913.							For 1917 and prior years, taxes paid to foreign countries or United States possessions were not allowed as a tax credit, but were included in general deductions.
1913	Mar. 1, 1913, to Dec. 31, 1915.							
1916	1916							
1917	1917							
1918	1918	$3,000 plus either an amount equal to the average pre-war net income plus or minus 10 percent of the increase or decrease of invested capital for the taxable year as compared with average pre-war invested capital or 10 percent of the invested capital for the taxable year, whichever is greater.[7]	Net income in excess of war profits credit.	80—less amount of excess profits tax.				Amount paid or accrued.
1918	1919 and 1920.				$10,000	Amount in excess of $10,000 derived from Government contracts made between Apr. 6, 1917, and Nov. 11, 1918.	Excess profits and war profits tax rates of 1918 act.	Same as 1918.
1921	1921				10,000	Same as 1919 and 1920.	Same as 1919 and 1920	Same as 1918 act.[6]
	1922 and 1923.							Do.
1924	1924							Do.
1926	1925							Do.
	1926 and 1927.							Do.
1928	1928							Do.
	1929							Do.

---

[3] For 1918–21, inclusive, war-profits and excess-profits tax of foreign corporations is computed by comparison with representative corporations with invested capital can be satisfactorily determined and which are engaged in a like or similar trade or business and similarly circumstanced. (See sec. 328, revenue acts 1918 and 1921.)

[7] If corporation was not in existence during the whole of a least one calendar year during the pre-war period, the credit (with certain exceptions) shall be the sum of $3,000 and an amount equal to the same percentage of invested capital for the taxable year as the average percentage of net income to invested capital for the pre-war period of representative corporations; but such amount shall in no case be less than 10 percent of the invested capital of the taxpayer for the taxable year. (See sec. 311, revenue act of 1918.)

[10] Beginning with 1921 the credit cannot exceed the proportion of the total tax against which the credit is taken that the taxpayer's net income from sources without the United States bears to the entire net income.

[12] See joint resolution of Congress No. 133, approved by the President, Dec. 16, 1929, reducing rates of income tax for 1929.

NOTE.—For the year 1917, there was also a tax of 10 percent upon that portion of the total net income remaining undistributed six months after the close of the taxable year, in excess of the income actually employed in the business, or invested in obligations of the United States sisued after Sept. 1, 1917.

For the years 1918 to 1920, a corporation that permitted an unreasonable accumulation of profits was not subject to the ordinary corporation income tax but the individual stockholders were taxed upon their distributive shares of its net income in the same manner as the members of a partnership or a personal-service corporation.

For the years 1921 to 1923, an additional tax of 25 percent was imposed upon the taxable net income of a corporation, where it was shown that there had been an evasion of surtax as the result of an unreasonable accumulation of profits. This additional tax was increased to 50 percent for 1924 and subsequent years, with the provision that the 50 percent additional tax shall not apply if all the shareholders of the corporation include in their gross income their entire distributive shares, whether distributed or not, of the net income of the corporation for the taxable year.

---

[1] Payments of governments which have funded were made prior to the dates of the funding agreements.

[2] Difference between principal of funded debts and amounts here stated represents deferred payments provided for in the funding agreements, for which gold bonds of the respective debtor governments have been or will be delivered to the Treasury.

[3] Increase over amount funded due to exercise of options with respect to the payment of interest due on original issue of bonds of debtor governments.

[4] Represents proceeds of liquidation of financial affairs of Russian Government in this country. (Copies of letter dated May 23, 1922, from the Secretary of State and reply of the Secretary of the Treasury dated June 2, 1922, in regard to loans to the Russian Government and liquidation of affairs of the latter in this country, appear in the Annual Report of the Secretary of the Treasury for the fiscal year 1922, as exhibit 79, p. 283, and in the combined annual reports of the World War Foreign Debt Commission, exhibit 2, p. 84.)

[5] Includes balances of amounts postponed under provisions of joint resolution of Dec. 23, 1931. (For amounts postponed see p. 35 of report of Secretary of the Treasury for 1932.)

EXHIBIT NO. 1396

TREASURY DEPARTMENT,
Washington, December 18, 1934.

Honorable GERALD P. NYE,
Chairman Special Committee Investigating the Munitions Industry,
United States Senate, Washington, D. C.

(Attention Mrs. Markley, Room 408, Senate Office Bldg.)

MY DEAR SENATOR: Receipt is acknowledged of your letter of December 15, 1934 (Treasury request no. 51–A), requesting a statement showing the total loans, by countries, made by the United States to foreign governments and the amounts of such loans remaining unpaid from each country.

There is enclosed herewith a statement showing the principal amount of obligations of foreign governments originally acquired under various acts of Congress. These obligations were acquired principally during the years 1917 to 1920, inclusive. There is also enclosed a statement showing the principal of the funded and unfunded indebtedness of foreign governments to the United States, the accrued and unpaid interest thereon, and payments on account of principal and interest as of November 15, 1934.

There is also enclosed for your convenient use a copy of a memorandum revised July 15, 1934, containing certain general information covering the indebtedness of foreign governments to the United States.

Very truly yours,

T. J. COOLIDGE,
Acting Secretary of the Treasury.

Enclosures.

EXHIBIT NO. 1397

[Copy, Readdressed]

DECEMBER 29, 1932.

HON. GERALD P. NYE,
United States Senator, North Dakota,
Senate Office Building, Washington, D. C.

DEAR SENATOR NYE: From a routine statement of the United States Treasury under date of December 11, 1932, I note oversubscriptions of $4,128,000,000 on Treasury offerings, thus disclosing enormous cash reserves of idle money in banks. Simultaneously I see Associated Press publishing statistical information published by the U. S. Treasury indicating enormous drop in income taxes generally and particularly by taxpayers in the $100,000 or more, class.

This reminds me of reports by Mr. L. H. Parker, chief of the division of investigation for the Congressional Committee on Internal Revenue Taxation in 1927, to the effect that scores of big corporations and many individuals escaped paying hundreds of millions of dollars, because of failure of the U. S. Bureau of Internal Revenue to enforce the law.

I have given nearly 20 years of my life to serving the United States Government. I hold a commission as captain in the Military Intelligence Reserves, in which organization I served during the last war. I am a practicing certified public accountant. I have served nearly 10 years, to December 10, 1931, as a special agent in the Internal Revenue Intelligence Unit; and know Mr. Parker's comment to be a fact, and that the privileged few of great wealth pay comparatively no income taxes because of inefficiency or design on the part of internal revenue officials and recover taxes years after same were paid, with interest, through the medium of unjustifiable tax refunds by manipulation on the part of privately employed tax experts and former bureau employees.

Believing the matter of exposing the control by the privileged class of wealth of our taxing machinery will be of interest to you I cite the following specific case—that of Mr. Alfred I. du Pont, of Wilmington, Delaware, and Jacksonville, Florida.

The history of Mr. Alfred I. du Pont, former executive of the great du Pont interests in New Jersey and Delaware, and member of the oldest capitalistic of families in the country, is one of conflict with the Government dating back to dissolution of the original E. I. du Pont de Nemours Powder Company of New Jersey under the Sherman Antitrust Act in 1912. A group of du Ponts, headed by Pierre S. du Pont, acquired on March 6, 1915, large holdings of T. Coleman du Pont, and organized the du Pont Securities Company to hold such stock. The

E. I. du Pont de Nemours Powder Company directors refused to buy up its own stock at Pierre's price. The officers of the powder company obtained a loan of $8,500,000 through J. P. Morgan and Company, which was later increased to $10,000,000. The powder company's stock was collateral on this loan. In order to boost the value of the collateral, it was decided to reorganize the New Jersey Corporation (powder company) so as to capitalize the large munitions contracts it had with foreign governments. On September 9, 1915, the E. I. du Pont de Nemours Powder Company of New Jersey transferred all its operating assets to a new corporation, chartered under the laws of Delaware on September 4, 1915, styled "E. I. du Pont de Nemours Company," in exchange for $120,000,000 in common and debenture stock of the Delaware company. On October 1, 1915, the common stock of the new company was distributed by the old company to its stockholders in the form of a 200% dividend. The debenture stock of the new company was exchanged with the stock holders for stock they held in the old company on January 10, 1918, and the old company (New Jersey) passed out of existence after payment in cash $1.0244529 per share to its stockholders in final liquidation on June 25, 1926. Mr. Alfred I. du Pont originally held 37,767 shares of common stock in the old company on which he received on October 1, 1915, as a dividend, 75,534 shares of common stock of the new company; and in the final wind up turned in his 37,767 shares of common stock of the old company for a like number of shares of debenture stock in the new company plus the liquidating dividend of $1.02 plus, per share, of the old company. His original holdings were not increased or decreased by the exchange of stock in the two corporations. The assets of the new company were the same as those of the old; the accumulated profits of the old company (surplus) being distributed in the form of the 200% dividend.

In his 1915 income tax return Mr. du Pont failed to report the profit received in the 200% dividend. Following examination by Internal Revenue Agent Daniel P. du Ross in 1919, an assessment was made against Mr. du Pont on December 20, 1919, in the amount of $1,576,015.06 for 1915. The assessment was paid only after protracted litigation which was carried through the Supreme Court of the U. S., largely upon the initiative of Alfred I. du Pont. (See Supreme Court decision no. 260, October 1921, *U. S.* v. *C. W. Phellis.*) Following this, Mr. du Pont filed a claim for abatement for 1915, which was rejected, and his efforts to enjoin the collection of the tax were overthrown by the decision of the U. S. Supreme Court in the case of *Graham* v. *du Pont.* He compromised interest and penalties for $118,201.19, on August 13, 1923, when he paid the 1915 tax.

The actual interest and penalties due on the seven years delinquent tax of $1,576,015.06 amounted to over two milion dollars. This was done during the administration of Mr. J. G. Bright as deputy commissioner of internal revenue, who is now employed by Mr. Alfred I. du Pont at a salary of $10,000 per year.

On top of this Mr. du Pont was paid a refund of $2,036,618.78, consisting of 1917–1918 taxes paid in the sum of $1,514,276.61 and interest in the sum of $522,342.17, on March 15, 1926, under representations by Edward H. Batson, another former deputy commissioner of internal revenue, as if the exchange of his common stock in the E. I. du Pont de Nemours Powder Company for like interest in the form of debenture shares in the new company, E. I. du Pont de Nemours Company of Delaware, on January 10, 1918, was a sale of stock of the old company entailing a loss. The claim was filed June 6, 1924, after the Revenue Act of 1918 was repealed by the Revenue Act of 1924 specifically prohibiting refunds on such grounds. It was paid on March 15, 1926, after statute of limitations tolled for the year 1918, and after two attorneys, T. P. Dudley and H. H. Hill, in the office of Solicitor of Internal Revenue recommended against the payment. According to correspondence of record in the Bureau it was aligned for payment in part by Deputy Commissioner J. G. Bright, who resigned as of September 30, 1925; and the payment on March 15, 1926, was "facilitated" by bribes totaling $90,000 paid by Mr. Edward Ball, a brother-in-law of Mr. du Pont.

Although Mr. du Pont's net income from dividends paid on his stock holdings of E. I. du Pont de Nemours Company during the years 1920 to 1926, inclusive, averaged well over two million dollars per year he paid not a cent of income tax for these seven years.

He evaded paying any tax for 1920 to 1926, inclusive, by the simple expedient of prorating alleged losses totaling $8,630,722.57, claimed invested in the Nemours Trading Corporation of Wilmington, Delaware, namely, $5,750,274 capital stock and $2,980,448.57 of said corporation's notes for cash advanced to it. The Nemours Trading Corporation was organized by Mr. du Pont on March 31, 1919, to buy shoes and other surplus war supplies for sale abroad. The scheme was unprofitable from the beginning, and the corporation ceased its efforts and began liquidating early in 1920. It was insolvent on November 17, 1920, when Mr. du Pont sold $2,500,000 of his stock in it at auction for $100; merely to claim the resultant loss of $2,499,000 in his income-tax return to offset stock dividends received from the E. I. du Pont de Nemours Company in that year; then followed it up by selling at auction enough worthless stock of Nemours Trading Corporation to offset his dividends until 1924, in each year's tax return. In 1924 he began to claim losses on the said corporation's notes to offset his income each year including for 1926. Both stock and notes of the Nemours Trading Corporation should have been written off in toto in 1920, when the same were determined worthless, but only superficial examinations were made by revenue agents of Mr. du Pont's individual returns, none of his corporations, and the artifice was not detected until statute of limitations ran against collection of taxes for the years in question. It is noteworthy that examination of Mr. du Pont's returns for the years 1920 to 1926 was not assigned to Revenue Agent du Ross, who recommended the assessment for 1915 against Mr. du Pont as result of examination in 1919 and who was familiar with the du Pont interests, but on the other hand the returns for 7 years were split up between different revenue agents and in some instances passed merely by office audit. There is some indication also that a large block of the stock of Nemours Trading Corporation was received by Mr. du Pont as a bonus in connection with the cash advances, later covered by notes, as well as that the capitalization of Nemours Trading Corporation was manipulated through Nemours Investment Company, another of Mr. du Pont's personal corporations, concerning which Mr. du Pont refused to testify; so there is a possibility that his claims for losses on the said Nemours Trading Corporation stocks and notes were duplicated. No effort was made to determine this when Supervising Internal Revenue Agent J. C. Wilmer cleared that corporation as a bankrupt in a perfunctory report dated April 23, 1925, and when the matter came to my attention all records were reported lost.

For the 4 years, 1927 to 1930, Mr. Alfred I. du Pont paid less than $100,000 per year income tax.

Dividend income from Mr. du Pont's stock holdings in the E. I. du Pont de Nemours Company alone, for these years, was as follows:

1927	$2, 895, 638. 50
1928	3, 183, 925. 50
1929	3, 558, 473. 00
1930	2, 837, 089. 50
Total	12, 475, 126. 50

on which surtax evaded by Mr. du Pont is $2,495,025.50.

He evaded paying this tax through the expedient of forming Almours Securities, Incorporated, organized under the laws of Florida in November 1926, to which he transferred his E. I. du Pont de Nemours Company stocks, on the theory that dividends from a corporation received by another corporation are not taxable for surtax until distributed as dividends to stockholders, which is in direct contravention of sections 220 and 104 of the revenue acts of 1926 and 1928, aimed to prevent surtax evasion through corporate form. The above referred to dividends income combined with other net income of the corporation, Almours Securities, Incorporated, under provisions of sections 220 and 104 of the Revenue Acts of 1926 and 1928, respectively, reflects a tax due of $10,353,793.79 as computed and assessed after exhaustive investigation by former Special Agent Lewis Williams and Revenue Agent J. J. Brown, which said assessment although regularly made in the sum of $7,177,933.42 on May 12, 1931, for 1927 to 1929, inclusive, and subsequently in the additional sum of $3,175,860.37 for 1930, was wiped out by an arbitrary stipulation with the Internal Revenue General Counsel's office before the Board of Tax Appeals, without any hearing before said board, on October 19, 1931, to the effect that no deficiency in tax existed. In other words, provisions of sections 220 and 104 of the Revenue Acts of 1926 and 1928, respectively, are not enforced by the Bureau. The cancellation of this $10,353,793.79 tax liability was accomplished again by the two former deputy commissioners of internal revenue, Edward H. Batson and J. G. Bright, both in the employ of Mr. Alfred I. du Pont, through their close personal contact with Bureau officials and intrigue among officials within the Bureau.

That wide ramifications exist in the Bureau of Internal Revenue, from the Commissioner down, as a result of influence of wealthy political patrons, is reflected in the following facts:

Former revenue agent in charge at Philadelphia, J. C. Wilmer, through whose supervision Mr. du Pont's income-tax returns were passed from 1919 to 1925 without payment of a single cent of tax, is now head of the Income Tax Unit in Washington.

Former Special Agent Daniel Bolich, who was assigned to investigate stock transactions of Mr. du Pont in New York in 1930 and made a negative report, was shortly thereafter appointed and is now serving as revenue agent in charge of the Philadelphia division.

Former Bureau Auditor Albert Lewis, who as head auditor passed the $2,036,618.78 refunds to Mr. du Pont in 1926, was on August 1, 1927, appointed revenue agent in charge of the Richmond division and promoted to a salary of $5,200 per year.

Former Bureau Attorney Aubrey R. Marrs, who originally entered the service on September 7, 1920, at a salary of $2,750 per year, and who was the attorney who rendered the favorable opinion on the $2,000,000 du Pont refund after two other attorneys rejected it, was on August 17, 1927, appointed to the special advisory committee at a salary of $5,600 per year, and is now serving as Assistant Commissioner of Internal Revenue at a salary of $7,500 per year since June 17, 1929.

Former Bureau Attorney Preston C. Alexander, who was employed in the penal division, solicitor's office, on March 16, 1920, at a salary of $2,250 per year; over whose name the $2,000,000 du Pont refunds were "approved" in 1926, was on September 19, 1927, promoted to a salary of $6,500 per year as chief attorney in the General Counsel's office; and on July 1, 1928, was designated head of the appeals division at a salary of $7,000 per year. In his present position in all likelyhood the Board of Tax Appeals stipulation of October 19, 1931, wiping out the $10,353,793.79 du Pont tax liability passed in his hands.

Mr. Eldon P. King, who entered the Internal Revenue Service at a salary of $2,500 per year on October 11, 1920, as a law clerk in the legal unit, signed the name of Attorney Preston C. Alexander to one of the du Pont refund claims (no. 17818), approving same as of November 19, 1925, was promoted to a salary of $3,800 per year on January 16, 1926, and on January 19, 1929, to the position of principal attorney, general counsel's office, at salary of $6,000 per year, in which position, it is interesting to note, he "prepared" cases for overassessment statement for the Joint Congressional Committee in 1929.

Whereas, the agents and attorneys who made adverse reports on the du Pont interests remain in the rank and file of the service or were forced out of the service altogether. I am a victim myself of this sinister influence, having been dropped from the rolls as special agent, without even a hearing, as of December 10, 1931. Incidentally, shortly thereafter Commissioner David Burnet and one of his deputies visited Florida and were the guests of J. G. Bright and Edward Ball, brother-in-law of Mr. Alfred I. du Pont, on a fishing trip on Mr. du Pont's yacht.

Proof of the aforementioned tax liabilities on the part of Alfred I. du Pont, and his corporation the Almours Securities, Inc., including also evidence of further personal tax liability of Mr. du Pont in the sum of $92,820.24 through the formation of trusts 1927 to 1930, in addition to the $10,000,000 tax evasion through corporate form, is contained in my confidential report to the bureau under date of April 16, 1931, copy of which I enclose herewith. The original report with 27 exhibits rests ensconced in innocuous desuetude in the general counsel's office of the bureau at Washington, penal division file no. A–238056, awaiting extinguishment by laches.

I will be pleased to assist in any way I can in any proceedings to compel the du Pont interests to make full payment of all taxes and penalties for which they are liable. In this connection please be advised that Mr. John Zimmermen, a C. P. A., of New York, residing at 449 Elmora Avenue, Elizabeth, N. J., who was comptroller for Almours Securities, Incorporated, from November 1926, to January 1929, and originally exposed, under provisions of section 3463 of Revised Statutes, the tax manipulation iniquities, will join in any such proceedings and testify to facts outlined in my report.

Very truly yours,

LEWIS WILLIAMS.

EXHIBIT NO. 1397–A

NOVEMBER 24, 1934.

Honorable HENRY MORGENTHAU, Jr.,
The Secretary of the Treasury ,Washington, D. C.

MY DEAR MR. SECRETARY: Will you be so kind as to have the following information, relating to the income taxes of Alfred I. du Pont for the years 1920 to 1930, inclusive, prepared for this committee:

1. A statement of the taxes paid by Mr. du Pont for each of the years, 1920 to 1930, inclusive.

2. A statement of refunds, if any, made with respect to taxes specified in paragraph 1, above.

3. Gross income for each of the years, 1920 to 1930, inclusive, disclosed by the income-tax returns filed by Mr. du Pont for such years.

4. A statement for the period 1920 to 1930, inclusive, of the amounts, if any, by years of losses which were claimed by Mr. du Pont with respect to stock of the Nemours Trading Corporation or of the Nemours Investment Company, or with respect to any other stock transactions.

5. A statement of the total stockholdings of Mr. du Pont in the E. I. du Pont de Nemours and Company by years during the period 1920 to 1930, inclusive, as stated in his income-tax returns, together with a statement of any transfer or transfers of such stock to Almours Securities, Inc., and a statement of Mr. du Pont's holdings in this corporation, as such transfer or transfers and holdings appear in Mr. du Pont's income tax returns.

Will you also inform the committee as to what positions J. G. Bright and Edward H. Batson have held in the Bureau of Internal Revenue, together with the dates involved.

Sincerely yours,

AN

Gerald P. Nye, *Chairman.*

Exhibit No. 1398

Treasury Department,
Washington, Dec. 10, 1934.

My Dear Mr. Chairman: Further reference is made to your letter of November 24, 1934 requesting that there be furnished the special committee investigating the munitions industry certain data from the income-tax returns of Alfred I. du Pont and also information relative to positions which have been held in the Bureau of Internal Revenue by J. G. Bright and Edward H. Batson.

Although your letter does not specifically so state, it is assumed the information requested is desired for the purpose of the investigation now being made by the committee pursuant to Senate Resolution 206, Seventy-third Congress, and the desired information is being furnished herewith pursuant to authority granted by Executive order dated June 15, 1934 which authorizes inspection of income-tax returns by the committee.

There is furnished below the data called for under items 1, 2, 3, and 4 of your letter:

Taxable years	1	2	3	4	
	Income tax paid	Refunds allowed	Gross income	Losses on security transactions	
				Nemours trading	Other
1920	None	None	$6,199,639.98	$2,499,900.00	$152,823.65
1921	None	None	1,031,713.46	1,249,875.00	31,703.74
1922	None	None	5,946,324.82	1,000,599.00	4,918,771.43
1923	None	None	5,047,012.94	999,900.00	1,777,681.50
1924	None	None	1,837,886.48	None	804,115.72
1925	None	None	3,947,641.39	None	828,121.75
1926	None	None	5,575,954.57	26,950.00	335,969.32
1927	$7,800.76	None	1,022,990.92	None	4,252.50
1928	115,791.78	None	1,054,482.38	None	[1] 59,246.90
1929	108,584.16	None	1,300,423.51	None	15,229.35
1930	100,134.68	None	713,814.55	None	11,364.28

[1] Indicates profit rather than loss.

The amounts shown in the first column under item 4, "Nemours Trading", are losses claimed on sale or other disposition of stock of Nemours Trading Corporation. In addition to these items, the taxpayer claimed deductions for worthlessness of debts due from Nemours Trading Corporation in the sums of $499,993.70 for the year 1924, $809,704.95 for the year 1925 and $1,670,749.92 for the year 1926.

No losses appear to have been claimed in any of the above-listed years in connection with the Nemours Investment Company although it is possible that loss in connection with stock of such a company is included in the net loss on security transactions for the year 1927 as there is not available at the present time a detailed schedule showing all items which are included in the total security transactions reported for that year.

The amounts shown in the second column under item 4 above as losses on "Other" security transactions cover all losses on all securities such as stocks, bonds, and mortgages except the losses incurred in connection with Nemours Trading Corporation. Although your letter refers only to losses on stock transactions, it is impossible from the information at hand to distinguish between the losses on stock transactions and losses on bond transactions for all years and for this reason the amounts stated above under the second column of item 4 cover all other security transactions rather than all other stock transactions.

The figures stated under item 3, "Gross income", above, should not be confused with amounts shown in individual income-tax returns as "Total income", as for example, the amount shown on line 12 of form 1040, individual income-tax return for the calendar year 1930, which is, in effect, net income with the exception of deductions to be taken on lines 13 to 18, inclusive, for interest; taxes; losses by fire, storm, etc.; bad debts; contributions and "Other deductions authorized by law" (and not claimed elsewhere in the return). The figures stated under the gross income column above have been compiled from the various items of gross income for each year without diminution for such items as cost of securities sold, depreciation and other expenses of rented properties and other items which are applied against gross income items in the income-tax returns in computing the "Total income" figure as contrasted with the "Net income" figure. This explanation of the gross income figures stated above is given somewhat in detail in order that it may be clearly understood that cost of securities sold has not been deducted in computing these figures, which accounts for the fact that, while large gross income figures are reflected for several years, no income taxes were assessed or paid for those years as the cost of securities sold, bad debts, and other deductions allowable under the various revenue acts exceeded the gross income.

It is shown under item 2, above, that no refunds have been allowed. It is to be understood that this refers to refund of taxes paid with respect to the taxable years 1920 to 1930, both inclusive, and that it has no reference to any refunds which might have been made during any of those years of income taxes paid for any taxable year outside of the period 1920 to 1930, both inclusive.

The figures shown above are as reflected in the returns as originally filed by the taxpayer but adjusted to show any corrections made thereto by the Bureau of Internal Revenue before final approval of the returns.

The returns filed for the years 1921 to 1926, both inclusive, were joint returns of Albert I. du Pont and his wife, Jessie Ball du Pont, and the various items of gross income and deductions of each spouse are not segregated in the returns, therefore, the figures stated for such years cover the income and deductions of both Mr. and Mrs. du Pont.

It is requested, under item 5 of your letter, that there be furnished a statement of the total stockholdings of Mr. du Pont in the E. I. du Pont de Nemours and Company by years during the period 1920 to 1930, inclusive, as stated in his income-tax returns, together with a statement of any transfer or transfers of such stock to Almours Securities, Inc. Taxpayers are not required to furnish in their income-tax returns statements of stockholdings in any corporation and this information cannot be supplied from the information available at the present time. It has been ascertained from the income-tax files of Mr. du Pont and Almours Securities, Inc., that on or about November 24, 1926, Mr. du Pont transferred to Almours Securities, Inc. 180,830 shares of common stock valued at $30.605,410 and 10,470 shares of debenture stock valued at $1,130,990 of E. I. du Pont de Nemours and Company in consideration of the issuance to him of 317,364 shares of the common capital stock of Almours Securities, Inc. This transfer and exchange was made at the time of the organization of Almours Securities, Inc., and no further transfers appear to have been made by Mr. du Pont to Almours Securities, Inc., of capital stock of E. I. du Pont de Nemours and Company at any time during the period ended December 31, 1930.

Item 5 of your letter also requests a statement of Mr. du Pont's holdings in Almours Securities, Inc., as such transfer or transfers and holdings appear in Mr. du Pont's income-tax returns.

The following analyses of Mr. du Pont's stockholdings in Almours Securities, Inc., have been compiled from such information as is available in the files of the

Bureau of Internal Revenue and, while there may be some slight inaccuracy, due to absence of definite information on certian stock transfers, it is believed that the analyses given are correct:

Common stock

Date	Consideration	No. of shares	Percentage of total stock outstanding
11/24/26	180,830 shares common E. I. du Pont de Nemours and Company, 10,570 shares debenture E. I. du Pont de Nemours and Company	317,364	99.9984
12/31/26	Balance	317,364	99.9984
1927	Sundry securities (no E. I. du Pont de Nemours and Company stock included)	7,628	
12/29/27	Stock dividend	24,628	
12/31/27	Balance	349,620	91.6865
7/5/28	Sundry securities (no E. I. du Pont de Nemours and Company stock included)	7,058	
12/31/28	Balance	356,678	91.8376

		5,359	------------
1929	Other dispositions, probably gifts	2,000	------------
12/31/29	Balance	3,369	7.4806
1930	Other dispositions, probably gifts	1,200	------------
12/31/30	Balance	2,169	4.8102

The service record of Mr. Edward H. Batson with the Bureau of Internal Revenue is as follows:

Feby. 19, 1918, appointed as law clerk, income-tax unit, Bureau of Internal Revenue.

March 1919, designated as assistant to the assistant head of the claims division, income-tax unit.

May 1, 1920, designated head of the staff division, income-tax unit.

Nov. 1, 1920, designated assistant head, income-tax unit.

June 1, 1921, designated deputy commissioner, income-tax unit.

Feby. 5, 1922, appointed deputy commissioner in charge of the income-tax unit under Executive Order No. 3611, dated January 9, 1922.

Dec. 15, 1922, tendered his resignation effective January 15, 1923.

Jan. 16, 1923, resignation effective this date.

The service record of Mr. James G. Bright with the Bureau of Internal Revenue is as follows:

March 29, 1918, appointed an auditor, income-tax unit, Bureau of Internal Revenue.

Aug. 13, 1918, resigned.

Feby. 5, 1919, reinstated as an auditor.

June 1, 1919, designated section unit auditor in the audit and administration division, income-tax unit.

March 1, 1920, transferred to consolidated returns section of the technical division, income-tax unit.

March 7, 1921, designated chief of section, consolidated returns subdivision of the special audit division, income-tax unit.

Nov. 1, 1922, designated assistant chief of the consolidated returns subdivision, special audit division, income-tax unit.

Jany. 16, 1923, appointed assistant deputy commissioner, income-tax unit.

July 1, 1923, appointed deputy commissioner in charge of the income-tax unit.

Aug. 20, 1925, tendered his resignation effective September 30, 1925.

Sept. 30, 1925, resignation effective.

In the event further correspondence relative to this matter is necessary, kindly refer to IT:E:RRR-CWC.

Very truly yours,

T. J. Cooley,
Acting Secretary.

Honorable Gerald P. Nye,
Chairman Special Committee Investigating Munitions Industry,
United States Senate.

"Exhibit No. 1399" is the report of the secretary of the War Industries Board to the President, February 1919, and was ordered printed as a separate document, see text, p. 4316. (Printed as Committee Print No. 3.)

Memorandum for Mr. Martyn

In response to your inquiry of today I report that so far as is shown by the records of this office and so far as I personally know, there are no civilian officials of the War Department serving in any other Government department.

C. S. West,
Acting Chief, Civilian Personnel Division.

Exhibit No. 1400

Excerpts from meeting of the War Industries Board (Also Judge Ritchie, Mr. Perkins) Held Tuesday, June 25th, 1918, 11:00 a. m. Room 909, C. N. D. Building.

Explosives—Contract with the du Pont Company for 30,000,000 pounds of lyconite.—A memorandum dated June 11th, from the Procurement Division, was submitted, in which it was proposed to place an order with the du Pont Company for 30,000,000 pounds of lyconite. The Board disapproves the placing of this contract, so long as there is no provision made for a fair salvage value of the plant after the contract is completed; in other words, the Board is of the opinion that wherever the Government pays for a plant, all the salvage value of the same shall accrue to the Government after the contract or contracts are finished.

The meeting adjourned at 12:45 p. m.

(Signed) H. P. Ingels,
Secretary.

Exhibit No. 1401

[Gov. bus.—P. S. du Pont file]

August 31, 1917.

MEMORANDUM OF VISIT TO WASHINGTON, AUGUST 30, 1917

In response to telephone request from Mr. Baruch's office Colonel Buckner, Mr. Edge, W. S. Carpenter, Jr., Mr. Spruance, and the writer, met Mr. Baruch and Mr. Summers at about two o'clock. The following points were discussed:

Mr. Baruch first made the statement that a purchasing commission had now been appointed consisting of himself as chairman, Mr. Lovett, and Mr. Brookling, who would have full charge of the purchasing for the combined accounts of the Allies and the United States. He read us part of this contract and stated it had been signed by the ambassador's of the different countries and by the United States. He also made the statement that the purchase of all explosives had been put in the hands of Mr. Summers. Mr. Baruch then asked whether we would give him full information on the linter situation, stating to him what percentage of the linter crop we require, and also stated that he would like to take up the question as to whether the du Pont Company would assume the purchasing of linters for the Government and Allies, as well as ourselves. I stated to him that it would be best for him to either receive a letter from Mr. Connable on the subject or discuss the matter with Mr. Connable as he had full charge of the purchase of linters.

Nitrate.—The question was asked as to what supply of nitrate we had in this country and enroute at the present time, it being stated that the nitrate question was rather serious as the Shipping Board were contemplating commandeering some of our boats now in the nitrate trade as it was absolutely necessary to secure more boats for trans-Atlantic trade. Mr. Edge made a more or less complete statement in regard to this, stating that we had about 72,000 tons in this country at the present time, this including du Pont, Hercules, and Atlas. He also stated it was necessary for us to get into this country about 48,000 more tons before the end of the year and that it would be most serious to commandeer any of our boats. It was understood that the Purchasing Department would address to Mr. Baruch a letter advising him fully in regard to this in order that he may lay the question before the Shipping Board as a strong argument.

They also requested that we advise Mr. Summers the exact amount of nitrate we had in this country at the present time, and our guess as to what other people have in this country.

TNA.—The question of TNA was discussed at some length between Mr. Spruance Col. Buckner, and Mr. Summers, and it was understood that Col. Buckner would write to them a full statement of our position in regard to this matter.

TNT.—The TNT question was discussed as well as substitutes for TNT. Mr Summers made the statement that ammonia explosives were in great danger in this country as he had on his desk at that time enough orders from the Allies to take so much ammonia out of this country that there would not begin to be enough for the ordinary commercial explosives, or for any other use. He stated that the Government had recently purchased 6,000 tons from the Atlas Company, of nitrate of ammonia. It was interesting to note here that we were not even asked to bid on this, although I understand from Mr. Spruance that we could have filled the order and would have been glad to receive it. It is understood, in regard to TNT and other like explosives, that Col. Buckner and Mr. Spruance will write Washington on this subject and will make them a bid on additional amounts, it being understood we would have to build a plant for this and that they would pay amortization charges. They made a new statement in regard to this—that any plant which the Government amortized should belong to the Government after the war. This is a new phase in the question and one which it is going to be difficult to handle, but there seemed to be no argument to it.

Mr. Summers stated that the Navy have finally accepted TNT for torpedo heads and mines, it being still unsettled in the Government.

Mr. Summers turned over to Mr. W. S. Carpenter a report on the Consolidated Gas Company of New York, and it was understood we would go over this and determine whether we would be willing to arrange with the Consolidated Gas Co. so that they could turn out about 3,000,000 gallons of toluol per year for our account, and that we would, as soon as possible, make a proposition to the Government for supplying them with TNT made from this toluol or any other toluol which we were able to secure. It is understood Col. Buckner will make this proposition when the time comes.

Exhibit No. 1403

NOTICE OF PROTEST

To: Secretary of the Treasury, Commissioner of Internal Revenue, collector of internal revenue for the district of Maryland.

Sirs: The undersigned, in preparing its return required by section 13, part 2 of title 1 of an act entitled "An act to increase the revenue, and for other purposes", approved September 8th, 1916, and commonly known as the "income tax" on corporations, has included therein, as required by said act, its receipts, income and profits derived from the shipment of articles exported to foreign countries, and in submitting its return protests against the assessment of any tax thereon insofar as said tax is based upon that part of the income of the undersigned so derived, on the ground that such an assessment would be invalid and unlawful by virtue of section 9 of article 1 of the Constitution of the United States, which provides that "no tax or duty shall be laid on articles exported from any State."

Respectfully submitted.

E. I. du Pont de Nemours & Company
By Pierre S. du Pont, *President.*

Dated at Wilmington, Delaware, this twenty-seventh day of February 1917

Exhibit No. 1404

A summary of the expenditures, by classes, reported by the foreign governments specified as made in the United States between Apr. 6, 1917, and Nov. 1, 1920

[In millions of dollars]

	Total	Great Britain	France	Italy	Belgium	Russia	Other countries[1]
Expenditures:							
Munitions, including remounts	2,493.6	1,330.6	827.2	259.1	14.1	58.7	3.9
Munitions for other governments	205.5	205.5	----------	----------	----------	----------	----------
Exchange and cotton purchases	2,644.8	1,682.4	806.6	87.6	----------	53.2	15.0
Cereals	1,422.5	1,375.4	----------	41.8	5.3	----------	----------
Other foods	1,629.7	1,169.2	295.2	141.4	22.2	1.7	----------
Tobacco	145.1	99.2	40.7	----------	5.2	----------	----------

Memorandum on Price Control as a Means of Eliminating War Profits

In the consideration of policies designed to "take the profit out of war", special prominence has been given to control of prices. The War Policies Commission gave the question first place among the measures which it takes up in its report.[1] It is discussed at some length in the industrial mobilization plan of the War and Navy Departments. The claim has been made that price control, in conjunction with certain other policies, would eliminate profiteering in the event of another war.[2]

In order to control prices, two fundamental tasks must be accomplished. What prices are to be set must be determined and some agency must see to it that the prices so fixed are properly administered.

I. THE DETERMINATION OF PRICES

A. The problem on paper

The Industrial Mobilization Plan recommends the fixing of "uniform per unit prices slightly above the 'bulk line' of cost". The term, "bulk line", came into usage in connection with the price-control efforts of the World War. In any given industry a number of different concerns contribute to the supply of most commodities. These concerns differ as to the efficiency with which they are operated and the advantages with which they are endowed and as a result their unit costs diverge considerably. Some fortunate producers have very low costs, while those of others are extremely high. But the bulk of the supply is produced at costs falling somewhere between these two extremes.

Thus, the cost conditions under which a majority of commodities are produced may be represented on graphs which resemble the one attached herewith. This charts costs in the beet-sugar industry during the season 1917–18. It was prepared by the Tariff Commission and placed at the disposal of the Food Administration to assist it in its war-time profit-control program.[3] The cost data here used are simply the actual money costs of production in the various concerns as determined by accountants.[4]

It will be seen that for about 85% of the production the costs increase gradually as more inefficient plants are needed to produce a given supply. Thus it would be possible to draw a line, AB, which would represent a cost covering the bulk of the output. Such a line would be the bulk line.

The Industrial Mobilization Plan enunciates as a further basis for price-fixing the principle that "just compensation must be allowed." [5] In this connection it should be pointed out first that "just compensation" is an extremely indefinite term. One interpretation of "just compensation" might be that return which the industry would have received had normal competitive conditions not been upset by the advent of the war. Under normal competitive conditions there is no guarantee that all concerns will maintain intact and get back the capital which they have invested. Indeed, all experience would indicate that the forces of competition will compel a certain number of high-cost producers either to reorganize and write down the value of their assets or to liquidate entirely and go out of business. In either case they will have lost some or all of their capital.

If the price fixed includes an allowance for depreciation, it may put those concerns whose costs fall above the price line CD out of business, but those whose costs come below that line need not question the safety of their capital. This is not the case under competitive conditions. Then a few marginal concerns who fall just under the price line will be operating without getting their capital back. Including depreciation charges results in a higher price for a given volume of production than would otherwise be necessary. If just compensation is viewed as that return which would duplicate normal competitive conditions, the net effect of including depreciation as cost is to guarantee a return which is more than just.

---

[3] Taussig, F. W., "Price Fixing as Seen by a Price-Fixer."

[4] Ibed., p. 223.

[5] Industrial Mobilization Plan, p. 65.

The Industrial Mobilization Plan goes on to set forth several bases which may be used by the price-fixing body always within the limitation of providing just compensation.[6]

1. "Actual cost of production plus a reasonable return on capital investment." The plan says of this criterion that difficulties in the determination of capitalization restrict its use severely. The present value of capital invested in machinery, buildings, land, etc., i. e., capitalization, is dependent upon income which in turn is greatly affected by prices. To use capitalization as a basis for fixing prices is to depart radically from the processes of normal competition.
2. "Prevailing market prices." There is no guarantee that this method will both ensure the necessary war production and prevent huge war profits. On one hand it is quite possible that to fix the prevailing market prices for some commodities would give a price line EF. This would obviously fall short of meeting war needs. On the other hand, a market price GH is quite likely as war approaches, in which case price fixing would result in tremendous war profits. There is no guarantee that price fixing on the basis of market conditions will result in an offsetting of the vast dislocations, inevitable in war time, of such a character that profits will be kept in check and production maintained at the required level.
3. "The cost of producing the last unit of the indispensable amount of the commodity required by the war program." On such a basis, the price fixed would be no different from that which would result from the abnormal competitive conditions engendered by the war. For those commodities required in great quantities it would be something like the line GH and for almost every commodity there would be a sizeable area above the cost curve. Such a plan would invariably permit huge profits.
4. "Profits earned by the industry of the commercial activity concerned over a pre-war period to be specified by the committee." Even under this sort of control, low-cost producers would reap large profits. The chief difficulty would be that in a number of commodities, such as steel, war requires all producers. Many high-cost producers would be shut out under the above plan. The number would be even greater if, as is the case in some industries, the cost curve started to rise sharply at F rather than at B. Under these circumstances a price which would give only the equivalent of a pre-war return would not call forth the required volume and would not encourage the required plan expansion. It would be possible to subsidize those producers above the price line by giving them different prices graded in accordance with their varying costs. This involves administrative complications which may be the reason why the plan dismisses a graded scale of prices as unsatisfactory.[7]

A further complication raised by the flat price, fixed to ensure pre-war profits, results from the necessity of limiting civilian demand in wartime. While the Government takes a much larger proportion of the supply than it does in peacetime, there is still considerable civilian purchasing of almost all products. This was the case in the last war. Some way must be employed to reduce civilian demand so that Government requirements may be satisfied.[8] This aim may be met in part by methods such as the Food Administration used to reduce consumption of scarce foods. If normal civilian consumption is MI and normal Government consumption is IJ, war propaganda may cut down civilian use to K but Government needs may demand that it be reduced to L.[9]

In the last war this problem was never squarely faced. Dr. Frank Taussig, a member of the price-fixing committee of the War Industries Board, says: "In the main the course of action by that committee was comparatively simple: A maximum price the same for public purchases as for private, the Government taking all it wanted and the general public scrambling to buy at the maximum price whatever it could get." [10] This method of procedure is open to serious objection, especially if intended for use in a long-drawn-out conflict. It entails an inequitable distribution to private citizens since the total civilian supply goes to those who are fortunate enough to buy first while the rest go unsatisfied. It creates a tremendous incentive to supply this importunate private demand at additional compensation acquired in some underhand method. The degree of facility with which such bootlegging may be carried on will be considered later. Should it develop to any considerable extent, the Government would find it increasingly difficult to place its orders at the fixed price. Such a situation might well become serious.

---

[6] Industrial mobilization plan, pp. 65 and 66.

[7] Industrial Mobilization Plan, p. 65.

[8] Taussig, po. cit., p. 213.

[9] This manner of speaking is for the purposes of clear presentation. It does not mean that the Government demand must be filled by the plants falling between I and J.

[10] Taussig, op. cit., p. 216.

It might be prevented in several ways. The goal of permitting only pre-war profits might be abandoned and a price fixed high enough to shut off a portion of the private demand. Or some sort of rationing scheme might be adopted. Because of administrative considerations, this might require having the Government take over the entire output at a fair price and reselling to the public at a higher price.

B. The problem in practice

When the field of activity is transferred from the study to the political and economic arena the problems are multiplied. By a study of the three major steps in price fixing with particular reference to the experience of the World War, it should be possible to get a fairly accurate picture of the probabilities of the future.

1. DETERMINATION OF COST

A first essential of any program of price fixing designed to prevent undue profits is an accurate knowledge of the actual cost conditions under which commodities are produced. Yet this information is extremely difficult to obtain. In the first place it is not past costs but future costs that are required. The prices are fixed to apply to a period in the future and in order to be comparable, the costs must be a forecast of conditions during the same period. However, costs are never the same. Dr. Taussig writes in a memorandum to the Price Fixing Committee: "In the first place, costs are not clearly ascertainable. They vary from month to month, from year to year. We get figures from cost accountants which are worked out to the last cent, but which as a matter of fact, contain arbitrary and debatable elements." [11] This means that figures on past costs must be revised and this revision is bound to be an uncertain process. Mr. Robert Brookings, chairman of the Price Fixing Committee, stated at one of his meetings, "We have gone into that very exhaustively and as I have explained to you, we have had the cost sheets for the month of March; that is the latest month we could get; we never can bring figures much closer than sixty days to a meeting of this kind if we get relaible figures;" [12]

Such a gap is even more serious in war time when all economic conditions are in a particularly disturbed and fluid state. It means that in almost every case the price-fixing body must make generous upward revisions in its cost data to cover possible increases. Mr. Brookings stated at a meeting called to fix the price of aluminum, "We felt after hearing all Mr. Davis (president of the Aluminum Company of America) had to say about it, and taking into consideration the probable increase as raises (sic) were going up, and we fixed the price at 32 cents.[13] Since the costs of the Aluminum Company, practically the only producer, were 17½ cents a pound by their own statement [14] and 15¼ cents according to the Federal Trade Commission,[15] this price of 32 cents a pound was designed to cover any probable increases in costs to say the least.

A further complication in getting accurate cost information arises from the fact that due to the importance of overhead or fixed costs in modern industry, there is a tendency for unit costs to decrease as volume rises and overhead is spread over more units. There is no instance on record where prices were reduced by the price-fixing committee due to this factor. That it was operative was pointed out to them by a representative of the small producers of cooper who said, "The trouble is with these low-cost producers that their expenses have been overtaken much faster than the other producers of copper. The Anaconda have been able to make such tremendous profits by spending so much money, and the nature of their mines is such that have made savings there that have practically come up to the increased costs in many of their departments." [16] Mr. Kelly, president of the Anaconda Copper Company, and present at the meeting, let this statement go unchallenged. Many firms are able to produce at capacity during a war period. This means that they are able to take advantage of all the tendencies toward lower costs which such large production affords. If the prices which they get for their products are based on cost figures compiled during a period of slack production when such economies were not operative, large windfall profits are bound to ensue.

[15] Ibid, May 9, 1918.

[16] Ibid., May 22, 1918.

The difficulty of determining costs is enhanced by reason of the necessary dependence of the cost finding body on the cooperation of industry. Even when data are gathered through the medium of an independent body like the Federal Trade Commission, the need for industrial cooperation is still apparent. The Commission must get the costs from the books of the companies in some way. The legislation proposed by the War Department does not contain any provision giving the Government access to industry's books and records.[17] Reliance on industry for this information was an announced policy in the last war and is continued in the plans for the next. Mr. Brookings stated it. General MacArthur, in his statement before the War Policies Commission, stressed the importance of a "maximum use" of the war-service committees with their "detailed data as to price factors and trade conditions."[18]

The efforts of the War Industries Board to fix the prices of cotton textiles are in point. The Board met and fixed a price but, according to "Government Control Over Prices" (Garrett, P. W.), "there was a decided absence of cost data. Several requests had been made for such data, but the representatives of the industry claimed that the time required for their collection and compilation would be too long to make them available for immediate use."[19] When price revision was considered, "The same lack of cost information held up negotiations. Indeed, 'the failure of a large number of cotton mills to submit their cost sheets' resulted in the postponing of any revision until November 16." [20] When cost data finally were obtained, the price-fixing committee found that under the prevailing price a profit considerably larger than 25% on plant investment was being made.[21]

Again, in the case of sole and belting leather: "It was not until the middle of July 1918 that the question of sole leather prices was taken into consideration by the price-fixing committee and even then, because of lack of sufficient cost data, no definite action was taken." [22] In addition, it is clear that any attempt adequately to check costs by examination of the books of a large number of companies is a herculean task, especially when it must be done in the haste required by war-time conditions.

Even when the data are furnished by industry, the complexities of cost determination make their validity doubtful. The following discussion at the copper meeting on making out cost sheets is illuminating:

"Mr. Bancroft. I filled in our figures there. Our conditions at the Lake are different in figuring the profits. On the forms they sent to me, I would work them one way and the next day I would shift it some other way. My final result would be the same, but I couldn't help but feel that they should have a different form for the making out of those cost sheets for the Lake companies. I believe our work is different, I think we should spread it out. In your final figures they ask for the labor, supplies, and overhead, that brings it down to three items. I don't know whether they want to separate and get the exact labor costs, the exact supply costs and the true overhead. Now of course in my figures, I have thrown any amount into that overhead that is really not truly overhead; it should go into the rest of the figures in some other place. It is all there but I know their figures aren't right and I don't like to give anyone a set of figures that isn't right.

"Mr. Brookings. If you submit that in writing to the Federal Trade Commission, they want to get all of the information that they can. They want to get the absolute facts. They don't intend to give us anything, this is the figures according to the books of the company. If you gentlemen wish to change it, when they don't take those figures off themselves, I suppose the blank form they ask you to fill out is in the usual way of dividing or subdividing the accounts.

"Mr. Bancroft. They don't know why to report certain items. One man will say to put it in one place and another in another place. I don't think they are correct. It all depends upon what figures are essential and what they should get." [23]

Even when adequate information is at hand, there arises the problem of detailed familiarity with such information on the part of the Government representatives. According to Government Control Over Prices: "Neither the price-fixing committee nor the Food Administration to any extent availed themselves of a detached scientific committee whose business it was to analyze for them and interpret the cost sheets prepared by the Federal Trade Commission." [24] This resulted in a tendency to permit the representatives of industry, who were, of course, thoroughly familiar with their own figures, to substitute their own information. Their figures almost invariably showed higher costs. Furthermore, no committee of experts can be as familiar with the details of an industry as those permanently engaged in the industry.

[17] Plan, p. 87, sec. 7.
[18] H. D. No. 163, 72d Cong. 1st sess., p. 372.
[19] Garret, op. cit., p. 299.
[20] Ibid., p. 301.
[21] Ibid., p. 302.
[22] Ibid., p. 322.
[23] Ex. D., p. 15.

The War Industries Board says, "The result of its (the Board's) action in fixing prices in any case should be considered in the light of the circumstances under which and the purposes for which it acts—getting within the time required an adequate supply of war materials which the Government needs, and the price question, though always important, is after all not the first consideration, and there should always be considered the fact, as illustrated by its action with respect to steel prices, that it uses a very broad business judgment in a great emergency without regard to strictly Federal Trade Commission reports or other cost data."[25] The reference to steel prices concerns the Board's action in fixing a price for steel considerably higher than could be justified on the basis of the Federal Trade Commission's cost figures.

Such a procedure, combined with lack of complete familiarity with the details of industry, makes effective limitation of profits a technical impossibility. When the fixing of tanning prices was considered, the Federal Trade Commission figures indicated that average tanning costs were 12 cents. Figures were presented by the industry showing costs of 13.5 cents. The prices suggested by the tanners were those which the committee fixed.[26]

One of the most difficult cost problems is that of determining what items should be included and how large they should be. Such matters as wages make little trouble, but the number of border-line items is large. There was no definite or consistent policy followed by the price-fixing agencies in existence during the World War as to what constituted allowable costs.[27] They met and disposed of each problem as they were confronted with it.

The difficulties raised by including depreciation as a part of cost have already been touched upon. These same difficulties are applicable to the item of depletion of capital values caused by the using up of natural resources in such industries as oil and copper. Mr. Brookings stated the policy of the committee on both these points at a meeting with the copper industry. His words were, "I wish to say that when we have a cost that leaves out depletion and depreciation, we recognize both depletion and depreciation as an adequate part of cost.[28] At this same meeting he made a remark showing the difficulty of getting definite figures on depletion. He said: "We have here before us the production of all these properties. To show you the amount of detail when we gather eight or nine hundred producers that are producing (sic) fifty million, it won't look as queer. We have found difficulty in some of these costs. We have had cost sheets presented to us of twenty-three, twenty-four, twenty-five, or twenty-six cents, whatever the case may be, and when we have analyzed them, we have reduced them to nineteen cents or something like that. They have put in other things that are their views as to depletion. My own experience teaches me that the average man is as honest as I am; I try to be honest; that is all I say. There are different methods of accounting, different methods of arriving at these things. When we change a cost, we generally do it with the consent or acknowledgment of the party; that is fair." [29] Depreciation and depletion are largely matters of someone's "views", and in most cases, either because of a necessity to avoid arbitrariness in order to assure the needed cooperation of industry or because of the committee's physical inability to cope with its huge task, the views adopted were those of the industry.

Another question which plagued the committee was the contention by the industrialists that in addition to ordinary depreciation, there should be included in cost, allowance for amortizing the investment in plant due to war expansion. On May 9, 1918, the committee increased the price of aluminum from 32 to 33 cents a pound in response to this plea.[30] They seem to have been sympathetic to it at all times. The basis for this attitude was the argument that such expansion is made at high war prices and that the post-war drop in both prices and demand will cause the companies to sustain large losses, sometimes amounting to the total investment.

[24] Ibid., p. 179.
[25] War Industries Board Minutes, Mar. 4, 1918, p. 11.
[26] Garrett, op. cit., p. 322.
[27] Ibid, p. 280.
[28] Ex. D., p. 14.
[29] Ex. D., p. 26.
[30] Garrett, op. cit., p. 286.

It has been pointed out in the case of the du Pont Company that war plants are far from being total losses after the war is over. Judge Gary did not seem too reluctant to build them when he said to the price-fixing committee, "There are members of this committee who are apprehensive in regard to future deliveries of steel. It is part of their duty to be sufficiently apprehensive so as to secure the fullest efforts on the part of steel producers. I believe the Government is going to have supplies, and if at any time there is any doubt in regard to that, I hope the large producers will be notified and given an opportunity to increase capacity for the purpose perhaps of making money, and for the purpose of doing exactly what you have urged us to do, what Mr. Baruch and others have said when they have urged us to do what was necessary." [31] The effects of including amortization of war facilities as a part of cost is that the Government sets a price which causes the public to pay for these plants. But the public does not get what it pays for. At the end of the war, the plants still belong to the companies and, for whatever they are worth, constitute a gift from the Government.

Instead of paying for expensive wartime expansion which will have to be scrapped later, the Government might pursue a policy of substituting for such expansion, insofar as possible more intensive exploitation of existing equipment. This would produce higher costs but they would not be nearly so high as those resulting from the other method.

In many instances the industrialists urged upon the waritme agencies the inclusion of taxes as a part of cost. The following discussion occurred at a copper meeting

"Mr. Brookings. I would like to ask just one question. You have given the costs of last year of North Butte production at 20.36.

"Mr. Cotton. Yes; that is as we construe it.

"Mr. Brookings. What did you publish it to the public?

"Mr. Cotton. I am not in a position to say whether it included depletion or not.

"Mr. Brookings. Your figures are very much lower than published by your company.

"Mr. Cotton. I am not sure whether we included a depletion or taxes which should be included.

"Mr. Taussig. You include excess profits tax?

"Mr. Cotton. We had no excess profits, we had income-tax profits. When you get to the question of cost-price fixing, in order to arrive at what is the real cost to you or else you will deceive yourself, you have to figure depletion, taxes, and elements of that kind." [32]

The committee fixed the price of cotton textiles on June 21, 1918. It then had data which showed profits of 25 to 30 percent. According to Government Control of Prices, "Several representatives of the cotton industry justified such profits on the basis of the tax situation."[33] The same document says, "In contrast with the methods of price-fixing for commodities other than food, the following clause in the Food Administration regulations for canners is of interest: 'Cost shall not include income and excess profits taxes * * *'" [34] It is anomalous to have a tax program intended to take the profits out of war used as an excuse for fixing prices high enough to enable those profits to be made and retained.

A further source of difficulty was found in intercompany or interdepartment profits. Most large concerns, such as United States Steel or the Aluminum Co. of America, are highly integrated. They generally carry on the various processes required for the production of their product through the medium of subsidiary corporations or separate departments. If, in transferring goods from one subsidiary to another, a profit is made, this profit should appear as a profit in the consolidated statement of the parent company. It is obviously very easy to permit such an item to appear as a cost rather than a profit and very difficult to check up on this sort of practice. The following item appears in the minutes of a meeting of the price-fixing committee that occurred less than a month before the end of the war: "Rails: The chairman announced that contrary to his previous understanding, he had discovered that the United States Steel Corporation's cost figures on rails are not strictly integrated, and that there is about a $5 per ton intercompany profit, a part of which might possibly be charged to transportation."[35] The following conversation occurred at the meeting which raised the price of aluminum to 33 cents:

[32] Ex. D., p. 7.

[33] Garrett, op. cit., p. 299.

[34] Ibid., p. 116.

[35] Minutes of price-fixing committee, Oct. 21, 1918, p. 1.

"Mr. TAUSSIG. What is the reportion (sic) of your consumption of bauxite as compared with the others?

"Mr. DAVIS. I suppose we use perhaps 66⅔% of the total consumption of the country; we produce practically all there is produced in this country.

"Mr. WOOSTER. You fixed the price on it? Do you say it is selling at $10.00 a ton, that is your price, and you practically make the price on bauxite throughout the United States?

"Mr. DAVIS. That never has been the case, because the French people have always fixed the price on bauxite.

"Mr. WOOSTER. What is the duty?

"Mr. TAUSSIG. It is free.

"Mr. BROOKINGS. That same question came up before and we simply side-tracked it and said, we are treating your investment and capital as one, and your return on your capital, and to be consistent, inasmuch as you had fixed the price under which bauxite is sold, we must take the cost to you, and the cost to you is what we have given you credit for.

"Mr. DAVIS. Our contention in that is a little different, I think, from what you put it. As a matter of fact, 25 or 30 years ago, we having practically invented the use of bauxite for aluminum, bauxite was nothing but dust with no value, but we went to our concern, and of course we did not realize how large this industry was going to grow and we bought for two or three hundred thousand dollars some bauxite land. We have spent nearly $2,000,000 for bauxite, within the last two years, in cash. My point, is Mr. Brookings, that because we were fortunate enough to buy this bauxite 30 years ago at a cheap price that anybody should say that aluminum can be made with bauxite at 25 cents a ton, for it could not, unless somebody should take our place.

"Mr. WOOSTER. The fact is that it is made for that. It costs you $0.50, I think." [36]

A raw material which actually costs $0.50 a ton is set down on the company's books at $10.00 a ton.

Mr. Colver further elaborates on this practice in a memorandum written for the price-fixing committee:

"In the first place, the Steel Corporation, through its control of a large part of the railroad transportation at the head of the Lakes, was able to levy a toll on the bulk of the iron ore produced in the country. Just as in the case of anthracite coal, in which a plan was worked out where the profit in anthracite coal lay in many cases not in mining but in its transportation to market, so in the case of iron ore, the mining of the ore itself was often relatively unprofitable, while the transportation of the ore by rail was made to yield enormous profit. The anthracite railroads owned a great many of the anthracite mines; they often mined practically at a loss, transporting the coal at an enormous profit, and competitors were compelled to mine at the lowest possible margin and all the natural profits were absorbed by the transportation companies as freight." [37]

In some cases there is actual padding of costs. The Federal Trade Commission describes this practice as follows:

"In cases where the Government fixes a definite margin of profit above costs, as in the case of flour, there is a considerable incentive to a fictitious enhancement of costs through account juggling. This has added to the volume of unusual profits. Increase of cost showing on the producers' books can be accomplished in various ways. The item of depreciation can be padded. Officers' salaries can be increased. Interest on investment can be included in cost. New construction can be recorded as repairs. Fictitious valuations on raw material can be added, and inventories can be manipulated."

* * * * * * *

"Payment of extraordinary salaries and in some instances bonuses to executives of corporations have been found by the Commission during its investigations. An illuminating example of high remuneration charged to the expense account is that given by the American Metal Co. (Ltd.), of New York, the chief dealings of which are in zinc. Appended are the salaries and tantieme (French—an interest, commission, or proportional amount) of some of the chief officials: [38]

---

[36] Ibid, May 9, 1918.

[37] Garrett, op. cit., p. 392.

[38] Senate Doc. No. 248, 65th Cong., 2d Sess., p. 7.

Mr. Sussman attended the meeting of the price-fixing committee with the copper industry on May 22, 1918, and participated in determining a price for copper.[39] The task of searching through the accounts of many companies for hidden profits is enormous

In reporting to Mr. McAdoo, Director General of Railroads, on his interview with the price-fixing committee, Mr. Walker D. Hines says: "They (the committe members) pointed out that the average cost was about $47 per ton; that the average profit of steel producers on steel rail prior to the war had for many years been as much as $8 per ton; and that under war conditions it could not be expected that any profit would be regarded as reasonable which did not equal the pre-war profit, plus some allowance, from $2 to $4 per ton additional investment at the present time."[40] It has already been indicated that this cost of $47 per ton included an intercompany profit of $5.[41] Mr. John S. Williams of the Treasury Department writing to the Director General on the annual report of the U. S. Steel Corporation for 1918 says, "* * * *. It should be noticed that there have been included in operating expenses, the sum of $96,675,000 expended during the year 1918 for maintenance and repairs; but attention is called to the fact that the company was carrying on its books, to the credit of depreciation and extraordinary replacement funds on December 1, 1918, the impressive sum of $191,281,000. (The annual report does not make it entirely clear exactly how this fund is being handled but the inference is that this represents the accumulation of charges for depreciation and extraordinary replacements in excess of the actual expenditures for this purpose.)"[42] So the prices of $55 per ton for Bessemer rails and $57 for open hearth rails finally fixed by the committee must have been based upon a very liberal interpretation of cost.[43]

2. "JUST COMPENSATION"

The next step in fixing prices after determination of cost is to decide what margin of profit above cost should be received. The industrial mobilization plan states that "just compensation" must be allowed. Mr. Hoover said during the war, "I do not believe that any person in the United States has a right to make 1 cent more profit out of any employment than he would have made under pre-war conditions. I do not care whether this refers to the farmer, to the laborer, to the manufacturer, to the middleman, or to the retailer."[44]

There is abundant evidence to show that the price-fixing committee did not and could not apply the criterion of pre-war profits rigidly. According to Government Control Over Prices, "the price-fixing committee tried in a rough way to measure the pre-war profits, and, with that weapon in hand, they fought in conference for the opportunist policy most favorable to the Government upon which they and the industry could agree. They were compelled, for want of adequate legal powers, to accomplish their ends by resort to indirect methods and did not have the same relative success with all industries. There was not, therefore, established by the price-fixing committee, and given out to the public as their formal policy, any resolute or general rule with respect to what they considered a 'reasonable profit.' It was, indeed, not possible for them to formulate any such general policy by reason of various complications within certain industries. It has already been noted, for example, that the difficulties of negotiation made finally mandatory the approval of particular cotton-goods prices at figures more than 25 percent above cost."[45] Chairman Brookings stated that "we have nothing to say about our own policy, we may change it tomorrow," and Dr. Taussig wrote that "a frankly opportunist policy alone was possible."[46] Instead of taking the cost sheets, adding pre-war profit, which would have to be computed on a per-unit basis, and promulgating the resulting prices, the committee called the industrialists to Washington and bargained with them until some sort of compromise was effected.[47] At one of the steel meetings, Mr. Brookings said, "You remember that at our last meeting it broke off with the statement that we did not want you gentlemen to make more money than you could take care of, and keep you from starving the other fellow. We want to stabilize prices without making it too hard for any company to give us the products we need." [48] Judge Gary said at this meeting, "It would be a very great mistake to adopt any base that is calculated to put any fear of the prosperity of our concern into the industry of this country." [49]

---

[41] Garrett, op. cit., p. 392.
[42] Ex. G., letter from J. S. Williams to W. D. Hines, May 5, 1919, p. 3.
[43] Garrett, op. cit., p. 51.
[44] Garrett, op. cit., p. 51.
[45] Garrett, op. cit., p. 410.
[46] Ibid, p. 242.
[47] Ibid, p. 382.

A constant source of irritation was the wide range of cost to be found among the different concerns producing the same product. The following are some examples: "But the cost of producing a ton of pig iron varied from $18.14 to $45.72 in September 1918, according to figures collected by the Federal Trade Commission. The cost of producing a ton of beehive coke varied, in like manner with different producers, from $2.93 to $11.45. The cost of producing a ton of anthracite coal within the Pennsylvania district varied from $2.64 per ton to $7.06. An excellent example in the diversity of unit costs is brought out by the Federal Trade Commission report upon the costs of producing rosin, which show a variation in the percent of margin on investment running for different companies from 10.7 percent to 275.1 percent." [50]

Differences such as these would materially affect the shape of the cost curve on our chart. The curve might begin at Q rather than at P. It might also run to R before any substantial rise set it. Either or both of these circumstances must have applied to various of the commodities with which the Committee was concerned. In either case, the profit area would have been greatly enlarged.

There arises from war an irresistible pressure for increased production. The spectre of a shortage of supply was ever present to those entrusted with the conduct of the war, whether civilians or military men. The Army member of the price-fixing committee, Lieutenant Colonel Montgomery stated that to stimulate production by one way or another was the policy always uppermost in the minds of the committee.[51] A similar statement was made by General Pierce before the War Policies Commission.

"Senator ROBINSON. In your view, I assume the prime necessity is adequate supply?

General PIERCE. Yes, sir.

Senator ROBINSON. And prompt supply?

General PIERCE. There is no question about that.

Senator ROBINSON. Were the prices you fixed made with regard to that consideration?

General PIERCE. Yes, sir; and the protection of the Government." [52]

Mr. Brookings stated to the steel men: "Take the cost of producing ore, assemble it, and follow it around through the production of the different grades of steel. I find it difficult to justify in my mind the prices that exist today, but we have not that sort of problem. We believe it necessary to stimulate production." [53] When those charged with the repsonsibility of fixing prices hold such views, an effective program of profit limitation is unlikely.

The corollary of this view was a tender regard for the high-cost producer, since it was believed that his production was necessary to maintain the necessary volume. Mr. Brookings told the steel men, "We cannot get away from the feeling that the smaller concern does require consideration. We thought something ought to be done to help them * * *." [54]

The low-cost producers were active in backing up this solicitude for the "small men". Judge Gary followed Mr. Brookings' remark by saying later on in the meeting, "I can't rid myself of the idea from the standpoint of trying to assist in some respects the small high-cost plant. It has a good deal of bearing on the question from my viewpoint." [55] Obviously, a price high enough to support the small inefficient steel plants would net such a highly integrated concern as the U. S. Steel Corporation a huge profit. The result of these two types of pressure—from the military for production and from the powerful low-cost producers—was a price which gave at least a small profit to almost every concern in the country and enormous returns to the large companies.

A further consideration which the committee advanced in fixing high prices was its belief that the excess-profits tax would recapture the profits thus allowed.

"At an executive session of the price-fixing committee, held July 8, 1918, a discussion took place to determine to what extent, if any, the excess-profits tax should be considered in the fixing of prices. Mr. Brookings submitted a memorandum stating that the price-fixing committee was created to stabilize values and prevent extortionately high prices. It was not intended, however, unnecessarily to depress values to a point where there would be little or no excess-profits tax. The policy of the committee should be, he believed, so to shape prices that the less efficient or small producer would receive a fair profit, even though that gave the larger and more efficient producer a very liberal profit. It was expected that the new excess-profit tax would equalize this discrepancy by taking a larger proportion of the liberal profits earned." [56]

[53] Minutes of price-fixing committee, Mar. 20, 1918.
[54] Ibid.
[55] Ibid.

Such a policy makes the question of taking the profit out of war a matter of the efficacy of the excess-profits tax rather than of price control.

A final influence affecting the committee's attitude was doubt of its legal position. Price fixing has always been considered a delicate subject by the courts of this country. Although the final result of prolonged litigation might have been favorable to the committee, it did not want to take the risk and made its rulings accordingly.

There can be little doubt that the effect of all these influences was to allow tremendous profits. The Federal Trade Commission observed: "The experience with steel, flour, and coal shows that a high stimulating fixed price, while stabilizing an ascending market, produced an ecomonic situation which is fraught with hardship to the consuming public and with ultimate peril to the high-cost companies through increasing the power of their low-cost competitors."[57]

Much was made of the great reductions in price brought about when the price-fixing committee stepped in. However, the fantastic prices in effect before the price-fixing committee was created were largely a result of the hysterical market conditions which prevailed when we entered the war. Very few sales were made at prices as high as the peaks shown on the charts. Garrett, in referring to the commodities with which the price-control agencies were concerned, says: "In the case of several of the most important commodities dealt with, the bulk of sales was made under contract. For a great many of the transactions current quotations were of little significance, because of outstanding contracts. Old contract prices were of particular importance in the consideration of control over crude iron, steel, copper, and sulphuric acid." [58] The same thing was true of bituminous coal when the Fuel Administration fixed a price for that commodity.[59]

The price-fixing of the committee boils down to this: When we entered the war the prices of those commodities which would be most in demand by the Government rose to unheard of peaks. The committee attacked those speculative peaks (which never represented more than a fraction of the total transactions) and got them down. Probably it also prevented a runaway market in some commodities. But it never stepped in except where Government purchases were such a large proportion of the total that they had already upset or threatened to disturb the market. And it never fixed a price which resulted in anything less than a fair profit even to the high cost producers. Mr. Baruch himself upheld this view before the War Policies Commission. He said:

* * * I vividly recall that during the war, even after we had by price fixing compelled a reduction of 35% from the peak index figures of iron and steel, and even after the 80 percent excess-profits tax was in effect, some high-minded and public-spirited steel men came to me expressing apprehension over the enormous profits they were making under our restrictive system operating at its best." [60]

A number of instances have been cited where the Committee consciously permitted much larger profits than were made before the war. Another occurred at a meeting with the copper industry. Mr. Brookings said; "If we attempted to take the annual expenditures made by the copper people as a basis of compensation on capital, there are no figures that we have seen on last year on any so-called 'A class' coverings, that would justify the price we would have made on copper, as far as we are able to see and as far as the criticism that came to us from every source."[61]

The prices fixed were maximum prices, but with a very few exceptions, they might just as well have been minimum prices. Chairman Colver of the Federal Trade Commission said in his brief to the price-fixing committee: "A maximum price becomes a minimum price, and few will voluntarily sell under the maximum price, even though they could well afford to do so. Not only has this practice been approved, but it has been aided and abetted by a declaration that the Government itself will not accept voluntary offers of commodities at prices lower than fixed prices. This would seem to be a complete inversion of the second purpose of price fixing," which, Mr. Colver had said, was to guard against a dangerously inflated price structure.[62]

[61] Minutes of Price-Fixing Committee, May 22, 1918, p. 10.

One final result to which the price fixing policy contributed should be mentioned. By permitting the low-cost producers tremendous profits, it created an opportunity for them to strengthen their already dominant position in the trade. Upon the return to peace time conditions, this was made even more apparent.[63] The war did not discourage monopoly.

3. REVISION OF PRICES AND EXTENT OF CONTROL

As indicated by some of the instances referred to above, extensive revision of prices after they had been fixed was not characteristic of World War price fixing. Most of the commodities controlled were those whose prices had gotten so far out of line that even considerable reductions failed to bring them down to the general level. Mr. Baruch, obviously referring to the last war, says, "It is only when we start from a distorted schedule of prices that we can stabilize prices piecemeal, and then only in respect of such prices as we find to be so grotesquely out of line with their component costs that there is no confiscation in fixing them until their component costs rise to relative parity with the prices fixed." [64] It is indicative of the size of the gap between costs and price that there were so few revisions.

However, there were some revisions. Mr. Colver, chairman of the Federal Trade Commission, says:

"We have seen unduly high prices raised and raised again on the representation of fear of future increase in costs, and, as industries are interrelated and buy and sell from and to each other and as we raise one because it anticipates an increase in cost, and raise others on the same anticipation, these raises, reacting, tend to justify the darkest fears. In other words, business concerns are busy skinning each other and the public and the Government is paying for the hide that is removed." [65]

These upward revisions would have been infinitely more frequent if price control had been undertaken in 1914 rather than in 1917. The difficulties of applying piecemeal pricefixing such as was tried in the last war to conditions prevailing before inflation had set in were fully brough out before the War Policies Commission by Mr. Baruch. He pointed out that if some prices are fixed while others are left free to fluctuate, the control will be either unenforceable or confiscatory. This is because the free elements will rise due to the strong inflationary forces released by the war. But all elements of the price structure are so interdependent that some or all of the costs of the controlled commodities are bound to be affected. If this process goes far enough without upward revision, controlled commodities will be selling at prices too low to cover their costs. Mr. Baruch says, "Those who suggest partial price fixing propose to create what amounts to an artificial price structure and * * * because they leave the generality of prices free, they will be obliged to adjust fixed prices so frequently, and always upward, that, at least in the usual circumstances of war, they would perhaps better leave the whole schedule free."[66]

The industrial mobilization plan makes no specific suggestions as to the extent of control which will be necessary in the event of another war. It says,

"Whether early action is to be limited to a selected class of necessaries and essential war material, or is to be extended to include the entire price structure is dependent upon conditions which exist at the time and upon the extent to which it can be shown that the action taken is reasonably necessary for the national defense and the successful prosecution of the war."[67]

Mr. Baruch, however, leaves no doubt as to his views on the subject and after they were presented, he was informed by General Moseley that the War Department was in "close accord" with him.[68]

PRICE FREEZING

Mr. Baruch recommends what he calls "price freezing." Its bare essentials are as follows: Instead of trying to determine costs and fix prices so as to give a profit margin above these costs equivalent to that obtained before the war, a task the difficulties of which have been described at length, he would take an entirely new tack. He would assume that the prices, which exist at some arbitrarily chosen period shortly before war upsets the markets, are normal. The President would order that after a certain date no sales should be made at prices higher than those which had prevailed on the chosen date, unless permitted by duly constituted authorities. The maximum prices so set would include every price for every article or service in the country. It is important to realize that this scheme includes all wages, all retail prices, all capital charges, in fact every element in the extremely complicated price structure of our national economy. Mr. Baurch was quite explicit on this point in his testimony before the War Policies Commission. He says, "There would not be anything exempted" under his plan.[69] Necessary changes and exceptions in these frozen prices would be made by a body similar to the price-fixing committee of the World War.[70]

[65] Garrett, op. cit., p. 394.
[66] War Policies Commission Hearings, p. 796.
[67] Industrial mobilization plan, 1933, p. 64.
[68] War Policies Commission, Hearings, p. 381.

There is no actual experience with such a scheme which would enable us to determine how it would operate.

(*a*) If strictly enforced, it might result in the loss of the war due to underproduction; or (*b*) there might be a complete breakdown in enforcement and the wartime rise in prices would not be prevented; or (*c*) the maximum prices might be revised upward so frequently and placed so high that they would closely approximate those which would have prevailed had there been no control.

A major war of necessity would involve tremendous dislocation in the economic life of the country. Four million men would be withdrawn from their ordinary occupations and placed in the Army. This will result in a shortage of labor, even with a considerable number of unemployed, since the labor market is divided into many compartments which are more or less noncompetitive in the short run. Employers will strongly desire additional workers and the tendency for wages to rise will be almost irresistible. When the men stop working and enter the Army, this has a tendency to reduce the productive capacity of the country. There need not necessarily be an actual decrease in production, the reverse will probably be true, but it will mean that additional production will require the relatively inefficient labor of untrained workers or workers putting in overtime. It will require the adoption of machinery in jobs where manpower would be more efficient. These things mean higher production costs.

The character and intensity of demand change overnight. The Government goes into the market on a tremendous scale. It wants goods the peacetime market for which is negligible or nonexistent, such as heavy ordnance, deep-sea mines, and trench helmets. It takes the bulk of the total output of such raw materials as copper, steel, wool, and cotton. It has to feed, clothe, and equip 4,000,000 men in ways far different from their normal consumption habits. Meanwhile, the needs of the civilian population must be satisfied pretty much as before. Much of this Government demand is of such a nature that delay in satisfying it or failure to provide sufficient amounts would be disastrous. This sort of demand will not permit any course of action which does not compel maximum production.

This shift in demand tends to produce a corresponding shift in the character of production. Plants turn to producing commodities which they have had no previous experience in manufacturing. The urgent need for these commodities within a short time requires intensive operation and overtime. Both the inexperience and the urgency make for waste and higher costs.

There is a tremendous pressure for new plants to produce essential commodities in greater quantities. This swells demand even more and increases the consumption of capital goods without a sufficiently compensating decrease in the consumption of finished goods. The desire to amortize these new plant facilities tends to increase costs and prices.

Both domestic and foreign trade channels are disrupted. Goods are needed at places where they are not required in peacetime, such as army camps. The increase in volume of freight taxes the railroads to the breaking point. Imports and exports are greatly reduced both because of the danger to shipping and because the domestic demand requires almost all of the output. Supplies of essential raw materials, such as rubber, may be cut off. These are further inflationary factors.

Finally, there are tremendous repercussions in the capital market. The Government cannot pay for its purchases out of current tax collections and it must resort to borrowing. It needs every dollar of savings that it can get its hands on and this means that it is willing to pay a relatively high interest rate if necessary. This drives up the cost of capital generally, and reacts on business costs. There is a strong incentive for those with idle funds to invest them in either private securities or Government bonds. In either case they will be spent immediately and will add to an already swollen demand, this normally non-operative increment.

---

[69] Ibid, p. 65.

[70] Ibid, p. 34.4

Costs would increase even though there were no raises in per unit prices for goods and services. Less efficient labor would mean that more man-hours would be required to produce the same volume of goods and hence labor costs would be higher. Goods needed in a hurry would cost more than in peacetime. Drastic shifts in the character of production mean that peacetime prices are not applicable to wartime production costs. In the case of most of the items purchased by the Ordnance Department (which was responsible for one-third of the Government purchases in the last war), there might not be any peacetime prices to freeze.

Then there is the problem raised by such industries as agriculture which may remain in a depressed condition over a considerable period of time. If a war had occurred during the last 3 years and the prices of farm products had been frozen, it would have meant a terrible injustice to the farming population. There would certainly be many other industries which would claim such special treatment and some which could make out a good case for it.

There would certainly be many cases throughout industry in which price freezing would not call forth the greatly expanded production required by war. For example, it is clear that increased farm production is almost entirely dependent on increased prices. Note the expansion in wheat production due to the price of $2.20 a bushel fixed during the World War. Such an increase would never have been forthcoming had wheat prices been frozen as of 1914. Mr. Baruch's way of providing for this contingency is to permit a price-fixing committee to raise such prices as are necessary. But there would be few industries which would be unable to demonstrate increases in cost sufficient to entitle them to raises. At the first sign of an impending shortage or of recalcitrance on the part of producers, the importunings of the Army would be added to the clamor of industry. The two together would be likely to overcome the resistance of any control committee. The increases in behalf of depressed industries and those due to the inevitable occurrence of violations represent a considerable inflationary impetus.

Each increase allowed adds to the already great pressure for further increases, because of the interrelations in the price structure so admirable pointed out by Mr. Baruch. The theory behind price freezing is that by clamping a lid on all prices it would prevent that upward spiralling which makes the partial price fixing a failure. But if the exceptions and violations ever constitute a considerable portion of the whole, price freezing is in no better case than the piecemeal variety.

The low prices set would give industry a tremendous incentive to ask private citizens for additional compensation of some sort. If these illicit transactions reached any substantial volume, the possibility of a shortage in the Government's supplies must be added to the effect of such transactions on the price structure.

II. ADMINISTRATION OF PRICES

There are strong indications that maximum price fixing in wartime will always result in widespread violations. The effectiveness of administration will vary with different commodities and different types of trade organization. Thus industries composed chiefly of large corporations which are closely banded together in trade associations will have little difficulty in enforcing prices if they are so minded. Violations will also vary as the price which is set is more or less profitable. Most of the industries with which the price-fixing committee of the World War was concerned were in a position with regard to both these points that was conducive to effective administration. As a result, there is little indication that the prices fixed by the committee were violated.

But the situation is different with regard to most industries. Here the administrative body is confronted with the double task of building up an organization to see that prices are enforced and then making it function effectively.

The experience of the Food Administration in the last war is in point. It made a most elaborate and determined effort to enforce its regulations pertaining to flour mills. A survey of the experience in that industry should furnish a guide to the character of the Administration's wartime experience in general.

The first step was to build up an organization. This was done by the formation of a milling division within the Food Administration. This organization was composed of successful millers, in sympathy with the trade.[71] It had a central office in New York and district offices in various parts of the country.

The method of the Food Administration differed from that of the price-fixing committee. Instead of fixing a flat price applicable to all producers, it fixed a maximum margin of profit to be added to the costs of each unit to determine unit price. This margin was set at 25 cents a barrel.

Such a method of regulating the profits of an industry is predicated upon a thorough audit of the accounts of every concern since it is impossible to determine individual profits without an accurate knowledge of individual costs. But the milling division did not see to it that such audits were carried out. It took the attitude that it was not its business to police the industry or to discipline millers. It declined to avail itself of the facilities for independent auditing offered by the Federal Trade Commission.[72]

A contemporary report describes the result as follows:

"Not a few millers took advantage of the situation and loaded their cost reports with improper items. Some came to believe that they would never be investigated or molested if they should pad their cost reports. Such items as new construction and equipment, largely increased salaries to officers (in some cases made retroactive to include a fiscal period closed before the beginning of Food Administration control), bad debts of ancient standing, excessive depreciation charges, losses on miscellaneous outside investments, etc., were added to current costs of production and so charged to the consuming public. Under the conditions of demand which then existed, prices inflated in this way could be easily obtained for the flour; in fact, flour could be sold for almost any price limited only by the flexibility of the seller's conscience."[73]

In addition to these practices, many mills set up jobbing departments, sold their output to these departments at the 25-cent profit, and then resold to the public, getting the larger additional profit permitted under the more liberal jobbing rules.[74]

The net result of administration of this sort was that almost all millers made more than the prescribed 25 cents a barrel. The Federal Trade Commission's report on profiteering says, "The Commission has tabulated returns covering the sale of something over 4,000,000 barrels of flour made and sold under the Food Administration's regulations from September 1917 to March 1918 inclusive. In face of the regulation of 25 cents per barrel maximum, the average profit per barrel on this flour was about 45 cents or over three times the normal profit per barrel referred to above."[75]

As a further indication of the tremendous difficulties involved in auditing a company's accounts, the Bethlehem Shipbuilding Company's wartime contracts with the Emergency Fleet Corporation may be cited. The announced policy of the management of the parent company, the Bethlehem Steel Corporation, was one of cooperation with the government auditors. In spite of this the following situation prevailed at the Shipbuilding Company's Harlan plant located in Wilmington, Del., according to the final report of the Government auditor.[76]

"The working conditions at this plant were very unsatisfactory.

"The works accountant was far from even being agreeable and his assistance during the whole period of reaudit was practically useless and of no value whatever. The writer cannot recall even one instance where anything but misleading replies were given to questions asked pertaining to a proper solution of the various questionable conditions that were brought to light throughout the entire course of the reaudit. * * *

"Certain valuable cost records pertinent to our needs on the overhead audit were withheld, some were never handed over, and others given after we were forced to build up the costs from amounts shown on controlling-journal vouchers.

"Of those cost records which we were unable to obtain, the entire stores requisitions for the years 1916 and 1917 and a part of 1918, 1919, and 1920, totaling about $30,000 were an outstanding feature.

"Of those records which the contractor withheld until we had completed our build-up, the following were the most important.

[72] Eldred, op. cit., p. 47.

[73] Ibid., p. 47.

[74] Ibid., p. 48.

[75] Federal Trade Commission, Report on Profiteering, p. 17.

[76] Report of C. C. Colliflower, traveling auditor of U. S. Shipping Board Emergency Fleet Corporation on Audit of Operating Expense of Harlan Plant, Beth. Ship. Corp., January 1916 to December 1920, inclusive, page 1 ff.

"1. Detail cost ledger for repair and renewal orders.

"2. Contractors detailed statement of items credited cost and charged disallowed cost.

"The time employed to work up these two features practically covered a period of six months for each of three auditors. This is a conservative estimate.

"Many journal entries were made without any explanatory reference; this feature consumed considerable time in order to determine the true nature of such entries, working papers showing detail were evidently destroyed, in fact Bethlehem relied on memory to give an explanation of these entries. Other entries purporting a description were entirely misleading."

Even if there had been active cooperation on the part of all the company officials, an effective audit would have been extremely difficult. A current audit was carried on while the ships were being built but, according to a report by the construction auditor of the Shipping Board, it was necessarily a superficial job.[77] In the first place, the E. F. C. was short-handed. Whereas the Navy Department had about 70 auditors at Bethlehem's Alameda plant and 100 at Fore River, the E. F. C. had only seven men at Alameda and about twelve at Fore River. It requires from seventy to a hundred men at a single plant of one company for a thorough current audit. Furthermore, the different government auditors at the five plants failed to agree as to what should constitute cost.[78]

Because of the ineffective character of the current audit, it was decided in the early part of 1920 that a reaudit was necessary. This work was first entrusted to a private accounting firm. After this firm had been at work for over a year and had been paid about $600,000, they were ordered to stop, on the ground that the results of their audit were of no use to the E. F. C.[79] The E. F. C. auditors then undertook to finish the job and did so about two years after it had been begun.

This was the situation with regard to the audit of one company. Extensive profit-fixing such as that attempted by the Food Administration would multiply these difficulties many times over, require thousands of auditors, and cost the Government thousands of dollars.

The Food Administration refused to fix a flat price applicable to all concerns in the industry on the ground that such a price would not make sufficient allowance for such factors as differentials of quality and service or regional differences. Some of the unfortunate consequences of this refusal have been pointed out. Yet it is likely that the same difficulty with a flat price will prevail in a number of industries in the event of another war.

Even if it is possible to fix one prevailing price for the whole industry, all the administrative problems are not by any means thereby solved. If there are a large number of concerns in the industry, if the demand is larger than can be satisfied (as is generally the case in war time), and especially if the price set does not afford large profit margins, there are bound to be widespread violations. The temptation for business men to obtain increased compensation under these circumstances would be irresistible. And bootlegging would be facilitated because of the connivance of purchasers who would be more than willing to pay higher compensation in return for larger quantities of goods.

The ease with which violations of price-fixing can be arranged is indicated by the experience of the N. R. A. Dr. Corwin Edwards, technical director of staff of the Consumers' Advisory Board of the N. R. A. in a statement at the hearings on price policy referred to the lumber industry and the cleaning and dyeing industry as "notorious case of bootlegging."[80] He further points to an example in the fur dressing and dyeing industry. The code for this industry provided for a minimum service charge for cleaning furs. Within 3 months the New York firms had lost so much business to firms outside of New York, which violated the service charge provision, that they asked and received permission to suspend price fixing. In this instance, as in all N. R. A. examples, the prices violated were minimum prices whereas in war time they would be maximum prices. However, the incentives for violation and the facility with which they can be accomplished are similar under both circumstances.

Dr. Edwards goes on to give some examples of the technique of bootlegging which does not involve a direct violation of the fixed prices. One method is to sell at the fixed price but to give the retailer larger allowances for advertising the product in his community than those offered by competitors. Under war conditions the procedure would be for the retailer to forego advertising allowances in order to get producers to sell him greater quantities. There are a number of opportunities for practices of this sort in the complicated relations between buyer and seller.[81]

---

[77] Report of J. A. Honsick, General Scope of the Audit of Bethlehem Shipbuilding Corporation Records, U.S.S.B.E.F.C. November 24, 1934.

[78] Ibid.

[79] Ibid.

[80] Edwards, C. D., Statement at Price Hearing, Jan. 9, 1935.

Another method of evasion was practiced in the machined waste industry. Prices were filed by brand name and if a producer wanted to sell at a higher or lower price he had only to change the name of his brand.[82]

The following information was supplied by the Compliance Division of the N. R. A. in response to a request for figures giving some indication of the extent of price violations covering codified industry as a whole:

"COMPLAINTS HANDLED BY N. R. A. FIELD OFFICES

"The following statistics indicate the number of complaints of code violations handled by the field offices of the Compliance Division from November 18, 1933, to February 16, 1935. Alleged violations of labor provisions and trade practice provisions are segregated. The number of 'closed cases' represents complaints disposed of by field offices without further administrative action. The number of complaints referred to other agencies represents those referred to Code Authorities officially authorized to handle complaints, to regional labor boards, to other special adjustment agencies, and to the Compliance Division for further administrative action.

	Labor	Trade	Total
Complaints received	118, 441	31, 687	150, 128
Total closed	97, 281	24, 249	121, 530
Adjusted	64, 577	17, 945	82, 522
Investigated, no violation found	32, 704	6, 304	39, 008
Referred to Compliance Division for special handling and to other agencies	6, 574	4, 053	10, 627
Pending Feb. 16, 1935	14, 586	3, 385	17, 971

"SOURCE OF INFORMATION AS TO TYPES OF CODE VIOLATION

"The following estimates of the proportion of field office complaints alleging given types of violation, have been based on complaints docketed between August 18, 1934, and February 16, 1935. Since the middle of August a brief summary of the code violations alleged in each complaint has been reported to Washington by means of carbon copies of the docket sheet or "face sheet" used on each file.

"While the face-sheet file does not give a one hundred percent coverage of complaints docketed, because of a lag in instituting the face-sheet system in the New York, Philadelphia, and Pittsburgh offices, it may be used as a sample of experience with code provisions. One set of the face sheets has been filed by code, and another set by certain broad types of violations. The classification by type is admittedly rough.

"For comparison with the count by type or violation, the statistics on the number of labor and trade practice complaints received over the period covered by the face sheets are as follows:

Aug. 18, 1934, through Feb. 16. 1935

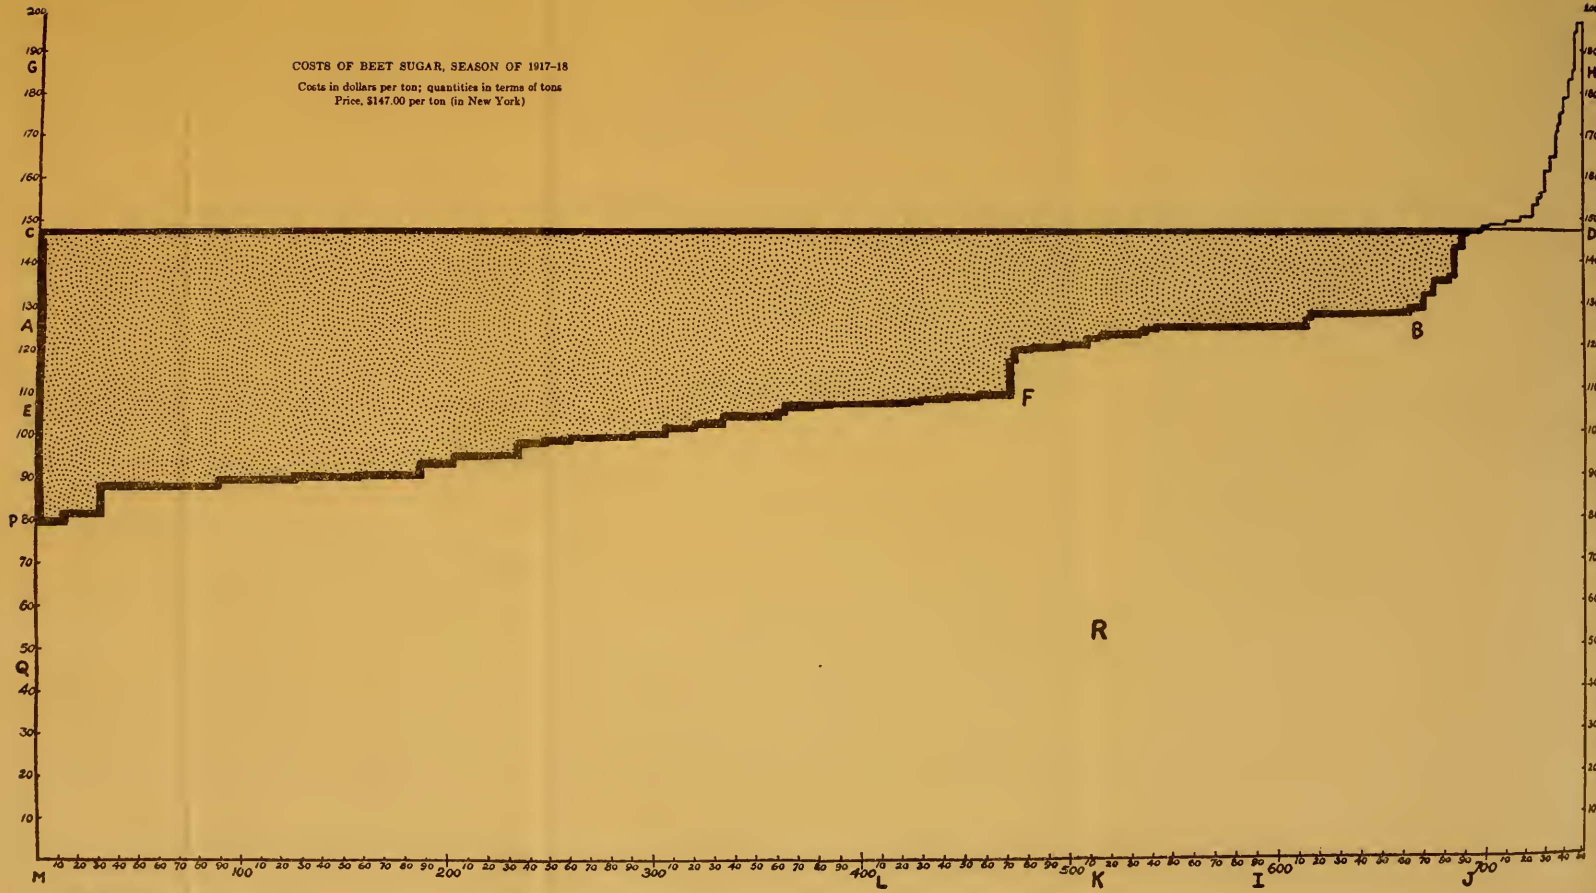
	Labor	Trade	Total
Complaints received	43, 625	14, 282	57, 907
Total closed [1]	43, 969	13, 168	57, 137
Adjusted	24, 818	9, 689	34, 507
Investigated, no violation found	19, 151	3, 479	22, 630

[1] The number of labor complaints closed Aug. 18, 1934, through Feb. 16, 1935, is greater than the number received during that period, with a consequent reduction in the number of labor complaints on hand Feb. 16, as compared with Aug. 18.

---

[81] Edwards, C. D., Statement at Price Hearing, Jan. 9, 1935.

[82] Edwards, C. D., statement at price hearing, Jan. 9, 1935.



COSTS OF BEET SUGAR, SEASON OF 1917-18

Costs in dollars per ton; quantities in terms of tons
Price, $147.00 per ton (in New York)

Complaints alleging violation of price provisions, Aug. 18, 1934, to Feb. 16, 1935

Total complaints	5, 310
Selling below cost	645
Selling below minimum prices	850
Violation of loss-limitation provision	413
Violation of price-determination schedule	348
Unfair bidding below code price	178
Failure to file prices	2, 876
Total trade-practice complaints docketed	14, 282
Percent of price violations to trade-practice complaints docketed	37. 2

"In the figures quoted above only one complaint against each respondent is counted. If several violations by the same respondent are alleged, only the major one is counted.

"Since it is difficult to draw a clear-cut distinction between the different types of price violations listed above, and since the original complaints are often stated inexactly, the total count of price violations probably has greater validity than the break-down by individual types. Furthermore, the category of 'selling below minimum price' has arbitrarily been used as a miscellaneous group to include price violations not assigned to other classes.

"The percentage relationship between price violations and total trade practice complaints cannot be considered exact, because of incomplete coverage. On the basis of other analyses made on a selective basis, however, we believe the proportion of price violations (including price filing) to be approximately 35 percent.

Labor complaints involving method of payment (*Aug. 18, 1934, to Feb. 16, 1935*)

Company script	11
Method of payment, other	593
Total complaints	604
Labor cases docketed, Aug. 18, 1934, to Feb. 16, 1935	43, 625
Percent, method of payment cases, to total labor cases docketed	1.4

"Since a large number of face sheets state the alleged violation as 'hours and wages', without further details, the above figures probably minimize the number of complaints concerned with methods of wage payment."

These figures while not conclusive are significant. They show that there have been many allegations of violation, a number of which have certainly been justified, even over the comparatively short period which they cover. They also indicate that a large percentage of the difficulty in the trade-practice field lies with the price provisions. There are thirty-three different headings under which trade-practice complaints are classified. Yet the six categories having to do with the price provisions account for 37.2 percent of the total. This would indicate that price fixing is among the most difficult types of regulation to enforce.

In conclusion it should be pointed out that the incentive to bootleg would be at least as strong in wartime as under the N. R. A. Probably it would be more intense. Furthermore, under the plan for wartime price freezing, price regulations would extend over one hundred percent of industry while under the N. R. A. they apply to only a small portion of it. The difficulties of the N. R. A. in the service industries, where enforcement has completely broken down, would be multiplied many fold under price freezing.

Exhibit No. 1406–A

EXCESS PROFITS TAXES

1. GENERAL DIFFICULTIES OF ADMINISTRATION

The delay attendant upon the administration of the excess profits tax in this country during and after the World War has frequently been noted. The complex problems involved in the application and calculation of this tax moved Secretary of the Treasury Houston to conclude that the law is—

"clogging the administrative machinery, and, threatening, indeed, its possible breakdown." (Annual Report of Secretary of the Treasury, 1920, p. 30.)

In 1927, nine years after the termination of the war and six years after the repealof the tax, the Bureau of Internal Revenue still had pending approximately 4,000 cases under the excess profits tax law:

"A statement showing the number for each year, as of October 14, 1927, is as follows:

1917	512
1918	736
1919	1, 035
1920	1, 615
Total	3, 898"

(Report of U. S. Joint Committee on Internal Revenue Taxation, vol. III, November 15, 1927, p. 14.)

While, as indicated in the above-cited report of the Joint Committee on Internal Revenue Taxation, these cases represented but a small percentage of the total number of excess profits tax cases (ibid., p. 20), the percentage becomes more significant if certain other facts be borne in mind. We have an administrative unit wrestling with the vast and difficult problem of excess profits taxation; this unit is given by statute (see R. S. 3229) certain powers of compromise, and possibly in practice goes further than its specific statutory authorization (see Couzens Report, pp. 184–192). Furthermore, a determination favorable to the taxpayer can only be challenged by him, and he does not in the usual case challenge such a decision. There, is therefore, present an inevitable tendency to close old cases without according them the consideration which would be accorded current matters. Administration is directed to an effort to do the current work efficiently, rather than towards investigating matters on which records and recollections have become somewhat dim. Furthermore, as controversy wears on and expenses are incurred in connection therewith, there is an increasing tendency to settle cases. The taxpayer is limited in economic resources, and the Bureau of Internal Revenue, after all, has a limited appropriation. Taxpayers with greater financial capacity and better expert talent may therefore get more generous treatment because better equipped to withstand delay.

The number of cases before the Board of Tax Appeals and the courts is probably a much better index of the difficulties of administration than the number of cases pending in an administrative unit faced primarily with the problem of current enforcement. In this connection—

"The controversies under the excess-profits tax acts impose by far the greater burden upon the Board of Tax Appeals. For example: Fifty-three percent of the tax years involved in cases before the Board are under the Revenue Acts 1917 and 1918. Thirty-three percent are under the Revenue Act of 1921. That is, 86 percent are under the Revenue Acts of 1917, 1918, and 1921. The provisions of the Revenue Act of 1918 appear 18,472 times, and the provisions of the Revenue Act of 1921 appear 16,042 times in the cases pending before the board.', (Report of U. S. Joint Committee on Internal Revenue Taxation, vol. III, November 15, 1927, p. 41.)

It should also be borne in mind that past due taxes are much more difficult and costly to administer than current ones:

"Approximately 40 percent of the cost of administering internal-revenue tax laws during the fiscal year 1927 was expended in the auditing of back-year returns. It is not possible for the Bureau to segregate the cost of auditing back-year returns from the cost of collecting the current year's revenue, as the work is interlocking to a vast extent, and the attempt to segregate such cost would require a very extensive as well as an expensive system of cost accounting." (Report of U. S. Joint Committee on Internal Revenue Taxation, vol. III, November 15, 1927, p. 18.)

Furthermore, effective collection of back taxes always provokes considerable psychological resistance:

"It is much better to stop profits at the source than attempt to recapture profits already realized." (Documents by War Policies Commission, 72d Cong., 1st sess., 1932, House Document No. 71, p. 31.)

The difficulty, always present in taxation procedure, arising from the fact that people are reluctant to surrender what they consider as earned, is intensified if the "recapture" be delayed in point of time.

The authorities in the field of taxation agree that the excess-profits tax in the past war was difficult of enforcement and are pessimistic as to whether any possible excess-profits tax that could be devised would ever be susceptible of effective enforcement, or even of adequate comprehension. T. S. Adams, of Yale University, formerly chairman of the Advisory Tax Board of the Bureau of Internal Revenue, comments thus on the difficulties of administration:

"Why not improve the administration? The reply is that it will take years to improve it. The intricacy of the excess-profits tax is such that it is hardly an exaggeration to say that it takes more time to teach an accountant to master its mysteries than the average accountant can be retained in the service after he has attained such mastery. * * * Ten years would be a radically short estimate of the time required in which to bring the taxpayers and the administrative authorities of the country to a point where the excess-profits tax could be reasonably well enforced." (35 Quarterly Journal of Economics, pp. 371–2, Should the Excess-Profits Tax Be Repealed (1920–21).)

While the administrative process moves cumbersomely toward the collection of the excess-profits taxes due the Government, the Government must resort to bond issues and possibly inflation as a means of temporarily remedying the lack of funds due to deficient tax yields. Mr. Colver, Chairman of Federal Trade Commission said before a House Committee:

" * * * the way to make anything expensive is to tax it; and if you levy a tax on war, you make war cost more than it should. A study of the actual working out of our excess-profits tax during the last war will demonstrate beyond any possible question that it *did not recover the excess profits;* that it did not keep prices down, and that it did not stimulate production, but that on the contrary, it *slowed production down*, it stimulated prices, and it made the cost of the war to the taxpayers, I should say, twice what it should have been. I would say that for every dollar collected in excess-profits taxes that got into the Treasury, it cost the people of the United States, or it will cost them $10 unnecessarily." (Italics ours.) (Hearings before the Committee on Military Affairs, House of Rep., 68th Cong., 1st sess., Mar. 11, 13, and 20, 1924, p. 237.)

Frequently the Government may find that the assets which it seeks to claim in payment of its taxes have been distributed. Or they may have been otherwise dissipated, since business may enter into slumps and depressions which eliminate potential taxpayers. To the extent that the excess profits tax rate approaches the taking away of a business' complete profit, it comes dangerously near to eliminating reserves which a business must carry in order to preserve itself from downward fluctuations in profit. Furthermore, there is a real difficulty in estimating what profit is, since profit is a bookkeeping item. If a tax is moderate, an error in the determination of profit may not be crucial, but if the tax be very high, there is no margin left for possible errors of such a kind. This is the basis of Mr. Ballantine's statement that an 80%, or possibly, at the outside, 90%, rate of tax was the maximum that could safely be used in connection with excess-profits taxation.

"In the case of any business which is at all complicated the determination of the profit for a particular year can rarely be exact but must rest in part upon assumptions and estimates. Almost never does the entire profit take the form of an actual excess of cash or securities at the end of the year. Generally speaking, part of the profit is in the form of inventories and in the form of improvements or additions to factories. Where the rate of tax is moderate, errors in determination do not have vital consequences and average out over the years. If, however, the entire profit is to be taken out of the business, errors in computation might be disastrous. Without elaborating on this difficulty, it may be stated that to allow some margin for error, any workable tax would presumably have to be computed on some percentage less than 100 percent—say, 80 percent or, perhaps, at the outside, 90 percent. Eighty percent was the rate urged by the Treasury and adopted as the maximum in 1918 and was the rate finally used in the British excess-profits tax. Leaving some relatively small margin of profit also serves the purpose of furnishing a guaranty to the Government that the taxpayer will see to the administration of the business with efficiency and economy." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), pp. 691–2.)

English experience on the efficacy of excess-profits tax administration is in accord with authoritative American statements.

"The Rt. Hon. Reginald McKenna, who, when Chancellor of the Exchequer, introduced the profits tax, remarked that the inland revenue had been since 1842 building up an income tax which would prevent evasion and that it would require another hundred years to devise a successful method of administering a profits tax." (Haig, Taxation of Excess Profits in Great Britain 1920 p. 150.

It should be noted, in contrasting the relative feasibility of the English and American schemes of excess-profit taxation as they worked out in the last war, that the discretion vested in the English administrators was much wider than thataccorded our own Bureau of Internal Revenue. The English administrator—

"meets the taxpayer with every disposition to be fair both to him and to the Treasury, and in cases of doubt as to what is fair, to be generous to the taxpayer. This attitude on the part of the local surveyors is deliberately fostered and encouraged by the higher officials of the inland revenue. The instructions issued to surveyors contain specific injunctions regarding the attitude to be assumed toward the taxpayer. There is full appreciation of the importance both of securing the taxpayer's cooperation and of getting assessments definitely settled in such a manner that they will not be constantly reopened for minor adjustments and corrections. In the case of the excess-profits duty particularly, with its high rates and its many opportunities for disagreement, it has been considered wise to conduct the administration along broad lines. The assessors have not failed to utilize their administrative discretion. As one of them remarked: 'We wipe off £20,000 one way or another as though it were a "half-penny."' The Board of Inland Revenue has specifically said to the local surveyors that 'owing to the present high rates of taxation' they desired 'that in doubtful cases the allowances granted in calculating excess-profits duty should err on the side of generosity rather than otherwise.'" (Haig, Taxation of Excess Profits in Great Britain, 1920, p. 97.)

Ingrained American distrust of administrative and bureaucratic procedure, a distrust shared by the American judiciary, stands in the way of similarly broad administrative discretion being vested in tax officials in the United States. The attitude of the judiciary plays a more important role in American tax administration than in the British scheme, a fact which explains the following recommendation of the Joing Committee on Internal Revenue Taxation:

"The recommendation that tax cases should be settled by *administrative* action, rather than through litigation, and the abandonment of the policy that all cases must be decided upon the basis of absolute accuracy, have been discussed. It is believed that the adoption of these recommendations is vital." (U. S. Joint Committee on Internal Revenue Taxation, vol. III, 1927, p. 45.)

Both of these suggestions for improving the administration of the tax laws emphasize departing from adherence to a strict statutory standard in favor of allowing the administrative body to fix assessments on a fluctuating basis. Such latitude of administrative discretion may well have to be expanded to a length never envisaged by the English administrator or the Joint Committee, should the proposal of a ninety-five percent rate of tax, contained in Documents by War Policies Commission, House Document 271, March 12, 1932, p. 23, be put into effect.

It has been suggested that patriotism will operate to secure a fuller measure of cooperation from the taxpayer in war time than could be gotten in peace time. See Documents by War Policies Commission, House Document 271, March 12, 1932, pp. 22–23. The measure of such cooperation is dependent upon the rate of tax, and the degree of closeness to the war situation. This latter point is significant, since a high rate of taxation may have to be continued as a governmental necessity after the termination of the war, when there is no longer present the same patriotic incentive towards payment of tax obligations. Even while retaining patriotic intentions, businesses may be hit by a post-war contraction of their profits or by deficits, and consequently unable to pay their taxes, which, it must be remembered, are due only after the income upon which they are based has been earned.

Patriotism in the last war was tested in a situation where the highest excess-profits tax rate during the war, continued in existence only for a short time, was, for the highest brackets, eighty percent. In fact, Mr. Haig, in speaking of the British experience on the subject, indicated that abuses would develop even with a rate far below 80 percent:

Best-informed British opinion places the maximum share which can be safely taken by the Government at about 50 percent. If the government takes more than the half of the pound of profit, abuses, it is believed, are certain to develop." (Haig, Taxation of Excess Profits in Great Britain, 1920, p. 149.)

Mr. Colver, chairman of the Federal Trade Commission, was quite dubious as to the extent of the patriotic reaction:

"As a group, men are patriotic; as individuals, they will pay as small a tax as can be calculated and will secure as high prices and as great profits as can be extracted." (Garrett, Government Control over Prices, p. 391.)

High war profits taxation will affect the incentive to increased production of capital facilities required for the production of war goods, since undoubtedly considerable war plant capacity will become obsolescent and useless in peacetime; investment therein will therefore not be profitable. (See Garrett, Government Control over Prices (1920) p. 390.) While this is to some extent met by provision for amortization, (to be discussed on p. 4485 infra), such provisions possess their own difficulties of administration.

Even with the comparatively moderate rate of war-profit taxation in effect during the war evasion was rife, both in England and America. The high rate of taxation was an encouragement to extravagant expenditure, since high cost items would be deducted from the net income upon which a tax would have to be paid. In the desire to avoid having the Government get the lion's share of the profits, salaries of executives were increased inordinately and bonuses liberally distributed. (Compare the report on the American Metal Mining Co. in the Federal Trade Commission Report re "Profiteering" (65th Cong., 2d Sess., Doc. 248, (1918) pp. 19–20)). The expansion of advertising to a volume beyond what certain authorities have argued to be socially desirable dates from the war period. "Only the shortage of paper limited the expenditure for advertising, according to one Treasury official." (Haig, Taxation of Excess Profits in Great Britain 1920, p. 148 et seq.) Inasmuch as the amount of capitalization determined the amount of profits exempted from the increased rate of tax, the "invested capital" (see p. 4481, infra) of many corporations was increased. Corporations were therefore frequently organized on an undesirable financial basis.

"In fact, if the new corporation or combination was generously capitalized it may relieve the corporation of all excess profits tax whatever." (Needed Tax Reform in the U. S. T. S. Adams (1920).) (Reprint from N. Y. Evening Post.)

This overcapitalization frequently occurred quite unintentionally.

There was also present a tendency to incur liabilities which were not real ones. Loans were camouflaged as invested capital in order to take advantage of the fact that a fixed rate of profit was allowed on "invested capital" before any profit would be considered an excess profit. Inventories subsequently acquired were undervalued in order to minimize profits.

Furthermore, expenditures were encouraged which were neither extravagant nor designed to be evasive, but were of the type aiming at future speculative profits, such as:

"repairs and betterments not presently needed or made with an eye to the future and in anticipation of a return to peace-time basis. Further, expenditures are lavishly made by big concerns out of rapidly accumulating surpluses which are in the nature of strategic advances upon other weaker competitors and which, upon a return to peacetime basis, will tend to result in a permanent elimination of weaker competitors and the rapid extension of monopolistic conditions. These expenditures are made on the theory that out of every dollar so spent, the Government itself contributes anywhere from 20 to 80 cents of the cost." (Garrett, Government Control over Prices (1920) pp. 391–2.)

Accordingly, business ploughed back earnings into capital, and made enlarged expenditures, either in the hope of reaping a profit in the future when the excess-profits tax should have been repealed or on the theory that the rate of tax made necessary greatly expanded business, regardless of cost.

It may also be noted that excess-profit taxation brings home to business men a realization that the Government is making large expenditures and a feeling that the Government is wasteful, so that the peculiar popular partiality towards tax evasion becomes accentuated.

"To take the referendum of the National Chamber of Commerce at its face value and apply it, would probably draw forth some hoarse cries. As a group, men are patriotic; as individuals, they will pay as small a tax as can be calculated and will secure as high prices and as great profits as can be extracted. High excess-profit taxes themselves have a bad effect on business men. They nourish a feeling that the Government is wasteful, and, as a result, tax evasions do not carry any particular feeling of guilt. When tax evasion takes the form of padded and increased costs, of lavish expenditures made for the sole purpose of reducing the rate of profit, the result must be detrimental to the maximum production at maximum efficiency. The business organization is softened by bad practice and by unbusinesslike methods, and while it holds to such unhealthy practices it can not maintain the highest degree of efficiency." (Garrett, Government Control over Prices, 1920, pp. 391–2.)

Whether the excess profits tax, characterized as it was by so much opportunity for evasion and administrative delay, actually accomplished the purpose of depriving industry of excess profits is extremely difficult to determine, but the opinion of Mr. Colver is to the effect that it did not so operate and that the excess profits tax got only 34% of the profit actually due to the war:

> "I dissent wholly and entirely from the theory that excess profit taxes justify unreasonable price structures and purge unreasonable profits. Not a penny of excess profit tax has been or will be paid to the Government that has not first been collected with many other pennies from the people of the country, either as consumers or as tax payers. Since the Government itself is by far the largest of all buyers at fixed prices, it seems to be absurd to take an excess dollar out of the Treasury in order to get 34 cents of it back in by way of excess-profit taxes. The net result of such a transaction is merely creating the necessity of raising an otherwise unnecessary 66 cents by some other means of taxation or by bond sale. In the main, it is not industry which ultimately pays excess profit taxes, but the consumer, and only a small part of the excess which the consumer pays reaches the Treasury in the form of taxes. The whole excess profit-tax theory is an attempt to lift oneself by his boot-straps, and there is lost from 20 to 80 percent of the energy employed in the process." (Garrett, Government Control over Prices (1920), p. 391.)

Mr. Baruch, in his testimony before the War Policies Commission, stated very emphatically that

> "Even with a fixed price structure and a high excess-profits tax there will huge war profits." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p 799.)

His statement was based on the fact that increased wartime demand would result in accelerated production, which would bring in its wake greatly decreased costs of production.

> "Mechanical mass production brings low costs, but only when the machines are operating close to capacity. * * * These machines represent enormous aggregations of capital, on which fixed charges are very great. * * * when they are speeded the results in reduced cost per unit of production are sometimes almost fabulous." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p. 799.)

Mr. Baruch also supplied a specific illustration of the way in which this might operate.

> "Consider, for example, the simple case of a company capitalizing for $1,000,000 selling $1,000,000 worth of goods annually, making 20-percent gross profit, or $200,000, on its turnover, and having $100,000 of expenses of administration and selling, leaving a net profit of $100,000, or 10 percent, on both its normal turnover and its capital. Suppose also that 10 percent of its costs of manufacture, or $80,000, are fixed overhead charges—depreciation, maintenance, supervision, taxes, etc. Then its costs for material and direct labor are $720,000 for every million dollars' worth of goods it sells. Now, suppose that war comes and we need the full capacity of that plant. We give it orders for $4,000,000 worth of goods, to be delivered in a single year. It has no increased selling and general administrative expense, because the demand is so great that no such effort is required. Neither do the fixed overhead elements of its manufacturing costs increase greatly—say, only to $90,000. What happens to the profits of that plant? Its material and direct labor costs on its $4,000,000 sales are $2,880,000. To this it must add $90,000 for fixed overhead charges in its factory and $100,000 for general and administrative expense, making a total cost for goods sold of $3,070,000. Its net profit is, therefore, $930,000, or 930 percent, of its normal profits in peace. It is making nearly 100 percent on its investment, and its net profit on turnover has increased from 10 to 23 percent. Even if we assess a tax of 80 percent on the $830,000 of excess over peace profit, that plant will still be making $260,000, or 260 percent of its normal profits." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p. 798.)

He was careful to stipulate that this illustration took no account whatsoever of price increases; and came to the same conclusion as Mr. Colver about the tendency of excess-profits taxes to increase prices and to get passed to the consumer.

> "Excess-profits taxes—standing alone—have no effect whatever to check inflation. Their only effect is to increase it. Thus 20 percent of $500,000 profit is $100,000 and 20 percent of $1,000,000 profit is $200,000. One way to increase $500,000 profit to $1,000,000 profit without increased risk or effort is to double price. For this reason there is more incentive to increase prices—and therefore profits—under an 80-percent excess-profits tax than there is without it. Indeed,

the main result of such a system is to induce rapid price increases to absorb the tax. Precisely because it accelerates and in nowise checks inflation the excess-profits tax—without more—offers no cure at all for war evils. On the contrary, it aggravates them." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p. 798.)
For another possible index of the efficacy of the excess-profits tax in eliminating war profits, see p. 4481, infra.

On this analysis, the higher the excess-profits tax rate, the more complete would be the failure to eliminate war profits in the expected degree of the rate of tax. Even though the relative percentage of profits, which is cut off by a tax, be very high, increased production would nevertheless mean that profits, as calculated on an absolute dollar basis, would remain very large. Furthermore, with respect to any tax of this type, a steep tax is inevitably passed back in large measure to the consumer so that industry has in reality only a small part of its profit eliminated. In war-time, the Government is beyond doubt the Nation's biggest consumer, so that it is placed in the anomalous position of imposing a high excess-profits tax in order to eliminate profits, and then paying a considerable portion of that tax itself. This is still another way in which reality does not match with expectation in the field of excess-profits taxation.

Experts are in agreement that the concept of "invested capital" was in large measure responsible for the difficulty of administration of the excess-profits tax during the past war. Thus, R. H. Montgomery said:

"There is the even more damning criticism that in actual operation the standard of invested capital does not perform the function of determining the richness of profits even reasonably well; that the results of its application are eccentric and unfair and that the task of calculating the standard is an impossibly burdensome one on both administrator and taxpayer." (Excess Profits Tax Procedure (1921), p. 122.)
To a similar effect, Professor Seligman said:

"What constitutes invested capital, however, is so elusive as to be virtually impossible of computation." (Essays on Taxation (1925), p. 704.)
In fact even Mr. Ballantine, former Assistant Secretary of the Treasury, who has generally a more hopeful outlook on excess-profits-tax legislation than most of the experts in the field feels that invested capital is an exceedingly baffling problem. His remarks were thus summarized:

"There is no other question that the experience of the Government and taxpayers with the determination of invested capital was unsatisfactory and that this basis should not be used again except as a last resort.

"He insisted that the method of recapturing war profits should be made simple and effective. Most of the administrative difficulties arising out of the excess-profits tax laws were due to the necessity of ascertaining invested capital. This base should not be used in another war. Some of the provisions of the laws were so highly complicated that they could not even be litigated because they could not be reduced to logical argument, pro and con. The determination of what constituted invested capital was an insoluble problem during the continuance of the tax, and is still unsolved. Some of the fundamental principles of invested capital are now in the courts and will be there for years to come." (Documents by War Policies Commission, House Document No. 271, 72d Cong., 1st sess. (1932), p. 21.)
Compare also, in this regard, a letter from Secretary of the Treasury Mills to the President of the Senate. (72d Cong., 1st sess., Document No. 105, p. 4.)

Some idea of the difficulty of the invested capital provisions of the war revenue acts may be gotten from the fact that, of the cases pending in 1927 in the Appeals Division of the Office of the General Counsel, Bureau of Internal Revenue, the interpretation of the basic invested capital section was more often involved than that of any other section in the case of the Revenue Act of 1917, and second in numerical frequency only to the very broad and inclusive section 234 in the case of the Revenue Act of 1918. (See Report of the Committee on Internal Revenue Taxation, vol. 3, p. 172.)

The major problem of excess-profits taxation was the segregation of normal peace-time from extraordinary war-time profit. Normal profit was computed by taking a fixed percentage (in 1917, from 7 to 9%; in 1918 and succeeding years, 10%) of the capital which had been invested in the business. Income up to this amount was exempted from taxation at the excess-profits rate but was still subject to the ordinary rate of income taxation; the remaining income, representing profits not considered to be normal, was taxed at a very high rate.

"Invested capital" conjures up all the usual engineering difficulties attendant upon valuation generally. (See "Exhibit No. 1343".) Since a certain percentage of "invested capital" is permissible before the excess-profits stage is reached, there is a tendency for the taxpayer to place a high valuation on his business; the higher the permitted valuation, the larger the total profit before excess-profits-tax rates go into effect. Intangible factors, such as going-value, patent rights, and goodwill are therefore likely to be considerably "written up." (Couzens' report, pp. 207–212; The American Economic Review, vol. IX, no. 1, supp. no. 2, pp. 20–22; Report of Committee on War Finance of the American Economic Ass'n (1919).)

Cash as an element of invested capital is comparatively easy to determine, granted that accounts are reliably and noncollusively kept; but cash may be a minor factor in comparison with the value of tangible and intangible property contributed in return for stock. Each chronologically distinct contribution of property of this nature involves a separate valuation in the light of all the attendant circumstances. There is present—

"The necessity of tracing the capital history of the corporation from the moment of its inception; of checking continuously its depreciation accounts and revaluation of assets; of averaging for the taxable year its distributions and its purchases or sales of 'inadmissable assets', remembering all the while that some mistaken practice of charging depreciation or taking the inventories may cost the taxpayer or the Government several million dollars. Additional taxes and penalties of $10,500,000 were imposed a few months ago upon a single corporation; the treatment of a particular 'loss' in another case changed the taxes of another corporation by more than $15,000,000; the income- and excess-profits tax of another corporation for the single year 1918 approximate $300,000,000. It is a common thing for a million dollars or more in taxes to turn on some accident of organization, or some fine-spun distinction about which nearly as much can be said upon one side as upon the other." (Needed Tax Reform in the United States, T. S. Adams, 2nd ed., 1920, p. 9.)

Accidental features of a corporation's history often assumed an untoward significance.

"The determination of invested capital was all important in the actual fixing of the tax but such determination was in many cases very difficult and in not a few cases impossible. Where a corporation had been formed by turning in the property for stock the determination of invested capital depended upon the valuation of the property at the time turned in. Retroactive valuations are difficult and were the subject of many controversies. The amount of invested capital was in many cases affected by the time of organization of the corporation. Where it happened that a corporation had been reorganized or formed in a year shortly before our entry into the war, the valuation of its assets would be on a much higher basis than if there had been no such reorganization. The determination of invested capital was also affected by accident or incorporate relationships.

"Problems as to the fixing of invested capital for consolidated groups have not yet been actually solved. In a good many cases also records were not available to show the capital put in. In every case current invested capital was affected by the computation of surplus or deficit resulting from the operation of prior years and such computation was, of course, a fruitful source of controversy." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p. 692.)

According to the Joint Committee on Internal Revenue Taxation,

"Some of the most complex problems in the administration of the revenue laws are involved in the determination of invested capital of a closely allied, or consolidated, group of corporations.

"The proportions which a single case may assume are brought out by the case of a certain large corporation, where the assessment letter, merely showing the mathematical adjustments, covered 2,267 pages, with 317 pages of exhibits. The difficulty of the questions involved in adjusting cases is shown by the fact that in 15 recent tax cases decided by the Supreme Court of the United States 9 have been decided by a divided court." (Report of U. S. Joint Committee on Internal Revenue Taxation, vol. III, Nov. 15, 1927, p. 21.)

Difficulties cumulate the further back in point of time the valuation is attempted.

"The fundamental error is in the attempt to perpetuate original investment or cost values (modified of course by depreciation, depletion, and the like). The attempt is in part impractical. In the case of the oldest corporations and those, like the larger railroads, which represent a combination of many preexisting corporations, it is literally impossible to follow the letter of the law; and in other cases—through formal reorganizations, statutory 'affiliation', accumulation of depletion reserves based upon permitted revaluations or discovery values, and in a dozen other subtle ways—the living fact that investment values do change bursts or seeps through the dead theory of the law, and finds half-suppressed recognition in the invested capital of at least some taxpayers. And where the attempt is not impractical, it is frequently unjust." (Quarterly Journal of Economics, T. S. Adams, Should the Excess-Profits Tax Be Repealed, 1921, p. 378.)

Mr. Ballantine's hope that the concept of invested capital can be eliminated from an excess-profits tax scheme (see p. 4487, supra) does not, however, seem capable of realization. Even in war time revenue measures which had provisions basing taxes on pre-war income, invested capital played a far greater role than was customarily appreciated. A tax based on pre-war income possesses a certain surface simplicity:

"Tax on income is the simplest method of applying a war tax. Most people are afraid to falsify their income-tax returns. The Government machinery for collection of such taxes already exists. Its method of operation is generally understood. From every standpoint, excess profits should be devised on the basis of income, and not on the basis of invested capital." (Documents by War Policies Commission, House Document No. 271, 72d Cong., 1st sess. (1932), p. 22.)

Nevertheless its place in the British scheme was indicated by Professor Haig to be that of a device used to relieve the taxpayer, in burdensome cases, from the operation of the tax computed on the basis of invested capital.

"In fact, the testing of profits by the standard of earnings in the pre-war period really operates as a relief provision, reducing the tax which would be payable if the percentage standard only was utilized. With the passage of time the percentage standard, based on invested capital, has been assuming a larger and larger role in the procedure." (Taxation of Excess Profits in Great Britain, 1920, p. 174.)

Generally, in foreign countries making use of pre-war income and invested capital as alternative bases for computing the amount of return exempted from the excess-profits tax rate, use of the income method was optional with the taxpayer in the event that it gave him a higher exemption than use of the invested capital method. "Taxation of Incomes, Excess Profits, and Luxuries in Certain Foreign Countries", Legislative Reference Division, U. S. Library of Congress. Corporations with meager pre-war incomes were guaranteed a statutory exemption of a fixed percentage on their invested capital; corporations with high pre-war incomes were at liberty to compute their exemption on their pre-war earning capacity, and pay the excess-profits tax on the difference between their wartime annual income and their average income during the chosen pre-war years.

In certain situations, use of invested capital as a base of exemption may be not merely optional, but necessary. Thus, according to Professor Haig, it was used.

"As the basis for adjustments in the profits of the current year because of increases or decreases in the amount of capital invested since the outbreak of the war. Such admustments (amounting ordinarily to 9 or 11 percent of the new capital introduced and 6 or 8 percent of the old capital withdrawn) are made whether the profits standard or the percentage standard is used. Moreover, not only must the amount of the new capital introduced or the old capital withdrawn be calculated, but in order to make the computation it is necessary to determine the total amount of invested capital both for the current accounting period and for a point in time before the outbreak of the war." (Taxation of Excess Profits in Great Britain, 1920, p. 81.)

That this is a recurrent and important, and not an exceptional, problem is indicated by a study of two hundred leading American corporations indicating, for the period 1916–1921, an increase in net worth from $6,294,000,000 to $11,363,000,000. (House Military Affairs Committee (1924), Hearings on Universal Mobilization, p. 178.

Most of this net increase of more than five billion dollars would have to be handled by the invested capital method.

Invested capital was furthermore used

"As the basis for the establishment of a standard in the case of a concern which was not in existence for at least one year before the war. In such a case no profits standard is available as an option and the pre-war standard is simply taken to be the statutory percentage (ordinarily 9 and 11 percent) applied to the average amount of capital employed during the accounting period.

"It is apparent that there is scarcely an assessment into which invested capital does not enter. It must be calculated, at least roughly, in every case, but because of the practice in cases of increases or decreases of capital of making adjustments in current profits, the pre-war invested capital, once calculated, need not afterward be disturbed." (Haig, Taxation of Excess Profits in Great Britain, American Economic Review, vol. X, no. 4, Supp., Dec. 1920, p. 82.)

Use of average pre-war income as a basis for exemption from the excess profits rate of tax is based on the arbitrary assumption that pre-war income reflects what would be the normal income in war time. Professor Adams' reaction is that "this also is a truth of limited application. The profits for two or three years before the war do not establish such a normal return. Such profits may have been abnormally high or abnormally low." (35 Quarterly Journal of Economics, May 1921, p. 388.)

As a matter of fact, doubt may even exist as to what is a pre-war year. Thus, the Revenue Act of 1918 defined "pre-war period" as "the calendar years 1911, 1912, and 1913 * * *" (sec. 310). However, Mr. Ballantine, in supplying an estimate of the effectiveness of the war profits taxation scheme, selected the years 1914–1916 as the pre-war years.

"A comparison of the tabulated net income of all corporations reporting net income for the three years before the war (the calendar years 1914 to 1916, inclusive) with the net incomes of such corporations for the war years (1917 to 1919, inclusive) shows that the average net income of corporations reporting net incomes was for the pre-war years about $6,000,000,000 before taxes and about $5,900,000,000 after taxes and that the average income of such corporations for the war years was $9,500,000,000 before taxes and about $7,000,000,000 after taxes. Thus, the average net income of corporations reporting net income increased $3,500,000,000 for the war years, while the average net income of such corporations after taxes increased about $1,100,000,000. According to this calculation, based on reported incomes and taxes, the taxes during the war, principally of course war and excess profits taxes, absorbed about 70 percent of the increase of the average profits of the war years over the average profits for the years immediately before the war." (War Policies Commission, House Document No. 163, 72d Cong., 1st sess. (1931), p. 690.)

Had the statutorily defined pre-war period been taken as a standard, the conclusion would be that taxes imposed during the war years absorbed no more than 45% of the war-time profits. (See, for the basic data, Statistics of Income from Returns of Net Income for 1925, 1927, p. 23).

In the complicated state of international relationships at present obtaining, war profits begin to be made as soon as a major outbreak occurs and may precede, as in the case of the United States in the late World War, the entrance of any particular country into armed combat. It is apparent that the use of the pre-war income exemption basis will penalize businesses with fortuitously subnormal profits in the pre-war period, but which have progressed in efficiency during the war years.

"Consider a heavy investment made in the expectation of distant returns. Here the original investment has more significance than the income record of the company in controlling the normal return." (35 Quarterly Journal of Economics, May 1921, p. 388.)

Conversely, corporations with abnormally high pre-war earnings are at a great advantage, regardless of war-time lapses in efficiency or their attaining of truly normal profits.

"Abnormally high profits in the past should constitute no ground for immunity from a future tax on supernormal profits. This is not word play; it is a mere suggestion of the truth that an abnormal state may continue for a considerable time without becoming 'normal.' Consider finally the concern which has had abnormally low profits in the past." (35 Quarterly Journal of Economics, May 1921, pp. 388–9.)

Professor Adams concurs in the dissatisfaction:

"voiced by the Chancellor of the Exchequer in explaining the financial statement of April 19, 1920:

"'I would remind the committee that under the provisions of the excess profits duty prosperous concerns with a large pre-war standard may escape liability for the tax because their present profits, tho high, are not in excess of their standard, and, at any rate, they pay tax on what all of us think an unduly low scale.'

"'It is reflected also in Professor Haig's conclusion that after all the percentage deduction is preferable to a pre-war profits deduction:'

"'If we are to continue profits taxation, the general standard prescribed in our present law for determining the richness of the profits should be retained. The best British opinion supports the view that a percentage of invested capital is a more satisfactory test than the earnings of some previous period, in a tax of this character, and they have shown how that percentage can be cleverly varied to meet the peculiar conditions in each line of business.'" (35 Quarterly Journal of Economics, May 1921, p. 389.)

The effect of such discrimination in cutting down the incentive to efficiency in a situation where increased production is preeminently required is obvious.

In considering the social effects of tax legislation, there should be borne in mind, in addition to the obviously desired objectives of administrative efficiency and substantial monetary yield, factors of individual fairness, and the prevention of discrimination. It was partly out of a desire to be fair that the concept of "invested capital" was introduced into the excess-profits tax legislation of both Great Britain and the United States. Even with a fixed percentage on "invested capital", the operation of the tax may discriminate unfavorably and unjustly against certain individuals. It was for this reason that there was included in the excess-profits taxation scheme a provision that the taxpayer could, under certain circumstances, have his tax computed under special assessement. This meant that, instead of applying the excess-profits tax rate on all income above a fixed percentage of "invested capital", the Government computed the average rate of tax paid by five other companies engaged in the same business and similarly situated. The difficulties of finding comparable businesses comparably situated need not be expanded on.

Some of the reasons for granting special assessments are as follows:

"1. Insufficient salaries paid to officers.

"2. Sale of capital assets within the taxable year.

"3. Substantial intangible value in a business of small capitalization.

"4. A corporation operating with a large amount of borrowed capital.

"5. Where respective values of mixed aggregates of tangible and intangible properties paid in for stocks and bonds cannot be satisfactorily determined.

"6. Foreign corporations." (69th Cong., 1st sess., Sen. Rep. 27, Jan. 7, 1926, p. 215.)

While these may be meritorious grounds for exemption they are subject to abuses. Thus, for example:

"In the J. H. Hillman Co.'s case the three executives of the company drew salaries of $12,000 each, or a total of $36,000. It was claimed that they should have been paid at least $50,000 each, plus 10 percent of the net earnings, or a total of $500,000. The company then claims to have paid $464,000 less in salaries to its officers than it should have done. This is claimed to be an "exceptional hardship" to the corporation.

"Let us see what this hardship amounts to. The company should have paid its officers $464,000 more in salaries. This saves the corporation $464,000 in expense. The company had to pay tax on this $464,000, which could not be deducted from income. Even in the highest bracket of 80 percent, with income tax added, the maximum total rate of tax is 82.4 percent. In this event the additional tax would be $382,336. Then the corporation stands as follows at the end of the year:

Saved on officers salaries	$464, 000
Loss due to additional tax	382, 336
Net saving	81, 664"

(Supra, p. 216).

In fact, the major difficulty of tax evasion is that provisions which originate in an intention to mete out justice in special cases are speedily taken advantage of by those who do not need the relief which the statute affords, but are technically able to take advantage of the remedial provision.

Thus, in the case of the R. J. Reynolds Tobacco Company:

"The above company has been allowed abatements and credits amounting to $1,698,265 for the year 1918. Their statutory tax would have amounted to $10,226,521; this has been reduced under section 328 to $8,528,266. The percentage of final profits tax to net income amounts to 40 percent" (supra. p. 225).

This in the face of the fact that the company was in the 80% bracket.

Likewise, in the case of the American Car and Foundry Company:

"This company has been refunded and abated under section 328 of the act of 1918 the amount of $5,209,204 on account of its 1918 tax. The net income of this taxpayer was $37,443,246, the final profits tax under special assessment was $17,244,552, the final percentage of profits tax to net income amount to 46 percent.

"We would call attention to the fact that the United States Steel Corporation, an allied industry, was in the 80 percent bracket in 1918 and was assessed a total tax amounting to about 57 percent of their net income" (supra, p. 222).

Similar illustrations, supplied in the same source, concerning the Youngstown Sheet and Tube Company, the Northwest Steel Company and the Pittsburgh Steel Products Company, indicate to what extent some of the big corporations took advantage of the special assessment procedure to in effect reduce the excess-profits tax rate to much lower than was provided for in the statute.

Name	Amount of regular tax	Amount of refund due to special assessment
Youngstown Sheet & Tube Co., Youngstown, Ohio	$19, 469, 794	$3, 482, 610
Northwest Steel Co., Portland, Oreg	1, 380, 692	923, 236
Pittsburgh Steel Products Co., Pittsburgh, Pa	4, 698, 161	1, 830, 227

(Information from S. Rpt. 27, pp. 222–3.)

A table of refunds in excess of $250,000 allowed from July 1, 1921, to the end of 1925 is supplied in appendix to part —, p —.

Difficulties such as those encountered in connection with "invested capital" and the special assessment features of the excess profits tax legislation apparently cannot be avoided, inasmuch as the loopholes in a tax statute are never fully realized until its practical administration begins. If one desires to be equitable, or not to be harsh in hard cases, one cannot neglect a feature such as invested capital or fail to allow for special exemptions in special situations. Fairness can only be purchased at the price of introducing complexity into the law, but complexity means more than trouble and expense. "The real evil", says Mr. Adams, "is found in the resulting uncertainty, the accumulation in the Treasury of claims for back taxes and penalties aggregating billions of dollars, the dread with which these claims must inspire the business world, the invitation which this situation offers to political jobbery and the wrongful mixture of big business in tax politics." (Needed Tax Reform in the United States, 2nd Ed. (1920), p. 9.)

Proponents of an excess profits tax scheme acknowledge that some allowance will have to be made for new capital expenditures in the war-time period, particularly those incurred in connection with the production of goods demanded for the effective prosecution of the war. Such allowance has taken in the past, and according to the recommendation of the War Policies Commission, should take in the future, the form of a deduction from net income. Any deduction from net income would of course decrease the amount of tax.

"From net income as now computed deduct:

* * * * * * *

"2. The cost of additional capital facilities required for the war and in due course to be authorized by the proper governmental war agency. * * * At the end of the war, the residual value of the additional facilities to be adjusted." (Doc. by War Policies Comm. H. Doc. No. 271, 72 Cong., 1st sess., pp. 22–23.)

High tax rates may result in a situation where it may be considered economically unwise to engage in new production, or the incentive for required industrial expansion may be restricted for other reasons. Large capital investments generally presuppose a duration in active use much longer than the average war period in order to make them self-paying. Even at the rate of tax prevailing in the World War years, considerably lower than some proposed rates, it was felt that special inducements had to be offered to industry to expand its capital facilities. This was the rationale of the amortization provision, providing that capital equipment constructed after the commencement of the war for the production of articles contributing to its prosecution, which became partially or wholly useless upon the war's termination, was to be allowed as a deduction to the taxpayer.

An idea of the vast amount of amortization allowances can be conveyed by the following table, which includes only amortization allowances in excess of $500,000 made in 168 cases.

"*Totals, group 1*

1. Total amount originally claimed	$459, 844, 015. 14
2. Total amount finally claimed	635, 934, 923. 16
3. Total amount finally allowed	425, 921, 945. 93"

(69th Cong., 1st sess., S. Rep. 27, p. 131.)

The allowance of war-time amortization brought up all the usual difficulties of valuation (see Memorandum in re Valuation), plus new problems of allocation of capital values according to war use, nonwar use, and the post-war use. The disparity between the amount of amortization claimed and the amount finally allowed is further brought out in the following summary of amortization allowances which were considered sound by an investigating committee, as contrasted with the amount of amortization not considered to be justified.

"7. Amortization based on solicitor's ruling and on sound engineering principles	$215, 256, 585. 52
8. Amortization not based on solicitor's ruling	136, 116, 453. 66
9. Amortization not based on sound engineering principles	74, 548, 906. 74
Total	425, 921, 945. 92"

(69th Cong., 1st sess., S. Rep. 27, p. 131.)

Administrative difficulties and the possibilities of disagreement are significantly illustrated by the number of open cases as contrasted with the number of closed cases in this same group of 168 cases.

"10. Closed under 1312 or 1006 agreement	$22, 597, 789. 94
11. Outlawed cases	117, 778, 885. 43
12. Inactive cases	32, 424, 553. 40
13. Open cases	253, 120, 717. 15
Total	425, 921, 945. 92"

(69th Cong., 1st sess., S. Rep. 27, p. 131.)

That the amortization provision on the whole redounded primarily to the advantage of the large manufacturers and miners may be gathered by contrasting the total amount of amortization allowances with the total amount of money involved in the 168 selected cases that were the subject of the above summaries. The total amount of amortization allowed was $597,000,000, whereas allowances in excess of $500,000 totaled $426,000,000, or 71%. (See Couzens Report, p. 132.)

The basic purpose of the amortization provision, to stimulate the production of war articles by encouraging capital investment during the war, is exceedingly difficult to define or to determine adequately, and consequently is subject to possibilities of misuse.

1. The erection of large capital facilities is a process which may extend over a great period of time, and therefore is subject to many changes. Specifications for construction may change. By mutual agreement or otherwise what may have been originally contracted for, may differ widely from what is ultimately erected. Furthermore, it is difficult, as a matter of equity, to determine whether facilities which have been contracted for before the war, are actually required for a war use as distinguished from a peace-time use. Considerations of individual fairness are involved as to the allowance to be made for facilities contracted for prior to the war but erected subsequent to its origin, which raise innumerable administrative obstacles and defy generalized treatment. It is therefore an over-simplification to speak of capital expenditures for facilities erected or acquired within the war period.

"Practically every large claim for amortization includes allowances upon facilities for the construction or acquisition of which the taxpayer was bound by contract prior to April 6, 1917, but which were not fully paid for on that date" (69th Cong., Senate Report No. 27, 1st sess., January 7, 1926, p. 135).

Furthermore, many plants were not completed until after the war was over. Although the original incentive for commencing construction may have been a war-time demand, it cannot be said that the completion of such construction represented a response to war-time needs. Nevertheless, it would be ruinous to interrupt building operations once they have proceeded beyond a certain stage. (See Couzens Report, pp. 136–137.) Industrial development, it must be remembered, possesses a continuity that is to a great measure unaffected by war conditions. It is accordingly very difficult to separate mushroom war-time growth from gradual peace-time development.

2. Considerable difficulty may be experienced with corporate entities set up during the war that take over capital plants which have been erected by other companies prior to the war. Amortization was frequently allowed in such cases.

"This statute has been construed by Income Tax Unit to allow amortization upon the mere legal fiction of acquisition, where there was no increase in productive capacity for war purposes, and where the acquisition and subsequent discarding of plants was for the sole purpose of consolidating an industry and killing competition" (p. 137). (See Couzens Report.)

3. The device of incorporation was subject to another artifice which clearly illustrates the difficulty of defining what are articles contributed for the prosecution of the war, and segregating them from articles not required for the prosecution of the war. For example, railroads were specifically held by the Bureau of Internal Revenue and by the courts not to fall under the scope of the amortization provisions, inasmuch as they did not contribute to the manufacture of articles required for the war. Nevertheless, amortization amounting to $2,789,185.49 was allowed to common-carrier railroad corporations whose stock was owned by the United States Steel Corporation and its subsidiaries, upon facilities owned not by a producer of articles but by a railroad corporation possessing only the attribute of having its stock owned by a war-use producer. As a matter of fact:

"The United States Steel Co. produced nothing, but it is the owner of the stock of other corporations, which did produce articles contributing to the prosecution of the war. Thus, we have railroad companies allowed amortization, because their stock was owned by a corporation, which owns the stock of another corporation, which comes within the class entitled to amortization" (p. 142). (Couzens Report.)

Pipe-line companies were also allowed amortization on the ground that their stock was owned by oil-producing companies. Among the oil companies thus benefited were the Texas Co., the Sun Oil Co., and the Sinclair Oil & Refining Co. Although the practice was condemned by the Solicitor of the Bureau in a ruling, allowances were made to housing corporations which were subsidiaries of various steel corporations, etc., on the ground that the parent company was entitled to amortization; a corporation organized to erect houses in the first place would not have been entitled to amortization. Similarly, amortization was allowed to corporations on tank and refrigerator cars, and even on land on the ground that the corporations were otherwise eligible for amortization. (See Couzens Report, pp. 143–144.)

The War Policies Commission contains an interesting recommendation in connection with facilities which are required for the war. It provides that these facilities are "in due course to be authorized by the proper governmental war agency." (Documents by War Policies Commission, 72d Congress, 1st session, House Document, no. 271, p. 23.) If such authorization be taken to establish the capital facility as one required for war use, there is considerable danger of an undesirable liberality being imported into the definition of war use. A war agency is likely to be more interested in the strenuous prosecution of the war, than in applying a strict measure of what is a facility required for war. It is therefore likely, on an odd chance that the facility may be put to a war purpose, or as an incentive to an organization to engage in war purposes, to endorse a plant as a capital facility required for the war, without careful scrutiny. It may be possible to watch similar developments in future war-tax administration, but the difficult administrative question of how to handle subsidiaries not engaged in the production of war articles themselves, but owned by corporations engaged in such production will always be present. Can a real disjunction be drawn between facilities erected for wartime use, and those erected during wartime but which do not directly produce articles for which the Government has a need?

There were three situations in which amortization allowances were made after the last war: (a) where property was completely discarded or sold; (b) where there was involved reduced replacement cost; (c) where "value in use" had been reduced. The Couzens Committee found very little to question on the first two categories. In connection with the first type of situation there is, however, always present the possibility of collusive sales of wartime equipment in order to write off amortization allowances. Reduced cost of replacement involves considerable difficulties of valuation. Most criticism has been concentrated upon the amortization allowances based upon loss of value in use. The delay before an authoritative ruling on this last-mentioned type of amortization was published is a significant indication of the administrative difficulties surrounding it.

"While the amortization provision was first inserted in the 1918 act, it was not until August 19, 1923, that the first ruling by anyone in authority interpreting this provision of the regulations was made. This ruling was made by Solicitor Hartson in the J. I. Case Threshing Machine Co. case and condemned the basis upon which every large amortization allowance for reduced value in use had been made. This ruling was not published until November 3, 1924, eight months after the expiration of the period within which redetermination of amortization allowances could be made. Although this ruling was made seven months before the expiration of the period within which redetermination could be made, there was not only no attempt to redetermine allowances made upon the condemned basis, but this ruling has not been followed in a single case, not excepting the case in which it was made." (69th Cong., 1st sess., S. Rep. 27, p. 149.)

There is abundant opportunity for discrimination, and incidentally, for administrative confusion, in the case of facilities erected during the war, for a war purpose, but as replacements for facilities which were deteriorating rapidly, becoming obsolete at the time when the new facilities were erected. The problem is to gauge adequately the extent to which a facility is being erected because of a wartime demand, as distinguished from installation in a situation where natural depreciation factors would have rendered such installation essential in a year or two. Probably because of the complexity of the engineering problem, old and new facilities had, when comparative capacity in production in the post-war period was being taken into consideration, to be grouped together in determining the value in use of facilities installed during the war. Although this was demanded by the practical exigencies of the situation, it nevertheless provoked adverse comment at the hands of the Solicitor of the Bureau.

"All of the taxpayers to whom the larger allowances for amortization were made were going concerns before the war. They all had facilities of age and condition varying from practically new to scrap. There was no attempt made in any of the larger cases to determine the actual usefulness of comparative remaining useful life of the facilities amortized for loss of useful value." (69th Cong., 1st sess., S. Rep. 27, p. 153.)

An indication of the advantageous treatment that could be procured by a company in a condition to consider in the aggregate its antiquated and modern plants, is supplied by the following illustration:

"Thus, although this war plant was the only plant owned by the taxpayer which could be economically operated, and *was in full use to 95 percent of its rated capacity*, and although its full rated capacity would be reached in one year, it was considered to be surplus capacity and to represent a loss to the extent of *47.4 percent* of its cost, because the company had on the scrap pile, charged to scrap, a collection of antiquated plants which could not be economically operated." (Investigation of Bureau of Internal Revenue, Couzens Report, p. 154.)

Future usefulness is conditioned upon an estimate of normal average productive capacity, and this raises complex problems involving the application of trained individual discretion. It is quite difficult to define a period which will be symptomatic of average production conditions for a plant, and it seems completely impossible to take a general period, covering all industry, which will be equally fair to the specific industries involved.

As a final evidence of the amount of difficulty caused by the concepts of "invested capital", "amortization", and "special assessment", might be cited the following percentage classification of overassessments in 125 cases. These took place in a period as late as 1930.

Classification of overassessments for the period January 1, 1930, to December 31, 1930

Principal cause	Amount	Percent of total
Estate tax	$19,023,863.08	23.57
Invested capital	12,263,512.08	15.19
Amortization	11,488,524.70	14.23
Depreciation	5,917,707.37	7.33
Special assessment	3,596,501.44	4.45
*****	* *	*
Total overassessments	80,724,098.03	100.00

W. S. CARPENTER, Jr.

"EXHIBITS Nos. 1409 to 1411-L, inclusive," will appear later in the appendix to that part of the hearings in which the Colt Company testimony appears.

The following letter from the Treasury Department is entered into the record in connection with "Exhibit No. 1343."

TREASURY DEPARTMENT,
Washington, January 28, 1935.

MY DEAR MR. CHAIRMAN: Reference is made to the letter of the special committee of the United States Senate Investigating the Munitions Industry dated December 12, 1934, requesting information as to (1) the complexity from an engineering and legal standpoint of the matters involved in the determination of value, (2) the amount of time it would take to make an adequate investigation of an average sized industrial plant, and (3) specific examples of different valuations placed on property by experts appearing for the Government, experts appearing for the taxpayer and the court, and inquiring whether your committee could be supplied with information as to the personnel which would be required to conduct an adequate investigation into the problem of valuation.

The legal difficulty and uncertainty in the determination of value of property not subject to frequent sales, and as to which market quotations are not published daily, arises because it is so largely to be determined from factual and opinion evidence, none of which is legally conclusive. Such evidence is the best available. Upon such evidence the value is determined by a judge or jury, in certain instances inexperienced in valuation procedure and with inadequate knowledge of considerations governing market value. The weight to be given to the evidence is entirely within their discretion and short of the adoption of a fundamentally unsound principle or an erroneous theory by the court in its instructions, it is impossible to secure a reversal of their finding if there is any evidence in support thereof in the record. It is a rare case where some evidence is not admitted which will support a most unsound finding of value.

Market value has been defined as the sum that in all probability will result from fair negotiations of an owner willing to sell and a purchaser willing to buy (*Brooks-Scanlon Corporation* v. *United States* 265 U. S. 106 to 123, 44 Sup. Ct. 471). The fundamental difficulty in establishing the market value of industrial plants arises because as a general rule no two of such plants are alike, and a sale of the property in question rarely occurs at or about the date for which the market value is to be determined. Even in the rare cases where a sale of the property has occurred that is practically contemporaneous with the date for which the value is to be determined, the conclusiveness of such evidence is frequently impaired by the introduction of evidence attacking the fairness of the sale, alleging misrepresentation of fact, duress, or force, as factors in the transaction. As a result, in the case of the valuation of the great majority of industrial plants, evidence of value, other than sales of the property itself, must be resorted to.

"The value of property results from the use to which it is put and varies with the profitableness of that use, present and prospective, actual, and anticipated. There is no pecuniary value outside of that which results from such use. The amount and profitable character of such use determine the value" (*Cleveland, Cincinnati, Chicago & St. Louis Railway Company* v. *Backus*, 154 (U.S. 439, 447).

A determination of value based on estimates of present and future profits and an appraisal of the value of such profits, usually designated as an analytical appraisal, while theoretically sound and in many cases the only available method, opens a wide field for differences of opinion. These differences arise as to interpretation of facts existing at the date of valuation, as to what reasonable prognostications as to the future should be based on the existing facts, and finally as to what the market reasonably indicates as the proper factor to be applied to the prospective earnings to arrive at value, that is, the rate of capitalization at which the earnings are to be valued.

The elements essential to an analytical appraisal of market value are primarily estimates in the light of facts known at the date of valuation. Estimates must be made of future earnings, of the time when such earnings may be realized, and of the risk involved in the purchase of the property. When these elements have been determined, the conclusion as to value is arrived at by the application of a sound judgment based on knowledge of market transactions in measurably comparable property at the nearest available time to the date of valuation. The value sought is the price which general buyers and sellers should reasonably agree upon.

As applied to the appraisal of the going-concern value of an industrial plant, the first investigation ordinarily would be an audit of the books of the operating company to ascertain the operating costs, selling price of the product, operating profit, overhead, general expenses and depreciation, and an analysis of the capital accounts and a descriptive analysis of the asset and liability accounts.

There is considerable room for differences of opinion as to what should be included in operating costs and in capital account, and as to whether or not the past operating costs are not unduly high or low on account of extraordinary circumstances, i. e., frequently claims are made that the plant was in the development stage or that repairs and replacements, although correctly charged will not be representative in determining future costs, or that labor was untrained or inefficient, or that exorbitant or inadequate salaries were charged by interested stockholders or owners. What adjustments should be made under the circumstances are entirely matters of opinion. Similar questions may arise as to many "nonrecurrent" expense items.

Again, questions arise as to whether or not the plant was running at a representative or normal capacity during the period prior to the valuation date, considering a reasonable expectancy of future use at the date of valuation, and as to the effect on costs of use of the plant at "normal" capacity. Also, where the results of operation are erratic, differences of opinion arise as to what operating period should be taken as representative. The foregoing may be taken as illustrative, but not a complete list, of questions in which differences of opinion may arise in regard to operating costs.

As to the future selling price of the product, admittedly to be determined in the light of existing conditions, wide differences of opinion frequently arise. Where there is no established price for the product at the date of valuation, i. e., the product may be disposed of through long-term contracts or on a cost or cost-plus basis, the difficulty and consequently the differences of opinion in the estimate of present and prospective market price may be greatly increased.

Having proceeded to the point where the costs of production and market prices are determined, the operating profit is a matter of subtraction. Ordinarily, the percentage of the selling price that is operating profit under fluctuating costs and selling prices is much closer to a constant than the spread between cost and selling price, and a recognition of this fact permits the fixing of the margin of profit within reasonable limits. The application of this method of determining the margin of operating profit will generally be resisted by proponents of a high value, when, by the taking of costs in years of low prices against a higher expected future price, the estimated margin of operating profit is greater. Consequently, detailed analyses of such figures are necessary to demonstrate that in the particular case under consideration costs bear a necessary relation to selling price, that is, that an increased selling price is accompanied by increased costs and a decreased price is accompanied by decreased costs. On the questions of overhead and general expenses and depreciation, the same differences of opinion as in the case of the direct costs frequently arise, that is, as to whether or not extraordinary circumstances of a nonrecurrent nature have unduly affected such costs during the period preceding the date of valuation. In addition, if the value of one plant among several or of a part of plant is in question, the proper method of allocating all indirect costs further complicates the determination of value. The difficulty of determining depreciation and obsolescence, and the allocation of such charges, give rise to the same differences of opinion already mentioned with respect to direct and indirect costs of production.

The audit and descriptive analysis of the asset and liability accounts are essential in an analytical appraisal for the purposes of checking depreciation and plant accounts and of determining the capital, other than plant investment, necessary to the conduct of the business. When this factor is determined, a portion of the profits is allocated to such capital.

The determination of each of the foregoing factors gives rise to differences of opinion. The amount of capital actually employed in the case of a single plant varies considerably from time to time and the amount that should normally be employed is essentially a matter of opinion. The question of the market rate of return on the capital, other than plant, is again a matter of opinion. There remains after the disposal of the foregoing determinations the ultimate question as to the rate at which earnings attributable to the plant should be capitalized, another matter of opinion based on the judgment of experts.

Estimates of expected profits are not infrequently complicated by the following circumstances; the product manufactured or the machines used in the manufacturing of the product are covered by patents; the plant operates under patent licenses; the product is manufactured or disposed of under terminable life contracts; the manufacturing is carried on in leased premises at rentals other than the present or prospective fair rental value; the plant is operating for others under contract with results which are more favorable or less favorable than might be obtained under terms of a contract which might be negotiated under present or prospective conditions. These factors enhance or depress present earnings and future earnings must be adjusted to allow for the discontinuance of the effect of such factors. The amount of such adjustments is at best a matter of judgment and opinion and on account of the highly technical nature of the subject matter, particularly in circumstances involving the use of patents, is inherently difficult from the standpoint of administrative and judicial determination.

The question of what portion of the hearings are attributable to patent protection and what portion to the business of manufacturing may be cited as one example of these difficulties.

In the case of the valuation of one plant among several operated by a business concern, the number of determinations mentioned above are multiplied due to the necessity of allocation.

By numerous decisions of the Supreme Court of the United States it is firmly established that the cost of reproduction new less depreciation constitutes evidence properly to be considered in the ascertainment of value. (*Standard Oil Company of New Jersey* v. *Southern Pacific Company, et al.*, 268 US. 146, 450 Sup. Ct. 465).

In the same case the court points out, however, that such evidence is not the measure or sole guide and states:

"The ascertainment of vaue is not controlled by artificial rules. It is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts."

The estimation of cost of reproduction new requires a very detailed and expensive inventory of each and every item comprising the plant. The current costs of all of these items must then be estimated. Such estimates include present costs of the land occupied by the plant, grading, excavation, foundations, building materials of every description, including freight, labor and superintendence during construction, cost of machinery incuding freight and installation, office and general overhead expense during the construction period, engineering and architectural fees, interest on capital during the period required for plant erection, and frequently such things as contractors' profits, overhead and general expenses and/or cost of specialized technical supervision. With such listing of items and with such estimates of current costs and prices, the cost of reproduction new is computed. The depreciation to be deducted must then be estimated.

This type of appraisals are usually made by long-established engineering firms who have maintained files containing price lists and descriptive matter from all available manufacturers of items making up the plant and equipment for all types of industrial concerns. Such estimates of depreciation are usually the personal opinions of the men taking the detailed inventory, usually the minor employees of the appraiser. Such a man looks at a structure or a machine, or at its important parts, and says that is a certain percentage of as good as new insofar as wear and tear and physical decay are concerned. The estimation of obsolescence is almost never attempted. The result frequently is that the appraisal includes estimated costs to reproduce such things as masonry buildings which are obsolete and would be more expensive to reproduce than would a strictly modern substitute structure. The appraisal may include machines which are entirely obsolete because of costs of operation greatly in excess of those of modern machines, yet such machines may exhibit little or no physical deterioration and be included at practically 100% of cost of reproduction new. The cost of reproduction new, less depreciation representing only physical deterioration, is the so-called "sound value" of this type of appraisal. Such appraisals, especially if made at about the time of valuation, are extremely difficult to meet or check retrospectively unless by means of their own inherent weakness or through other evidence of value (*G. C. Thompson Company* v. *Routzahn*, 25 F. (2d) 897). On account of their lack of conclusiveness, the amount of detailed work required, the remoteness of the date of valuation, and the intervening changes in plants involved, it has been found impractical in verifying such appraisals in the Bureau of Internal Revenue, to do more than require that such appraisal show the date of acquisition and original cost, check reproduction costs with the best index factors obtainable to determine the difference between original cost and reproduction cost new, and make such allowance for depreciation and obsolescence as appears to be justified by the circumstances of the particular case.

In the trial of valuation questions the dollar and cents figure shown as reproduction cost new, less depreciation and obsolescence, even under proper instructions because of its simplicity, may be given undue weight as evidence of market value rather than proper consideration with the other evidence in the case.

In the case of plants under corporate ownership, the sale price of shares of stock in the market may be admissible as evidence of the value of the assets. However, the shares of stock and the net assets of a corporation are entirely different things, and the value of one bears no fixed nor necessary relation to the value of the other (*Ray Consolidated Copper Company* v. *United States*, 268 U.S. 373). This type of evidence is therefore never conclusive. Unless the value in issue is the entire going concern value of the corporation, such evidence is not a measure of the value of the property (*Pullman Palace Car Co.* v. *Central Transportation Co.*, 171 U.S. 138), although it may be a part of the foundation for expert opinion on value and a fact to be considered by the judge or jury with other evidence in reaching their finding of value.

Value in the case of industrial plants generally must be a conclusion based on facts and the expert opinions contributed from four distinct technical fields, that is, accounting, engineering (construction and operating), legal, and financial. The conclusion requires a correlation of these contributions since the factors contributed from each source are interdependent and modify the effects of contributions from the others.

The professions or avocations from which the contributions are made are technical and have developed experience, language, and methods of procedure peculiar to themselves. As a result, the presentation of evidence in valuation cases in such a manner that technical complexities are minimized and the technical conclusions appeal to the common sense of parties having to deal with the determination of value, is a difficult matter and requires intensive preparation. Technicians are generally prideful or unconscious of the technical manner in which their contributions are made, and reluctant or unable to reduce their contributions of fact or reason to simple fundamentals, intelligible to technicians in other fields and to the nontechnical man.

A further difficulty in the administration and judicial determination of market value is due to a loose popular conception or definition of value. This difficulty attends the whole process of determining value. It particularly affects expert opinion. Some fallacy, or a combination of fallacies, may be interwoven in or form the basis of the opinion. In many cases the incompetency of such opinion is not or cannot be shown on direct or cross-examination with the result that such opinions may support a most unsound finding of value.

A few examples of persistent fallacies of this nature which have arisen in such a manner as to permit their rejection by the courts are:

(1) The theory that more or less uncertain estimates involved in the determination of value at the date of valuation may be corrected by the later ascertained facts (*Ithaca Trust Company* v. *United States*, 279 U.S. 151).

(2) That the value of property is measured by the subsequently ascertained ultimate return therefrom, or that latent occult intrinsic value controls rather than the considerations that affect market value and have their influence upon men of affairs (*Stratton's Independence, Limited*, v. *F. W. Howbert, Collector*, 231 U.S. 399; *Reinecke* v. *Spalding*, 280 U.S. 227).

(3) That value is to be determined under an assumption of nonexistent conditions, or on some speculative assumption as to what the value would have been if something which did not occur had occurred (*National Bank of Commerce* v. *City of New Bedford*, 29 N. E. 532; *Bingham's Administrator et al.*, v. *Commonwealth*, 244 S. W. 781; *Rice* v. *Eisner* (C.C.A. 2), 16 F. (2d) 358).

(4) That value is to be determined by some morally just or normal standard divorced from the conditions existing at the date of valuation and the standard established by the market which is the gauge of the considerations which influence general buyers or sellers, and of the intensity of the social desire for the property at the time (*Ithaca Trust Company* v. *United States*, 279 U.S. 151; *Boyd* v. *Wiley*, 124 U.S. 105; *United States* v. *New River Collieries Co.*, 262 U.S. 341–345; *719 Fifth Avenue* v. *United States*, 5 F. Supp. 909; *United States* v. *Cole et al.*, T.D. 4165, C. B. VII–1268, C.C.H. 1927, p. 7720).

(5) Misconceptions of the nature and character of the property to be valued (*Reinecke* v. *Spalding*, 280 U.S. 227; *Kaufmann & Bauer Co.* v. *Heiner*, 34 F. (2d) 698).

(6) A failure to properly weigh the reasonably assured and the remote or more or less speculative elements which contribure to value (*Johnson* v. *United States*, 44 F. (2d) 244, 70 Ct. Cl. 534; *719 Fifth Avenue* v. *United States*, 5 F. Supp. 909; *Driscoll et al.*, v. *Inhabitants of Northbridge*, 210 Mass. 151, 96 N.E. 59; *United States* v. *Cole et al.*, T.D. 4165, C.B. VII–1268, C.C.H. 1927, p. 7720; *Commissioner* v. *Swenson* (C.C.A. 5), 45 F. (2d) 61).

(7) Attributing value to a particular property based on earnings derived in great part from amny other elements or properties contributing to the production of such earnings (*Perfect Window Regulator Co.* v. *United States*, 66 Ct. Cl. 147; *Keystone Wood Products Co.* v. *Commissioner*, 19 B.T.A. 1116).

Another further weakness from a governmental standpoint in establishing market value is due not infrequently to the unwillingness of experts in specialized lines to accept employment as opinion witnesses for the Government. This is largely due to the fact that in many cases there is a common interest extending throughout all industries under a given set of circumstances to secure the advantage of high or low values. Competent witnesses are either directly connected with or dependent on the industry for their regular income. Witnesses of the highest qualifications are, therefore, frequently unable or unwilling to accept governmental employment.

The Bureau of Internal Revenue has had to determine the value of physical plants as distinguished from going-concern value at March 1, 1913, in the cases of taxpayers owning plants on and operating them after that date. Such determinations were made for the purpose of establishing a base for depreciation allowances. In the great majority of such cases the taxpayers and the Bureau have been able to agreed upon a value equal to cost less sustained depreciation. Difficulty in these cases was confined generally to questions of correct accounting. The stable nature of such property and the relatively stable price level for a considerable period prior to and at March 1, 1913, eliminated, to a large extent, questions of appreciation in value and were in a large measure responsible for the comparative ease with which such questions were settled.

On account of the instability of the market standards, valuation of physical property in periods of depression or unusual prosperity furnishes the opportunity to present opinion evidence out of line with the general market conditions existing at the time, and in line with the exigencies of the case and the idiosyncracies of the witnesses. The uncertainty of litigation involving value questions to be determined in such periods is thereby increased.

On account of their peculiar and individual characteristics in every case and the confusion of their qualitative characteristics as distinguished from their quantitative contribution to value, intangible elements which may contribute to the value of industrial property generally, such as goodwill, trade marks, trade brands, etc., are the frequent sources of irreconcilable differences of opinion and litigation.

However, in determining going-concern value as a whole, available market records of prices of securities of comparable corporations furnish a yardstick or market standard which permits, but does not insure, some check on the reasonableness of opinions as to value.

When patents are to be valued separate and apart from goodwill, trade marks, trade bands or other intangible elements contributing to the value of property operated or to be operated as a whole, the values of each are inherently matters of opinions. The motive of interest results in the production of unreasonable opinions in such cases. Opinions of this nature are of frequent occurrence in which earnings in excess of a fair return of the tangible property are attributed almost entirely to patents, although it is patent that extensive advertising and good management have built up a large element of goodwill. Such opinions are the source of increased uncertainity as to outcome in litigated cases of this nature.

The foregoing recital of the complexities and uncertainties in the determination of fair-market value from commercial and legal standpoints, since it attempts to cover the entire field in a general way, probably overemphasizes the difficulties that may be encountered in the great majority of cases. If the foundational facts are fully developed, the field for reasonable differences of opinion is greatly narrowed. Given competent representation on both sides, assurance that the valuation will be competently litigated if necessary and applying the standard of a common-sense reaction by a court or jury to the evidence which may be adduced by both sides rather than the standard of decisions in exceptional and extreme cases, the great bulk of valuation issues should be satisfactorily disposed of administratively.

Your question as to the amount of time it would take to make an adequate investigation of an average-sized industrial plant is difficult to answer on account of the varying circumstances under which such an investigation may have to be conducted. A few of the circumstances which may greatly vary the time required in such an investigation are: The elapsed time between the date of the investigation and the date of valuation; the condition of the books of account, plant records, and operating records of the plant under investigation, and the question as to what portion of the work of the investigation may be thrown upon the owners of plants.

The answer to your question which follows is not based on the statistical analysis and should be taken as subject to wide variation in individual cases even under the assumed conditions which are suggested. The assumptions made are as follows: (1) That the original records, minute books, stock registers, stock transfer books, books of account, operating records and plant accounts are well kept and available; (2) that the burden of appraising the plant to be valued is placed upon the owner of the plant, the appraisal to show as to each item making up the inventory of plant, the date of purchase, the cost, the facts relied on to support present reconstruction cost equal to cost or departures from cost either up or down, and the facts relied upon to demonstrate the amount of depreciation and obsolescence accrued; (3) that all evidence of value either supporting a high or a low value within the knowledge of the owner of the plant is submitted by the owner of the property; (4) that the owner of the plant is restricted on any appeal from the original determination of value to the foundational facts, as distinguished from conclusions or opinions, submitted before the original determination of value, and (5) that an average sized industrial plant is one having a value of about $3,000,000.

Under the conditions assumed, it is estimated that a competent auditor, with one assistant, and a competent engineer, with one assistant, would require about three months to check the history of the plant, factual evidence as to transactions in interests in the plant or in the securities of corporate owners, operating records, capital accounts, and assemble the foundational facts upon which an analytical appraisal valuation must be based, including reasonable conclusions as to reconstruction costs new less depreciation and obsolescence, and as to the earnings and capital accounts. A competent valuation expert either having commercial experience or a knowledge of commercial transactions and of market conditions, and with some legal advice, should be able to arrive at a defensible value based on the standard of the market within one month. In cases which are litigated, there should be added to the above time to prepare for trial, the time of one lawyer for a thirty-day period, one auditor for an additional thirty days, one engineer and one valuation expert for at least the same period, and probably ten days for three expert witnesses. If the principal foundational facts are stipulated, the trial time may be a week or less. If agreement on the foundational facts cannot be reached, the trial time is impossible to estimate, as is demonstrated by the widely varying length of the proceedings in hearings of public utility commissions with which you are no doubt familiar.

Your additional inquiry as to whether information could be furnished as to the personnel which would be required to conduct an adequate investigtion of the problems of valuation must be answered in the negative on account of inadequacy of the information as to the scope of the inquiry contemplated.

The table attached hereto shows specific examples of different valuations placed on property by experts appearing for the Government, by experts appearing for the taxpayer and the courts, as well as a few cases in which the Government relied on sales of the property in question and/or the sale price of the owner corporation's securities.

The Bureau of Internal Revenue has settled administratively, or through litigation, the cost or fair market value as of March 1, 1913, whichever is greater, of practically all property operated in the United States which is subject to depreciation, exhaustion, or depletion allowances under the income-tax statutes.

The remaining costs (or Mar. 1, 1913) are kept up to date in connection with the preparation and audit of each year's income-tax returns. It therefore suggests itself, that adopting the value remaining after deducting allowances recognized as sustained under the income-tax statutes as a basis for contractual compensation for the use of such property, may be worthy of your consideration. Such a basis has the merit of avoiding the burden of a large volume of revaluations. It has the further merit that a large percentage of the original value determined on other than a cash cost basis has been eliminated through the allowances for exhaustion, depletion and depreciation. The necessity for valuing land and possibly other nonwasting assets, as well as natural resource deposits discovered and patent developed after March 1, 1913, if such a basis were adopted, would still remain.

Very truly yours,

——— ———,
Acting Secretary.

Hon. Gerald P. Nye,
Chairman Special Committee Investigating the Munitions Industry,
United States Senate.

Title of case	Kind of property valued	Evidence of value		Value found by Court, Jury or the Board of Tax Appeals
		Government	Taxpayer	
Syracuse Food Products Corporation (21 B. T. A. 864).	Patents at March 1, 1913	Opinion evidence $200,000 to $260,000	Opinion evidence, $3,500,000 to $4,000,000.	$1,750,000.
U. S. v. *Cole et al.* (T. D. 4165, C. B. VII-268, C. C. H. 1927, p. 7720).	Undeveloped mining property at March 1, 1913.	Opinion evidence, $1,500,000	Opinion evidence, $2,500,000 to $9,000,000.	$1,875,000.
Newaygo Portland Cement Co. (27 B. T. A. 1097).	Hydroelectric power plant	Opinion evidence, $206,000	Opinion evidence, $650,000	$375,000.
American Metal Co. (30 B. T. A.)	Value developed mine, December 4, 1925.	Opinion evidence, $1,428,570	Opinion evidence, $4,250,000	$1,500,000.
719 Fifth Ave. v. *U. S.* (5F. Supp. 909)	Value leasehold March 1, 1913	Opinion evidence, 0	Opinion evidence, $300,000 to $370,000.	0.
Wise v. *Heiner* (unreported)	Value undeveloped coal land	Opinion evidence, $400 per acre	Opinion evidence $1,200 per acre.	$600 per acre.
Tex-Penn Oil Co. (28 B. T. A. 917)	Value of 1,007,834 shares of stock in newly organized oil company.	Opinion evidence, value $10,078,340	Opinion evidence value, 0	$7,054,838.
J. G. Robertson (28 B. T. A. 53)	Value shares common stock Firestone Tire & Rubber Co. at March 1, 1913.	Opinion evidence, $300 per share. Sale price in the market $300.	Opinion evidence $670–$800 per share. Cross examination one witness: "Anyone would be a sucker to pay more than $300.00."	$550.
J. G. Robertson Routzahn (1 F. Supp. 355)	The issue was the same and the evidence substantially the same as in case above			Not in excess of $431.85 per share
Guckenheimer & Bros. Co. v. *Heimer* (unreported).	Good will distillery business	Opinion evidence, 0	Opinion evidence, $1,500,000	$750,000.
Atlantic Steel Co. v. *Rose* (unreported)	Assets of steel company	Evidence of a contemporaneous sale for cost at $1,415,632; subsequent sale price of petitioner's stock evidencing value less than $2,000,000.	Opinion evidence, $2,941,030.89 to $3,441,030.89.	$2,673,548.06
Spahr Brick Co. (2 B. T. A. 946)	Entire assets of a brick company	Sales of 63 percent of the stock of predecessor corporation supporting value less than $30,000.	Opinion evidence, $141,617.23.	$63,967.23.

The following information on comparative prices of powder was requested of the War Department and supplied under date of April 4, 1935 (see text, p. 4173):

> It is impracticable to furnish complete information respecting comparative prices paid for powder as requested, because in many of the contracts the Government furnished one or more of the ingredients with a corresponding reduction in price. However, in the following contracts it appears that the conditions were the same and the prices are accordingly submitted for the information of the committee.
>
> The following is a partial list of contracts placed during the World War for powder:

Cannon powder

Order no.	Company	Quantity	Unit price
		Pounds	
471.5/145/26	Etna Explosives Co	1,220,000	$0.52
471.5/145/12	Du Pont	2,220,000	.52
G. E. 150	Du Pont	5,380,000	.50
G. E. 151	Du Pont	10,382,500	.47½
G. E. 152	Du Pont	13,500,000	.47½
G610–311E	Du Pont	14,000,000	.49½
G628–312E	Du Pont	40,500,000	.49½
G674–314E	Du Pont	100,440,000	.49½
471.5/145/35	Hercules Powder Co	778,000	.52

Small-arms powder

Order no.	Company	Quantity	Unit price
		Pounds	
15467	Du Pont	4,819,000	$0.60
17357	Du Pont	5,000,000	.60
R–1148–C	Du Pont	9,000,000	.60
P–12462–1242E	Hercules Powder Co	50,000	.60
P–17067–2812–S. A	Hercules Powder Co	50,000	.62
P–3988–662–E	Hercules Powder Co	6,000,000	.62

The following information was requested of the du Pont Company by the committee (see text, p. 4227):

E. I. du Pont de Nemours & Company, Incorporated,
Legal Department,
Wilmington, Del., April 18, 1935.

Alger Hiss, Esq.,
Special Committee Investigating the Munitions Industry,
408 Senate Office Building, Washington, D. C.

Dear Mr. Hiss: In the course of our examination at the December hearings (p. 6138 of the typewritten record), you asked whether the "100-acre factory site of parcel A" and the improvements thereon included in the du Pont Fibersilk Company's purchase (broad gauge tracks, poles, light and power wires, etc., water lines, sewers, hydrants, Percy House, etc., police headquarters, and soda storehouse no. 5) as described near the end of the matter headed "Rights of Way" in "Appendix A" of the contract of purchase shown as your exhibit no. 1372, are a part of or in addition to the village, as described in the middle of the matter headed "Parcel A" in "Appendix A." I undertook to supply this information. The answer, I find, is that the items in question are a part of the village, and not additional thereto. This, I believe, will be apparent to you from the internal evidence of the contract itself, upon closer examination of that document, since you will note that the two separate descriptions both include the items of "Percy House" and "Soda Storehouse No. 5."

To clear up an apparent misconception in the record, it occurs to me to add that the property acquired by the du Pont Fibersilk Company included only a portion of the original Old Hickory Village as constructed in 1918 by Mason & Hanger Company under the supervision of the du Pont Engineering Company.[1]

Very truly yours,

NPW/amp/v W. F. GREGG, *Of Counsel.*

The following letter is in response to a request of the committee regarding persons involved in legislative work for the du Ponts (see text, p. 4228):

E. I. DU PONT DE NEMOURS & COMPANY, INCORPORATED,
LEGAL DEPARTMENT,
Wilmington, Del., May 22, 1935.

Hon. GERALD P. NYE,
United States Senate, Washington, D. C.

DEAR SENATOR NYE: Serious thought has been given to the request for certain data referred to in your letter of May 10. While desirous of being cooperative with your committee, I should like to give you some idea of the difficulties of compliance with the committee's request.

Our company produces and sells over 4,000 products throughout this country and it is of the utmost importance that we should keep abreast at all times of all laws and regulations (Federal, State, and municipal) affecting our varied lines of activity as much in advance of the actual passage of such laws as possible. Our company depends upon its membership in trade associations, chambers of commerce, and commercial service companies to obtain copies of pending bills and proposed regulations. These cover a wide range of subjects, such as the storage of paint, the labeling of products, regulations for the manufacture, transportation, storage, sale and use of commercial explosives, workmen's compensation laws, and the infinite variety of other matters which from time to time arise in the ordinary routine of everyday business. As such bills are received, the matter of presenting the views of the departments affected usually is left to the many trade associations of which we are members.

The point I wish to emphasize is that such work on the part of employees of our company is quite incidental to their other company work. We have no officers, employees, publicity agents, or lawyers who are engaged more than incidentally in legislative work. Our records for the period referred to do not indicate the time occupied by any of our employees who were engaged in legislative work. The term "legislative work" is so comprehensive that if taken literally in this connection to include those who have in any way considered and made suggestions with respect to pending bills and/or regulations (Federal, State, or municipal), it would hardly warrant the exclusion of a single employee holding a position of any responsibility whatsoever. Certainly a report of the total compensation paid to and other income from the company of such employees for such an extended period, merely because they had rendered service of such a character quite incidental to their ordinary work, and regardless of the extent or character of such work, would present such a distorted picture as to be of no value to your committee.

As to the last paragraph of your letter: We do not have in our files a list of the names of officers, officials, representatives, publicity agents, or lawyers of the organizations to which we have subscribed during the period referred to, nor of the salaries or incomes of such individuals. We probably could secure such information as to salaries paid (at least with respect to most of such period) with the acquiescence of such organizations, but it is quite improbable that information as to their incomes would be made available to us. It should be borne in mind, however, that such salaries paid would come exclusively from membership fees received from members of all the companies comprising such organizations, a list of which for the year 1933 was mailed to Mr. Raushenbush under date of November 23, 1934. This is substantially an up-to-date list.

Very truly yours,

THOMAS R. HANLEY.

---

[1] Under date of April 30, 1935, the committee asked the du Pont Company exactly how much of the Old Hickory Village was acquired by the du Pont Fibersilk Co. Under date of May 7, 1935, the du Pont Co. replied that they had no information as to the portion of the Old Hickory Village acquired by the du Pont Fibersilk Co. other than that contained in the contract executed by the United States of America and the Du Pont Fibersilk Co. This contract was entered as "Exhibit No. 1372" and appears in the ppendix on p. 4413.

The following information regarding contributions to the National Economy League was requested of the du Pont Company by the committee (see text, p. 4228):

E. I. du Pont de Nemours & Company, Incorporated,
Executive Offices,
Wilmington, Del., April 18, 1935.

Hon. Gerald P. Nye,
United States Senate, Washington, D. C.

Dear Senator Nye: During the course of the hearings of your committee Senator Clark asked the question whether E. I. du Pont de Nemours & Company, or any of its officers or directors, had made any contribution to the National Economy League; and if so, how much?

This question was asked of Mr. Irénée du Pont, but he did not have the information and agreed to give it later.

In his absence, I am advising you that in 1934, E. I. du Pont de Nemours & Company contributed $2,500 to the National Economy League, and made no other contribution to it either before or later.

As to whether any of the officers or directors of the du Pont Company made any contribution to this organization, I cannot say. I did not make any such contribution and, as far as I know, no other officer or director made any such contribution. If such contributions were made by any of the individuals, it was purely a personal matter of their own and in no way connected with the du Pont Company.

Trusting that the foregoing will meet Senator Clark's purpose, I am

Yours very truly,

L. du Pont, *President.*

LduP/MD.

The following list of stockholdings of officers and directors of the E. I. du Pont de Nemours & Company and subsidiary companies in excess of $10,000 was requested by the committee (see text, p. 4253):

E. I. du Pont de Nemours & Company, Incorporated,
Executive Offices,
Wilimington, Del., December 28, 1934.

The Hon. Gerald P. Nye,
Chairman Senate Committee Investigating the Munitions Industry,
Washington, D. C.

Dear Senator Nye: At the recent hearings you referred to your secretary's previous request that we secure for your committee information from certain individuals regarding their holdings of securities during the years 1925 to 1934.

At that time I advised you that we did not feel we had any authority to require these individuals to give you the information requested, but that your secretary's request had been passed on to the individuals in question.

Although in passing this request on, it was our intention to have those individuals, who desired, send your committee direct the information requested, for some reason a number of the individuals forwarded me the information. I am enclosing herewith the original letters in such cases, as follows: December 17, 1934, W. A. Twelkemeier; November 30, 1934, L. P. Mahony; December 5, 1934, A. R. Chantler; December 5, 1934, A. D. Chambers; December 3, 1934, Cesare Protto; December 3, 1934, V. C. Gouert; December 3, 1934, I. J. Cox; December 13, 1934, William du Pont, Jr.; memorandum undated, E. W. Furst; December 12, 1934, T. S. Grasselli; December 17, 1934, T. J. Ross; December 17, 1934, F. K. Gatch; December 17, 1934, O. M. Hook; December 17, 1934, G. A. Gahles.

Yours very truly,

L. du Pont, *President.*

LduP/MD

[Personal]

National Ammonia Company, Inc.,
St. Louis, Mo., December 17, 1934.

Mr. M. D. Fisher,
Secretary National Ammonia Company, Inc.,
Wilmington, Del.

Dear Mr. Fisher: Returning to the office from an absence on vacation, I acknowledge receipt of Mr. du Pont's November 26 letter with respect to the information requested of officers of wholly owned subsidiary companies, in connection with the United States Senate investigation of the munitions industry.

During the years 1925 to 1934 I did not personally hold stock in any other company in amounts of $10,000 or over.

I personally made no campaign contributions during the years 1919 to 1934, inclusive.

Very truly yours,

W. A. Twelkemeier,
Assistant Treasurer.

To: L. du Pont, president E. I. duPont de Nemours & Company.
From: V. C. Gouert, treasurer American Glycerin Company.

In compliance with your letter November 26, enclosing copy of communication under date of November 20, 1934, received from the secretary of the Special Committee of the United States Senate Investigating the Munitions Industry, advise that I do not have now and did not have during the years 1925 to 1934, inclusive, any stockholdings in any corporation in amounts of $10,000 or over, nor did I make any campaign contributions during the years 1919 to 1934, inclusive.

VCG/F V. C. Gouert, *Treasurer.*

(Stamped: Received, Dec. 4, 1934, Lammot du Pont.)

American Glycerin Company, Incorporated,
Wilmington, Del., December 3, 1934.

Mr. Lammot du Pont, *President,*
Room 9044 Building.

(Your letter November 26th.)

Dear Sir: As I recall it, I more or less regularly made some small campaign contributions in the years 1919 to 1929 inclusive. The amounts of these contributions probably averaged about fifteen or twenty dollars annually for these years. After 1929 I have made no campaign contributions until this year when I contributed $40 to the Republican National Committee.

As to ownership of stock in corporations other than du Pont during the years 1925 to 1934 in amounts of more than $10,000, I will list them as follows: 1,200 shares General Motors Corporation, common stock, and 57 shares General Motors Corporation, preferred stock.

In order to make the information complete I am including a list of securities held in the name of my wife, Alice C. Cox: 308 shares Chesapeake & Ohio, common stock; 269 shares U. G. I., common stock; 50 shares U. G. I., preferred stock; 59 shares American T. & T. Company common stock.

The items in the foregoing list have from time to time amounted to more than $10,000 in value during the last five years.

Mr. F. A. Herpel, vice president of American Glycerin Company is ill and on leave of absence but he has informed me that he has made no campaign contributions during the years 1919 to 1934, inclusive, and that he has no stock holdings in any company other than du Pont in amounts of more than $10,000.

Yours very truly,

IJC/F I. J. Cox.

(Stamped: Received, Dec. 4, 1934, Lammot du Pont.)

928 Delaware Trust Building,
Wilmington, Del., December 13, 1934.

Mr. Lammot du Pont,
du Pont Building, Wilmington, Del.

Dear Lammot: As requested in your form letter of November 26th, 1934, to the officers and directors of the company, I have submitted this date to the United States Senate Special Committee Investigating the Munitions Industry the list of my stock holdings.

Sincerely yours,

Wm. du Pont, Jr.

Stock holdings in various companies in amounts of $10,000 and over by E. W. Furst since the acquisition of The Grasselli Chemical Company by du Pont in 1928:

Mr. STEPHEN RAUSHENBUSH,
Secretary Nye Committee, United States Senate,
Washington, D.C.

DEAR SIR: In reply to your request of November 20th, 1934, to the E. I. du Pont de Nemours & Company, second paragraph, and as a director of the company, I beg to state that my holdings in other companies, other than the du Pont

Company, in amounts of ten thousand dollars ($10,000) or over, are as follows (years 1925–1934):

Atlas Powder Company, common;
Atlas Powder Company, preferred;
General Motors Company, preferred;
Hercules Powder Company, common;
Equitable Office Bldg., common;
Jos. Bancroft & Sons Co., common;
General Electric Company, common;
Texas Gulf & Sulphur, common;
General Motors Company, common;
Gillette Safety Razor Company, common; and
Electric Bond & Share, common.

Of these—

Atlas Powder Company, common;
Equitable Office Bldg., common;
Jos. Bancroft & Son Co., preferred;
General Electric Company, common;
Texas Gulf Sulphur Company, common;
Gillette Safety Razor, common; and
Electric Bond & Share

are all worth much less than ten thousand dollars ($10,000).

Very truly yours,

Chas. L. Reese.

CLR/mr.

E. I. du Pont de Nemours & Company, Incorporated,
Vice President's Office,
Wilmington, Del., December 18, 1934.

Hon. Stephen Raushenbush,
Secretary of Special Committee Investigating the Munitions Industry,
Washington, D. C.

Sir: The undersigned was elected a director and vice president of this company on May 12, 1930 (effective following June first). During the period in which I have served as an officer and director of du Pont Company, aside from du Pont stock, the only shares which I have owned, the market value of which at any time was above $10,000, were the following:

Noranda Mines of Canada
American Telephone and Telegraph
American Gas and Electric

For a year or more I have owned no American Telephone and Telegraph and only 2 or 3 shares of American Gas & Electric.

Yours very truly,

Charles M. A. Stine,
Vice President.

Mr. Stephen Raushenbush,
Secretary United States Senate Special Committee
Investigating the Munitions Industry,
408 Senate Office Building, Washington, D. C.

My Dear Mr. Raushenbush: I understand that the Senate committee has requested that all directors of the du Pont Company advise in regard to their stock holdings in other companies in excess of $10,000. I can advise you that I owned no shares of stock in other companies in excess of $10,000 at the time of my election as director or subsequently. I understand there has been no request for information in regard to stock holdings in the du Pont Company.

I hope this gives the desired information insofar as I am concerned.

With the compliments of the season, I am,

Very truly yours,

F. Sparre, *Director.*

A. B. Echols,
Du Pont Building, Wilmington, Del., December 20, 1934.

United States Senate,
Special Committee Investigating the Munitions Industry,
408 Senate Office Building, Washington, D. C.

Gentlemen: Mr. Stephen Raushenbush, secretary of your committee, addressed a letter under date of November 20, to E. I. du Pont de Nemours & Company, wherein he requested "list of the stockholdings in other companies, in amounts of $10,000 and over, held at any time during the years 1925 to 1934, inclusive, by the officers and/or directors of your (du Pont) company and its wholly owned subsidiaries."

As an officer and director of E. I. du Pont de Nemours & Company, I submit the following information regarding that portion of my stockholdings for the period 1925 to 1934, inclusive, which in my mind might be considered pertinent to your investigation:

1925 to 1928: No securities of a munition nature.

1929: United Aircraft & Transport Corporation common stock.

1930: United Aircraft & Transport Corporation common stock; Curtis Wright Corporation common stock.

1931: No securities of a munition nature.

1932: Bendix Aviation Corporation common stock.

1933: Bendix Aviation Corporation common stock.

1934: Bendix Aviation Corporation common stock.

I have not included any information with respect to my other stockholdings which were of such a nature that they cannot possibly have any bearing on your investigation, such as oil, motors, gold mining, food products, and miscellaneous industrial securities.

Yours very truly,

A. B. ECHOLS.

ABE:r.

E. I. DU PONT DE NEMOURS & COMPANY, INCORPORATED,
VICE PRESIDENT'S OFFICE,
Wilmington, Del., December 17, 1934.

HON. STEPHEN RAUSHENBUSH,
Secretary of Committee Investigating Munitions Industry,
Washington, D. C.

SIR: Referring to your letter of November 20th addressed to the du Pont Company requesting information as to stock holdings of the officers and directors of said company, please be advised that during the period from 1925 to 1934 I have owned no stock in any munitions company other than stock of E. I. du Pont de Nemours & Company and the General Motors Corporation, if the latter might be considered to be a munitions manufacturer.

Yours very truly,

M. F. HARRINGTON.

Wilmington, Del., December 20, 1934.

MR. STEPHEN RAUSHENBUSH,
Secretary Special Committee Investigating the Munitions Industry,
Room 408 Senate Office Building, Washington, D. C.

DEAR SIR: Copy of your letter of November 20th, 1934, to E. I. du Pont de Nemours & Company, requesting list of stockholdings and campaign contributions of the officers and/or directors of E. I. du Pont de Nemours & Company and its wholly owned subsidiaries has been furnished me as an assistant treasurer of E. I. du Pont de Nemours & Company.

In reply you are advised that I, at no time during the years 1925 to 1934, inclusive, held stock holdings in other companies in the amount of $10,000 and over; nor did I make any campaign contributions for the years 1919 to 1934, inclusive.

Yours very truly,

GLN:r

G. L. NAYLOR.

Office of the Assistant Secretary,
Washington, D. C., May 14, 1935.

The Secretary, Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.
(Attention: Miss Lydia Lee.)

Dear Sir: In compliance with telephone request of May 13, 1935, the following information is submitted:

The Auxiliary Reserve is composed of members of the Officers Reserve Corps who by reason of age or for other causes are not considered available for general assignment. On June 30, 1934, the total strength of the Auxiliary Reserve was 2,789. With my letter of March 29, 1935, there was enclosed a table showing the strength of the various components of the Army. The third item showed the total commissioned strength of the Organized Reserves as 111,356. This total included the Auxiliary Reserve.

The total personnel of the Civilian Rifle Clubs is as follows:

Civilian Rifle Club membership	85,670
School membership	1,793
Total	87,463

Very truly yours,

C. T. Harris, Jr.,
Lieut. Colonel, Ord. Dept.,
Director, Planning Branch.

Investigating the Munitions Industry,
U. S. Senate Office Building, Washington, D. C.
(Attention Hon. Gerald P. Nye, Chairman.)

Dear Sirs: With reference to the hearings before your committee, I attach hereto four photostat copies of a certificate of award issued by the War Department of the United States, signed by Newton D. Baker, then Secretary of War, and B. Crowell, then Assistant Secretary of War and Director of Munitions, which recognizes the "distinguished service the loyalty, energy, and efficiency in the performance of the war work by which du Pont engineering companied aided materially in obtaining victory for the arms of the United States" in the World War.

I also attach hereto four photostat copies of a similar Certificate of Award of the War Department of the United States, issued in behalf of E. I. du Pont de Nemours and Company.

We respectfully request that a copy of each of the attached certificates of award be included in and made a part of the record of the hearings before your committee.

Very truly yours,

W. S. Gregg, *of Counsel.*

INVESTIGATION OF MUNITIONS INDUSTRY

MONDAY, JANUARY 21, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357, Senate Office Building, pursuant to call of the chairman, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, Pope, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee.

The Chairman. The committee will be in order. Senator Vandenberg, have you something that you wish to insert in the record?

Senator Vandenberg. Mr. Chairman, before we recessed, when Mr. White of the United States Internal Revenue Bureau, was on the stand presenting information regarding million-dollar incomes during the war period, and preceding and following, I suggested that he prepare a chart, without name but by number of the tax paid upon each one of these incomes for the period.

The Bureau has furnished that information and I ask that the report be identified as an exhibit and printed in the record.

The Chairman. Such will be ordered.

(The document referred to was marked "Exhibit No. 1412.")[1]

The Chairman. The committee will want this morning to swear and have available for testimony Mr. John F. Mettin, Mr. N. R. Parker, and Mr. Charles J. Langell, if they will come forward at this time.

TESTIMONY OF JOHN F. METTEN, N. R. PARKER, AND CHARLES J. LANGELL

NEW YORK SHIPBUILDING REPLIES TO COMMITTEE REQUESTS

(The witnesses were duly sworn by the chairman.)

The Chairman. Mr. Metten, under date of January 2, 1935, request was made for certain information to be supplied the committee. Has that all been complied with?

Mr. Metten. All that we could get together. Of course, we only had a short time, and those files run into a great many; I think they brought about 90 packages, did they not? I believe there is a letter written that we got together all we could in the time.

---

[1] See Hearings, Part XIII, appendix p. 3154.

The CHAIRMAN. What you have ready, you have brought with you?

Mr. METTEN. Yes.

The CHAIRMAN. And when might we expect the balance of them?

Mr. LANGELL. Mr. Parker better answer that.

Mr. METTEN. Mr. Parker, the treasurer, better answer that, as he has that in charge.

The CHAIRMAN. Mr. Parker, the question has been asked as to when the information not yet ready will be available to the committee. Can you say as to that?

Mr. PARKER. Senator, in the request, the period covered is from 1916 to 1934, a period of 18 years. The details asked for would require an analysis of 18 years of operation. That would take months of accounting work to accumulate all of the detail of the questions. So far as it was possible to reply to the questions and give the information desired, it is here, in as full detail, as it was possible to accumulate.

The CHAIRMAN. Mr. Raushenbush, do you want that this morning?

Mr. RAUSHENBUSH. I would like to have that this morning.

The CHAIRMAN. Let it be offered then, not for the record at the moment, but for the information of the committee.

You speak of some of this information occasioning months of work, of research work, to supply it. Just what might be included in our request that would take so long, Mr. Parker?

Mr. PARKER. You asked for expenses of various employees, or representatives, covering that period. Those expenses, of course, were disbursed during the 18 years covered and there is no segregation of them, so far as our accounts are concerned, and it would mean going through all the details of expenditures for the whole period.

Senator BARBOUR. I can understand, that, Mr. Chairman, the witnesses would be glad to give us any individual items and information that we should ask for today which would be of assistance to us.

Mr. PARKER. The secretary will. We have tried to cooperate in every way possible, and we will continue.

The CHAIRMAN. The committee was sure you would, so far as you could, cooperate thoroughly with the committee.

You may proceed, Mr. Raushenbush.

Mr. RAUSHENBUSH. Before leaving that, Mr. Chairman, would it be possible to just note, through Mr. Parker, when we can expect to receive certain items. There are only a few, probably, which have not been furnished. We would like to get them, certainly before the hearings are over.

The CHAIRMAN. Do you mean, Mr. Raushenbush, to take our letter of January 2, 1935, and indicate therefrom just what information is not yet available?

Mr. RAUSHENBUSH. Perhaps the simplest thing would be for Mr. Parker to indicate on his copy of the letter which of the items are involved.

The CHAIRMAN. Mr. Parker, if you would take your copy of our letter of January 2, 1935, and indicate thereon the paragraphs on which you have not been able yet to supply the information requested, we would appreciate it.

The Chair is going to suggest the printing in the record at this time the letter of January 2, 1935.

(The letter referred to follows:)

UNITED STATES SENATE,
SPECIAL COMMITTEE INVESTIGATING THE MUNITIONS INDUSTRY,
January 2, 1935.

NEW YORK SHIPBUILDING CORPORATION,
Camden, N. J.

GENTLEMEN: The committee wishes to examine into certain phases of the shipbuilding industry and requests the company to be represented through its several responsible officers at hearings beginning at 10 a. m., January 21, 1935, in the Senate Office Building, room 357.

It believes that among the officers necessary for the purposes of the committee will be the following:

Mr. John Metten, president; Mr. N. R. Parker, treasurer; Mr. Charles Langell, estimator.

The following will be requested at a later date:

Mr. Carl Kaltwasser, vice president; Mr. E. L. Cord, chairman board of directors; Mr. Addison Foster; and Mr. L. B. Manning.

The committee requests you to bring with you the following:

1. Information concerning the income and taxes of the company during the period 1915 to 1920, inclusive.

2. The committee requests you to bring with you also all estimating data on naval vessels for the years 1926, 1927, 1928, 1933, and 1934, including all inquiries to suppliers and replies to those inquiries.

3. The committee requests also a summary of information on naval ships for which you secured awards divided as follows:

Name of ship	Estimates made by company for material and labor	Actual cost of material and labor	Estimated overhead (divided into major items)	Actual overhead charged (divided into same major items)	Sales price and final settlement for the ship

4. The same summary for merchant marine ships for the years 1928 to 1934, inclusive, divided into the six columns, as described on the previous page. The information desired on the merchant marine ships includes only the summaries of the estimating data as described, whereas the information required on naval ships included the actual files in your company's possession.

5. All campaign contributions made by the company to any political party during the years 1920 to 1934, inclusive, also all campaign contributions made by any officers and directors of the company during those years. The company is asked to secure signed statements from its officers and directors concerning these contributions and duly present them to the committee.

6. Any bonus payments of the company to officers and directors for the years 1933 and 1934.

7. Individual statements by officers and directors receiving such bonus payments as to expenditure of these bonus payments for company purposes for the years 1926 to 1934, inclusive, including entertainment, gifts, loans, etc., involving company interests, directly or indirectly.

8. The names of all representatives or agents of the company in the United States or abroad, together with their salaries, the expense itemized by individuals for the years 1920 to 1934, inclusive.

9. A statement of ownership of stock of the company by individuals, together with the addresses of these individuals, in blocks of 1 percent or over of each classification of stock as of January 1, 1932, January 1, 1933, January 1, 1934, and January 1, 1935, or company dates within close range of these dates.

10. Ownership of bonds of the company held by individuals in blocks of 5 percent or over as of the same dates.

11. Ownership of stock in other companies by directors and officers of the New York Shipbuilding Corporation for the years 1926 to 1934, inclusive, in amounts of over $10,000, including the number of shares of stock in each of the other companies. This information is to be secured by the company for presentation to the committee.

12. All information in the possession of the company or its officers concerning any options taken on any blocks of stock in any classification amounting

to over 5 percent of that stock, together with the dates of the options, the amounts, the names and addresses of the individuals, and all further information pertaining to these options.

13. A list of foreign sales agents by name, including the rate of commission, salaries, and expenses and commissions actually paid them for the years 1920 to 1934, inclusive.

14. The amount of foreign business in dollars for the years 1920 to 1934, inclusive, divided by companies.

15. The amount of United States business done by the company in dollars, divided by years, 1920 to 1934, inclusive, subdivided as between United States Government and private business, and under the head of Private Business, subdivided between those private companies receiving governmental subsidies for ships and those not receiving them.

16. All company contributions, dues, entrance fees, loans, etc., to all national or State associations or individuals.

17. A summary of all publicity and/or propaganda expenses disbursed by the company and/or its officials for magazines, press, radio, or for publicity consultation and assistance, 1920 to 1934, inclusive.

18. The fees or commissions paid on United States governmental business for the years 1920 to 1934, inclusive, listed by individuals and by names of ships.

19. All fees for legal services, including retainers and other expenses, 1920 to 1934, inclusive, itemized by individuals or companies.

20. Dates of the original and supplemental contracts on naval ships ordered by the Government during the years 1917, 1918, and 1919, until the completion of those ships, including a statement of the financial effect of those changes with regard to the company and the amounts involved in those changes.

21. Summarize pay-roll data for the years 1927 and 1932, and 1933 and 1934, inclusive, including:

(*a*) Total number of men employed each week in those years.

(*b*) Total man-hours each week in those years.

(*c*) Total pay roll in dollars each week in those years.

(*d*) Average labor cost per hour.

22. A statement covering the cost of steel plates and shapes for the years 1916 to 1934, inclusive, averaged by years.

23. Copies of any side agreement or agreements made by the company with Cramps, with bonding firms, or with others, in connection with taking over contracts for U. S. S. *Salt Lake City* and machinery for U. S. S. *Pensacola*.

24. Copies of all data, memoranda, correspondence dealing with the enactment and enforcement of the Vinson Act.

25. Copies of the minutes of the board of directors and/or any executive committee of such board from 1915 to 1934, inclusive.

26. The committee also requests the company officials to bring with them copies of all agreements with foreign companies on sales or on patents, including payments made under such agreements, either by the foreign companies or to the foreign companies, 1916 to 1934, inclusive.

27. The committee requests each and all of the officers of the company to bring with them all records, diaries, and other memoranda in their original form indicating or describing the meeting or communication with officials of other shipbuilding companies regarding bids and awards for naval vessels and records of similar communications, conferences, or meetings on this subject with naval or other governmental officials during the period 1926 to 1934, inclusive.

Sincerely yours,

GERALD P. NYE, *Chairman*.

The CHAIRMAN. Now, if you will indicate, starting with paragraph 1, Mr. Parker, just what is not now supplied, we would appreciate it very much.

Mr. PARKER. In paragraph 1 we have furnished a copy of the published annual report, income and profit-and-loss statement, and a statement of income taxes paid.[1] That is complete, as we understand the question.

---

[1] Entered later as "Committee Exhibit No. 2" and on file with the committee. See Hearings, Part XIX, p. 5110.

Paragraph 2 covers the periods 1933 and 1934 and has to do with current contracts. The inquiries and the correspondence in connection therewith are necessary for our day-to-day operations. To bring them before the committee would really stop work at the plant for the period that they were here.

For the period 1926 to 1932 there have been furnished the committee, and I believe are in the supply room downstairs, 92 boxes of correspondence of that period, which may be kept by the committee.

For the period 1933 and 1934 there are available—and we would be glad to cooperate with the committee in every possible way to give the information contained—but to bring those from our files would stop the progress of the work, stop placing orders, and stop employment to some extent, and I am sure the committee does not desire us to do that.

Mr. RAUSHENBUSH. You say that furnishing of that information——

Mr. PARKER. "Inquiries to suppliers."

Mr. RAUSHENBUSH. I understand that the inquiries to suppliers are those in the 92 boxes to which you referred?

Mr. PARKER. Not the inquiries for 1933 and 1934. They are in constant use.

Mr. RAUSHENBUSH. Did you bring along the estimates for 1933 and 1934?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. All right.

Mr. PARKER. On paragraph 3 I believe we are complete.[1]

Paragraph 4 is complete as far as we understand it.[1]

Paragraph 5, campaign contributions, requires that we secure signed statements from officers and directors concerning contributions between 1920 and 1934. We have written to all the former officers and directors, officers and directors during that period, and in part we have received replies. Some of the officers and directors are not available, some are out of the country, and some are away on vacations. Such replies as we have received are in the folders furnished the committee.[2]

Mr. RAUSHENBUSH. Can you add to that the list of officers who have not replied to that?

Mr. PARKER. I gave a list in a letter making the response.

Mr. RAUSHENBUSH. Including the names of officers who have not replied?

Mr. PARKER. Yes, sir.

Bonus payments of the company is replied to in full for the period requested.

Individual statements by officers, under paragraph 7 necessarily follows the replies which we must receive.

Men as representatives or agents, with their salaries and expenses, we just did not have time to accumulate and compile the data.[3] The expenses are turned in from time to time, and their salaries are available, and we would be very glad to continue that and try to furnish the committee with the full detail. I am giving the names of the representatives and agents.

---

[1] Summaries of estimates on Merchant Marine and Naval vessels were entered as "Exhibit No. 1540." See Hearings, Part XIX, p. 5113.

[2] Campaign contributions were entered later as "Committee Exhibit No. 4" and are on file with the committee. See Hearings, Part XIX, p. 5111.

[3] Lists of agents and representatives were entered later as "Exhibits Nos. 1529 and 1539." See Hearings, Part XIX, pp. 5083 and 5111.

Mr. RAUSHENBUSH. Did you supply the names of the Washington representatives and their expenses?

Mr. PARKER. Only their names. I have not a detail of their expenses.

Mr. RAUSHENBUSH. Were there so many Washington agents that it was impossible to compile their expenses, Mr. Parker? What reason would there be for any difficulty in compiling that?

Mr. PARKER. Purely a matter of time.

Mr. RAUSHENBUSH. When will that be available?

Mr. PARKER. I really cannot say. But I will cooperate in every way possible. I could not give a definite time when it might be done.

Mr. RAUSHENBUSH. May we expect it within the next 3 weeks?

Mr. PARKER. I doubt it very much. I do not believe it can be done.

Mr. RAUSHENBUSH. How many Washington representatives did you have at any time?

Mr. PARKER. I do not recall more than one at any time.

Mr. RAUSHENBUSH. And you find it impossible to give the salaries, commissions, and expenses of that representative for that period of years?

Mr. PARKER. It is 14 years asked for, Mr. Raushenbush.

Mr. RAUSHENBUSH. One man for 14 years.

Senator CLARK. Does the record show your Washington representative?

Mr. PARKER. I have replied to that; yes, sir.

Senator CLARK. It ought to be a very simple matter to add up the salaries and expenses of those men. It is necessarily a limited list, is it not?

Mr. PARKER. Each week, or maybe semimonthly or monthly, he turns in an expense account for his expenses, which goes into the monthly disbursements for that month, and there are 14 years covered, which means an examination of those accounts. We do not segregate individuals and carry their accounts by individuals.

Senator CLARK. You do not have the disbursements to individuals?

Mr. PARKER. We have them all but it takes time.

Senator CLARK. It seems to me it would be very simple to run through and select the names of a very limited list and find out the disbursements for the various individuals.

Senator BARBOUR. The fact is that there are a great many items of expense which are difficult to segregate, are there not?

Mr. PARKER. Exactly so.

Senator BARBOUR. It is not the individual involved, I do not think, is it?

Senator BONE. Do those items show Washington expenditures?

Mr. PARKER. They show expenditures made by these representatives.

Senator BONE. In that city or in connection with your work here?

Mr. PARKER. I doubt if they would show the purpose of the expenditure; just merely the amount of the expenditure.

Senator BONE. Do you not endeavor to keep a set of books that you will know what your money is being spent for?

Mr. PARKER. We know what our money is being spent for.

Senator BONE. Then it must be itemized in some fashion.

Mr. PARKER. Very few of those accounts are ever itemized.

Senator BONE. Do you permit a man a blanket expense account and permit him to spend money without designating what it is for?

Mr. PARKER. Any expenditure authorized by the president of the company is disbursed by me as treasurer.

Senator BONE. That authorization would indicate the nature of the expenditure, would it not?

Mr. PARKER. Not necessarily; very seldom as a matter of fact.

Mr. RAUSHENBUSH. In computing the overhead of the company chargeable to naval vessels and the like, you must be going over those figures constantly, must you not, to determine whether they go into the overhead or do not?

Mr. PARKER. We have a total of traveling expenses for periods. We have 4,000 men. Many of those men travel. Some of the operating men travel for the completion of ships, trial trips, and so forth, and work in the shipyards.

Senator CLARK. Do you pursue that same policy with regard to all your employees as you do your Washington representative, not having the expenditures itemized?

Mr. PARKER. They are always identical in every case. We treat expenses for everybody just the same.

Senator CLARK. You mean to say none of your employees traveling on company business, whatever it may be, makes no itemized report of his expense?

Mr. PARKER. Yes, he does. So does the Washington representative.

Senator BARBOUR. From time to time?

Mr. PARKER. From time to time. We do not compile it and keep it so that we can tell what happened 14 years ago.

Mr. RAUSHENBUSH. Or 2 years ago?

Mr. PARKER. Or 2 years ago, or 2 months ago.

Mr. RAUSHENBUSH. I think Mr. Parker has treated the company's accounting here quite accurately, but I do want to say, Mr. Chairman, that we attach some importance to having those figures.

Mr. PARKER. It is purely a matter of time. We can compile a good part of it, or maybe all of it, if given time, but there are 14 years in the request.

The CHAIRMAN. Will you undertake to furnish that information to the committee in part as it is compiled?

Mr. PARKER. If I might say so, Senator, after the committee has had an opportunity to go over these replies which we have made, then any additional information that might be required, not found sufficient in the replies made, could be made as a separate request, and we would be very glad to cooperate.

Mr. RAUSHENBUSH. Is that a reply to the Senator's question as to when the information can be available on that one point?

Mr. PARKER. I really could not answer when that would be available. I have had no opportunity to go through the expenses, and the files are in a rather incomplete state. Realizing that we have been investigated by the internal revenue agents, by accountants, and engineers of prospective purchasers, and by accountants and engineers of purchasers during the period 1920 to 1934, and we have been investigated by a Senate committee investigating certain activities back in 1928 and 1929, and we have been investigated in the last 2 years by another Senate committee on mail contracts; each of these investigators has been through our files, Mr. Senator.

The CHAIRMAN. Have any of these investigations developed the answer to the question under debate at the moment?

Mr. PARKER. No, sir; they have not.

Senator BONE. Did any of those investigations require you to produce that sort of evidence?

Mr. PARKER. No, sir.

Senator BONE. None of them ever asked for that sort of information?

Mr. PARKER. Yes, sir.

Senator BONE. Did you produce it for them?

Mr. PARKER. No, sir.

Senator BONE. Did they insist on its production?

Mr. PARKER. No, sir.

Senator BONE. They abandoned the thing after they made that first request?

Mr. PARKER. Their investigators ascertained the fact that it was too difficult a task, and would be incomplete and probably inaccurate.

The CHAIRMAN. What of the following request?

Mr. PARKER. No. 9 is answered complete.[1] No. 10 is answered complete.[2]

The CHAIRMAN. What did you say of no. 9?

Mr. PARKER. No. 9 is answered complete.

The CHAIRMAN. No. 10?

Mr. PARKER. Complete.

The CHAIRMAN. No. 11. Ownership of stock in other companies?

Mr. PARKER. That is contained in the request of all officers and directors for the period 1926 to 1934, and the replies so far received are contained in the folders turned over to the committee.

The CHAIRMAN. No. 12?

Mr. PARKER. Is answered complete.

The CHAIRMAN. No. 13?

Mr. PARKER. Is answered as complete as it was possible to list foreign sales agents. Nos. 13 and 8 are almost identical, Representatives or agents of the company in the United States or abroad. and no. 13, a list of foreign sales agents by name, and as to their salaries and commissions, the same applies to no. 13 as applies to no. 8.[3]

The CHAIRMAN. No. 14?

Mr. PARKER. No. 14 is answered complete as regards the shipbuilding business, which is all that is available.

No. 15 is complete as regards the shipbuilding business.

No. 16, All company contributors, and so forth, is answered as complete as it was possible.[4] There is no statement given of company contributions. We have given it for 1 year, 1934.

---

[1] Statement of ownership of stock of the company in blocks of 1 percent or over was entered as "Exhibit No. 1547." See Hearings, Part XIX, p. 5136.

[2] Statement of ownership of bonds of the company in blocks of 5 percent or over was entered as "Exhibit No. 1536." See Hearings, Part XIX, p. 5109.

[3] Lists of agents and representatives were entered as "Exhibits Nos. 1529 and 1539." See Hearings, Part XIX, pp. 5083 and 5111.

[4] Lists of company contributions were entered as "Exhibit No. 1538." See Hearings, Part XIX, p. 5110.

Senator BONE. Mr. Parker, may I intrude at this point and ask, how long it will take you to compile the figures covering the information shown in this questionnaire to which we have made reference?

Mr. PARKER. I believe it would take at least 2 months for an accounting group of propably three persons to analyze the expenses of the 18 years; it would take 2 months for every year.

Senator BONE. In view of the fact that this committee will be in session for probably 5 or 6 months, will you produce those figures. agree to produce those figures for our records? They have never been produced in any of these investigations and it is probably time that we have them and incorporate them in a permanent record.

Mr. PARKER. Did you understand my answer?

Senator BONE. I did sir. I understood you to say 2 months.

Mr. PARKER. Two months for each year; 36 months for 18 years.

Senator BONE. I did, sir. I understood you to say 2 months.

Mr. PARKER. Yes, sir.

Senator BONE. Have you more men available?

Mr. PARKER. No, sir.

Senator BARBOUR. How much do you suppose it would cost your company, Mr. Parker, if you were put to that expense; to the expense of doing that?

Mr. PARKER. At the per diem for accountants, to do this work, that would probably cost $60,000, or $20,000 a year.

Senator CLARK. Do I understand you to say, Mr. Parker, that you do not preserve the record of disbursements to your Washington representatives at all?

Mr. PARKER. You misunderstood me if you understood it that way.

Senator CLARK. What is the situation about that? Why does it take 2 months for each year to find out what the disbursements were to a man who was your representative here in Washington?

Mr. PARKER. Because we do not keep it by the man's name in Washington, Timbuctoo, or wherever it is, but keep it in a general file, and every expense is there, so far as I know, except if it be upset by the various investigations we have had. I am not sure that the record is complete, and when I see an incomplete record, I have to trace out all other expenses.

Senator CLARK. You mean to say as to John Jones, representing you in Washington, you have no record as to what you paid John Jones in the year 1921, I will say?

Mr. PARKER. No, sir; we have not.

Senator CLARK. I will say that is a most remarkable way of keeping records.

Senator BONE. In view of the large amounts which this Government is paying for battleships, cruisers, and so forth, do you not think it would be wise for you to be in position to show that to your client?

Senator CLARK. It might be wise not to be able to show it.

Senator BONE. You can hang it on one horn or the other of the dilemma, but, do you not think, as a contracting party with the Government, that it would be wise? Putting it the other way, do you think it is an improvident request and not justified by the facts that the Government should have this information available to them?

Mr. PARKER. Senator, you are asking me what I think. My job is the bookkeeper of the company.

Senator BONE. We are spending about one-half billion dollars on the Navy—and that is a lot of money—and the Government ought to be fully advised, do you not think, concerning where this money is going, and how it is to be spent, and every angle of the expenditures should be examined?

Mr. PARKER. It is a matter for the Government to fix.

Senator BONE. That is the point. The Senate is representing the Government, or I believe we think it is. It may be laboring under a delusion or hallucination, but I thought we were speaking for the Government.

Senator VANDENBERG. Mr. Parker, for the years 1933 and 1934, would it be an equally difficult task to get this rather limited information?

Mr. PARKER. That would be fairly easy, and I think could be gotten in a fairly reasonable length of time.

Senator VANDENBERG. I suggest we start out having that.

The CHAIRMAN. Without waiting for the balance?

Senator VANDENBERG. Yes, sir.

Senator CLARK. The late period instead of the earlier period. I think that is a very sensible suggestion.

Mr. PARKER. I would be very glad to cooperate on that basis, and I think that I could accomplish something and give it to you in a reasonable time.

The CHAIRMAN. What about no. 17?

Mr. PARKER. No. 17, the only publicity and/or propaganda expenses which are disclosed by such records as we have, have to do with three matters, the disbursements of William B. Shearer in connection with the passage of the Jones-White bill in 1927 and 1928; and for publicity expenses on the pay rolls of the Trans-Oceanic Steamship Corporation.[1]

Senator CLARK. Do you have them segregated?

Mr. PARKER. Those items have been segregated and given to the committee investigating the activity of William B. Shearer at Geneva, have been given to the committee investigating the ocean-mail contracts, and copies of the full details have been given your investigators.

Mr. RAUSHENBUSH. Is that up to date?

Mr. PARKER. That is all there is.

Mr. RAUSHENBUSH. One of these committees you mention met in 1929. Have all those accounts been brought up to date?

Mr. PARKER. They were all concluded in 1928.

Mr. RAUSHENBUSH. Do you so testify?

Mr. PARKER. As far as I know they are.

Mr. RAUSHENBUSH. That the company paid out no more expenses upon any of these accounts after 1929?

Mr. PARKER. No; that is not true.

Mr. RAUSHENBUSH. That is what I was offering you the opportunity of saying.

---

[1] Entered as "Exhibit No. 1538." See Hearings, Part XIX, p. 5111.

Mr. PARKER. The record shows the disbursement made in addition to that to which you referred, as legal expenses, which has been itemized and given to your investigators.

Mr. RAUSHENBUSH. That is what I was trying to get at.

Mr. PARKER. But the matter is complete on what you have.

Mr. RAUSHENBUSH. All right.

Mr. PARKER. There are no fees or commissions paid on governmental business for any years, so far as I know, and I have so answered.

Fees for legal services, including retainers and other expenses, I have given them for the year 1934, from 1926 to 1932, and for the year 1934, which is all I had an opportunity to accumulate in the limited time.[1]

Senator VANDENBERG. Does that mean that you skip 1933?

Mr. PARKER. I think I skipped 1933; yes, sir, but I have 1934.

Senator VANDENBERG. Was there any reason for skipping 1933?

Mr. PARKER. I just did not have it available and did not submit it yet.

Senator VANDENBERG. I would be particularly interested in 1933, Mr. Parker, if it can be made available.

Mr. PARKER. It is not very difficult to get it. It is just a matter of time.

Senator VANDENBERG. All right.

Mr. PARKER. Dates of the original and supplemental contracts under no. 20, I have given a list of contracts but the statement of the financial effect of the change in contracts is utterly impossible to obtain.[2]

The CHAIRMAN. That perhaps would be a matter which we would have to develop here.

Mr. PARKER. It is a matter which would have to be developed because it is a matter of opinion more than anything else.

The CHAIRMAN. No. 21?

Mr. PARKER. No. 21 has been furnished complete as far as the records are available. Total man-hours each week were not available on a weekly basis up until 1934. We have given the number of men employed and the total pay roll as requested.

Average cost of steel plates under no. 22 is as requested.

Copies of all the agreements in connection with the Cramps contract are in the folders.

All data under no. 24 are furnished.[3]

No. 25 is complete.[4]

No. 26 is complete except for the payments to and from foreign companies, which is not compiled.[5]

The CHAIRMAN. Except for what?

Mr. PARKER. Payments to and by, the latter sentence of no. 26.

The CHAIRMAN. How long will that be?

---

[1] List of fees entered as "Exhibit No. 1537." See Hearings, Part XIX, p. 5110.

[2] List of contracts on naval ships during 1917, 1918, and 1919 was entered as "Exhibit No. 1530." See Hearings, Part XIX, p. 5085.

[3] Data concerning the Vinson Act was marked "Committee Exhibit No. 6" and is on file with the committee. See Hearings, Part XIX, p. 5113.

[4] Copies of the minutes of the board of directors were marked "Committee Exhibit No. 3" and are on file with the committee. See Hearings, Part XIX, p. 5111.

[5] Copies of agreements on sales and patents were marked "Committee Exhibit No. 5" and are on file with the committee. See Hearings, Part XIX, p. 5112.

Mr. PARKER. I do not believe it will be possible to obtain that. That has to do, of course, with the electrical business. That would have to be developed, too, Mr. Chairman, I think, because, if you want to limit that to shipbuilding entirely, which I assume you do, it would have to be segregated in good part from a combined electrical and shipbuilding activity that went on for the period 1925 to 1929 and 1930.

The CHAIRMAN. What agreements not connected with shipbuilding might there be?

Mr. PARKER. Agreements for patents and other matters having to do with the electrical business, which we were in during that period. However, copies of the agreements are here, as far as we have them.

The CHAIRMAN. Now, as to the last question?

Mr. PARKER. The company asked its officers to bring with them all records and diaries as requested in paragraph 27.

The CHAIRMAN. Mr. Raushenbush, you will, of course, at your earliest convenience ascertain how complete is the response that has already been made, and then advise the committee if there is further information which should be had.

Mr. RAUSHENBUSH. Yes, sir.

The CHAIRMAN. All right, Mr. Raushenbush; you may proceed.

Mr. RAUSHENBUSH. Mr. Metten, you are president of the company?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. Will you very briefly outline for the committee, the function of the company, what its business is?

Mr. METTEN. It is engaged in shipbuilding—merchant and naval shipbuilding.

Mr. RAUSHENBUSH. Merchant and naval shipbuilding. It has really no other interest of importance at the present time?

Mr. METTEN. No, sir; not at the moment.

TAXATION OF WAR PROFITS

Mr. RAUSHENBUSH. We should like to go into some of the history of the company to find out what information there is of value to the committee in certain matters it is interested in, notably taxation of war profits. We propose—and I want to say this openly—to start right at the beginning during the war years, and come up into the more recent years later.

Is there any one of your gentlemen who is particularly conversant with the earlier history of the company during those war years? Were you with the company, Mr. Metten?

Mr. METTEN. No; I have only been president of the company since the first of November 1934.

Mr. RAUSHENBUSH. Were you with the company then, Mr. Parker?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. Were you with the company, Mr. Langell?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. And you, Mr. Pruitt?

Mr. PRUITT. I am the general counsel for the corporation.

Mr. RAUSHENBUSH. Mr. Parker, you were with the company at the time, and in what capacity?

Mr. PARKER. What time, Mr. Raushenbush?

Mr. Raushenbush. Beginning with 1916, let us say.

Mr. Parker. In 1916 I was in charge of all costs and accounts.

Mr. Raushenbush. And later you became assistant treasurer?

Mr. Parker. In 1918 I became assistant treasurer.

Mr. Raushenbush. And then treasurer?

Mr. Parker. I became comptroller in 1927, and treasurer in 1929.

Mr. Raushenbush. We find from the Treasury Department records, that the company as it existed in 1916, was sold to the American International Corporation. We find in the Treasury file a list of the stockholders at that time, and I wonder if you could look at them, which I offer for proper number, and develop from your own information whether any of those larger stockholders are present stockholders in the company.

(The document referred to was marked "Exhibit No. 1413" and is included in the appendix on p. 4831.)

Mr. Parker. I recognize from this that it is a list of stockholders of the New York Shipbuilding Co., a company which was sold November 30, 1916, and as far as the present stockholders of the New York Shipbuilding Corporation are concerned, the transfer records are not in my possession, and in reply to the paragraph of the letter, a list of stockholders has been submitted to the committee.

Mr. Raushenbush. Then, I take it, your answer means that you do not recognize any of these larger stockholders as present stockholders of the company?

Mr. Parker. I do not know the present stockholders of the corporation.

Mr. Raushenbush. As to the interest of Mr. Walters, for instance, you do not know whether there is any stockholding at present on his part in the present corporation?

Mr. Parker. That's right. I do not know. Mr. Walters is dead.

Mr. Raushenbush. Or his estate? How about Mr. Henry C. Frick?

Mr. Parker. Dead too, as I understand.

Mr. Raushenbush. His estate?

Mr. Parker. Not so far as I know.

Mr. Raushenbush. Or Mr. Andrew W. Mellon and Mr. R. B. Mellon?

Mr. Parker. Not to my knowledge. They have never been stockholders since they disposed of their interest in 1916.

Mr. Raushenbush. Mr. Baruch?

Mr. Parker. Not so far as I know.

Mr. Raushenbush. The New York Shipbuilding Co., then, in 1916 was sold to the American International Corporation? You were with the company at that time?

Mr. Parker. Yes, sir.

Mr. Raushenbush. The directors of the American International Corporation at that time included a certain number of names, and I want to ask you whether, so far as your knowledge goes, the men at that time directors are still interested in the present corporation. Mr. Vanderlip?

Mr. Parker. I do not know.

Mr. Raushenbush. Mr. Armour?

Mr. Parker. I do not know.

Mr. RAUSHENBUSH. Newcomb Carlton or Charles Coffin?

Mr. PARKER. Neither of them.

Mr. RAUSHENBUSH. W. F. Corey?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. Robert Dollar?

Mr. PARKER. He is dead.

Mr. RAUSHENBUSH. P. S. du Pont?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. J. P. Grace?

Mr. PARKER. I do not believe so.

Mr. RAUSHENBUSH. You do not believe so?

Mr. PARKER. That is right.

Mr. RAUSHENBUSH. J. J. Hill?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. Otto H. Kahn?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. P. A. Rockefeller?

Mr. PARKER. Same answer.

Mr. RAUSHENBUSH. John D. Ryan?

Mr. PARKER. Same answer.

Mr. RAUSHENBUSH. Charles A. Stone?

Mr. PARKER. Same answer.

Mr. RAUSHENBUSH. Guy E. Tripp?

Mr. PARKER. Same answer.

Mr. RAUSHENBUSH. P. A. S. Franklin?

Mr. PARKER. Same answer.

Mr. RAUSHENBUSH. I would like to offer this list of the directors of the American International Corporation with corporate connection, for the record, as "Exhibit No. 1414."

The CHAIRMAN. It is so ordered.

(The document referred to was marked "Exhibit No. 1414" and is included in the appendix on p. 4832.)

Mr. RAUSHENBUSH. At the time of sale to the American International Corporation, Mr. Parker, is it correct, as far as your information goes, that Mr. Mellon, who sold the corporation kept $7,500,000 in bonds, took that in part payment?

Mr. PARKER. The sale of the New York Shipbuilding Co. to the American International was for a cash consideration and bonds, which cash and bonds were distributed to the stockholders of the old company, in the old company's liquidation. Mr. Andrew W. Mellon and R. B. Mellon were the two largest stockholders in the New York Shipbuilding Co., and had received the greatest amount of cash and the greatest amount of bonds, approximately one-half of the bonds issued.

Mr. RAUSHENBUSH. The bond issue was how large?

Mr. PARKER. Seven and a half million.

Mr. RAUSHENBUSH. We have here a letter, Mr. Parker, from Mr. George J. Baldwin, the senior vice president of the American International, in which he describes to the Emergency Fleet Corporation the sale by Mr. Mellon to him and his corporation, and there is a paragraph in here which states [reading from "Exhibit No. 1415"]:

> In the negotiations which were so resumed at the conference of October 18, I presented very few arguments toward securing a reduction. My figure

$10,000,000 was based on $1,500,000 annual earnings and was eventually met by Mr Mellon's suggestion that "we split the difference $11,500,000" which I promptly agreed to, provided he would take $7,500,000 in bonds.

Mr. Parker. He was acting not for himself in that case, Mr. Raushenbush, but acting for the liquidating committee representing all the stockholders.

Mr. Raushenbush. Is it your understanding that he and his brother and his corporation took the larger share of those bonds, and, according to their larger stockholdings, and have kept them since?

Mr. Parker. Most of the bonds, I believe, have been kept by the original holders.

Mr. Raushenbush. That means, then, that the Mellon group still has the bonds of the New York Shipbuilding Corporation at present?

Mr. Parker. We have no means of saying accurately or definitely. We know to whom the bonds were issued from the bond numbers and in our reply to the committee's letter I have given as far as possible a list of the bondholders.

Mr. Raushenbush. There are two further statements in this letter which I want to put into the record for a purpose, describing the basis on which the company was bought. I simply want to read two paragraphs from this letter of Mr. Baldwin which I want to enter as "Exhibit No. 1415."

(The letter referred to was marked "Exhibit No. 1415" and is included in the appendix on p. 4847.)

Mr. Raushenbush. That letter reads in part as follows:

> We also had in mind the possibility of further profits from New Government work and new merchant construction. The latter possibility was particularly attractive by reason of the unusual profits then current in new merchant construction.

The letter later states:

> The trade was made, so far as we were concerned, with earnings, on the basis of profits in hand and to be earned, and we have not since learned of anything then existing which would have changed our estimates of profits.

I would like also to put in a reply from Mr. Mellon to Mr. Cuthrell of the Emergency Fleet Corporation, describing the same arrangement. I read:

> Later at a conference following the letter Mr. Baldwin stated that his people were desirous of acquiring the property but that it appeared to them from their examination, taking into consideration the nature of the contracts on hand, the available space for future contracts, that the prospective earnings would not be sufficient to justify the option price.

I would like to offer that as "Exhibit No. 1416."

(The letter referred to was marked "Exhibit No. 1416" and is included in the appendix on p. 4849.)

Mr. Raushenbush. It is fairly clear, is it not, Mr. Parker, that the purchasing group, the American International Corporation, was basing supposedly entirely on the earning capacity of the plant, according to Mr. Baldwin's letter to the Emergency Fleet Corporation?

Mr. Parker. The letter speaks for itself. I was not one of the purchasers. I do not know the purpose of purchase.

Mr. RAUSHENBUSH. You do know that profits of $2,929,573 accrued to the vending company as a result of the transaction, do you not?

Mr. PARKER. I do not recall the amount. There was a surplus to the liquidating committee.

Mr. RAUSHENBUSH. We find in the various Treasury files, and also in the company's protest, later on, the sum of $2,929,573. Did you not in fact receive from the Treasury, notices running through the years 1916 to 1929 that they were attempting to check the vendee company or new company on the profits made by the sellers?

Mr. PARKER. It was asserted against the new corporation. The profit, if there was a profit, made by the owners of the old company in the sale of that company.

Mr. RAUSHENBUSH. Yet, the Treasury was attempting, as you understand it, to assess some $58,000 plus against the purchaser?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. And the corporation properly protested that?

Mr. PARKER. Right.

Mr. RAUSHENBUSH. And finally it was barred by the statute of limitations. Is not that a correct statement of what happened?

Mr. PARKER. That is correct.

Mr. RAUSHENBUSH. Why do you suppose during those years in the twenties, when these transactions were going on, the Treasury did not try to tax the vending corporation, the Mellon corporation, which had sold the corporation to you?

Mr. PARKER. That is a matter that the Treasury Department will have to answer. I do not know why they did it, or did not.

Mr. RAUSHENBUSH. This profit of $2,929,000, which you had paid in excess of the value of the plant, the purchasing company had paid, that was immediately written onto the books, was it not; I mean distributed among the property? You tried to allocate that to ways and yards and the like, and did so allocate it almost immediately.

Mr. PARKER. The new corporation paid a certain price for the assets, plant, land, buildings, and all the price they paid for it was the price at which the new corporation set it up on its books.

Mr. RAUSHENBUSH. That price was $2,929,573 above the old price, and you then distributed it among various assets, assigned so much to this and so much to that, did you not?

Mr. PARKER. The corporation set it up on its books, and it did not make any difference at what it was held on the books of the previous company.

Mr. RAUSHENBUSH. But my point is, it did not set it up as goodwill?

Mr. PARKER. Not at all. It was an actual purchase of tangible property, a tangible asset.

Senator CLARK. Two and a quarter million dollars above what the old company carried it on its books?

Mr. PARKER. Exactly, sir.

Mr. RAUSHENBUSH. Almost $3,000,000, Senator.

All through the following years, when you were doing work for the Navy and the Emergency Fleet Corporation, you tried to depreciate that $2,929,000, did you not?

Mr. PARKER. I believe properly so.

Mr. RAUSHENBUSH. And to have that depreciated against the naval vessels and the Emergency Fleet Corporation vessels. You believe they did so?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. And you remember quite accurately, do you not, that both the Navy and the Emergency Fleet Corporation constantly insisted that was a nondepreciable item, a goodwill item that you had paid for?

Mr. PARKER. That is correct.

Mr. RAUSHENBUSH. So that for a period all through the war and later years, when the tax matters became important, there was a constant fight, let us say, between the company and the Navy and the Emergency Fleet Corporation and the Internal Revenue Department, on the question of whether or not the Government would really pay for that depreciation on the goodwill you had paid for?

Mr. PARKER. Not quite a fight, but, say, a conference.

Senator CLARK. A controversy, was it not?

The CHAIRMAN. Mr. Parker, you were connected, of course, with the corporation during the war?

Mr. PARKER. Yes, sir.

The CHAIRMAN. What was the attitude of the corporation when the war came? What was the attitude of the corporation in respect to cooperation with the Government? Was there a large will to cooperate fully?

Mr. PARKER. I believe so.

The CHAIRMAN. What was the thing that moved the corporation primarily in those days? Was it the matter of profit, or was it a matter of patriotic cooperation with the Government?

Mr. PARKER. Senator, if I may say so, for those old employees who have been in shipbuilding for many years, every one of them were moved more or less patriotically. There is not a man who has been in this game for any length of time who does not feel he is just as much a part of any division of Government operation as if he were commissioned or a civilian in the ranks of the Government.

New owners came in and the new owners may have been actuated by profit. The owners were not the operators. The operators of the yard, the management of the yard, were all old-time shipbuilders, and I know very well for them that they were actuated by truly patriotic motives.

The CHAIRMAN. You are not prepared to say that the new owners were actuated by patriotic purposes, are you?

Mr. PARKER. Not at all.

The CHAIRMAN. What is your inclination with respect to that? What was their attitude?

Mr. PARKER. I really do not know, sir.

The CHAIRMAN. Did you see any evidence that their motive was not a patriotic one?

Mr. PARKER. I believe that they were as patriotic as anyone could have been during that period.

The CHAIRMAN. And during the war you felt the corporation was lending patriotic cooperation to the Government?

Mr. PARKER. Yes, sir.

The CHAIRMAN. Do you see now where there might have been a more patriotic response than there was during those years?

Mr. PARKER. In hindsight you might find some things, Senator, that we could have done better, but the motivating influence and idea of everybody was to do all they could. That was our job, and we tried to do it.

The CHAIRMAN. Let us assume, now, that we were to enter war again. Do you feel that your company could be more patriotic than it was during the war?

Mr. PARKER. For the management and the personnel, I do not believe so.

The CHAIRMAN. You do not believe it could?

Mr. PARKER. No, sir.

The CHAIRMAN. All right, Mr. Raushenbush.

Mr. RAUSHENBUSH. You did not include the owners there, Mr. Parker?

Mr. PARKER. It was not in the question, Mr. Raushenbush.

Senator VANDENBERG. Who won this argument on depreciation between the Government and the company?

Mr. PARKER. There is always one winner in any controversy with the Government, and that is the Government.

Senator VANDENBERG. Did the Government win?

Mr. PARKER. Yes, sir.

Senator VANDENBERG. That is a novelty with respect to many of these contracts with respect to munitions.

Mr. RAUSHENBUSH. Let me ask you this question again, Mr. Parker:

Up to December 1926 the Government managed to keep you from capitalizing those items, did it not?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. What happened after that?

Mr. PARKER. The company was sold again.

Mr. RAUSHENBUSH. Then what happened to those items?

Mr. PARKER. We went into a new business.

Mr. RAUSHENBUSH. Yes; and then?

Mr. PARKER. The items were capitalized.

Mr. RAUSHENBUSH. The items were capitalized in 1926.

Senator VANDENBERG. In other words, the Government did not win?

Mr. PARKER. Yes; the Government did win.

Mr. RAUSHENBUSH. For a while.

Senator CLARK. You mean in 1926 the items represented by this $3,000,000 were capitalized? Is that what I understand? It was the $3,000,000 which was capitalized in 1926?

Mr. RAUSHENBUSH. Yes, sir.

Mr. PARKER. They were not the same items. They were different items, but equivalent in amount.

Senator CLARK. It was a balance which you were not able to take care of during that period?

Mr. PARKER. That is right.

Senator CLARK. You allocated it sometimes to one thing and sometimes to another, and finally got them capitalized in 1926?

Mr. PARKER. That did not affect the situation so far as the Government is concerned, the Government or Treasury Department never allowed depreciation up to this minute.

Senator CLARK. But if we were going into another war, on the basis of the allowance on plant capacity, the items representing nothing but goodwill would be in there?

Mr. PARKER. Senator, if you will let Mr. Raushenbush finish it, then along in 1931, we not only wrote off that $3,000,000 but wrote off $7,000,000 besides, so that our present situation is, instead of having $17,000,000 on the books, we have only $6,000,000.

Senator CLARK. What was the basis of that write-off?

Mr. PARKER. Putting the company in the proper set-up to carry on its function as a part of the national-defense system of this country. It was written off against surplus.

Senator CLARK. Do I understand up to that time you had approximately 50 percent of your capital which was not a proper rate base? Is that correct?

Mr. PARKER. Fifty percent or approximately.

Senator CLARK. You wrote off $7,000,000 out of $17,000,000. Is that correct?

Mr. PARKER. We wrote off nearly $10,000,000 out of $17,000,000.

Senator CLARK. You wrote off nearly $10,000,000, but in all these years back, including the war years, that had been in the base on which you figured your prices? Is that correct?

Mr. PARKER. No, sir.

Senator CLARK. Where did the $10,000,000 come from?

Mr. PARKER. The $10,000,000 represented the value on the books of the property placed in the plant for war work during that period, appraised, at various times, by engineers at reproductive cost. It was a good part obsolete property, not in operation, and it was not a good value to have on a clean balance sheet.

Senator CLARK. It had been in there during all these years, had it not?

Mr. PARKER. It was in use during the war.

Senator CLARK. It was in there as a part of your capitalization?

Mr. PARKER. It was in there as a part of our capitalization, during that period.

Senator CLARK. As the base?

Mr. PARKER. But the Treasury Department never allowed depreciation on it, because they allowed amortization in the first instance against war contracts.

Senator CLARK. I am not personally concerned with what you paid in income taxes, Mr. Parker, as much as I am your present financial set-up, which would go into the prices which you would charge the Government in the event of war, or, as a matter of fact, what you would charge the Government in time of peace on construction of ships.

Mr. PARKER. At the present time the capitalization is nominal, and these items have all been written off, and many others besides.

Mr. RAUSHENBUSH. You mean you had $10,000,000 of the property there on which the Government was not allowing any depreciation at all, if I gather your statement correctly.

Mr. PARKER. Approximately that; yes, sir.

Mr. RAUSHENBUSH. How much of that was property contributed by the Government during the war?

Mr. PARKER. Realize that that was property which had been amortized, and amortization had been allowed against the war-profits tax, 80 percent on our contracts.

Mr. RAUSHENBUSH. That still does not quite answer my question. You did get from the Emergency Fleet Corporation about $14,000,000 worth of property for about $500,000, did you not, and that was the exchange price there?

Mr. PARKER. I won't say $14,000,000 worth of property. We got property which may have cost the Shipping Board $14,000,000, but its worth was less than we paid for it.

Mr. RAUSHENBUSH. What I am trying to get at at the moment is, How much of that was in the $10,000,000 which you wrote off?

Mr. PARKER. Some part of it. I do not recall.

Senator BONE. What was the nature of that property which you acquired in that way? Ships?

Mr. PARKER. Oh, no. We owned land adjacent to the main plant, and, during the height of the war and the shipping program, the Shipping Board desired to use a part of that land in the construction of a new shipbuilding plant. The record will clearly show that we were adverse to that, and did not desire to do it, and we did not want it, and we did not think it was the economical thing to do, and we did not think it was a good thing from the management point of view. It gave us too much to do, to build a plant at the same time we were building ships. However, the Shipping Board insisted that it be done, and it was done.

The CHAIRMAN. Was there any delay in your complying with that request?

Mr. PARKER. I think the record will show in a number of letters where we did everything that was possible to avoid going into this program of plant construction along with ship construction.

The CHAIRMAN. How long from the time that the Government urged you to supervise the construction of that plant—how long was it before you complied?

Mr. PARKER. It was a very short while, Senator, because they said, "If you do not do it, we will commandeer your land and do it ourselves." So that it did not take very long for us to go along with them.

The CHAIRMAN. What time during the war was this?

Mr. PARKER. 1918.

Senator BONE. Was that to be a Government plant?

Mr. PARKER. That was to be a plant operated by the New York Shipbuilding Corporation management.

The CHAIRMAN. But the Government was to build it?

Mr. PARKER. The Government was to build it.

The CHAIRMAN. You were to supervise the building and you were to supervise the operations after it was completed?

Mr. PARKER. Yes, sir.

The CHAIRMAN. And yet the Government was forced to threaten commandeering?

Mr. PARKER. That is correct.

The CHAIRMAN. Before you would respond at that time?

Mr. PARKER. Because we felt, and which later proved to be the case, that the diversion of our activities to the construction of the plant would materially affect the completion of ships then under construction, and it did.

Senator BONE. What was the character of the ships then under construction?

Mr. PARKER. Destroyers for the Navy Department, which the Navy Department wanted at the earliest possible moment, and which delayed carrying through the destroyers and involved us in quite a controversy with the Navy Department because of the delay.

Mr. RAUSHENBUSH. Before you went into the construction of that $14,000,000 south yard did you and your company make an arrangement with Director General Schwab, of the Emergency Fleet Corporation, determining on what terms that would be given back or be sold to the company?

Mr. PARKER. There was an agreement made by which we would be permitted to repurchase the property on the basis of an appraisal or on the basis of earnings.

Mr. RAUSHENBUSH. So that before you acceded to this threat of the Government commandeering, an arrangement was made with Schwab, who was head of the Emergency Fleet Corporation, determining pretty definitely the terms on which you would get that at the end of the war. Is that not correct?

Mr. PARKER. That is right.

Mr. RAUSHENBUSH. In that connection, Mr. Chairman, I would like to read a letter from Charles J. Fay, of the firm of White & Case—White & Case have been your attorneys on these matters, have they not?

Mr. PARKER. Up to 1933.

Mr. RAUSHENBUSH. The letter is dated May 25, 1923, and is addressed to James W. Talbert, of the Emergency Fleet Corporation. [Reading from "Exhibit No. 1417":]

> DEAR MR. TALBERT: This is to confirm the appointment you gave Mr. Neeland and myself for Thursday morning, the 31st inst. Mr. Neeland and I will endeavor to be on hand promptly, and my thought is to be there at 9:45 a. m. (standard time). If you cannot see us at that time, we will wait until you are free.
>
> I enclose a memorandum regarding this plant-acquisition matter by the New York Ship of the improvements made at the cost of the Fleet.
>
> As the situation now stands, the acquisition arrangements (which was formulated in 1918 to avoid a possible war tax cash liability for the ways and shop improvements which Director General Schwab intended, and proposed, should be acquired by New York Ship without specific payment therefor but in the nature of a gift or added fee or compensation) was, and is, based on the improvements themselves, providing their valuation through earnings.

Does not that indicate fairly clearly that this whole arrangement by which you got the property, and in which the Emergency Fleet Corporation had sunk $14,000,000, for one-half million dollars, was determined before you went into that supervision of the construction of the yard?

Mr. PARKER. It was recognized at the time the work was undertaken that the land belonged to the New York Shipbuilding Corporation. The facilities placed on that land and attached to that land by the Shipping Board became a part of the realty.

Nevertheless, there was an agreement executed by which the Government would be paid for that on basis of the earnings, which earnings developed from the operation of that unit.

Mr. **Raushenbush**. So that there was not only the threat of commandeering, but there was a promise obtained from Mr. Schwab, as quoted, " in the nature of a gift or added fee or compensation " before you went into this?

Mr. **Parker**. That was not a motive to agree. That was rather a motive to make us avoid, because, if, by any chance, it was a fee on the construction, or if, by any chance, it was a gift, it would have been subject to tax, and we would be in position of having an obsolete, nonoperating plant, which would be subject to a high rate of income tax. It would be having a bear by the tail.

Mr. **Raushenbush**. The arrangement was to get around the tax there, by having that sort of an arrangement, and it should not be exactly a gift, but in the nature of a gift or added fee or compensation.

I would like to offer the letter for the record, as " Exhibit No. 1417."

(The letter referred to was marked " Exhibit No. 1417 " and is included in the appendix on p. 4850.)

Mr. **Raushenbush**. I would also like to offer for the record 2 letters, 1 being a letter from a Treasury Department official, dated December 2, 1929, telling the story of the 1916 income taxes, 13 years before, as " Exhibit No. 1418 "; and also, as " Exhibit No. 1419 ", excerpt from company's protest against 1917–21 taxes, filed November 1927, dealing with the profit of $2,929,000, and the question of its depreciation.

(The letters referred to were marked, respectively, " Exhibit No. 1418 " and " Exhibit No. 1419 ", and are included in the appendix on pp. 4851 and 4852.)

Senator **Vandenberg**. Mr. Parker, from your information will you tell me when you made this purchase for $500,000 from the Shipping Board, at what price you carried the purchase on the books?

Mr. **Parker**. At the time we made the purchase we put it on the books at the actual cost, the cash we paid plus the amounts that we allowed the Shipping Board in the settlement with the Shipping Board, somewhere in the neighborhood of about $750,000.

Senator **Vandenberg**. All right.

Mr. **Raushenbush**. Then how could you later depreciate a large part of the $10,000,000 out of that? When was the rest of it put on the books?

Mr. **Parker**. After the revamping of the New York Shipbuilding Corporation in 1925, when it became the American-Brown-Boveri Electric Corporation.

Senator **Vandenberg**. You mean these values were restored to the books at some time on the larger basis?

Mr. **Parker**. On the basis of the appraisal made at that time?

Senator **Vandenberg**. What was that figure?

Mr. **Parker**. I do not recall the figure.

Senator **Vandenberg**. About what value?

Mr. **Parker**. Approximately $2,000,000, between 2 and 3 million dollars.

Senator VANDENBERG. When was this appraisal?

Mr. PARKER. 1925.

Senator VANDENBERG. When was it purchased from the Shipping Board?

Mr. PARKER. About 1922.

Mr. RAUSHENBUSH. It was 1922 or 1923?

Mr. PARKER. About 1922.

Senator VANDENBERG. You bought for one-half million dollars in 1922 that which was subsequently appraised at 2-million-and-odd dollars, 3 years later?

Mr. PARKER. It is only fair to realize that that appraisal was based on the use of these facilities, for another kind of business. The New York Shipbuilding Corporation in 1925 had not received any naval work for several years. There was no naval work received from the war period, which terminated with the Limitation of Arms Conference in 1922, until we took over the first of the cruisers from Cramps, after the Cramps Co. had defaulted on their cruiser contract. The only thing in process in the yard was the completion of the airplane carrier *Saratoga.*

So that the plan of the purchasers in 1925 was to abandon shipbuilding entirely and go into the electrical business, and the facilities, the buildings, and so forth, were appraised on basis of use in the electrical business, which accounts for the write-up.

Mr. RAUSHENBUSH. By whom was the appraisal made?

Mr. PARKER. In 1925?

Mr. RAUSHENBUSH. Yes.

Senator BONE. Mr. Parker, assuming that those facilities would be available in an expanded shipbuilding program, what would that property legitimately be worth?

Mr. PARKER. I have not the slightest idea, Senator. It would have to be appraised.

Senator BONE. Can you not express an opinion as to its possible value? This Government is going into a very elaborate program of building naval vessels now. The plant assumes more value in the face of that, if you secure new contracts.

Mr. PARKER. If the facilities which we have could be put into active and continuous operation, it would certainly enhance their values. How much, I do not know. It would depend entirely on the use and the length of the use.

Mr. RAUSHENBUSH. In case there were another war-time emergency, you could put the South Yard into use, after some repairs, could you not?

Mr. PARKER. It would be major repairs.

Mr. RAUSHENBUSH. I noticed in your various descriptions of the company you treat the South Yard as an asset very definitely.

Mr. PARKER. That is true.

Mr. RAUSHENBUSH. If there are no further questions on that matter, I would like to get into the questions of war profits now, and I want to offer as "Exhibit No. 1420" a letter received from the Treasury Department by one of our investigators, giving the invested capital for the years 1917 to 1921, the taxable net income, and the tax liability. That, I take it, agrees with your own figures. Do you want to look them over? I mean before final settlement.

Mr. PARKER. I have no way of checking them now, Mr. Raushenbush.

Mr. RAUSHENBUSH. If you find any discrepancies, will you please call them to our attention, because that is the Treasury's statement of the tax actually paid and the invested capital actually agreed upon.

We have here also copies of your corporation income-tax returns, showing the amount of these various items, taxes and profits and invested capital, which you reported, and, if you want to use those to check the figures as we go along, they are there for your use.

(The letter from the Treasury Department referred to was marked "Exhibit No. 1420" and is included in the appendix on p. 4852.)

Mr. RAUSHENBUSH. The company's returns are shown here on these income-tax returns which you filed, of which these are photostats, and the final settlements agreed on by the Treasury and yourselves are shown in the letter just put in evidence as "Exhibit No. 1420", and our search of the files of the Bureau of Internal Revenue in the matter indicates that in 1926 there was a further set of figures compiled by the revenue agents there.

Mr. Chairman, I would like to call for just a moment the accountant who had to do with those files in the Treasury Department, to testify as to these 1926 findings of the Treasury. May I do so?

The CHAIRMAN. Yes, sir.

TESTIMONY OF WALTER G. MITCHELL

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Will you give us your full name for the record?

Mr. MITCHELL. Walter G. Mitchell.

Mr. RAUSHENBUSH. Mr. Mitchell, you are an accountant for the committee?

Mr. MITCHELL. Yes, sir.

Mr. RAUSHENBUSH. You examined, under orders, the files of the Treasury dealing with the New York Shipbuilding Corporation?

Mr. MITCHELL. Yes, sir.

Mr. RAUSHENBUSH. How big are those files?

Mr. MITCHELL. At present the accumulated papers fill two drawers, and I would say the papers altogether weigh about 100 pounds.

Mr. RAUSHENBUSH. You went through that 100 pounds of papers?

Mr. MITCHELL. Yes, sir.

Mr. RAUSHENBUSH. Will you tell us what you found?

Senator VANDENBERG. How long did it take you?

Mr. MITCHELL. I made a brief summary at the finish, and probably spent 8 or 10 days on it in all.

Mr. RAUSHENBUSH. Senator, we do not want to give the impression that we have made an adequate summary of all the history back and forth between the Treasury and the New York Shipbuilding Co.

Mr. Mitchell, you found that in 1926, did you not, the revenue agents made certain reports or findings as to the invested capital of the company and the income and taxes?

Mr. MITCHELL. They started their work in the latter part of 1926 and the report was probably not rendered until the middle of 1927.

Mr. Raushenbush. Will you please state what those findings were for the years 1918, 1919, 1920, and 1921?

Mr. Mitchell. Yes, sir; their examination really covered the years 1917 to 1921. They made very large adjustments of the net income shown on the books and also on the invested capital. Do you want those detailed by years, Mr. Raushenbush?

Mr. Raushenbush. Please.

Mr. Mitchell. In 1917 the net income was shown by the books to be $1,791,449.42. They decreased that in the sum of $970,504.88, showing a corrected net income of $820,944.54.

In 1918 the net income per the books was $378,358.29. They increased that $4,185,485.90, showing a corrected net income for that year of $4,563,844.19.

For the year 1919 the net income, per the books, was $1,401,792.40. They increased that $5,094,120.91, showing a corrected figure of $6,495,913.31.

In the year 1920 the books showed $2,826,698.25, and they made an increase in that of $5,882,000——

The Chairman. When you say "they", Mr. Mitchell, whom do you mean?

Mr. Mitchell. The two revenue agents, Messrs. Cavanaugh and Elliott.

The increase for 1920 was $5,882,196.26. The correct showing was $8,708,894.51.

Senator Bone. Is that the net income?

Mr. Mitchell. Yes, sir; the corrected net income.

In 1921 the books showed $2,046,559.92, and their increase there was $1,660,800.67, and the corrected showing was $3,707,360.59.

The totals for those years, 1917 to 1921, show as follows:

The book net income for the 5 years was $8,444,858.28. The total net additions by the revenue agents were $15,852,098.86, showing a corrected net income for the period of $24,296,957.14.

Do you want the invested capital adjustments?

Senator Vandenberg. Are those the figures on which tax was finally collected?

Mr. Mitchell. No, sir; they were not. After numerous conferences, there was a settlement and compromise.

Senator Vandenberg. Are we going to have those figures, Mr. Raushenbush?

Mr. Raushenbush. We have already put those into the record, Senator, under the heading of "Exhibit No. 1420", I believe it is, in which the Treasury informed us of the final settlement.

Senator Bone. Mr. Mitchell, I note here that in taxes for the year 1918 there was a final settlement in 1928. Did it take 10 years to make that adjustment?

Mr. Mitchell. Yes, sir.

Senator Bone. Ten years?

Mr. Mitchell. Yes, sir.

Senator Vandenberg. Is the entire argument one respecting invested capital all the time?

Mr. Mitchell. What is that, Senator?

Senator Vandenberg. Is the entire argument the one involving the figure of invested capital?

Mr. MITCHELL. No; that is a minor matter. The large one was the net income, the figures for which I just read. Their invested capital was comparatively small as compared with net-income adjustment.

Mr. RAUSHENBUSH. Before you proceed, Mr. Mitchell, I would like to offer a compilation as an exhibit, because I want to offer this for observation while the discussion continues on it. This will be "Exhibit No. 1421."

(The statement referred to was marked "Exhibit No. 1421" and is included in the appendix on p. 4854.)

Mr. RAUSHENBUSH. Mr. Mitchell, in arriving at these very great changes in income, with the subsequent great changes in taxes in the various years, the revenue agents disallowed a great many items which the company had charged up to expenses, did they not?

Mr. MITCHELL. They did.

Mr. RAUSHENBUSH. Would you please pick out some of the larger ones of those disallowances during those years, and describe what it is about? That is very important in the committee's attempt to limit war profits or profits after war, whatever it is in this case, and if you can give us what sort of things the company tried to get in as expenses, and that the revenue agents, who are qualified and competent, think should be thrown out, that would be appreciated.

Senator VANDENBERG. Before he answers that, may I ask whether they are operating on cost-plus contracts or on negotiated contracts?

Mr. RAUSHENBUSH. Mr. Parker can answer that.

Senator VANDENBERG. Mr. Parker?

Mr. PARKER. We are operating on flat-price contracts now.

Senator VANDENBERG. At the time of the 5-year period, were you on a cost-plus basis or were you on a bid contract basis?

Mr. PARKER. Cost-plus basis for the period 1917 to 1922. Is that the period you had in mind?

Senator VANDENBERG. Yes. Then this controversy involves an interpretation of cost-plus contracts, as I understand it. Go ahead, Mr. Mitchell.

Mr. MITCHELL. One of the items consisted of amounts charged to expense, representing wages unclaimed by workmen, and the revenue agents found there was no supporting data, $201,064.29. These are figures for the whole 5 years, of course.

Depreciation deducted on the appreciation of the plant for the years previously mentioned, also on amortized property, $1,910,651.24.

Capital assets charged to expenses, which were disallowed by the United States Navy and the Emergency Fleet Corporation, $1,558,762.35.

Senator VANDENBERG. Do you know anything about what type of items those were?

Mr. MITCHELL. No; I do not. There are numerous schedules over in the Treasury Department, possibly 100 pages in all.

Mr. RAUSHENBUSH. What item is that, Mr. Mitchell?

Mr. MITCHELL. That is the capital assets charged to expenses and disallowed by the Navy and the Emergency Fleet Corporation.

Senator VANDENBERG. Do you know that, Mr. Parker?

Mr. PARKER. There were repair items, which they claimed extended the useful life of the buildings or apparatus, our contention being that with the completion of the war program, there was certain to be a 5- or 10-year lapse of shipbuilding, and that the repairs were only necessary for the program then in hand, and they were so charged for the items of expense, and subsequent events proved our point, and they were expense items and not capital items.

Senator VANDENBERG. Were your cost-plus contracts specific in defining how you should arrive at the basic cost figures?

Mr. PARKER. The actual cost was to be subjected to audit by the Navy Department or the Shipping Board, for whom the ships were being built, and their findings were final, so far as we were concerned, subject to where we could get them to agree on the proper items of cost.

Senator VANDENBERG. There was nothing in the cost-plus contract which tied the cost into your previous cost experience in any way?

Mr. PARKER. No.

Senator VANDENBERG. In other words, your peace-time operation had no bearing whatever—your peace-time operations costs had no bearing whatever upon the costs which were to be allowed in your war-time operation?

Mr. PARKER. The costs were to be as determined by the Navy Department or the Shipping Board.

Senator VANDENBERG. Go ahead, Mr. Mitchell.

Mr. MITCHELL. The company set aside a reserve for disallowances, and the amounts set up in that reserve were charged to expense. Those items covered items disallowed by the Navy and Emergency Fleet Corporation. The total of those for the years 1917 to 1921 was $3.597,844.09.

Mr. RAUSHENBUSH. Mr. Mitchell, let me interrupt there a minute.

Mr. Chairman, I have here an exhibit,[1] a report of redetermination of amortization claim, compiled by the Emergency Fleet Corporation, showing in a little detail some of the items which the company apparently attempted to charge into expense and which the Emergency Fleet Corporation auditors threw out under the heading Mr. Mitchell is just reading. Is not this the one?

Mr. MITCHELL. Yes, sir.

Mr. RAUSHENBUSH. For instance, income taxes, $377,000, is put in there and thrown out. The hire of special services—Pinkerton, and so forth—$52,918.30, was put in by the company and thrown out.

Senator CLARK. You mean they tried to put in expenses as a part of the rate base.

Mr. RAUSHENBUSH. No, as a part of the expenses the Emergency Fleet Corporation should pay $377,004.56 for income tax; donations. $32,457.67; athletic expenses, welfare expenses; Chinese representative, $2,000; cigars, wines, and liquors, $17,651.06.

This was a charge not against the Navy but the Emergency Fleet Corporation.

Senator VANDENBERG. You mean these are charges against the cost basis or cost-plus contract?

Mr. RAUSHENBUSH. Yes, sir.

Senator CLARK. In other words, their remuneration was to be figured on basis of a percentage of cost, and these are some of the items—cigars, wines, and liquors, Chinese representative, and the income taxes—which were shown to be put in as part of the cost of operation, on which they were to figure their percentage of return.

---

[1] Introduced later as "Exhibit No. 1422", see p. 4555.

Mr. Raushenbush. As we understand it. By the way, in that connection, Mr. Parker, that $15,651.06 for wines, cigars, and liquors, did that cover a launching? I mean, a trial trip? Were those expenses in connection with a trial trip?

Mr. Parker. They may have been. They may have been for launching or trial trips or wines and liquors, during the period of construction.

Mr. Raushenbush. Do you still follow this procedure of having the expenses of trial trips charged up against the purchasers of a ship?

Mr. Parker. It is charged to the cost of the ship; yes, sir.

Mr. Raushenbush. In other words, you do have, on all these trial trips, a large group of friends and well-wishers from all over the country, going along on those trips, and even today, for instance, when the Manhattan went out, did you have a similar bill for wines, liquors, and cigars?

Mr. Parker. Undoubtedly; yes, sir.

Mr. Raushenbush. And was that charged up against the cost of the ship?

Mr. Parker. Yes, sir.

Senator Barbour. As I understand it, Mr. Secretary, these items were not allowed.

Mr. Raushenbush. No, sir. This was an attempt by the company to get them allowed.

Senator Barbour. They were not allowed finally, and there was no attempt made to conceal them. In other words, they are listed under these different things, and the Government could throw out any they liked, and they did.

Mr. Raushenbush. As to the attempts to conceal, we are going to get into that a little later.

Senator Barbour. As far as this list is concerned, it is all there?

Mr. Raushenbush. It was found after some difficulty by the Emergency Fleet Corporation auditors. They have also Christmas presents in there for $5,300, Japanese representative, $3,000, and other items, totaling, altogether, I do not know how much, but over one-half million dollars, which I think was disallowed.

Senator Vandenberg. What is the date of the settlement on this?

Mr. Raushenbush. The revenue agents in 1926 went over, as we get the story, the returns from 1918 on through 1921, and at that point disallowed for revenue purposes these various items. Now, we will bring out that in some cases the Navy, and in some cases the Emergency Fleet Corporation, had paid some such improper items. and it was only after check——

Senator Clark. Do you mean Christmas presents, wines, cigars, and liquors?

Mr. Raushenbush. These different items. It was only after check on the part of the Revenue Department agents, after quite a while. that these items were disallowed. That is the story as we get it. is it not, Mr. Mitchell?

Mr. Mitchell. Yes, sir.

Senator Bone. This item of $900,000-plus, allowed for depreciation was deducted from the total amount of income tax which they paid. Is that correct?

Mr. Mitchell. That is charged in as one of the items of expense from the gross income to arrive at the net income subject to tax.

Senator Bone. In other words, it is deducted from the gross income?

Mr. Mitchell. Yes, sir.

The Chairman. Mr. Parker, what is the reference to the engagement of Chinese and Japanese representatives? How would any such engagement enter into costs?

Mr. Parker. Administrative expense which is pro rated to the cost. The salary of them——

The Chairman. What would they have to do with shipbuilding?

Senator Barbour. What were their duties?

Mr. Parker. As a matter of fact, they had a lot to do with shipbuilding and a lot to do with cost-plus contracts, because the Japanese representative managed to pull out of the fire a Japanese tanker job for construction up in that yard, with a cost-plus contract, under which we might reduce the cost of that ship by absorbing a part of the overhead, and a sizable part of the overhead, which otherwise would have been charged directly to the cost-plus contract, since it was the only one left.

The Chairman. You were building, of course, for the Japanese, as well as for the United States Government at that time?

Mr. Parker. Yes, sir.

Mr. Raushenbush. What did they have to do with the expenses of the Emergency Fleet Corporation?

Mr. Parker. The salary of the Chinese representative or Japanese representative was a part of the administrative expense, the same as the president's salary, or the vice president's salary, all of which is pro rated on the basis of the actual production of the plant, that is, the actual construction in the plant.

Mr. Raushenbush. Could you not charge that up to that company instead of having the Emergency Fleet Corporation pay for part of it?

Mr. Parker. The Emergency Fleet Corporation paid part of it because it was part of the general salaries that were paid during the period of the emergency fleet construction.

Senator Bone. Do you consider cost of doing business with Japan a proper charge against the cost of a ship made for this Government?

Mr. Parker. Since it is offset by this one, by the benefits of the Japanese contract.

Senator Bone. I am curious about this aspect of it: Were the wines and liquors bought and served during prohibition?

Mr. Parker. No, sir; that was before prohibition.

Senator Vandenberg. Mr. Parker, when you went into a cost-plus Government contract, did you maintain the same overheads as you did on your regular contracts preceding or was there an increase in compensation to officers, and so forth?

Mr. Parker. That was an increase in all rates of pay, beginning in 1917, and covered the labor, the mechanics, the skilled and un-skilled white-collar men, and all the way up the line, because everybody's wages and salaries increased during the war period.

Senator VANDENBERG. For instance, the general officers of the company charged higher salaries against the cost-plus contracts than had previously existed?

Mr. PARKER. True.

Senator CLARK. It was a sort of "adjusted compensation"?

Mr. PARKER. That is a part of the disallowance, incidentally. You will find the president's salary was disallowed, the increase.

Senator VANDENBERG. For instance, what was the president's salary increase?

Mr. PARKER. I do not recall that.

Senator VANDENBERG. Do you not remember in a general way?

Mr. PARKER. All salaries were increased anywhere from 50 to 75 or maybe 100 percent. The president's salary increased, but how much I do not recall.

Senator VANDENBERG. They were increased all the way up to 100 percent the moment you had a cost-plus contract with the Government. Is that correct?

Mr. PARKER. That is correct. But, Senator, in fairness——

Senator VANDENBERG. I want to be fair about it.

Mr. PARKER. Just who made the increase and who ordered the increase?

Senator VANDENBERG. Who did?

Mr. PARKER. There was a Ship Labor Adjustment Board, which was made up of the representatives of the Navy Department, the Shipping Board, and the builders.

Senator BONE. Can you give the names of the gentlemen composing that board?

The CHAIRMAN. Just a minute.

Mr. PARKER. It was called the "Macy Board." They fixed the rate of pay, and we paid them, on instructions from the customers, the Shipping Board, or the Navy Department.

Senator VANDENBERG. You mean the Macy Board told you to increase the president's salary 100 percent?

Mr. PARKER. No; it was all the wages; all the white-collared people and draftsmen, and the officers and administrative staff were increased correspondingly.

Senator VANDENBERG. That was done on your own volition?

Mr. PARKER. Yes, sir.

Senator CLARK. Do you know about what the president's salary was before this increase came along?

Mr. PARKER. I do not know, Senator.

Senator CLARK. Was it as much as $50,000?

Mr. PARKER. I really do not remember.

Senator CLARK. You must know, as treasurer of the company.

Mr. PARKER. I was not at that time, sir.

Senator CLARK. You were in the treasurer's office at that time, were you not?

Mr. PARKER. Yes, sir.

Senator CLARK. You must have had some intimation within, say, 15 or 20 thousand dollars of what the salary was that the president was getting.

Mr. PARKER. I probably did at that time, but the president's salary is a matter of record, kept by the treasurer, and it is not passed down beyond him, and I was not the treasurer at that time.

Senator CLARK. You have no vestige of recollection which would enable you to give within 15 or 20 thousand dollars of what the president's salary was before it was doubled in that way?

Mr. PARKER. I would not say it was doubled.

Senator CLARK. Before it was enormously increased, in any event.

Senator VANDENBERG. Mr. Parker, if you were to have one of these engagements to build one of these ships for the Government, on a private-contract basis, instead of a cost-plus basis, would not many of these increases have been obviated? In other words, were they not the inevitable result of the invitation of the cost-plus contract?

Mr. PARKER. No, sir. What would have happened—there were new shipyards being built all around the country. After all, a shipyard is only as good as its management. We had the old skilled merchant shipbuilders. They built new shipyards, at Bristol, Hog Island, down the Lakes, and there was a constant demand on our management, and they were trying to take every man away from us, offering them salaries more than double, more than 100 percent, and in many cases it was the loyalty of the men to the company that made them refuse offers at much higher salaries to go to the new yards so that the increase in salaries was absolutely necessary.

Senator CLARK. That was at a time when men were being drafted to fight abroad for $1.25, was it not?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. Will you continue, Mr. Mitchell, with the disallowances?

The CHAIRMAN. Just one moment. If salaries were increased 50 and 100 percent, what have they been decreased since the war?

Mr. PARKER. They have never been decreased to a point where they were before the war.

The CHAIRMAN. How about the executives of the corporation?

Mr. PARKER. That would go for the executives and the wage earners as well. They have never been reduced to the point they were before.

Senator BONE. Can you designate the personnel of the Macy board? Do you recall who the members were?

Mr. PARKER. I do not, Senator. I recall Macy was the head of the board.

Mr. RAUSHENBUSH. What Macy is that?

Senator BONE. Did they have anything to do with the Army as well as the Navy?

Mr. PARKER. I really do not know. They called it the "Ship Labor Adjustment Board", so that I assume they were exclusively dealing with shipyards.

Senator BONE. It had to do exclusively with the building of ships, then, you think?

Mr. PARKER. I believe it did.

Senator BONE. You were compelled, I take it, then, to submit your salary and wage schedules to the Macy board for approval?

Mr. PARKER. They submitted us a schedule which we had to pay.

Senator Bone. In other words, you acted on direction of the Macy board, which was a governmental agency?

Mr. Parker. That is correct.

Senator Clark. That did not include the executives of the company?

Mr. Parker. That did not include the executives of the company.

Senator Clark. You did that on your own motion?

Mr. Parker. Yes, sir.

Senator Bone. So that we get the record straight, the Macy board made directions only as to wage earners?

Mr. Parker. Draftsmen.

Senator Bone. Men other than executives in the shipyards?

Mr. Parker. That is right.

Senator Vandenberg. Suppose the cost-plus formula had required everybody to cling to their peace-time costs, so that you would not have been in competition in the feature you were talking about: Would it have been possible, under such a general rule, to have saved a great deal of these tilted prices?

Mr. Parker. The reason for the organization of the Macy board was a strike, because the costs of living were increasing by leaps and bounds, and wages were not covering people in connection with increasing costs of living. A strike took place, which was the cause of the formation of the Macy board, and various employees in the various shipyards were told to return to work; that the board would consider their case when they reached it, and that any decision would be retroactive from that date.

In our particular case it took something like, I believe, 7 months before we finally got to a conclusion, and we paid back pay for that period.

Senator Vandenberg. Do you remember, in a general way, what you paid, let us say, general labor under the Macy board award?

Mr. Parker. Labor who pre-war had been receiving probably 30 cents an hour was paid about 65 cents an hour, at the high point of the Macy board.

Senator Vandenberg. Did some of your labor get up into the 15- and 20-dollar-a-day bracket?

Mr. Parker. That is based on a regular day. Where they were working, as we were those days, making from 80 to 120 hours a week, they did; yes, sir.

Senator Bone. The average wage for a manual worker in a shipyard, for an average time, was around $5. The great bulk of them got around $5 a day?

Mr. Parker. 54 cents an hour; yes, sir; about that.

Senator Bone. I happen to recall that very vividly because I was counsel for labor groups in my city at that time.

Mr. Raushenbush. Will you continue, Mr. Mitchell?

Mr. Mitchell. Amortization was claimed by the company in the amount of $3,620,234.68, but was allowed by the Internal Revenue Department in the amount of $2,543,588.44. The difference was disallowed by the Treasury Department, in the amount of $1,076,646.24.

Special rental received from the United States Navy, which was buried in accounts payable, instead of showing in profit and loss, in the amount of $103,689.18. That was restored to income by the Treasury Department.

Extra compensation paid, which was disallowed as excessive by the Navy in the amount for the 5 years of $1,349,199.

In determining the estimated earning profit on uncompleted contracts, the company used a certain percentage as indicating the percentage of completion; but the revenue agents went to the records of the United States Navy and used their percentages instead, which resulted in a disallowance and addition to income of $4,281,369.78.

The Emergency Fleet Corporation entered into an agreement with the company whereby they were to pay a flat overhead rate of 50 percent, based on direct labor. The actual overhead was less than that, and the computations of the revenue agents show that the company made an excess profit there of $2,152,976.81, which they have added back to income.

Senator VANDENBERG. Just a minute. I do not quite understand this 50 percent. Will you describe that to me again, please?

Mr. MITCHELL. In order to avoid a lot of controversy as to what items went into overhead, such as these claimed capital items, and so forth, the Emergency Fleet Corporation entered into a special contract with the company, agreeing to pay them, without examination of their records, 50 percent of their direct labor as an overhead expense. The revenue agents figured that the actual overhead ran between 40 and 42 or 44 percent, and the difference between those figures over this entire period amounted to that figure.

Senator VANDENBERG. Does that mean that the original cost-plus contemplation was an overhead allowance of 50 percent of the other items?

Mr. MITCHELL. That was not the original figure. I believe it was just cost, material, labor, and overhead, plus the percentage figure for profit. But they immediately got into such an argument with the company over all these items that they determined upon this flat allowance.

Senator BONE. Mr. Chairman, is it possible for us to have inserted in the record at this point a typical cost-plus contract?

The CHAIRMAN. Do we have such, Mr. Raushenbush?

Mr. RAUSHENBUSH. We could insert here the contract with the Emergency Fleet Corporation.

Senator BONE. Is that a cost-plus contract?

Mr. RAUSHENBUSH. That is a cost-plus contract, is it not?

Mr. PARKER. What ship is it for? Is that the supplemental contract covering all of the ships or just one ship?

Mr. RAUSHENBUSH. Settlement agreement, supplemental contract no. 151.

Mr. PARKER. It is a supplement and not a ship contract.

Senator BONE. I would like to have a typical cost-plus contract inserted in the record so that those who are interested can see exactly the character of such a contract.[1]

Mr. RAUSHENBUSH. We can do that, and we can put this supplemental contract[2] in at the same time, describing these overhead charges.

Mr. PARKER. May I make an observation?

Mr. RAUSHENBUSH. On the point he is on?

---

[1] Typical cost-plus contract appears in appendix, p. 4927.

[2] Supplement Contract No. 151 was entered as "Exhibit No. 1431", see text, p. 4587.

Mr. Parker. No. He made use of an expression that it was "buried."

Mr. Raushenbush. Go ahead.

Mr. Parker wants to comment on what you said, Mr. Mitchell.

Mr. Parker. Mr. Mitchell, may I ask why the expression "buried in accounts payable" is used there? Is that your expression—or what?

Mr. Mitchell. I saw it in the income-tax papers, some place, but other places on the revenue agents' report it is described as "credited to accounts payable."

Mr. Parker. You used the expression "buried"?

Mr. Mitchell. I saw that in some of the correspondence over there.

Mr. Parker. I would like to comment on that, if I may, Mr. Raushenbush.

Mr. Raushenbush. Go ahead.

Mr. Parker. The special-rental provision was a provision by which we installed certain facilities; and there was paid a percentage of the cost of that installation, the final payment to be determined upon appraisal by the Navy Department of the then use of the facilities. And it was quite possible that any moneys we had received in payment or part payment for those facilities would have to be repaid to the Navy Department, if the appraisal showed that those facilities were not fully used and available for subsequent use. Therefore, that is a proper account payable to the Navy Department, and the contingent liability to be paid, and was so carried on the books. The fact that we carried it that way—and the Navy Department finally allowed us that amount—made it a proper item to be credited to surplus. But it was not "buried" in any sense.

Mr. Mitchell. I have not attempted to check into the merits of any items but to summarize the revenue agents' reports.

Mr. Parker. I am objecting to the word "buried."

Mr. Raushenbush. You are not saying that everything the Navy agreed to was a proper charge, are you, Mr. Parker?

Mr. Parker. Did you understand my explanation?

Mr. Raushenbush. In the course of your explanation you made some statement that because the Navy found later on that was right, and paid it, that made it right, in which case I would like to bring out evidence of the fact that the Navy had been paying you a certain amount of charges which were later disallowed under computation of the Treasury Department.

Mr. Parker. Under the provision of the special rental, the amount the Navy paid us was subject to final determination on the completion of the contract, and any amounts so paid would possibly be paid 100 percent to the Navy, depending upon their findings at that time. Therefore it was a proper contingent liability, to be so carried.

Mr. Mitchell. There were a few items on the other side, showing deduction from income made by the revenue agents. There were certain revenues during the progress of these contracts which the company decided to retain for itself, but the Navy later claimed them as a deduction from the contract price. They consisted of a cash discount of $142,398.86, interest on deposits, $111,024.55, proceeds of sales of scrap, $1,001,350.86.

Mr. RAUSHENBUSH. Could you summarize that, Mr. Mitchell, by saying how much during these 4 years was restored to income by these revenue agents?

Mr. MITCHELL. Yes.

Mr. RAUSHENBUSH. The net, now.

Mr. MITCHELL. The net addition to the income was $15,852,098.86.

Mr. RAUSHENBUSH. Mr. Chairman, at this point I would like to call attention to "Exhibit No. 1421", which was put in showing a comparison between the three sets of figures: (1) The company's return; (2) the revenue agents' findings; and (3) the final settlement in 1928; and showing so far as the attempt to determine taxes goes, the terrifically large fluctuation all the way through there. In 1918, for example, the revenue agents found a net income four times as big as the company reported, and suggested proposed taxes four times as big as the company reported.

In 1919 they found an income four times as large as the company reported, and proposed taxes which would have worked out, under the taxation laws at the time, roughly eight times as large as the company reported.

In 1920 they found an income two or three times as large as the company reported, and proposed taxes four to five times as large.

In 1921 the tax increase over the company's return would have amounted to—or their income would have been more than about 50 percent, and the taxes would have amounted to about four times as much. In other words, it was about this figure of 14 or 15 million dollars which they tried to add onto the taxes in 1926.

Now, they did not succeed in doing that, and I think we are rather interested, Mr. Parker, in having you tell us how this final settlement in 1928 came about. What conferences were called, where you were there, what pressure you used, what people you brought in to help you, and the like, to get that final settlement which reduced the taxes from the 1926 report to the point that they were finally reduced? Will you tell us about that?

Mr. PARKER. The tax matter at the time this was brought out was turned over to the firm of Larkin, Rathbone & Perry, New York City, who conducted the entire negotiation up to the point of final compromise.

The final compromise was worked out, I believe, between the then chairman of the shipbuilding division, Mr. L. R. Wilder and Mr. Charest, the general counsel of the Revenue Department.

The CHAIRMAN. Mr. Raushenbush, in a study in December of the existing war plans for the next year, was there any evidence at all indicating a plan to get away from the injustices that had been done during the last war? That is, were those who made the plans evidently striving to do away with any of these practices that grew up in the last war?

Mr. RAUSHENBUSH. Of course, I can give certain impressions about what those plans amounted to.

The significance of this information, to my mind, Mr. Chairman, is this: That those plans, at the best, are theoretical guesses as to what can or cannot be done in another war, and here you have a story of what actually happened, not only during the last war, so far as the financial matters go, but in the many, many years dragging along afterwards. The matters were not finally settled until 1928, and we are just trying to develop the story of what happened within a year after the revenue agents had reported an increased income of about 14 to 15 million dollars, how it happened, and the increase in taxation of about $11,000,000, how it happened just a year or so later it was lowered down to such an extent.

That is, the actual working out of an attempt to tax war profits.

Senator VANDENBERG. Also an exhibit of what the cost-plus contract contemplates.

The CHAIRMAN. It was that which I had in mind in asking whether there was anything about the new plans which recognized the abuse of the cost-plus contract in the World War.

Mr. RAUSHENBUSH. We are not at all through with the story here of what happened during all these years, and what did not happen during all these years, which might have been expected to have happened. But the significance of the story, Mr. Chairman, as I get it, is that with taxes far lower than are being proposed, in the war years there was a conflict between honest men in the Government and honest men in the shipbuilding company, with the result of 2 sets of findings that had a range in one item of 5 times as large as the other, I mean one finding was 5 times as large, and with that ratio was running all the way through, and with 1 of them it was 8 times as large.

The final range in taxes reported by the company was about 2 and the taxes proposed by the revenue agents was about 14 million, which shows the terrific difficulty of even trying to levy taxes, as reasonably mild as the taxes were in the last war.

Senator BONE. What was the profit allowed under these cost-plus contracts?

Mr. RAUSHENBUSH. Cost plus 10 percent.

Senator BONE. Have you any studies, Mr. Raushenbush, indicating what overheads were allowed as operating expenses?

Mr. RAUSHENBUSH. Well, sir, we come to that in just a moment. I do not know whether we will have time this morning, but when we have the Emergency Fleet Corporation men commenting on a contract that was made with the Emergency Fleet Corporation, in which they agreed to pay 50 percent of the overhead, it will be shown. And the comments are very definite on the point which you are raising, and I think very interesting in that connection.

Before we close this morning, I would like to have a fuller story, if we may have it, as to how it happened that from 1920 on up to 1926 there was practically no effort made to increase these taxes, and how substantially in 1926 it happened. Was that, sir, because of a change in the control of the company?

Mr. PARKER. I do not know. There was a change in the company in 1925.

Mr. RAUSHENBUSH. In 1927 conferences were being held in connection with reducing these proposed taxes. Did you secure any help from prominent political people in connection with these taxes at that time?

Mr. PARKER. I do not know. I had nothing to do with it except appear before the conferees and before various Treasury people.

Mr. RAUSHENBUSH. You do not know, then, whether any United States Senators, or people of that kind, were called in at the time?

Mr. PARKER. I do not. I met none of them.

Mr. RAUSHENBUSH. I would like to offer, Mr. Chairman, the report on redetermination of amortization claim of the New York Shipbuilding Corporation as an "Exhibit No. 1422."

(The report referred to was marked "Exhibit No. 1422" and is included in the appendix on p. 4855.)

Mr. RAUSHENBUSH. I offer as an exhibit here a letter, with the appropriate number, "No. 1423", signed by Walter E. Edge, directed to the Commissioner of Internal Revenue, which reads in part:

> I trust before any final action is taken in the matter of the reexamination of the returns of the New York Ship Building Corporation, of Camden, N. J., for the years 1917, 1918, and 1919, that you will personally review the situation.
>
> This corporation changed hands recently as you know and from all the information I have the reassessments are based upon conditions which could in no way be visited on the present corporation. I have already presented briefs in connection with the whole transaction so I will not attempt to review them by letter * * *.

Do you remember those briefs?

Mr. PARKER. No, sir; I do not.

Mr. RAUSHENBUSH (continuing):

> but I don't want to see the present corporation unfairly embarrassed and would personally appreciate it if you would give it your own careful attention.
>
> With kindest personal regards, I am,
>
> Sincerely,
>
> WALTER E. EDGE.

(The letter referred to was marked "Exhibit No. 1423" and is included in the appendix on p. 4856.)

Senator BARBOUR. To whom was that letter addressed?

Mr. RAUSHENBUSH. To the Commissioner of Internal Revenue, just about the same time that these conferences on taxation were taking place.

Senator BARBOUR. Let me say for the record, if I may, that I do not think you assume there is anything improper in connection with that letter or the activities of the Senator, was there?

Mr. RAUSHENBUSH. I do not know, Senator, what the customary procedure is about having Senators file briefs in tax matters.

Senator BARBOUR. It might have been a brief prepared by someone else.

Mr. RAUSHENBUSH. That might be true.

Senator BARBOUR. I, of course, am not familiar with the situation. But I think every Senator on this committee feels that if a constituent comes to him in good faith, he cannot close the door of his office to him or refuse to offer him help in any way he can. I certainly would not. I do not want that to be assumed as an improper action on the part of a former colleague of mine. And I am quite sure it would not be.

Mr. Raushenbush. I am trying to get from the company any further memory about this thing, and we do not seem to be able to get it.

For instance, in 1926, the revenue agents proposed a tax of fourteen and a half million dollars, and after a very elaborate check, in 1927 or 1928, the Treasury reduced that to the figure given. That whole subject is introduced for future guidance of the committee on the difficulties of putting on taxes.

Senator Barbour. I understand, Mr. Raushenbush, and I am not criticizing the presentation at all. I did not want inadvertently to have some erroneous impression arise with respect to anything pointed out, because there was no basis for it.

Mr. Raushenbush. I show you, Mr. Parker, a letter from Mr. Bardo, concerning what seems to be this tax matter. Will you look at that and see if you have ever seen that before? [Handing paper to witness.]

I would like to read that Mr. Chairman. It was dated about the time that these taxation matters were taking place, December 23, 1927, and while it mentions some costs of governmental ships, the *Saratoga* and the *Lexington*, it also refers to the tax matters. [Reading from "Exhibit No. 1424":]

> I have just received copy of House Resolution No. 55, introduced by Congressman McClintic December 13, copy of which is attached hereto. I had a short talk this morning with Judge Parker, who stated that on your return from Washington you had requested that certain information be developed by Mr. Parker with the thought of inviting the investigation referred to.

Mr. Parker, is that you, or is he referring to Judge Parker? Do you know?

Mr. Parker. I assume he means me.

Mr. Raushenbush (continuing reading):

> Publicly, of course, we could not say other than that we welcome an investigation. Privately, we want to use every honorable means to see that the investigation is not started and that the resolution referred to dies a natural death in the Committee on Rules, to which it had been referred.
>
> There is altogether too much dynamite in a congressional investigation, and we are altogether too vulnerable from the standpoint of political attack to leave anything undone which will forestall the investigation. We have troubles enough with our tax situation and our new high-speed line development without having the waters muddied up by a congressional investigation, the effect of which would be harmful either to ourselves or to the industry as a whole.
>
> Who can say what statements Admiral Capps, for instance, if he were called before a congressional investigation, might make with respect as to what he regards as inefficiency and the lack of proper administration of the yard? He made these charges in one of our conferences. If he made them before a congressional committee, we never could catch up with the story, and it may well be that we will be confronted not only with our tax situation but in addition by a resolution from Congress asking somebody to investigate all of these things which obviously would be dragged out in an investigation of this kind.
>
> I expect to have a conference with Congressman Wolverton on Wednesday next.

That is the Congressman from Camden, is it not?

Mr. Parker. Yes, sir.

Mr. Raushenbush (continuing reading):

The names of the House Naval Affairs Committee and the House Rules Committee are shown on the attached list.

Personally, I am strongly opposed to any encouragement of this investigation, for the reasons which I have generally outlined.

Does that bring to your mind at all what activities were being carried on in connection with this very tax matter business?

Mr. PARKER. He refers to tax changes, quite aside from the matter which I was discussing with Mr. Wilder at this particular time. The entire tax matter was left in the hands of the firm of Larkin, Rathbone & Perry, and we supplied the information requested. The whole tax matter was handled by them up to a point of compromise, and I was only drawn into the conferees' hearings and various hearings to provide data as requested. I had nothing to do with the settlement other than paying the money to the collector of internal revenue in the Camden district.

Mr. RAUSHENBUSH. Mr. Metten, were you with the company at the time?

Mr. METTEN. When was this?

Mr. RAUSHENBUSH. 1927?

Mr. METTEN. No.

Mr. RAUSHENBUSH. Mr. Parker, here we have a situation of the various things like the *Saratoga* and the *Lexington* costs, which are in the fire at the moment, but the major thing which I find disturbs the company is an attempt to get a tax reduction from the proposed figure of fourteen and a half million down to the final settlement figure of $5,705,000, and you, so far as you are concerned, do not remember anything that was done toward getting that reduction?

Mr. PARKER. All that I know is that the assessment could not have been paid, because the company would have been bankrupt. There was not anything by which it could be paid. Therefore a compromise was worked out between the Department and, I believe, Mr. Wilder. In any event I received instructions that a compromise had been worked out and to prepare and provide the funds necessary to the collector of the Camden district.

Mr. RAUSHENBUSH. Were you present at the final conference in the Treasury Department when the final settlement was made?

Mr. PARKER. No, sir; I was not.

Mr. RAUSHENBUSH. Mr. Chairman, we find in the files of the Bureau of Internal Revenue a statement which I want to offer for the record, with the proper number "No. 1425", showing that at the time this final settlement was made for the years 1918 to 1921, the settlement was made for some part of the years, 1922 to 1925, and the auditor reported that they were closed, not by a proper audit, but on the estimated tax liability to be determined within one-half hour; and, as such, such years might be included in the total tax.

First, however, I will offer the letter from Mr. Bardo to Mr. Wilder to which I have previously referred as an exhibit.

(The letter referred to was marked "Exhibit No. 1424" and is included in the appendix on p. 4857.)

Mr. RAUSHENBUSH. Mr. Parker, during the years 1922 to 1925, we have figures here which show you reported gross sales of about

470 million dollars worth of products. That is about right, from your memory, is it not?

Mr. PARKER. That is a large sum. I do not recall whether that is the amount or not. It may be one-half that.

Mr. RAUSHENBUSH. We added that up for the years 1922, 1923, 1924, and 1925.

Mr. PARKER. It seems very high to me. I do not believe there were that many sales in that period.

Mr. RAUSHENBUSH. You can go back and check it, but there was a very considerable volume of sales, and here we have a statement from the Auditor of the Treasury Department, saying that there was no field audit on all that sum, but that in the total settlement there was simply an office audit for one-half hour, and the taxes on all that were settled in one-half hour. Do you remember anything about that?

Mr. PARKER. No, sir.

(The report referred to was marked "Exhibit No. 1425" and is included in the appendix on p. 4857.)

Mr. RAUSHENBUSH. Mr. Chairman, I simply offer this as an exhibit bearing on the question of attempting in any way to satisfactorily tax profits. Here the situation, as we get it, was that with a great deal of delay and confusion, which we have not brought out but will show later, the taxes for away back in 1918, 1920, and 1921 were not properly assessed according to the Treasury until 1926. Then they made a very elaborate investigation and ran into some difficulty with the company in getting the facts, which we will bring out later, and finally instead of imposing those taxes, it imposed taxes which were roughly 8 million dollars less, between 8 and 9 million dollars less.

Then in order to clear up the whole matter, to get it out of the way, they settled taxes on something close to one-half billion dollars, for the years 1922, 1923, 1924, and 1925, in one-half hour, without any field audit.

Now the Treasury was handicapped for men and all, but that is the way it seems to have been worked out. The taxes are not levied in the spirit of war or patriotism and so forth, but levied later on, when things are lower and there are differences of that kind.

The CHAIRMAN. And irrespective of all plans that may be on foot now to meet the emergency of another war, nothing has been done to alter that program, has there?

Mr. RAUSHENBUSH. Senator Vandenberg's interchange with Secretary of the Treasury Mills, I think is in point there, to which he has referred many times, when after the War Policies Commission proposed a high war tax, he addressed a letter of inquiry to the Treasury saying, "What chance is there to work out the scheme proposed for high taxes and to make the administration a success?"—I assume more successful than this.

The CHAIRMAN. And the response is that there was nothing done until war comes?

Mr. RAUSHENBUSH. That, I think, is the response of Secretary Mills.

Mr. Chairman, we have before us a story which has significance again from this taxation angle, but just what happened during all this long delay will be shown. Some parts of it are quite interesting and some we can report today, and the whole question of the Emergency Fleet Corporation we want to go into in a little more detail, but I feel we cannot enter into it without some time ahead of us.

The CHAIRMAN. Unless you could proceed to bring the thing to an end in 10 or 15 minutes, I suggest we recess until tomorrow morning.

Senator BARBOUR. Before we recess, Mr. Chairman, I would like to state for the record, as a member of a very small subcommittee, the Public Grounds and Building Committee of the Senate, I will probably have to be absent from this committee tomorrow morning, and possibly Wednesday morning, in relation to the business of that committee. I will try to be here, if I can, and if I cannot you will realize that it is no fault of mine.

The CHAIRMAN. I am sure every member of the committee is conversant with the difficulties that we may encounter from day to day.

I wish that the reporter would note that the only absentee on the committee this morning is Senator George, who is absent on account of illness.

The committee will stand in recess until 10 o'clock tomorrow morning.

(Whereupon, at 12 noon, the committee recessed until tomorrow, Tuesday, Jan. 22, 1935, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

TUESDAY, JANUARY 22, 1935

United States Senate,
Special Committee to Investigate the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357 Senate Office Building, pursuant to the recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, and Vandenberg.

Also present: Stephen Raushenbush, secretary to the committee.

The Chairman. The committee will be in order. Proceed, Mr. Raushenbush.

FURTHER TESTIMONY OF JOHN F. METTEN, N. R. PARKER, AND CHARLES J. LANGELL

Mr. Raushenbush. Mr. Metten, in order that you can get back to the company, you have requested the committee to conclude, if possible, their examination of you as soon as possible. We are glad to do that.

Will you outline briefly for the committee your career in the naval construction field?

Mr. Metten. I have been in the technical end or in the engineering end of the business for the last 30 years, and I was chief engineer of the Cramps Co. until the time they closed, and then I had charge of the central office, getting out standard plans for the seven cruisers that were built in the private yards, and the three navy yards.

Mr. Raushenbush. When you say " central office " will you describe that a little more in detail?

Mr. Metten. At the time that these contracts were sent out they contained a clause, that is the Navy invitation for bidding, a circulars, that those ships should all be alike, built from the same plans, and they decided the only way they could do that would be to have one set of detailed plans, from which all ships could be built for that class. Newport News built 2, New York Shipbuilding Co. built 1, Bethlehem Shipbuilding Co. built 1, and the navy yards built, I think, 3, was it not?

Mr. Langell. We had two.

Mr. Metten. The same plans were issued to all the yards and the ships were duplicates.

Mr. Raushenbush. Did you correct that, Mr. Langell?

Mr. Langell. The New York Ship had two ships, I think.

Mr. Metten. Those were the ones defaulted by the Cramp Co.

Mr. Langell. Excuse me.

Mr. RAUSHENBUSH. Please proceed, Mr. Metten. What happened when you went with the Marine Engineering Corporation?

Mr. METTEN. After that job was wound up, then I was consulting engineer for the Matson Line in connection with building those three ships for the Pacific trade, and I also worked on the *Manhattan* and *Washington*, and I was also consulting engineer for the Baldwin Locomotive Works.

Mr. RAUSHENBUSH. At the same time you were employed by the New York Shipbuilding Corporation?

Mr. METTEN. You see, I was only working in a consulting capacity for them, and I specifically was looking after the *Manhattan* and *Washington* designs.

Then in that capacity, when the 1933 program came out, there were some new types of ships involved. They asked for class II designs. And I acted in the capacity of consulting engineer for those plans being developed.

Mr. RAUSHENBUSH. Let me interrupt you for the benefit of the committee; when you say " class II ", do you mean designs furnished by the companies?

Mr. METTEN. Yes; they send out bids on class I, which is the Department's general design, and then they invite alternate bids on the builder's design, and then they select whichever one they think is most advantageous, and in this case they selected the design of the New York Shipbuilding Co. for the leader, the new heavy destroyers, and also the new 6-inch gun cruisers, and in accepting those designs they decided that all the ships of that class again would be to the same design; and that is all the 1,850-ton destroyers and all of the 6-inch gun cruisers. And in order to do that, it was necessary again to have all the ships built to the one set of plans.

That began, you might say, my permanent connection with the New York Shipbuilding Co., because there was an agreement between the builders and the Department to the effect that the ships of Bethlehem and the various orders in the navy yards would all be built from the one set of plans, so that they would be duplicates. The idea, of course, was that it is to their advantage to have the ships alike, so that the crews, when they are familiar with one, will be familiar with all that group.

I was working on their design and had charge of the design end of it until some time in October when I was elected president, to take effect November 1, 1934.

Mr. RAUSHENBUSH. And now you are no longer doing design work?

Mr. METTEN. Yes; that was an understanding, I believe, that I would have to still look after that in connection with the other details.

Mr. RAUSHENBUSH. There are several things on which you could probably inform the committee, Mr. Metten. You were, you say, connected with Cramps, back in 1926?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. At that time the Navy awarded two large contracts, one for the machinery on the *Pensacola* and for the whole building of the *Salt Lake City* to Cramps as the lowest responsible bidder. Did you feel at the time that Cramps was the lowest responsible bidder?

Mr. METTEN. Again those were class II designs. They were on the builder's design, and the award was made on the basis of the design that the builder had submitted.

You know the division of work in the designing end is that you are responsible for the design. The pricing and the bidding is made up by a separate department, an estimating department.

I did prepare the general designs, detailed designs, from which those bids were made up.

Mr. RAUSHENBUSH. The very year that the Navy Department decided that Cramps were the lowest responsible bidders, that particular firm went into bankruptcy, did it not?

Mr. METTEN. No, sir.

Mr. RAUSHENBUSH. 1926?

Mr. METTEN. I think it was the year afterward, 1927.

Mr. RAUSHENBUSH. But in 1926 it was known that it would no longer fulfill the contracts, was it not?

Mr. METTEN. No, sir. I do not think so.

Mr. RAUSHENBUSH. Almost immediately after the Navy had chosen Cramps as the lowest responsible bidder, the firm did find itself unable to complete the work, did it not?

Mr. METTEN. No; it was a year later, I think. I think a great deal of that work had progressed and part of the machinery was in the shop and part of the materials were in the yard. I think that it was about a year later.

POOLING OF DESIGNS BY SHIPBUILDERS

Mr. RAUSHENBUSH. About a year afterward the firm went under.

From there you proceeded in 1927 to become president of the Marine Engineering Corporation, did you not?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. Did you suggest the formation of that Marine Engineering Corporation to the Navy officials?

Mr. METTEN. No.

Mr. RAUSHENBUSH. That perhaps represented the Big Three, did it not; Bethlehem, New York Ship, and Newport News?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. And they all owned stock in it, did they not?

Mr. METTEN. Yes.

Mr. RAUSHENBUSH. You did have conversations, did you not, with the responsible people in the Navy before the formation of this corporation?

Mr. METTEN. I was brought down here and asked to take the position, on account of the idea being that I had had experience in design and it was an important design.

The CHAIRMAN. Asked by whom to take the position?

Mr. METTEN. I think the chief of bureaus suggested that. I was asked to come down here, but I think the shipbuilders were all down here at the time.

Mr. RAUSHENBUSH. Who were the chiefs of the bureaus at the time?

Mr. Metten. Admiral Halligan, Chief of the Bureau of Engineering, Admiral Buret, C. & R. meaning "construction and repair."

Mr. Raushenbush. The corporation which was formed was formed by the Big Three with the blessing of the Navy. Can we put it that way?

Mr. Metten. Yes; I think so.

Mr. Raushenbush. They hoped to get certain advantages out of having the designing work of the three corporations done in one office. Is that right?

Mr. Metten. Yes, sir. It was not only that but prior to that time there had been only a few of those cruisers built. The first cruisers were five of the *Richmond* class, which were built by the Cramp Co. and then there were four or five others built at that time. While the five built by the Cramp Co., like all the others, were of different types, they decided it was much better in the new grouping to keep them alike.

Mr. Raushenbush. What advantages were there, both to the Navy and the big shipbuilders, in having this Navy Department designing pooled, you might call it?

Mr. Metten. In the ordinary course of events, each ship would have been different. You see the Newport News contracts would have detailed plans, worked out by them, and in case of the New York shipbuilding contract, the details would have been worked out by them; in the case of the Bethlehem contracts, the same thing would have been done.

Mr. Raushenbush. One advantage was a standardized ship. What other advantages would either the shipbuilders or the Navy get out of this arrangement?

Mr. Metten. I think that was the principal object. As I understood it at the time, that was the whole object in that set-up, to standardize the ships.

Mr. Raushenbush. Did not this corporation do combined purchasing for the shipyards?

Mr. Metten. Yes, sir; they had to do that because they wanted the auxiliary duplicated as far as possible. Instead of having one type of auxiliary in one, and another in another, they naturally had to standardize the auxiliary machinery.

Mr. Raushenbush. You did then purchase from Westinghouse and General Electric, Babcock & Wilcox, and all the other big suppliers of machinery, not only for the Big Three but for the navy yards, too, did you not?

Mr. Metten. No.

Mr. Raushenbush. No?

Mr. Metten. You see that had to come through the Navy. Duplicates of all orders were sent to the Navy so that they could follow the Navy routine.

Mr. Raushenbush. Then the Navy did not get any advantages of common buying on these purchases which you were making through this Marine Engineering Corporation, for the benefit of the big three?

Mr. Metten. Yes.

Mr. Raushenbush. Did it?

Mr. Metten. Of course, you see, here would be, for instance, five units. Take something like generating sets, and so forth. Naturally the Navy in asking for a bid for those ships would get the benefit of quantity production, because they were to be duplicates of those they were building through these private yards.

I should say that they probably benefited equally with the other yards in the purchase of that material.

Mr. RAUSHENBUSH. So that you think the navy yards did get that benefit?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. That changes your other answer somewhat, does it not?

Mr. METTEN. I only tried to explain that the Navy, of course, has to order through their own supply system.

Mr. RAUSHENBUSH. The main advantage of standardized ships was there, and another one has been brought out, namely, the saving which you were able to obtain for the big three through common purchasing. It would do something else, would it not, namely, take from the Navy Department the burden—let us put it that way—of designing its own ships?

Mr. METTEN. It did not take from them because in the central office there were representatives of the Navy Department, Construction Corps, and Engineer Corps, and all plans had to go through them and had to go to the Bureau for approval.

Senator VANDENBERG. Is the Navy Department equipped to design a ship?

Mr. METTEN. Yes, sir.

Senator VANDENBERG. Could the Navy Department design a ship without any outside aid?

Mr. METTEN. That is a question that I think you could say "yes" to. You see, their people are transferred from place to place. In private yards the technical staffs do nothing else but that work practically all of their lives.

Senator VANDENBERG. When the Navy builds a ship, does the Navy build it on their own plans or on designs from the outside?

Mr. METTEN. In the case of those cruisers, of course, they used the central office design. It was practically a Navy design, because everything had passed through the Navy Department.

Senator VANDENBERG. As a matter of fact, is it not true in reality that the Navy is at the mercy of the outside designers and private producers for their designs?

Mr. METTEN. I do not think so; no, sir.

Senator VANDENBERG. Would you say that the Navy today could build a ship without outside assistance in respect to design?

Mr. METTEN. Yes; they could build a ship.

Senator VANDENBERG. What kind of a ship do you think it would be?

Mr. METTEN. I think it would be a pretty good ship, Senator.

Mr. RAUSHENBUSH. How much did the Navy have to pay for these designs on these cruisers which were made for the 26 to 31 class?

Mr. METTEN. I do not remember the figures; but it was divided up, as far as I can remember, in this way: There were 3 private yards building a total of 4 ships, and 3 navy yards, I think, building a total of 3 ships, and the navy yards paid, I think, one-quarter of the cost.

Mr. Raushenbush. I have a figure showing about $400,000 for those plans. It that right?

Mr. Metten. For the Navy Department?

Mr. Raushenbush. Yes, sir; a letter from you to the Bureaus.

Senator Bone. Was that charge made, Mr. Raushenbush, even when the plans were duplicated?

Mr. Raushenbush. They were standardized plans which went to all the yards.

Senator Bone. I mean, was that charge assessed against the plans, even when they were duplicate plans?

Mr. Raushenbush. Mr. Metten, maybe you can answer that.

Mr. Metten. Assessed against the plans?

Senator Bone. In other words, did you charge the Government $400,000 for a set of plans when they might need them?

I do not know whether I made it plain in the beginning, but that is what I meant.

Mr. Metten. Yes; you see this situation was agreed upon in advance, before that subdivision was ever established. It was more or less a case of the Navy Department, you might say, being a partner in this scheme.

Senator Bone. You mean a partner in the charge?

Mr. Metten. In the cost of these plans. As a matter of fact, they built three ships, and they got the plans cheaper than the private yards got them.

Senator Bone. Suppose that you drew up a set of plans, Mr. Metten, for a standardized type of ship, for which you made a charge of $400,000. Suppose you built 10 ships of that design; would the Government be required to pay $400,000 for each set of plans when they were all built from one set of plans?

Mr. Metten. No; the division was made that the Government paid its proportion. The way it was set up was, it was considered that there were four building concerns. The Government was 1, Newport News 1, New York Ship 1, and Bethlehem 1; and the price, as I recollect it—I do not remember those figures, but I think it is roughly somewhere near one-quarter.

Mr. Raushenbush. Speaking of the $400,000?

Mr. Metten. That is all a matter of record. You can get that.

The Chairman. Each builder, then, shared in the cost?

Mr. Metten. Yes, sir.

The Chairman. Approximately one-fourth of the cost was assessed against each builder?

Mr. Metten. Yes, sir.

Senator Vandenberg. I would like to get this clear in my mind. That is in 1927. Were there any other shipbuilders in the country competent to build these ships besides the big three?

Mr. Metten. They would have had to put in considerable additional equipment. I think that those three were perhaps the only ones who could have undertaken the work without modifying the plan.

Mr. Raushenbush. You say that neither Federal nor United could have built a cruiser in that year?

Mr. Metten. I do not think so.

Mr. RAUSHENBUSH. I note there was apparently some controversy, and the Bureau took the position that $400,000 was too high. You wrote a letter on August 6 to the other officers of the big three saying:

> My inclination is to stand pat on the $400,000. * * *

Mr. METTEN. You know the discussion, as I remember it, was this way: The value of the contracts was thought to be a representative part, you might say, of the proportional share. For instance, Newport News was building two ships off of those plans. Bethlehem and New York Ship were building one ship off of those plans. And it seemed logical that the larger contracts should take a larger share of the cost of preparing the plans. The same way with the Navy Department. They were building three ships, and as that was the way the discussion went at that time, we thought that the Navy Department, on account of being in a position to benefit to the largest extent, they ought to take a proportional share.

Mr. RAUSHENBUSH. You have given a picture here, Mr. Metten, of the Navy Department being a sort of business partner, and yet that was not quite it, was it? I will read the rest of the paragraph of your letter of August 6, 1927, addressed to the members of the big three. [Reading:]

> My inclination is to stand pat on the $400,000 as entirely aside from obtaining plans and schedules, the bureaus expect the navy yards to participate in the saving through joint purchasing to an extent that from present indications will probably pay for the plans. I think we might as well recognize the fact that the navy yards are competitors in the present program and expect to be competitors in the future programs.

I will offer that for the record.

(The letter referred to was marked "Exhibit No. 1426" and is included in the appendix on p. 4858.)

Mr. RAUSHENBUSH. So that what you were really doing was to organize a group, financed by the big three, which had part of its expenses paid by the Navy Department and also took over and in a way monopolized the designing at the time, and yet found itself in the position where one of the people who was paying a share of the expenses at the navy yards were really competitors to your own private yards. Is not that about the basis of relationship at the time?

Mr. METTEN. Of course, the navy yards are competitors with private yards.

Senator VANDENBERG. Did not they cease to be competitors under these agreements, so far as these ships are concerned?

Mr. METTEN. There was a subdividing. As a matter of fact, that is just another one of those jobs which I had to undertake, to do the best I could, and be guided by the various people who were interested in it. We were down here and the thing was adjusted and discussed with the Navy Department.

Senator VANDENBERG. It was the Navy's price protection in this group of contracts?

Mr. METTEN. Price protection?

Senator VANDENBERG. On the ships you were going to build under this pooled arrangement?

Mr. METTEN. Each yard put in a bid at a definite contract price. This was a condition attached to that contract, that they should be duplicates.

Mr. RAUSHENBUSH. May I venture to explain the Senator's question, if I understand it? Did not the Navy stop being a competitor, as far as designing went, after this pool was established?

Mr. METTEN. Of course, they were all together building the duplicate ships from those plans.

Mr. RAUSHENBUSH. Yes.

Mr. METTEN. I would not call it a "pool."

Mr. RAUSHENBUSH. For that 1927 bidding on the cruisers series 26 to 31, the Navy did not draw designs of its own, did it?

Mr. METTEN. No; only general type plans.

Mr. RAUSHENBUSH. As usual?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. And it turned the designing job over to you people?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. It did not go into it any more?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. What was the status of the smaller yards while you had the combined designing arrangement? Did they even attempt to draw any designs for any ships that you were drawing designs for?

Mr. METTEN. I do not think so. There is another thing which I think will perhaps explain the situation. You know there has been very little Navy work built, and the skilled men in the designing end of it had more or less disappeared. There were only a few of them scattered around the country, and it was thought at the time that there was not a sufficient number of trained men to undertake that work separately at the various yards. And the idea of the central office was to concentrate all of the best men on this particular class of design work into one establishment, so that they could carry on this work, and so that the Navy would get the best possible job, so far as design was concerned.

Senator VANDENBERG. Excuse me, that goes back to my original inquiry, in which I am very much interested. Is not that still the situation?

Mr. METTEN. Yes, sir.

Senator VANDENBERG. That the Navy's equipment is so scattered, that it is not useful in the production of a completed net result?

Mr. METTEN. There has always been a scarcity of really competent designers on this class of work.

Senator VANDENBERG. In other words, it would be difficult today for the Navy, in a self-contained way, to produce these designs, would it not?

Mr. METTEN. It would be difficult, I think.

Senator VANDENBERG. Yes; certainly.

Senator BONE. How long has that condition existed?

Mr. METTEN. It has existed ever since, you might say, the general lull in Navy building. They are highly specialized ships and they require a lot of experience in the various classes of work.

Senator VANDENBERG. So long as that condition maintains, I ask again, is not the Navy more or less at the mercy of private designers?

Mr. METTEN. That is being reduced now, Senator. They are recognizing——

Senator VANDENBERG. The answer is "yes", and they are trying to meet it. Is that it?

Mr. METTEN. Yes, sir.

Senator BONE. In what way is the Navy trying to meet that condition, Mr. Metten?

Mr. METTEN. They are trying to organize select men, and in the navy yards they are getting together representatives groups to meet this condition.

Senator BONE. I believe you testified that they shifted these men around so that there was no stability to their service. That is, they are moved all around so that they cannot concentrate on their activities.

Mr. METTEN. That was true during a period when there was not very much work, and naturally the men would go from one place to another. The better class of designers in shipyards have been more or less of a floating group.

Senator VANDENBERG. Has the Navy any designers who have ever been responsible for the designing of a complete ship?

Mr. METTEN. Yes, sir. They have some officers that have been responsible.

Senator BONE. Then it simply resolves itself into this question: That either the Navy or private shipbuilding companies must of necessity have a group of designers brought together in an organization?

Mr. METTEN. Yes, sir.

Senator BONE. So far the Navy has not done that. Is that right?

Mr. METTEN. They have done it. They have established a central office. That started in some years ago, after this central office, and the advantage of it was recognized, and they began trying to group together a good staff of technical men.

Senator BONE. How much have they accomplished in that direction?

Mr. METTEN. I really could not say, because you see I do not come in contact with that end of it.

Senator BONE. You are unable, then, to enlighten us as to what the Navy has done in the way of getting a staff of designers together?

Mr. METTEN. I know they have a central office in the New York Navy Yard, but just how far that has progressed in the way of staffing I could not say.

Senator BONE. That is at the Government navy yard in New York?

Mr. METTEN. Yes, sir.

Senator BONE. Do you think they are able now to turn out a complete set of plans, designs, and specifications on all types of ships?

Mr. METTEN. Yes, sir. They could do that.

Senator BONE. Do you know whether or not they have done it or are doing it?

Mr. METTEN. I believe they have done it in the case of the new group of cruisers.

Senator BONE. But I want to get back to the question I asked you before. On a set of plans for a cruiser, as I understand it, it costs about $400,000. Who gets the money for drawing those plans—the individual designers or private shipyards?

Mr. Metten. The individual designers. It is split up, and it takes a big staff to get out one of the plans.

Senator Bone. I understand that. In other words, the money goes to these private individuals who draw the plans?

Mr. Metten. Yes, sir.

Senator Bone. Again I want to repeat—and perhaps I am a little tedious—is the Government required to pay $400,000 for each ship—for a set of plans on that ship?

Mr. Metten. When they make the plans today?

Senator Bone. When a private company furnishes them?

Mr. Metten. In that case the central office—yes——

Senator Bone. Could you not give us a "yes" or "no" answer on that? And then you can explain it. Does the Government have to pay $400,000 for the plans on each ship?

Mr. Metten. Not now.

Senator Bone. Did they at the time that this was done?

Mr. Metten. I see what you mean. No; that was the total price they paid.

Senator Bone. I do not know that you have yet made it plain to me. Was the United States Government required to pay $400,000 for the plans on each ship?

Mr. Metten. No.

Senator Bone. Can you now enlighten us as to how much the Government did actually pay for the plans on these ships?

Mr. Metten. They bought the plans as a group, and they built 3 ships from those plans.

Senator Bone. That is what I am getting at. In other words, they made really 1 payment for 1 set of plans, costing $400,000, and then they were following along on those plans on any ship subsequently built?

Mr. Metten. Of that type.

Senator Bone. Is that a correct interpretation?

Mr. Metten. That is correct. I think they got three sets of plans. My recollection is that when those plans were sent to them, they were duplicated to the extent that they could be distributed to the various yards. I am not sure of that.

The Chairman. What was charged for the duplicating?

Mr. Metten. That all was included in that price. There was an agreement made down in the Navy Department to furnish the plans, so that they could build all the ships of that type from those plans.

Mr. Raushenbush. Mr. Metten, was not one of the results of this combination that any bright ideas that any particular one shipyard had would be shut out, unless the Marine Engineering Corporation, of which you were president, approved?

Mr. Metten. No; we got the best men. As a matter of fact, when that company was organized, on account of the shortage of men, we got the best men from the three shipyards, who were brought into the central office.

Mr. Raushenbush. I have a letter here from Mr. Bardo to yourself, dated November 21, 1927, which I want to show you, and which seems to be a reference to a suggestion by Newport News that would have saved the Government some money, and Mr. Bardo is making the point that he does not want any of that sort of thing [handing paper to witness].

I will offer that for appropriate number.

(The letter referred was marked "Exhibit No. 1427" and is included in the appendix on p. 4858.)[1]

Mr. RAUSHENBUSH. I will read the second paragraph of that letter.

> The contract between the three shipyards which brought the Marine Engineering Corporation into existence contemplates, if it means anything, that Marine Engineering Corporation is to be the official mouthpiece of the three yards insofar as their relations with the Department for the crusier construction are concerned. Any departure from this understanding will, I am sure, have the effect of gradually repudiating the standing of Marine Engineering Corporation with the Department and result in serious embarrassment in many directions later on. Personally, I am strongly opposed to the practice complained of.
>
> We put ourselves in a very embarrassing and inconsistent position when we voluntarily propose to do something the effect of which is going to materially increase the cost. The margin between the cost of producing these ships and the selling price is narrow enough without further reducing it by a voluntary action which, so far as we can now see, will not improve either the efficiency of the particular units nor have the assurance that it will prolong their lives.

There is some more correspondence on that which gives the impression that Newport News had a proposal which would have increased the price to the private shipyards and would have given the Government a better ship, and here Mr. Bardo sent a letter to you in which he says he does not want anything like that, and that is not the purpose of the Marine Engineering Corporation.

Do you remember that incident?

Mr. METTEN. I think I do. You see, in establishing a design office of that kind, someone has got to be at the head of it and make the decisions. You cannot run a standardized design and have two or three different yards, each going their own way; and I was placed in a position of having to decide those questions which were decided on the basis of giving the Government a better job, as far as I can tell you.

Mr. RAUSHENBUSH. Well, apparently the suggestion that Newport News made on account of some turbine changes and spares and Mr. Bardo characterized it as something which would materially increase the cost——

Mr. METTEN. I do not know. At the outset decision was to be made whether or not they would buy the main turbines from someone else, like General Electric or Westinghouse, and I think it was just the other way about.

I think that they found that they could get a better price if they bought them than if they built them.

My experience had been that the machinery which had been built by the better-class yards had been more reliable and better suited to the navy work than that which had been bought outside, and I decided that we would build the standard turbines.

Mr. RAUSHENBUSH. Now, if the advantages of this marine corporation to get standardized ships and to get lower costs by dealing with the suppliers on a wholesale way were good in 1927, why was the Marine Engineering Corporation, of which you were president, disbanded a few years later?

---

[1] See p. 4658 for further testimony regarding "Exhibit No. 1427."

Mr. METTEN. It was undertaken for the specific job, and then I believe there was some objection on the part of some of the builders. It was a rather trying thing to carry through, and, of course, when they talked about disbanding it I personally did not care about going through with this trying job any longer. It had completed the job for which it was organized.

Senator VANDENBERG. I would like to ask a question about that purpose before we get away from this letter. The letter says that the contract between these three big shipyards, which you say were the only three who could build these ships [reading from "Exhibit No. 1427"]:

> contemplates, if it means anything, that Marine Engineering Corporation is to be the official mouthpiece of the three yards insofar as their relations with the Department for the cruiser construction are concerned.

You have indicated that you pooled your engineering resources. Does that mean that you also pooled your bids?

Mr. METTEN. No, it had nothing to do with the bids.

Senator VANDENBERG. You went through all these mutual arrangements with respect to the design, but you did not talk with each other about the price which you were going to bid on the jobs?

Mr. METTEN. As I explained before, the circulars came out and had a condition attached that these ships must be duplicates. Now, as I recollect it, the bids were put in by the different yards separately, in the usual way, and then it was a case of determining how they could best make them duplicates. I think that the formation of this was after the bids were made.

Senator VANDENBERG. How near alike were the bids? Do you recall?

Mr. METTEN. I do not recall. I was the chief engineer of the Cramp Co. and of course I was not in contact at all with the bidding and was brought into it when they decided to form this central office.

Senator VANDENBERG. If the purpose of the organization of the Marine Engineering Corporation, as stated in this letter, was to make it the official mouthpiece of the three yards, in respect to cruiser construction, am I wrong in interpreting that as a price agreement as well as a design agreement?

Mr. METTEN. No, sir; it had nothing to do with prices. It was purely a matter of design.

Mr. RAUSHENBUSH. You just made the point, Mr. Metten, that these designs were drawn before the bids were let. Is that right?

Mr. METTEN. Yes, sir.

Mr. RAUSHENBUSH. Then the Navy, in letting these bids, was doing it blindly, was it not, at the moment?

Mr. METTEN. No, they had issued the general plans and general specifications which covered the ships completely.

Mr. RAUSHENBUSH. And after all that was over, then the plans were drawn?

Mr. METTEN. Yes, sir. The detailed plans are always made up afterwards.

Mr. RAUSHENBUSH. And yet the Navy had, according to your earlier testimony, permitted itself to participate in those same plans, had they not?

Mr. METTEN. The plans of the central office had not been worked out. They had to lay down the condition that the ships must be built on the same detailed plans, but following the general type, plans, and specifications laid down by the Navy Department.

Mr. RAUSHENBUSH. And had gone into this arrangement, that it would take plans drawn by your group?

Mr. METTEN. I do not think at the time that they asked for bids they had any clear idea as to just how this was going to be carried out.

Mr. RAUSHENBUSH. You do not remember, Mr. Metten, when you first discussed this matter of the Marine Engineering Corporation with the Navy, do you?

Mr. METTEN. No; I do not. I was brought down here, and the chiefs of the bureaus talked to me about it.

Mr. RAUSHENBUSH. How much contact did you have with the estimators of the various companies while you were president of the Marine Engineering Corporation?

Mr. METTEN. Very little.

Mr. RAUSHENBUSH. Is that job on the cruisers the only thing Marine Engineering Corporation did?

Mr. METTEN. Yes.

Mr. RAUSHENBUSH. They did nothing on anything else?

Mr. METTEN. Nothing else.

Mr. RAUSHENBUSH. Not on mercantile work, or anything like that?

Mr. METTEN. No, sir.

DEFECTS IN CRUISERS 26 TO 31

Mr. RAUSHENBUSH. Was one of the reasons for dropping this engineering corporation some feeling that the designs drawn for all the cruiser class were unsatisfactory?

Mr. METTEN. I never heard of it.

Mr. RAUSHENBUSH. Could you tell us about the experience that all those cruisers had with regard to their sternpost?

Mr. METTEN. I do not remember. That, of course, happened in the yard. I believe there were some sternposts renewed.

Mr. RAUSHENBUSH. You know about these things more in detail than that, do you not, Mr. Metten? Here were the six cruisers all designed by you, or the Marine Engineering Corporation, and is it not true that every single one of them cracked their sternposts?

Mr. METTEN. I do not remember that it was all of them. That came, you see, after the ships were delivered. As far as that sternpost is concerned, that probably followed the general type of plan. That did not necessarily mean that the ships were defective.

Mr. RAUSHENBUSH. Was it not part of your design to have the sternposts just that way, and not any heavier than they were?

Mr. METTEN. You know that those ships were under weight limitations. The treaty imposed certain limits, and I think in all probability those sternposts followed the design which was a part of the type plan. I do not remember the details. You know, there were thousands of plans. I think you could find out at the Navy Department that, so far as the general ship was concerned, they were considered very satisfactory ships.

Mr. RAUSHENBUSH. According to the Navy Department records, the *Northampton, No. 26*, which was built by the Bethlehem Shipbuilding Corporation, the *Chester, No. 27*, built by the New York Ship, the *Louisville, No. 28*, which was built by Puget Sound, and the *Chicago, No. 29*, built at Mare Island, and the *Houston, No. 30*, built by Newport News, and the *Augusta, No. 31*, built at Newport News, all cracked their sternposts within some 6 months after they had been out, and in most cases it was still within the time limit, and the contractors had to pay the cost of repairing. Now, the story we get from the same records is that the sternposts were cast in two different foundries, one on the west coast and one on the east coast, and that after all this trouble and delay which resulted from the cracking of the sternposts on all six ships they decided that the designing was incorrect and that they had to have heavier sternposts made.

Mr. METTEN. That may be. A sternpost is a rather small part of a 10,000-ton ship.

Mr. RAUSHENBUSH. Surely.

Mr. METTEN. There are always some things which you do not discover until later.

Mr. RAUSHENBUSH. It is a fairly important part. When a sternpost cracks, there is a chance of a ship taking water?

Mr. METTEN. Yes; but so far as that design is concerned, remember that the detailed design was approved by the Bureau. The detailed plans came down there and were checked and approved by the Navy Department.

Mr. RAUSHENBUSH. As we get this, then, you had this combined designing office, which was supposed to take the responsibility for all this work, and as soon as there is a mistake the blame gets put back onto the Navy Department. Is that the way the thing is worked?

Mr. METTEN. No, sir. They did not pay for it. The yards paid for it.

Mr. RAUSHENBUSH. Because it was within the 6 months' limit, they paid it?

Mr. METTEN. In designing a ship there are always some of those big things on which errors are made, like everything else. There might have been a mistake made in the sternpost, but that is not unusual.

Mr. RAUSHENBUSH. It is not unusual?

Mr. METTEN. No, sir.

The CHAIRMAN. How long a period did the Navy have in which to determine the satisfactory character of the construction? Six months, do we understand?

Mr. METTEN. The guaranties extended for 6 months, defects and deficiencies.

The CHAIRMAN. And these cracked sternposts were developed within those 6 months; is that it?

Mr. METTEN. Yes, sir. You know in those ships there were 100,000 horsepower, and they required steering trials, with the helm hard over, and steering trials astern, and these stresses run up very high on those back-up trials; in fact, they developed more speed than they expected astern, and pushing those big ships with the rudder over, it resulted in transverse strains, and it caused these cracks.

I think if you go to the Navy Department and talk to the people there, they will tell you that that is something in big work which you are always liable to get into.

Mr. Raushenbush. If these cruisers were accepted on their trial trips, how did it happen that their sternposts cracked later on in actual work?

Mr. Metten. They were under the water and they may have developed some signs of it that were not discovered, you know.

Mr. Raushenbush. I see here a letter sent to various people commenting on the very successful trial trip of the *Chester*, built by the New York Shipbuilding Co., which later on developed the cracked sternpost, and the letter, among other things, is addressed to W. F. Kenney. How did he happen to get a letter referring to a trial trip of the *Chester?*

Mr. Metten. Mr. W. F. Kenney?

Mr. Raushenbush. Yes, sir.

Mr. Parker. He was a director of the corporation.

Mr. Raushenbush. He was a director of the New York Ship at the time?

Mr. Metten. That was a letter from New York Ship.

Mr. Raushenbush. Just a few more questions we want to get straight about this matter and I think we will be through.

All the way along you have been in the engineering and designing. You are still under your present arrangement head of designing of New York Ship?

Mr. Metten. Yes, sir.

Mr. Raushenbush. When did you first find out that you were going to be asked to take the vacancy which was created in October?

Mr. Metten. About a week before the election, before the meeting.

Mr. Raushenbush. That offer was made to you by the representatives of the Cord Co.?

Mr. Metten. Yes, sir.

Mr. Raushenbush. Which one?

Mr. Metten. Mr. Manning.

Mr. Raushenbush. Did Mr. Manning speak to you of any conversations he had with the Navy Department before the offer was made to you?

Mr. Metten. The first time he called me up and made the offer I turned it down. I said I did not care for it. I preferred to remain in the design end.

Mr. Raushenbush. That is not quite responsive, Mr. Metten. Did Mr. Manning speak to you of conversations which he had had with the Navy Department about the whole New York Ship situation at the time he made this offer to you?

Mr. Metten. The second time—you see, I was in a position that I had more or less agreed to go along with this, or I had more or less promised to stay with the design on these leaders and cruisers, until they were finished, and I felt that I was under certain obligations to the Navy Department to keep that promise.

Then when the offer was made to me, I told them, likewise, that I could not take it because I had to remain on the design work until these contracts were finished.

I believe he went down to the Navy Department, because the next time he talked to me he said that if it was arranged so that I could still look after the design work, the Navy Department was agreeable to it.

Mr. Raushenbush. Is that really the full substance of that conversation?

Mr. Metten. Full substance?

Mr. Raushenbush. Yes. What I am getting at is this: The Navy Departmant had, had it not, rather severely criticized New York Ship for various reasons a little previous to this change in administration of the company?

Mr. Metten. Yes; I think so. I think probably they criticized it to Mr. Manning. They wanted to make a change in the organization. I knew that, of course.

Mr. Raushenbush. You mean the Navy Department wanted a change in the organization?

Mr. Metten. Yes; and I understand they probably complained to Mr. Manning about the ways things were developing.

Mr. Raushenbush. After the Navy Department had expressed its desire to Mr. Manning that there be a change in the management of the company, did Mr. Manning take you down to Washington to discuss that with the Navy people?

Mr. Metten. No, sir.

Mr. Raushenbush. You had no discussion with the Navy people about that?

Mr. Metten. I knew nothing about the contemplated change until about a week before the election, at the meeting of the board.

ACQUISITION OF CONTROL BY CORD CORPORATION

Mr. Raushenbush. When did the Cord Corporation take over New York Ship?

Mr. Metten. I think roughly a year or so ago, but I do not remember the exact date.

Mr. Raushenbush. Do you remember, Mr. Parker?

Mr. Parker. The new board of directors was elected August 2, 1933.

Mr. Raushenbush. August 2, 1933?

Mr. Parker. Yes, sir.

Mr. Raushenbush. But, Mr. Parker, had not the Cord Corporation obtained voting control of the company before August 2, 1933?

Mr. Parker. I have no knowledge in that connection, Mr. Raushenbush.

Mr. Raushenbush. When were the bids opened in 1933 on the new Navy cruiser program?

Mr. Parker. July 26, 1933.

Mr. Raushenbush. So that roughly a week after those bids were opened, the Cord Corporation actually took over official control, did it not?

Mr. Parker. As represented by a new board of directors.

Mr. Raushenbush. As represented by a new board of directors. And you say you are not able to testify as to how much earlier than that they acquired the voting control?

Mr. Parker. I have no knowledge in connection with that whatever.

Mr. RAUSHENBUSH. At this time, Mr. Metten, when you were put in as president was one of the Cord Co.'s own men put in there to help you, to assist you?

Mr. METTEN. Yes.

Mr. RAUSHENBUSH. Who was that?

Mr. METTEN. Mr. Kaltwasser.

Mr. RAUSHENBUSH. Had he been in the shipbuilding game before that?

Mr. METTEN. I believe not.

Mr. RAUSHENBUSH. Now, Mr. Metten, your function at present, as I get it, is really head of the designing department, is it not?

Mr. METTEN. That is part of it. Of course all the matters from now on in reference to the company will have to be decided, I suppose, by me.

Mr. RAUSHENBUSH. Have you so far interested yourself in any of the financial transactions; the bonds, the stocks?

Mr. METTEN. Not in the past.

Mr. RAUSHENBUSH. I mean within the last few months, since you have assumed the presidency?

Mr. METTEN. I have not had very much time. I have been tied up with a lot of details and the main thing is to get the plant reorganized and on a better footing.

Mr. RAUSHENBUSH. You are really not carrying on the financial transactions, in the same way, for instance, Mr. Bardo was?

Mr. METTEN. No.

Mr. RAUSHENBUSH. Actually, then, is it not a fair comment, Mr. Metten, that you are head of the design department, with the title of president?

Mr. METTEN. No; I do not think so.

Mr. RAUSHENBUSH. And the responsibility——

Mr. METTEN. You can see, I have been in the shipyard for about 40 years, and it is a case of trying to pick the men that will be the heads of the different departments and gradually change around and gradually get it back into shape. Of course my duty has changed, and while I am still looking after the design end, and at the same time——

The CHAIRMAN. Who is taking care of the financing end?

Mr. METTEN. Mr. Parker and Mr. Kaltwasser. He is executive vice president.

Mr. RAUSHENBUSH. If we ask you questions, for instance, about the financial structure of the company, would you be able to answer?

Mr. METTEN. No; I could not answer.

Mr. RAUSHENBUSH. Has Mr. Cord had any direct contact with you?

Mr. METTEN. Only once. That was on a visit to the yard, maybe 7 or 8 months ago. That is the only time I have met him.

Mr. RAUSHENBUSH. Has he given you any advice or instructions about how he wants the company conducted?

Mr. METTEN. Not Mr. Cord.

Mr. RAUSHENBUSH. Has Mr. Manning done it?

Mr. METTEN. In a general way; yes.

Mr. RAUSHENBUSH. Mr. Chairman, it might be well to point out at this time, that we asked for Mr. Cord as a witness and found that he was out of the country, and we could not be informed by his attorney exactly when he would be back. The information we requested from him has been promised through his attorney, Mr. Pruitt, to be brought by Mr. Manning when he appears later on.

The CHAIRMAN. Very well.

Mr. RAUSHENBUSH. I have no further questions to ask Mr. Metten at this time, Mr. Chairman.

Senator BONE. Mr. Metten, just one question occurs to me. Can you give the committee some idea of the average price the Government paid for cruisers of the type which we have been discussing, the *Northampton*, the *Chester*, the *Chicago?*

Mr. METTEN. I did not understand.

Senator BONE. Can you advise the committee what was the price, about the average price, of these cruisers we have been discussing?

Mr. METTEN. I do not remember the contract price, but I imagine it was somewhere around—do you remember that [referring to an associate]?—somewhere about 10 million dollars, of the *Chester* class.

Mr. LANGELL. I have got it right here somewhere.

Senator BONE. For instance, the one built by the New York Shipbuilding Co.

Mr. METTEN. They can give you that.

Mr. LANGELL. $10,815,000.

Senator BONE. That was a 10,000-ton cruiser?

Mr. LANGELL. Yes, sir.

Senator BONE. In what year was she finished?

Mr. LANGELL. I beg your pardon?

Senator BONE. When was she finished?

Mr. LANGELL. She was delivered on the 23d of June 1930.

Senator BONE. That was the cruiser *Chester?*

Mr. LANGELL. *Chester;* yes sir.

Senator BONE. I am interested in that because of the fluctuation in prices.

Senator VANDENBERG. I am still interested in this pooling arrangement. Have you the total prices there?

Mr. LANGELL. No; I have not any prices of the other yards.

Senator VANDENBERG. Mr. Metten, did you have anything to do with figuring the bids on this group of ships?

Mr. METTEN. No; I was not involved in that.

Senator VANDENBERG. Not at all?

Mr. METTEN. No, sir. That was all done by each yard separately.

Senator VANDENBERG. You do not know whether it was or not. You did not have anything to do with it?

Mr. METTEN. I assume it was done by each yard separately.

Senator VANDENBERG. It was entirely an assumption? I do not mean to be invidious, but you do not know. If there was any pooling of bids, you would not have any information on the subject?

Mr. METTEN. I would not have any information.

Senator VANDENBERG. You were not in a position to have any?

Mr. METTEN. No. The Cramp Co. did not even bid on that, I do not think. Did they?

Mr. LANGELL. No; Cramp did not put in a bid.

The CHAIRMAN. What invitation for bids was there outside of the "Big Three"?

Mr. METTEN. I believe there was the usual invitation sent by the Department.

Mr. RAUSHENBUSH. Did it go to anyone besides the "Big Three"?

Mr. METTEN. I imagine that anyone who could put up the bond was permitted to bid. Anyone who asked for the specifications and plans usually got them.

Senator VANDENBERG. The thing was pretty well in the hands of the big three, was it not?

Mr. METTEN. On account of yard equipment, I think so; yes.

Senator VANDENBERG. And the Navy was more or less at the mercy of the big three, were they not? I do not weigh that in an invidious way, but it was a fact?

Mr. METTEN. They had two or three yards, Philadelphia, New York, Mare Island, Bremerton.

Senator VANDENBERG. But they had made a contract with you, through this Marine Engineering Corporation, to let you build from them, had they not, so that whatever ones they had agreed to let to private yards had to be let to the big three, in your view?

Mr. METTEN. They had certain subdivisions, as I understand, so many to the navy yards and so many to the private yards.

Senator VANDENBERG. The only private yards were the big three?

Mr. METTEN. Yes, sir.

Senator VANDENBERG. Therefore, they were in the hands of the big three, so far as that section of the contract was concerned?

Mr. METTEN. Of course, they could have put them all in the navy yards.

Senator VANDENBERG. Not under the contract, could they?

Mr. METTEN. Before they asked for bids, they could decide at that time to build them all in the navy yards.

Senator BONE. Assuming that they determined to build one of these 10,000-ton cruisers in the Government yards, were they at liberty to use the detailed plans and specifications which you had prepared, and, if so, under what conditions?

Mr. METTEN. Of course, if they had built all of them, there would have been no occasion for a central office, and they would probably have organized their own central office.

Senator BONE. Were your plans employed in building any of these cruisers in the Government navy yards?

Mr. METTEN. Yes.

Senator BONE. What do they pay for the use of the plans when they build the ships?

Mr. METTEN. You had it right there. I have forgotten the price which was agreed on. They came down here and agreed on their share of the price.

Senator BONE. Where they built a cruiser, for instance like the *Louisville* in the Bremerton Navy Yard, do you recall what the Government paid for the plans and specifications?

Mr. METTEN. I think they were very similar to the previous type ships, and what modification they made, they made themselves.

Senator BONE. I know, but what did they pay for the use of the plans in building the *Louisville?*

Mr. METTEN. They did not pay anything.

Senator BONE. They did not pay anything?

Mr. METTEN. Nothing.

Mr. RAUSCHENBUSH. The *Louisville* was one of the No. 26 to No. 30 group, was it not?

Mr. PARKER. Yes, sir.

Mr. LANGELL. That was a part of the $400,000.

Mr. METTEN. I think she was one of the later group.

Senator BONE. The *Louisville* was finished about 3 or 4 years ago.

Mr. METTEN. She belonged to that group, Senator.

Senator BONE. Perhaps less than that. Somewhere around 3 or 4 years.

Mr. METTEN. Then she belonged to that group.

Senator BONE. Then we are to understand that the Government paid nothing for the plans on the *Louisville?*

Mr. METTEN. No.

Mr. LANGELL. What is the *Louisville*'s number?

Mr. RAUSHENBUSH. No. 28.

Mr. METTEN. They did pay for part of the plans. If the *Louisville* was one of those ships, then, of course, they did pay that price to the central office for those plans.

Senator BONE. That is what I had in mind. Is that $400,000?

Mr. METTEN. Somewhere around there.

Mr. RAUSHENBUSH. And the Navy objected to the price and it was lowered a little bit.

Senator BONE. How much?

Mr. RAUSHENBUSH. $15,000.

Senator BONE. In other words, they took off $15,000 from $400,000 for the plans of the *Louisville;* is that correct?

Mr. METTEN. They usually divide the cost of the plans amongst the ships which are built from those plans.

Senator BONE. I have had some discussion with Navy officials about the *Louisville*, and therefore I am trying to arrive at specific figures. The plans on the *Louisville* cost $400,000 less $15,000, or $385,000?

Mr. RAUSHENBUSH. I think, Senator, you will find that there were three ships that were built in Government yards at the time, and the *Louisville* was supposed to pay one-third.

Mr. METTEN. That is correct. That is the way they usually do it.

Senator BONE. That is what I am trying to put into the record. It seems to me we could have the questions answered directly, unless you do not know. Do not tell us something with which you are not familiar.

Let us make this plain, so that we will have it in the record once and for all. The Government built two of those ships in the Government yards in this program?

Mr. METTEN. Three of them.

Senator BONE. Three of them. Then how much was charged against each of these ships for the use of the plans?

Mr. METTEN. One-third of that sum, assuming that the Navy accounting is carried out the way the private yard's is.

Mr. RAUSHENBUSH. I have no further questions to ask you, Mr. Metten, and if the chairman cares, he might excuse you until further notice. That would be satisfactory.

The CHAIRMAN. Very well, Mr. Metten, you can understand you are excused, with the understanding, of course, if we desire your presence here, you could and would run down.

Mr. METTEN. Yes; I can come down at any time.

The CHAIRMAN. Thank you, Mr. Metten.

(Witness excused.)

Mr. RAUSHENBUSH. Mr. Parker, I would like to go into the story where we left off yesterday, and would have gone on with it this morning if we had not wanted to finish with Mr. Metten. I was very much impressed with some testimony which you gave, to the effect that in attempting to get one item which the committee had requested, the expenses of the Washington representatives for a period of 14 years, that it would take approximately $60,000.

Mr. PARKER. Mr. Raushenbush, I would like to make that more clear. The committee in the 27 questions have asked for a lot of financial expenditures, salaries, payments to and from people under foreign patent agreements. What I meant was that the expense of collecting or compiling all the data requested in the letter would take a long time, and would cost, roughly, the equivalent of 3 years' accounting work, going over 18 years. I did not mean that it would take that to obtain the salaries and expenses for just one item, the Washington representative, or any of the other foreign representatives. I think that could be done in a reasonably short time.

As I told in response to Senator Vandenberg's question, I thought that I could get 1934 and 1933 very quickly, if I had time to get back of it. 1934 is the current record, and is quite easily obtained.

Mr. RAUSHENBUSH. It was in response to Senator Barbour's question as to the cost of finding this one item that you testified, going back over 14 years, would cost about $60,000, I believe.

Mr. PARKER. To obtain all the information requested in the letter. I did not mean that for just the Washington representative. We would be very glad to get that for any particular one, and I do not think it would entail very much expense or any great expenditure of time to get that one item.

Mr. RAUSHENBUSH. When you got that one item, you are sure, according to your accounting system, that that will be all the expenses for the Washington representative under all accounts, under all heads?

Mr. PARKER. Yes, sir; as far as the records would indicate.

VOLUME OF BUSINESS IN WAR AND POST-WAR YEARS

Mr. RAUSHENBUSH. I am somewhat interested in that question of the huge amount of expenditures involved in the war work of the company. According to our record, from 1917 to 1921 you did a total of $565,000,000 worth of business. Could you give us a rough idea——

Mr. PARKER. What years, Mr. Raushenbush?

Mr. RAUSHENBUSH. 1917, 1918, 1920, and 1921, the sales added up to $565,083,357.05.

Mr. PARKER. I do not believe that is a correct figure

Mr. Raushenbush. We have this from your income-tax returns.

Mr. Parker. If I may explain something, Mr. Raushenbush, that is a thing which has been asserted time after time. We will take a list of the contracts obtained by this company in that period, and, if you do that, you will not arrive at the total of the contracts anywhere near that figure.

The way that figure was compiled by the income-tax division is that each year—these contracts running over the period of a year—each year the report is worked in process, which is a cumulative total, even though it may be for 2 years prior, and that is a cumulalative total which duplicates it; sometimes three times the same amount is added in.

If you will take the total contracts which this company had during that period, it does not equal more than one-half or quite one-half that sum.

Mr. Raushenbush. Would you put it at about one-half that sum?

Mr. Parker. I would not know, but this question has been brought up many times, and the answer was given in the investigation of mail contracts. They had the same thing from the Treasury Department, and it was explained in the same fashion, and they determined the correct figure.

Mr. Raushenbush. I do not want to make too much of the point, but you believe it would be one-half?

Mr. Parker. Not more than one-half.

Mr. Raushenbush. $220,000,000?

Mr. Parker. As I remember the actual figure, it was about $165,000,000.

Mr. Raushenbush. All right; $165,000,000 for those 5 years. Now could you give us a rough idea, a very rough one, of how much of that expenditure was for the Navy and how much for the Emergency Fleet Corporation?

Mr. Parker. It was approximately half and half; if anything, leaning a little bit to the Shipping Board in total.

Mr. Raushenbush. About 60–40 to the Emergency Fleet Corporation?

Mr. Parker. Something like that.

TAXATION OF WAR PROFITS

Mr. Raushenbush. During this time how many men were around there employed by the Emergency Fleet Corporation to check and audit your books?

Mr. Parker. They had a corps of accountants and engineers. I imagine they had as high as 20 and probably more than that for the Navy Department.

Mr. Raushenbush. Twenty for the Emergency Fleet Corporation?

Mr. Parker. Probably, counting inspectors who checked the cost and audited the plant-construction accounts, as well as the ship accounts.

Mr. Raushenbush. And more than that for the Navy?

Mr. Parker. Probably more than that for the Navy. The Navy usually had more than the Shipping Board.

Mr. Raushenbush. How many were there for the Bureau of Internal Revenue, for the Treasury?

Mr. PARKER. I do not believe at any time they had more than two.

Mr. RAUSHENBUSH. Not more than two. So that you had——

Mr. PARKER. At any one time.

Mr. RAUSHENBUSH. So that you had, roughly, 47 Government men trying to check the cost and auditing?

Mr. PARKER. The Shipping Board auditors were changed, moved from place to place. The Navy auditors were transferred from time to time. We had several field audits, amortization and engineering audits, at various times by the Treasury Department. If you are trying to get the total number of men who were there, it would be something over 100, I am sure, over the whole period.

Mr. RAUSHENBUSH. I am trying to get an average of how many were there steadily.

Mr. PARKER. Some place between 30 and 50, combined Navy and Shipping Board.

Mr. RAUSHENBUSH. And those studies kept going on all the way through 1926?

I want to introduce into the record at this point an exhibit, which is a letter from the Treasury Department man who made the investigation in 1926, which gives perhaps better than any other one document, a story, sir, of the difficulties and complexities in checking, even for the Treasury Department, many years after all this had happened, and after all the other work had been done the books of a company on expenditures to which Mr. Paker has testified.

This letter is dated December 9, 1926, and is addressed to the head of the Consolidated Returns Audit Division, Bureau of Internal Revenue.

(The document referred to was marked "Exhibit No. 1428" and is included in the appendix on p. 4859.)

Mr. RAUSHENBUSH. That reads, in part [reading]:

> A field examination was made by representatives of the Trenton (N. J.) office, covering the years 1918 to 1921, inclusive, which resulted in a recommendation of a net overassessment of $181,820.33 for the 4 years. A second field examination was made out of Trenton, N. J., covering the years 1919 to 1921, inclusive, which resulted in a recommendation of a net additional tax of $99,057.55. The taxpayer agreed to the results of both examinations at the times of their completion.

As I get it, the local people were making two examinations, and one showed the taxes were $181,000 too high, and the other one showed the taxes were $99,000 too low, and the taxpayer agreed to the results of both examinations at the time of their completion.

Then the memorandum continues [reading]:

> An office audit of the last revenue agent's report reflected adjustments that resulted in a net overassessment for the years 1919 and 1920 of $836,964.64, and a deficiency for 1921 of $487,763.34.
>
> The case then went forward to the Solicitor of Internal Revenue, claims section, where objections were raised with reference to certain of the allowances applying against gross expense applicable to Government contracts. A copy of the Solicitor's memorandum returning the case to the unit is attached.

There is further description along the same line, and then it continues [reading]:

> To verify the correctness of the taxpayer's returns, or books, it is most essential to procure the schedules referred to and to examine the computa-

tions of earned profit on each contract that was made by the taxpayer and appear thereon. Such schedules have been requested of the taxpayer, first over 3 weeks ago, and photostats thereof were promised by Mr. Norman F. Parker, asistant treasurer, almost daily after the first request.

Is that yourself, Mr. Parker?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH (continuing reading):

> Last Saturday, on request again for the schedules, Mr. Parker informed us that he had been "stalling" and that we knew it, but that the corporation's counsel had advised him to delay giving the schedules to us. He called his counsel by telephone, a Mr. Orr, connected with White & Case, attorneys, while we were present, and explained the situation, and stated to Mr. Orr that he believed we were entitled to the schedules and should get them. Mr. Orr's advice, we were informed, was not to deliver them.
>
> To date, the situation remains the same, the schedules have been refused on the advice of counsel, so we are informed by Mr. Parker and Mr. J. T. Wickersham, the treasurer.
>
> The points raised by the Solicitor have developed other points that make it imperative, in the opinion of your examiners, after their investigation thus far, that a reexamination be made of the taxpayer's books for the period extending from 1918 to 1921, inclusive.
>
> Their investigation thus far, with the information we have been able to gather, results in an increase in income over income as determined by the revenue agent from Trenton, who made the last examination for the period 1918 to 1921, inclusive, of approximately $8,000,000.
>
> It is the positive opinion of your examiners, with the information gained thus far, that there should be recommended to the Commissioner that a reexamination be made of all of the taxpayer's books and records for the years 1918 to 1921, inclusive; and that the taxpayer should be duly notified under the provisions of section 1105 of the Revenue Act of 1926 that such investigation has been ordered.

That was just preliminary, Mr. Parker, was it not, to the examination which was made in great detail in 1926 that resulted in this increase in taxes?

Mr. PARKER. It was just at the beginning of that examination, as I recall it.

Mr. RAUSHENBUSH. Do you have any comment to make on the statement here that you had been "stalling" under the advice of your attorneys?

Mr. PARKER. None, except that that was true.

Mr. RAUSHENBUSH. In addition, we find here a letter which I want to offer for the record, a letter from the Assistant to the Commissioner of Internal Revenue, to the local office, calling attention to a rather strange situation, that the Treasury Department, either because of the "stalling" or because of the general delay, found it necessary to get waivers from the company to protect the Government in the matter, and the local Camden man of the Revenue Department had made out a very strange kind of waiver, where the Government assessed taxes against your company, allowing them to do that, but not allowing them to collect those taxed beyond a statutory period.

Do you remember anything like that?

Mr. PARKER. No, sir; I do not.

Mr. RAUSHENBUSH. You did not have a hand in that at all?

Mr. PARKER. No, sir.

Mr. RAUSHENBUSH. I will ask that that letter I have referred to, dated October 23, 1925, be marked "Exhibit No. 1429."

(The letter referred to was marked "Exhibit No. 1429", and is included in the appendix on p. 4860.)

Mr. RAUSHENBUSH. That goes in with your testimony of the other day, Mr. Parker, that the company was engaged in trying to prove it was bankrupt, or practically bankrupt, and could not pay those taxes. Do you remember an appraisal made by the firm of George W. Jessup & Son. of the company's property at the time?

Mr. PARKER. I remember that George W. Jessup & Son, with some other engineering associates, made an appraisal for its purchase. I had nothing to do with it. I only knew that they were there, and I furnished them with maps and plans and certain data.

Mr. RAUSHENBUSH. Do you know what they reported?

Mr. PARKER. I do not. I never saw the final report.

Mr. RAUSHENBUSH. We have their final report here, which I would like to offer. It is a letter from George W. Jessup & Son, dated August 19, 1927, to the American-Brown-Boveri Electric Co.; also a letter from Samuel T. Freeman & Co. on August 17, 1927, in which they appraised the property at $4,250,000 and also state:

> It is our opinion that such a liquidation would net your company $1,250,000 for the ground and buildings, and $1,750,000 for machinery, equipment, etc., or a total of not over $3,000,000.

(The letters referred to were marked "Exhibit No. 1430" and are included in the appendix on p. 4861.)

Senator VANDENBERG. What was the date of that?

Mr. RAUSHENBUSH. That was in August 1927.

That was part of the attempt, was it not, Mr. Parker, to persuade the Treasury that the company was worth practically nothing at the time?

Mr. PARKER. It was evidence that was submitted to the Department.

Mr. RAUSHENBUSH. At the same time I notice an annual report for the year 1927 of the American-Brown-Boveri Electric Co., which, I suppose, was used for stock sales and the like, being addressed to the stockholders, showing property and plant with a value of $16,178,211.83. Do you remember that at all [handing book to witness]?

Mr. PARKER. I remember it. You will note that this is a consolidated balance sheet and includes consolidated plant values of not only the American-Brown-Boveri Electric Corporation property at Camden, against which this tax assessment rested, but also included subsidiary companies in St. Louis, Boston, and Sidney, N. Y.

Mr. RAUSHENBUSH. Which had property values, altogether, of about four and one-half millions dollars, did they not, if that?

Mr. PARKER. Approximately $5,000,000, I would say.

Mr. RAUSHENBUSH. I am not talking about goodwill. I am talking about the plant property value.

Mr. PARKER. The plant property on the books showed something like $5.000,000.

Mr. RAUSHENBUSH. So that at the outside they were charging up for plant and property $11,000,000?

Mr. PARKER. So that this figure of plant property is not comparable to the appraisal.

Mr. RAUSHENBUSH. If you deduct the outside figure of $5,000,000, they are still claiming to their stockholders that the plant of the New York Ship at that time was worth $11,000,000.

Mr. PARKER. It was on the books at $11,000,000, but the appraisal, as I understand it, was made at a liquidating value.

Mr. RAUSHENBUSH. Now, the appraisal, according to this letter, was made at a nonliquidating value.

Mr. PARKER. That is right. They had four and three.

Mr. RAUSHENBUSH. $4,250,000, and a liquidating value of $3,000,000.

Now, coming for a moment to the transactions with the Emergency Fleet Corporation, were there any of the board of directors of the American International Corporation, that you know of, connected with the Emergency Fleet Corporation? Was Mr. Franklin on there?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. We find him listed as a dollar-a-year man.

Mr. PARKER. He may have been. I do not recall it.

Mr. RAUSHENBUSH. Do you know whether Mr. Baldwin was on there?

Mr. PARKER. I do not know.

Mr. RAUSHENBUSH. Mr. Grace?

Mr. PARKER. I do not know.

Mr. RAUSHENBUSH. Mr. Neeland?

Mr. PARKER. Only in his capacity as president of the New York Shipbuilding Corporation, indirectly.

Mr. RAUSHENBUSH. Was he a dollar-a-year man there?

Mr. PARKER. No.

Mr. RAUSHENBUSH. Was he on the Board?

Mr. PARKER. No; not so far as I know.

Mr. RAUSHENBUSH. What do you mean, only in his capacity as president of the New York Shipbuilding Corporation, indirectly?

Mr. PARKER. His connection with the shipbuilding, as a part of the contract of building ships for the Shipping Board.

Mr. RAUSHENBUSH. He was not on the Board?

Mr. PARKER. Not so far as I know.

Mr. RAUSHENBUSH. Mr. Frick, who was one of the former large stockholders, was on the Emergency Fleet Corporation Board, was he not?

Mr. PARKER. I do not recall.

Mr. RAUSHENBUSH. Henry C. Frick?

Mr. PARKER. I think that must have been Henry C. Frick, Jr. Henry C. Frick, Sr., was a former stockholder of the old company.

Mr. RAUSHENBUSH. We have his name in evidence, here. Mr. Schwab was director at the time, was he not?

Mr. PARKER. Of the Emergency Fleet Corporation?

Mr. RAUSHENBUSH. Of the Emergency Fleet Corporation.

Mr. PARKER. That is correct.

Mr. RAUSHENBUSH. From whom did you buy your steel in those days, Mr. Parker?

Mr. PARKER. Most of our steel was bought, in those days, from the United States Steel Corporation.

Mr. RAUSHENBUSH. When did that switch? When did you switch over to Bethlehem?

Mr. PARKER. I would say subsequent to 1927.

Mr. Raushenbush. You are testifying that during these war years you were not buying your steel from Bethlehem? Is that correct?

Mr. Parker. As far as I can recall most of our steel purchases were from Carnegie, the United States Steel Corporation.

Mr. Langell. So far as I know.

Mr. Raushenbush. You both testify to that effect, Mr. Langell?

Mr. Langell. I am not sure. I think we got some from Sparrows Point.

Mr. Parker. We went into the structural-steel business for a period, when the ship programs were out, and we were buying Bethlehem sections at that time because Bethlehem sections in the building-construction business were more developed and were specified generally by the building contractors. So that, prior to 1927, we were buying structural steel from Bethlehem, but not for shipbuilding, to any great extent, so far as I know, but were buying it for building construction.

Mr. Raushenbush. Was there any particular reason for giving United States Steel preference over Bethlehem? Was there any difference in price?

Mr. Parker. That I do not recall. The prices were a matter for the purchasing department. It was something I had nothing to do with.

Mr. Raushenbush. You had a business which you think was about $250,000,000 during these years, with the Navy, and about 60 percent of that was with the Emergency Fleet Corporation, and you had, did you not, a contract with them largely at cost plus on their ships, that is, the Emergency Fleet Corporation ships? Cost plus how much was it?

Mr. Parker. There were varying methods of cost plus. There was cost plus fixed overhead percentage, cost plus fee of so much, per deadweight ton, cost plus fixed fees varying from 10 percent down to 5 percent. There were several types of cost-plus contracts.

Mr. Raushenbush. Was not a supplemental contract entered into with the Emergency Fleet Corporation, making an arrangement by which there was to be a flat payment of 50 percent of the whole company's overhead by the Emergency Fleet Corporation?

Mr. Parker. There was a supplemental contract on a certain group of ships, which was made on the basis of cost plus a fixed overhead rate, with the fees originally stated in the contract per deadweight ton, per 10 percent, or per fixed amount of the fee.

Mr. Raushenbush. And that supplemental contract involved the payment of 50 percent of the whole overhead, did it not?

Mr. Parker. Fifty percent of the direct labor for overhead allowance.

Mr. Raushenbush. I have here a copy of the supplemental agreement, dated July 27, 1920, which I will offer for the record.

(The document referred to was marked "Exhibit No. 1431" and is included in the appendix on p. 4862.)

Mr. Raushenbush. It says in that contract [reading]:

> Said fixed charge shall cover all other costs and charges of every nature whatsoever for such respective vessels, including all overhead charges of the ship-

builder with respect to the construction of such vessels for the owner, bond interest, taxes, all costs of administration, all maintenance, all repairs, all depreciation, and all insurance (but not including insurance on hulls of vessels during construction, which insurance is a material charge).

Mr. Parker. That is right.

Mr. Raushenbush. It just takes in about the whole world, does it not?

Mr. Parker. No, sir; it is one of the fairest types of contracts, and avoids what would be assumed by someone not really familiar with the situation, that we could gain by padding our overhead, by padding the salaries of the administrative officers. So that the overhead on a percentage basis became our own responsibility. If it were high, it was our own. If we saved, it was our own. So that every inducement was offered by the supplemental contract to reduce overhead on the contract. It was the fairest arrangement, far more fair than any of the previous cost-plus contracts.

Mr. Raushenbush. Did you not also have contracts with the Navy which called for the Navy paying some of the overhead?

Mr. Parker. All overhead on any class of work is on a prorated basis in proportion to the volume of the work.

Mr. Raushenbush. I would like to put into the record at this time a compilation made by the resident auditor of the Emergency Fleet Corporation at the New York Shipbuilding Corporation to show a picture of the actual overhead and the amount paid under the 50-percent overhead contract, dated July 27, 1920.

(The document referred to was marked " Exhibit No. 1432 " and is included in the appendix on p. 4866.)

Mr. Raushenbush. Mr. Chairman, this gives here in columns the total direct labor, the total actual overhead for the yard for the first 11 months of 1920, the actual percent that that overhead was, and then the actual charge to the Emergency Fleet Corporation. Now you will see that the actual percent of overhead was far lower than the 50-percent arrangement which the Fleet Corporation had entered into. It was 39.94. This shows the rate at which the Emergency Fleet Corporation billed, and this column shows the excess [indicating]. It shows that in those 11 months alone this arrangement which some of the Emergency Fleet Corporation people thought was most unusual resulted in that excess.

The Chairman. Whose compilation is that?

Mr. Raushenbush. That was prepared by the resident auditor of the Emergency Fleet Corporation and was found in the Treasury's files. It shows that the excess of 50 percent over actual cost for those 11 months alone amounted to $1,270,996.60, which would be running at the rate of about $1,400,000 in a year, purely excess.

That is only significant from the connection it has with a letter which was written by the district plant engineer, and which is in the nature of a confidential report to the Bureau investigators. He is commenting all the way through on this contract, and here is his introductory letter. He describes this situation.

Because of the importance of this to the attempt to classify taxes in case of war, especially high taxes, I would like very much to have your indulgence to read a good deal of this. I will offer it as " Exhibit No. 1433."

(The document referred to was marked "Exhibit No. 1433" and is included in the appendix on p. 4867.)

Mr. Raushenbush. During this discussion Mr. Freeman, the district plant engineer, refers to himself as "Mr. Freeman" instead of saying "I", because this is supposedly an official report.

After summarizing, in the first three paragraphs, his functions and his duties and obligations, he points out in paragraph 4 one of the few changes he made. That paragraph reads:

> Mr. Freeman cut down the force from 35 to 10 at the New York Shipbuilding Corporation and also discovered that there was no check on maintenance at this yard, the cost of which was a cost against the ships in general overhead, and on some contracts an additional 10-percent profit was allowed. This matter was pointed out by Mr. Freeman and he was allowed to place four engineers on maintenance. A record of maintenance, month by month, by the New York Shipbuilding Corporation, was kept in regular schedule, and at the date of Mr. Freeman starting activities had reached an amount of $448,805 per month, which was charged against ship construction at a time when only the north yard was in operation, as the south yard had just gotten started.

Then he goes on to point out how he brought maintenance down from an amount of $448,000 to $91,000 plus.

The fifth paragraph reads:

> Matters were brought somewhat to a head by the New York Shipbuilding Corporation receiving a letter dated February 20, 1920, from our resident engineer, in which their attention was called to the fact that they were doing considerable work in the yard and charging same to maintenance, which was an improper charge, as it was being done without authority, and 11 items were cited on which the work was going on at that time; and the said corporation was advised that we were requesting our resident auditors to withhold payment on these jobs until same were approved, if they were proper charges. On Wednesday, February 25, 1920, we were advised that Mr. Magoon, senior vice president of the New York Shipbuilding Corporation, was in conference in the home office of the Fleet Corporation; and one of the officers of the New York Shipbuilding Corporation at the yard stated that he was afraid to call him up as he—Mr. Magoon—was in an awful temper about maintenance, resulting from our letter.
>
> 6. On the same day Mr. Magoon replied to our letter, stating that he was unable to find any ruling which required him to submit regular application for doing maintenance work for approval and that it was his present purpose to proceed with maintenance work under his usual procedure. On the same day the New York Shipbuilding Corporation wrote to Mr. Frick, manager of construction, Emergency Fleet Corporation, in which they state that the jurisdiction of the plant maintenance by the district engineer's department had been assumed as an extension of its duties in connection with plant construction and that they ask the Fleet Corporation in said letter to issue instructions that will relieve the New York Shipbuilding Corporation from all question of such supervision. It is to be noted that these letters were written the same day as the conference above referred to in the home office. Under date of February 28, Mr. Frick issued instructions to Mr. Miller to remove all engineers in his district whose work was confined strictly to maintenance.

Later on, however, that was changed.

I will now read from paragraph 7:

> This department pointed out to various departments further irregularities that the New York Shipbuilding Corporation made in the matter of plant construction and charged to ships. In one case we discovered one of the old ways that had been there for 20 years had been remodeled from wooden construction to concrete construction at an expense of approximately $126,000; same had been charged to ship construction and apparently had been paid as a ship cost. This was brought very forcibly before the auditing department; and said department, on their own initiative, made an estimate of the improper cost that had already been paid the New York Shipbuilding Corporation. An estimate of our share, amounting to $750,000, had been improperly paid, and this

amount was held up by the auditing department as made to the New York Shipbuilding Corporation. The Navy Department, hearing of this action, called a meeting and stated that inasmuch as they were paying 50 percent of the overhead, that they be allowed to see this list, as they also desired to hold up funds for improper payments, resulting in a similar amount being held up by the Navy Department on March 3.

Mr. Chairman, according to this letter, the Emergency Fleet Corporation had overpaid $750,000, according to their figures, at that time; and the Navy Department found out about this thing and asked that they be allowed to see the list in order that they might see if they had not overpaid, too. [Continuing reading from "Exhibit No. 1433":]

The Fleet Corporation notified the New York Shipbuilding Corporation that $750,000 was held up from their payments, and following this they received a like notice from the Navy Department. So that we find in the spring of 1920, we, the Fleet Corporation, did know that the books of the New York Shipbuilding Corporation showed many charges as ship costs which were improper.

That is before the signing of the supplemental contract.

Now, in paragraph 8 of the letter he states [reading]:

There is no doubt that this Department is held responsible by the New York Shipbuilding Corporation due to the fact that we stopped them from getting away with improper cost in large sums; that we have brought out the fact that neither the Navy nor the Fleet Corporation were paying proper attention to ship costs. Admiral Capps, Chief of Cost Compensation Board, in Washington, sent for Mr. Freeman and asked him regarding the work he was doing, complimenting him upon same, and stating he was glad the Fleet Corporation had somebody who had backbone enough to stick up for what is right and did say that he could not understand where his own Cost Compensation Board had been at the plant of the New York Shipbuilding Corporation for the last 5 years.

Now, reading paragraph 9:

The feeling that the New York Shipbuilding Corporation had that they were being checked up in a manner that they were not used to; that their free hand in construction work was in a measure restrained, did, we imagine, after considerable bearing on their efforts to eliminate our activities from that yard, but due to the fact that Mr. Freeman succeeded in pointing out the value of checking maintenance, checking the interest of the Emergency Fleet Corporation, matters remained the same as usual until date of July 27, 1920, when a new arrangement was entered into between the shipbuilder and the Emergency Fleet Corporation in which a fixed percentage of direct labor was allowed, said yard requiring no longer any efforts of the organization until at the date of this report, there is practically no supervision, as no control is required by this arrangement of the money that is allowed the New York Shipbuilding Corporation for maintenance.

It was this contract which you were commenting on as being so unusually fair, was it not, Mr. Parker?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. The document continues [reading]:

Commenting on this report for the benefit of all concerned, attention is called to the following facts:

Mr. Freeman, district plant engineer, and Mr. Eason, district manager, visited the plant of the New York Shipbuilding Corporation on or about July 13, 1920, in order for Mr. Eason, the new district manager, to pay his respects to the yard and visit same. At a meeting in Mr. Neeland's office——

Mr. Neeland was your president at the time?

Mr. PARKER. That is correct.

Mr. RAUSHENBUSH (continuing reading):

(those present being Mr. Neeland, Mr. Eason, and Mr. Freeman), Mr. Eason stated to Mr. Neeland that it was considered advisable to allow a fixed percentage for maintenance, and Mr. Neeland replied that that was just what they were working on, and stated that Mr. Gillan, of the Shipping Board, was expected to visit the yard the next Saturday at the launching of the *Bay State;* that he, Mr. Neeland, had a very dear friend, who was also a friend of Mr. Gillan, and that this friend had come to him and stated that if he had anything to put through he had better arrange to do so in the next week, as the President expected to make some new appointees to the Board—

meaning the Shipping Board—

and that his friend, Mr. Gillan would probably resign; that as matters now stood, Mr. Gillan could get through anything he wanted to, as it was a one-man Board; that whatever he said was accepted; that any delay over a week might cause them not to get it through. Mr. Neeland then stated that for this reason he would like to have this matter brought up as soon as possible, so as to get it through by Mr. Gillan while still on the Board. Luncheon was then announced. Mr. Neeland asked Mr. Eason and Mr. Freeman to meet him after lunch, as he could not have luncheon with them because he had to make a talk to his superintendents. The meeting was then adjourned, and on the way out Mr. Freeman called Mr. Eason aside and told him that he did not like the way Mr. Neeland talked, and that while he agreed with the principle of a certain percentage being allowed the New York Shipbuilding Corporation, he did not think it possible to think of doing within a week, and he also advised Mr. Eason not to be a party to railroading anything like that through in that time, as it was a proposition that required a long time to work up. Mr. Eason replied that he would not, and was just drawing Mr. Neeland out, or words to that effect.

Mr. Freeman then asked to be excused from the afternoon meeting (as he did not desire to become a party to same). At the end of the same week Mr. Freeman went on his vacation, and on his return he found that the agreement had already been entered into.

Then we get the comments on the agreement [reading]:

(10) In connection with said agreement, your attention is called to the fact that the auditors, under date of August 2, 1920 (Mr. George W. Willbrock, resident auditor), submitted a report to the district controller, A. J. Paynter, in which he states, referring to the report, "It consists of as many facts as could be gotten together within a few days in connection with the proposition of a flat overhead of 50 percent, contract for which I understand has since been signed, no official notification, however, having been received at this office to date." He also stated in the same letter of transmittal of report, "all of the elements that entered into the proper consideration of this proposition have not been thoroughly weighed", this because of the limited time given the writer. It will be noted that this letter of transmittal, in which the resident auditor tells the Emergency Fleet Corporation that all elements have not been properly considered, under date of August 2, 1920, several days after the actual signing of the agreement, which was July 27, 1920, showing that agreement was prematurely entered into, if the knowledge that is secured from the auditors, who have been constantly on the work, is of any value.

The CHAIRMAN. As I get the picture, the Emergency Fleet Corporation had auditors there constantly. All their reports, and the report of the district manager, were, according to Mr. Freeman, ignored when this particular contract was signed. [Continuing reading from "Exhibit No. 1433":]

Your attention is also called to the fact that the plant engineering department which has had more to do with plant maintenance which forms a large part of the overhead at this yard, was not asked for any recommendation, nor consulted. Especially is this very pointed in view of the fact that this agreement appears to have been drawn up to avoid maintenance control or of accounts which at the date of the contracts were improperly on the books of the New York Shipbuilding Corporation and on which a million and one-half dollars was withheld. It is to be noted that the agreement on page 5, sets forth that "for this purpose, the direct and proportionate labor, cost, as they now appear and shall appear upon the books and records of the shipbuilder shall be used for work already performed, etc.", and which back cost appears to have been used as a basis for the agreement when same were known to be improper and not correctly recorded.

There is another paragraph and some comments by Mr. Gillan, and paragraph 12 says [reading]:

An examination of the facts of this agreement of July 27, which is made retroactive from the beginning of these contracts, in the opinion of the writer is manifestly wrong to the interests of the Fleet Corporation for it was drawn up apparently to ease the situation under which as set forth by the agreement both parties recognized that the determination of the actual cost of the said vessels as defined in the contract would necessitate long negotiations and expense to both parties and possible conflict and both parties are, therefore, desirous of settling, adjusting, or compromising all questions and so for these reasons they have drawn up an agreement on which there is apparently no compromise as all of the cost as shown by the books of the corporation for direct and apportionate labor cost is used without question, which is combatted by certain claims that are presented by the shipbuilder to offset all irregularities in said accounts.

13. It will be noted that the claims that the New York Shipbuilding Corporation have presented as made would apparently show a loss of 1¾ per cent to the New York Shipbuilding Corporation. This combated by figures from the auditing department which is made up mainly on plant figures about which the plant department was not consulted.

You see, Mr. Chairman, all the way through, apparently, this whole agreement was made without any consultation with any people who had been working at the plant before. That is this man's grievance in the matter. [Continuing reading:]

This agreement is based upon a list of work estimated by the auditing department on a strictly engineering propostion and in many cases lies deep in the ground, yet this estimate has been allowed which affects the Emergency Fleet Corporation's interest retroactive to the beginning of the Emergency Fleet Corporation's interest at this plant and also applies to all future work. This is absolutely wrong, improper, and unbusinesslike, and something that would not be countenanced by any private corporation, and yet we find that it has been thought to spend Government money in a way that cannot possibly be right. It was made without use of data that had been collected by our representatives, and used all data which was wrong and which was known to be wrong by the records as indicated above and which was vital to the formation of a proper agreement to protect the Government's interest. It is to be regretted that the Fleet Corporation representing the Government allowed this contract to be made with a corporation that has been under observation by the District plant engineer and the auditing department with the knowledge of the departments above, substantiated by proof that they had to be recognized to the extent of taking from this corporation funds that had been improperly paid out. All this occurred before the agreement was signed and was known before said agreement was signed.

Then, in the next paragraph, he goes on to say that there is going to be a certain amount of "velvet" [reading]:

14. An examination to the effect of the agreement as far back as 6 months which is as far as it was carried by the auditing department showed from January to June 1920, that the New York Shipbuilding Corporation by its new agreement made an excess in what they would have made under their other contract which is binding an amount of $667,014.50 as "velvet." The details by months is as shown in statement attached marked "Exhibit B."

Then he goes on to say:

We believe from conservative estimate that the entire benefits of this new contract by the Fleet Corporation will amount to between $2,000,000 and $3,000,000 profit as "velvet."

Then he goes on to comment on the south yard, and there is this comment on the whole thing [reading from paragraph 17 of "Exhibit No. 1433"]:

> Our force at the New York Shipbuilding Corporation is reduced 71 percent at the present time. There is no doubt that this reduction was brought about by the apparent sinister influence of the New York Shipbuilding Corporation.

Mr. Parker, what do you remember about that contract and those conditions which had to do with the letter from the plant engineer which was just read? That says that the contract, of which I introduced a copy just a minute ago, showed that the excess carried on a 50-percent basis of overhead was $1,270,000 for the 11 months. Were you in on the making of that supplemental contract with the Emergency Fleet Corporation at all?

Mr. Parker. Not at all. I supplied figures to Mr. Neeland. I supplied a list of the various items in controversy, most of which were matters of opinion. I felt then, and I feel now, that the items that we claimed as proper elements of cost were proper elements of cost, and the fact that this would have led to long-drawn-out controversy led to a final settlement of the whole matter on a contract basis which in principle is fair and is the soundest type of cost-plus contract we have ever experienced.

Mr. Raushenbush. And is that the kind which you would like to enter into in another war, if we had one?

Mr. Parker. The kind of contract which is fair, and is the only type of cost-plus contract which is fair, is an agency contract where, as an agent for a principal, and subject always to the approval of the principal, disbursements are made only on such approval of the principal.

And the amount of fee allowed the agent for the work by the principal can be fixed, can be competitive, can be increased, can be subject to savings, in which the agent might participate. So that the inducement to do an efficient, economical job and gain thereby is always the incentive to doing a good job.

That was the principle on which this contract was truly based, except for the fact that the work had progressed to about 80 or 85 percent complete, and it may be that the fixed overhead, which, in a sense, is a fee based on direct labor, may have been too high, as the results turned out. Had it not been for that fixed overhead, in which the contractor no doubt participated, the actual costs might have been far in excess of that, because it gave the contractor an opportunity to control those factors of cost which were then within his own jurisdiction.

The question of an expenditure of $50,000 for a repair may many times save $150,000 in the actual direct cost of a ship.

To have that approved and included in cost where you have difference of opinion by engineers who are not familiar with the shipbuilding business, not familiar with the results of inadequate or inefficient apparatus, naturally leads to differences of opinion.

So that the best interests of both parties, the principal and the contractor, are served where that factor is not subject to controversy because of normal and natural differences of opinion.

So that in principle that type of contract is, to my mind, the fairest and most equitable type of cost-plus contract.

Mr. Raushenbush. That is very interesting, and I hope we can get back to it after a while, but, at the moment, I would like to finish up with this subject. We brought out yesterday that the Emergency Fleet Corporation had planned ahead of time that the $14,000,000 investment would be given back to you in a certain way, to avoid taxes, at the end of the war period, and that was done. You paid about $500,000 for it. Now I find them making a contract which, while it may have been right in principle, fixed a percentage of overhead, and did so without consultation with any of the staff, apparently, who had been on the ground, and added to the advantage of the company to the extent which the plant engineer there estimates between $2,000,000 and $3,000,000, and did it completely ignoring the staff you have described, who were constantly around there.

Yesterday in the testimony we found that the revenue people, when they finally got into this situation in 1926, and for various reasons decided to look into it, and found a whole host of things which nobody had found before.

On top of that, if we take the testimony the other day about it costing $60,000 to find a certain number of items, and take the testimony that at the outside altogether it would run up to $250,000,000 or so for a period of years, and we are confronted with the situation which raises a question as to whether when once expenses are paid, there is any real possibility of controlling them. Whether you make it on a split overhead basis or a straight cost plus or a cost plus fixed fee, wherever expenses are required to come in, whether it is really possible for a government to police them. Certainly 40 men were not enough.

How many more did you have yourself, working for the company, on those figures, in the whole auditing department, the whole accounting department?

Mr. Parker. Fifty to one hundred.

Mr. Raushenbush. You had 50 to 100, and the Government had 40, and yet, 10 years after it is over you still are faced with the same disputes about who was "gypped" and who was not "gypped." And then there are these charges of "stalling" on advice of your attorney, Mr. Parker, to sort of complete the picture.

I would like to put in a few more things, because our time is short.

Did you charge up to expenses, for instance, some royalties to a Dutch firm for Diesel engines which you never used? The resident auditor states that you so did in a letter dated January 14, 1920.

Mr. Parker. That is correct.

Mr. Raushenbush. I would like to offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1434" and is included in the appendix on p. 4872.)

Senator Bone. Mr. Raushenbush, I am not clear on one thing. Was this yard doing Government work exclusively during this period?

Mr. Raushenbush. Mr. Parker could answer that.

Mr. Parker. During the period 1914——

Senator Bone. Take it from 1917 to 1921.

Mr. Parker. I am sure you want the complete picture, Senator. From 1914 to 1916, due to the shortage of shipping, all private yards were filled with new construction because of shipping needs and the opportunity of profit, with the result that when we entered the war in 1917 we had contracts on the books, not yet undertaken, private contracts, that would utilize the capacity of that plant for a long period.

The Government, of course, under the extraordinary powers granted by Congress to the respective bureaus and division and agencies set up, commandeered the entire output of the plant, all contracts in process, materials, plans, and everything else. They went into that, making extensive changes to fit their particular purposes.

The merchant ships were changed to include foundations for armament, depth bombs, compartments for protection against submarine attack, mine-sweeping devices, camouflage, and all such things, which was all done at the direction of the Government, who had commandeered all our plans. They were private contracts, but were not completed as private contracts but were completed for the Government, under the Government orders.

It was those changes in the contracts, the requirement that they meet the Government demands, which brought about all of these various charges, both with the Navy and the Shipping Board, which led to such long controversies.

Senator CLARK. Did they commandeer your private vessels on the ways, in the process of building?

Mr. PARKER. They commandeered everything we had.

Senator CLARK. They took them all over?

Mr. PARKER. Yes, sir.

Senator CLARK. You did some Chinese work during that period?

Mr. PARKER. That was later, after the war.

Senator CLARK. I understood you to say that your reason for charging part of the Chinese compensation against the Government was that by getting a Chinese tanker to construct——

Mr. PARKER. Japanese.

Senator CLARK. I understood you to say Chinese. I believe you charged part of the compensation to the Chinese and Japanese agents to the Government; and I understood that that was because of the Japanese agent getting a Japanese tanker to construct, and you had saved the Government part of the overhead.

Mr. PARKER. That was correct.

Senator CLARK. When was that?

Mr. PARKER. To get that complete, we had, at the end of the war, November 1918, under way, 30 destroyers, we had contracts for 2 battleships, a battle cruiser, any number of troop ships then under construction, and all these contracts were on a cost-plus basis. The war ended in November 1918, and the need for the ships, except the naval vessels, was not felt, except for troop movement, and the Navy Department was pushing the construction of the destroyers as being the essential vessels and the battleships and battle cruisers, being long-term contracts, running over a period of 4 years, were not being pushed, because it did not appear that they could be completed to be in time to be of service.

The destroyers were completed under the terms of the original contract, and the troop ships for the Shipping Board were changed and converted into passenger and cargo vessels and became, eventually, the President type ships.

The troop accommodations, and various other features which were in the original plans and specifications were changed, and they were under a new contract and under new plans finished under the same cost-plus basis.

The battleships—the *Colorado* was approximately 75 percent complete, and the battleship *Washington* was probably 60 percent complete in 1922, long after the war, and, of course, were caught, along with the battle cruiser, in the Limitation of Arms Conference of 1922. The battleship *Washington* was canceled and the *Colorado* was finished. The battle cruiser *Saratoga* was changed to an airplane carrier. The armament and armor and various structural changes which were necessary to convert any such battleship cruiser to an airplane carrier were carried out over a period, and final delivery of that ship was about 1927. That was still a cost-plus contract.

In the period from 1920 to 1921, when this Japanese tanker for the Japanese Navy was constructed, that was also on a cost-plus basis, the inclusion of fees, commissions, and expenses of the Japanese representative, and overhead and administrative expense incident to the Japanese tanker, which reflected, as stated yesterday, a saving, since the total overhead of the plant was prorated to all production, and the overhead, which would otherwise have been charged to all other construction in process was, in part, borne by the Japanese vessel.

Senator Clark. Is it customary on all your cost-plus contracts to have the commissions to agents in other nations included?

Mr. Parker. We charge that to administrative expense, and administrative expense is prorated to all production. It is not charged to the ship, but charged to all ships and prorated on the actual production of the plant.

Senator Bone. Is that a standard form of accounting employed generally?

Mr. Parker. Yes, sir; so far as I know, in every ship-building plant.

Senator Bone. At the present time?

Mr. Parker. Yes, sir; so far as I know.

Senator Bone. Did you build and deliver anything in the nature of a 10,000-ton cruiser during that period?

Mr. Parker. No, sir; the 10,000-ton cruiser class was not in the picture until 1926.

Senator Bone. That was a later development?

Mr. Parker. Yes, sir.

Senator Bone. Was there anything equivalent to a 10,000-ton cruiser turned out?

Mr. Parker. After the contracts which we were ordered to build during the war, the battle cruiser and battle ships, after the Limitation of Arms Conference in 1922, there was no construction in which we participated, that is, no naval construction in which we participated, until we took over the Cramps contract after default.

Senator Bone. The battle cruiser was converted into an airplane carrier?

Mr. Parker. Yes, sir; completed as an airplane carrier, and the armor was removed, and all the other structure which was required to make it into a plane carrier.

Mr. Raushenbush. The whole difficulty in determining costs, apparently, still persists after the war, Mr. Parker. We have here a Treasury Department letter in which they were attempting to compute the cost of the *Idaho*. That was after the war a while, was it not?

Mr. Parker. The *Idaho* was under a contract and was about 40 or 50 percent complete at the time of the war, a battleship contract at the time of the war. We were instructed by the Navy Department to suspend construction on it and advance the construction of the destroyers, and for a long time the *Idaho* remained just tied up at the dock, without any work of any character being done on it.

Mr. Raushenbush. Apparently in 1926 the revenue agents went into this thing. I have a document here, and there are a great many pages which I want to put in, but there is just one paragraph to which I wish to call your attention.

They say [reading]:

> After a very careful study of conditions, viz., the system of bookkeeping and record keeping, the practices of the corporation, etc., it is the opinion of your examiners that it is an utterly impossible task to attempt to determine correct costs in connection with each contract. It is our unqualified opinion that even a large corps of men working for an indefinite time could not even approach accuracy. Thousands and probably hundreds of thousands of vouchers, labor tickets, store requisitions, etc., would have to be examined and reanalyzed, and the books all recast. During the war emergency the plant employed in the neighborhood of 22,000 men.

I would like to offer that for the record.

(The document referred to was marked "Exhibit No. 1435" and is included in the appendix on p. 4873.)

The Chairman. But there was no real effort made at that time to get away from cost-plus?

Mr. Raushenbush. There were many efforts made, but in 1926 they go back over the whole thing and find it cannot be done.

I have here a letter which I would like to offer for the record, being addressed to H. B. Robinson, head Consolidated Returns Audit Division.

(The letter referred to was marked "Exhibit No. 1436" and is included in the appendix on p. 4877.)

Mr. Raushenbush. That letter reads, in part, as follows [reading]:

> In the course of our examination of the records of the cost inspector of the Navy, we have noted that it has been the continued practice of the taxpayer to include everything possible in expenses (cost of construction of ships) regardless of whether or not they represented correct costs. We have also noted that approximately $1,037,000 has been disallowed as expense by the Navy Department on billings to it by the taxpayer; and the items composing this amount capitalized and depreciation allowed thereon. This necessitates the computation of voluminous detailed schedules of depreciation, spread over the years 1918 to 1921, inclusive. Of necessity, in connection with the Navy dealings with the taxpayer, separate schedules of depreciation have to be prepared for every month of every year.

They say here:

> We have been informed by the commander in charge of the Navy cost-inspection office that the corporation included in 1 month in the cost of construction of ships a dividend in the amount of $35,000.

Is that correct, Mr. Parker? Was the attempt made to charge a dividend on preferred stock into the cost of the Navy vessels?

Mr. Parker. It was charged to expense?

Mr. Raushenbush. Expense of the ship?

Mr. Parker. It was charged to the cost, the expense of which was prorated to all work, and a part to naval vessels.

Mr. Raushenbush. So that you were in a position of asking the Government to pay a certain part of your preferred-stock dividends?

Mr. Parker. Mr. Raushenbush, you may have read the first cost-plus contract with the Navy Department, in which there was a semblance of a definition of cost, which item provided that costs shall include all taxes. Yesterday it was brought out by your investigator of the Revenue Department that income taxes to the extent of some $300,000 were included.[1]

Mr. Raushenbush. $377,000.

Mr. Parker. When that contract was reviewed literally, where the contract said that the costs were to include all taxes, it was quite apparent to everyone eventually there was slight chance of the income taxes being allowed as an element of cost when the contract provided that costs should include all taxes.

Senator Bone. Who framed that contract on behalf of the Government?

Mr. Parker. The Navy did, and handed to us that contract.

Senator Bone. The Navy Department agreed to that in the contract?

Mr. Parker. The Navy Department prepared the contract and offered it to us to sign.

Senator Bone. And included in there an allowance of income taxes as a part of your overhead?

Mr. Parker. No, sir; all taxes.

Senator Bone. That is what I mean.

Mr. Parker. They did not specify income taxes.

Senator Clark. That includes income taxes.

Senator Bone. That is an all-inclusive term.

Mr. Parker. Under the literal wording of the contract it was absolutely necessary that we charge all taxes to cost.

Senator Clark. So that in your compensation the percentage on the total cost would be figured in and the taxes which were paid were also to be figured in the base, on which you were getting your percentage?

Mr. Parker. It was quite apparent to us, Senator, that that was a thing which could not stand, and would never be allowed by the Department, the Revenue Department, or anybody else, because income taxes were apparently aside.

Senator Clark. It certainly did not seem to be apparent enough to you to not make the claim. You made the claim, did you not?

Mr. Parker. We tried to present our costs as the contract provided.

Senator Clark. It was not sufficiently apparent to you that it would not be allowed to cause you not to make a claim and put up a fight for it?

Mr. Parker. We tried to follow the contract.

Senator Bone. On the theory that, being "nominated in the bond". you were going to exact your "pound of flesh"?

---

[1] In this connection see letter from Secretary of the Navy to Senator Barbour, appendix p. 4939.

Mr. **Parker**. We were putting in everything in the contract provisions.

Mr. **Raushenbush**. Do you know whether the other shipbuilders tried that?

Mr. **Parker**. I really do not know.

Mr. **Raushenbush**. According to all the letters put in, the constant picture, if you want to comment on it, is that the shipbuilding company, at every time, in every way, has tried to increase its costs and has tried to get them up as high as it could, and fought with the revenue agents or anybody else over what the figures should be.

You will remember the whole discussion, trying to get figures on *Ways J*, for instance, and they felt they were being definitely held up, and every single attempt they could make in any way, to get an increased cost, was being made.

Senator **Clark**. Coming back to this contract, the effect of this contract, according to its construction which you assert that it says, Mr. Parker, is that the more taxes which were assessed against you, the more money you actually received from the Government.

Mr. **Parker**. That was a peculiarity of the contract.

Senator **Clark**. Yes, sir; very peculiar.

Senator **Bone**. In other words, if you took all your profits and charged them to operating expenses, your profits would be just that much greater?

Mr. **Parker**. That is what the contract provided.

Senator **Clark**. Would it mean that the profits would be figured as taxes were figured, in the base set-up for figuring your percentage?

Mr. **Parker**. It would be on the basis provided.

Senator **Clark**. That is the assertion which you made.

Mr. **Parker**. Which, of course, was apparent to us as being impossible, but required us to make the charge against the expenses, which the contract provided.

Senator **Clark**. That is all.

Mr. **Raushenbush**. I would like to offer a letter I have here, dated October 14, 1926, also addressed to Mr. H. B. Robinson, head Consolidated Returns Audit Division, for the record.

(The letter referred to was marked "Exhibit No. 1437" and is included in the appendix on p. 4878.)

Mr. **Raushenbush**. Mr. Freeman, who commented on that being so, did not have his advice heeded. And 3 years afterward, whoever was drawing these contracts had not been a bit more careful about these things, had they? You will say it was done in a war rush; and the Navy, who had to have these ships, had more or less acquiesced in this contract, but here is a contract signed by the Emergency Fleet Corporation, a supplemental contract, of July 27, 1920, and they are saying the same thing, and giving you the same opportunity.

Mr. **Parker**. From what you said of Mr. Freeman's comment, the war rush was small compared with when that was put through.

Mr. **Raushenbush**. Yes, sir; that seems to be the situation.

Senator **Bone**. Mr. Parker, has there been any discussion between your company and the Government respecting the nature of any contracts for building ships in the event of another war?

Mr. **Parker**. The only matter in that connection with which I have had any part was in the supplying of the commandant and the various naval officers with a record of the capacity and the available facilities in the event of a national emergency.

Senator BONE. But there has been no discussion between your firm and the Navy Department as to the type of contract to be followed in the event of another war?

Mr. PARKER. None in which I have had any connection.

Senator BONE. So that all we have to guide us now is this lamp of experience which has been shining or burning very brightly here, to guide us in the event we wanted to make some suggestions to the Navy on the type of contract to be employed? Is that right?

Mr. PARKER. I believe you are right, sir.

Senator BONE. If we went into a war tomorrow, we would not have any experience to guide us except the unhappy experience of the last war, because the Navy made the contract, permitting you to charge up as an operating expense all the taxes you had, including income tax. That is all the experience we have had.

Mr. PARKER. That was provided in the contract.

Senator BONE. And the Navy Department of this Government prepared and sent down to you that type of contract?

Mr. PARKER. Senator, in 1917 no one had had any great amount of experience in cost-plus contracts.

Senator BONE. Mr. Parker, I realize that we had not been through a world war before that time, but certainly no business man with intelligence would enter into that sort of contract, would he? You would not make that sort of contract with a contractor, would you, if you were in the position of the Government?

Mr. PARKER. Senator, if I may be a little bit facetious, when we took the first Government contract for the cruiser *Washington*, which was our contract no. 14—it has been a long time ago—we submitted that contract in its form presented by the Department to our general counsel, who reviewed the contract and returned it to us with the comment that anybody who signed that contract was a fool. It is only through the wisdom of experience that you gain by these various contracts. We found that the attitude of the Department was fair, that the intent of the contract was carried out by both sides, and we had no penalties exacted that were severe and not contemplated between the parties in this contract, and we have entered into Government contracts ever since on a fair-minded basis.

Senator BONE. It was left in your hands to decide on the basis of fairness what was to be done in the matter of the payment of taxes, literally in your hands, was it not? In other words, the Navy had drawn a contract that literally delivered the Navy over to your concern, if you wished to enforce the contract?

Mr. PARKER. Not at all. It could not be enforced. It was illegal in the first instance. That was recognized by everybody. You are a lawyer, and ought to know.

Senator BONE. It is perfectly legal for the Government to pay a certain amount for a ship.

Mr. PARKER. Yes, but this was a cost-plus contract.

Senator BONE. The Government agreed to waive its rights, so far as taxes were concerned?

Mr. PARKER. No; it was not waived. They cannot waive a right.

Senator Clark. Do I understand, Mr. Parker, you say that under this contract you figured in the dividends on your preferred stock as a part of the expense?

Mr. Parker. Under this contract, Senator, where our whole plant was commandeered by the Government, and where the whole activity of that plant was for the Government, either one division or another, the assumption was that all the costs of operation, including interest on borrowed money, bond interest, interest on bonds used for providing the working capital, or dividends on preferred stock, if preferred stock had been issued to provide working capital, were interest charges and such were included necessarily.

Senator Clark. Do you mean if you wanted to be a good fellow and to declare dividends on preferred stock, the more money went into the treasury?

Mr. Parker. It seems the interest on bonds is an element of cost, on which to determine cost, and is recognized by everybody.

Senator Bone. The Navy Department has made claims that to build ships in a public yard does not provide a fair comparison with private yards, because the private yards have to stand overheads which a public yard does not have. Apparently here you have not only charged in all the possible overheads in respect to such matters, with which any man knowing utility practices is familiar, but have charged in as overheads dividends on preferred stock, and the contract handed you by the Navy Department permitted you to charge off even income tax as an "overhead."

Mr. Parker. That is the first contract, the second contract did not.

Senator Bone. The Navy prepared the contract, and yet the Navy has made the assertion that a public yard has an advantage over a private yard because the public yard does not have to carry taxes as an overhead. That argument won't hold water, will it, if you want to be fair about it?

Mr. Parker. You are speaking of what will hold water under cost-plus contracts?

Senator Clark. At least you do not have to charge up, in addition to the amount that the navy yard would have to pay in taxes, if it were a private yard. In this case, according to the theory under the contract, the Government not only gave you the taxes but also paid you for the privilege of having the right to assess taxes. In other words, you did not have to pay any of the tax, but you got 10 percent, or 20 percent, or whatever your commission above cost was, on the taxes which were assessed.

Mr. Parker. We did not.

Senator Clark. You claimed that was in the contract and tried to get it.

Mr. Parker. We claimed that was in the contract and tried to get it, because that was provided in the contract.

Senator Bone. That was a contract drawn by the Navy Department?

Mr. Parker. Right.

Mr. Raushenbush. Just one more question, Mr. Parker, in regard to this unusual supplemental contract of the Emergency Fleet Corporation, at the time when P. A. S. Franklin was a dollar-a-year man with the Fleet Corporation, and was also a member of your board. I notice, some years later, the company gave him the opportunity of purchasing a certain amount of treasury stock at $1. Is it true that that is the same stock that, a few months later, was given under option for $30? Do you remember the transaction, which we found in your minute books last night?

Mr. PARKER. I remember the transaction by which Mr. Franklin and Mr. Feeland were given some stock which had been reacquired by the New York Shipbuilding Co., but whether that was a part of the stock acquired later by L. R. Wilder and his associates in the American-Brown-Boveri Electric Corporation, I do not know.

Mr. RAUSHENBUSH. It was the same class of stock?

Mr. PARKER. There was only one class of stock.

Mr. RAUSHENBUSH. So that you were giving Mr. Franklin a reward, or tip, or whatever it is, for his services to the corporation, in the form of allowing him to buy treasury stock out of the treasury for $1, which, a little later, was worth, under option, $30. Is that not correct?

Senator CLARK. Is that the same dollar he got from the Government?

Mr. RAUSHENBUSH. One dollar a share.

Senator BONE. Is that the P. A. S. Franklin who was the head of a concern who bought a lot of ships from the Government at a low price?

Mr. RAUSHENBUSH. Yes, sir.

Senator BONE. What firm?

Mr. PARKER. International Mercantile Marine.

Senator BONE. They bought a number of ships which are now operating under mail contracts. Is that correct?

Mr. PARKER. I do not know, I believe so.

Mr. RAUSHENBUSH. You say that there was only one class of stock, so that the stock under option at $30 did go to him for $1?

Mr. PARKER. What he sold it for, or whether that was part of the stock which was optioned, I have no knowledge.

Mr. RAUSHENBUSH. You say there was only one class of stock?

Mr. PARKER. There was only one class of stock.

Mr. RAUSHENBUSH. A little later, American-Brown-Boveri Electrical Corporation was advertising stock at 77. Is that the same kind of stock?

Mr. PARKER. 77?

Mr. RAUSHENBUSH. Yes, sir; there is a circular of October 1925 referring to the stock being worth 77 on the market, the property and assets behind it worth 77.

Mr. PARKER. That is not the same stock.

The CHAIRMAN. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12:22 p. m., a recess was taken until tomorrow, Wednesday, Jan. 23, 1935, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

WEDNESDAY, JANUARY 23, 1935

United States Senate,
Special Committee to Investigate the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357 Senate Office Building, pursuant to the recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee.

The Chairman. The committee will be in order. Mr. Humphreys.

TESTIMONY OF H. R. HUMPHREYS

ATTEMPTS TO INFLUENCE CONGRESS

(Witness was duly sworn by the chairman.)

Mr. Raushenbush. Mr. Humphreys, you were formerly connected with the New York Shipbuilding Co., were you not?

Mr. Humphreys. Yes, sir.

Mr. Raushenbush. For what years?

Mr. Humphreys. From 1918 to 1929, I think.

Mr. Raushenbush. Would you describe for the committee the various capacities in which you served the company?

Mr. Humphreys. I was engineer of the industrial service department. That is about the only title I think I ever had.

Mr. Raushenbush. During what years was that?

Mr. Humphreys. Well, of course, that has been a long while ago, but I think I became engineer the very last part, probably in December of 1918.

Mr. Raushenbush. And how long did you stay in that capacity?

Mr. Humphreys. I do not ever remember there being any change in it except that the details gradually diminished in that work as the shipbuilding program diminished.

Mr. Raushenbush. Did you not perform other functions for the company besides that of industrial manager?

Mr. Humphreys. Yes, unless you would class it as part of that work. I used to come down here to Washington once in a while for Mr. Neeland, when he was president of the company.

Mr. Raushenbush. Would you begin at the beginning of your Washington activities and follow them through as much year by year as possible, telling us rather fully and freely what you did down here for the company?

Mr. Humphreys. That would be rather difficult. I do not remember so much about it. I just came down here from time to time as the president of the company asked me to. We had large contracts here for which we had to collect the money and I came down here and sort of went around the Department and tried to hurry up the payment of the bills as much as I could. I sort of watched the papers, and things as bills were introduced which seemed favorable or unfavorable to the company, and sent them up there. When Mr. Neeland was down here I connected with him.

The CHAIRMAN. Who?

Mr. HUMPHREYS. Mr. Neeland who was president of the company.

I do not think I came down here—I am pretty sure I did not—in 1918. I do not remember just when I started coming down here but I know it was not that early because for several years I was up there in the plant.

Mr. RAUSHENBUSH. I am only asking, Mr. Humphreys, about all the following years up to the time you left the company.

Mr. HUMPHREYS. That is what I referred to when I said what I was doing. You mean after Mr. Neeland resigned or was out of the picture?

Mr. RAUSHENBUSH. Yes; all the way through.

Mr. HUMPHREYS. I did the same thing while Mr. Bardo was president, only in a much smaller way. There was not so much to do.

Mr. RAUSHENBUSH. Won't you go over that a little, year by year, and tell us what you had to do in 1922, let us say, and bring it on up through the years.

Mr. HUMPHREYS. I am afraid I could not do that because I do not remember what years there were that I did anything special. There was not anything particular about it that I did except just what I have said. I mean, there was not any particular thing that I recall that I had anything special to do, other than what I have said. It was just in a very general sort of way.

Mr. RAUSHENBUSH. How much were you paid by the company for both salary and expenses during these years, let us say from 1921 on up to 1929?

Mr. HUMPHREYS. I would not know that. As I remember my salary, it was—some parts of the time it was $5,000, and afterwards it was reduced to $4,250.

Mr. RAUSHENBUSH. What I would like to get at would be the total per year with expenses.

Mr. HUMPHREYS. I would not know that. I have no record of that in any way. I never knew what the expenses were.

Mr. RAUSHENBUSH. You put them in as lump sums, for a long time, did you not?

Mr. HUMPHREYS. Lump sums?

Mr. RAUSHENBUSH. Yes, sir.

Mr. HUMPHREYS. No; it seems to me that I usually put them in by the week, or I do not think ever more than by the month.

Mr. RAUSHENBUSH. How much did the expenses amount to?

Mr. HUMPHREYS. I have not the slightest idea.

Mr. RAUSHENBUSH. Did the whole total you received from the company run about $10,000 a year? Can you say within $5,000 whether it was $10,000, $15,000, or what it was?

Mr. HUMPHREYS. I really cannot. I kept no record of them.

Mr. RAUSHENBUSH. You kept no record of them at all?

Mr. HUMPHREYS. Except they were expenses. Of course I kept record of my salary.

Mr. RAUSHENBUSH. You did keep a record of your salary. Do you think that was about $5,000?

Mr. HUMPHREYS. I have not any record of it now, but of course that was something that was regularly paid to me and I of course made a record of that.

Mr. RAUSHENBUSH. Did you ever go abroad for the company?

Mr. HUMPHREYS. I did not exactly go abroad for the company, but I recall they paid my expenses on two occasions, or part of my expenses, when they knew I was going abroad just for pleasure.

Mr. RAUSHENBUSH. What did you do for the company over there?

Mr. HUMPHREYS. The first time, as I recall, Mr. Neeland had been talking to somebody about a coal process, taking powdered coal and putting it into locks, or something like that, and these fellows had requested that he put some money into it, and Mr Neeland was very anxious to supplement the work of the shipyard, some of the idle buildings. He felt shipbuilding was sort of diminishing and he wanted to get them into some other kind of business. He was always trying something like that. He asked me, when I was over there if I would not inspect this plant which these fellows claimed was in operation successfully over there.

I just cannot recall where it was now, but I remember very well when I got there I found that the lumber for the building of the plant was the only thing that was on the job. There was no plant built or no plant in operation, and I think I cabled him, or wrote him something to that effect.

Mr. RAUSHENBUSH. What was your other trip?

Mr. HUMPHREYS. My other trip, as I recall, was later when Mr. Bardo was president, and he sent some papers down to the steamer for me to deliver to their interests in Baden, Switzerland, the Brown Boveri Co. of Switzerland. He knew I was going over there and he sent, as I recall, a large envelope of important papers that he wanted to get over there quickly.

Mr. RAUSHENBUSH. What did you do for the company when you were over there?

Mr. HUMPHREYS. I delivered those papers, and also they were having some difficulty about that; they had a lot of men over here who had not been able to get their families over here, or something like that, and they asked me if I would not call on, I guess it would be the consul, in Zurich, and ask him if there was not some way that those people could be let come over here for, as I remember it, it was something like 6 months' quota.

You understand I have been away from this company since 1929 and these things, which if I had kept in continuous employment with them, they probably would have kept in my mind, but I have not thought of these things since.

The CHAIRMAN. Mr. Humphreys, what has been your employment since 1929?

Mr. HUMPHREYS. I am a special agent of life insurance.

Mr. RAUSHENBUSH. Is that all you did for the company on that trip? When was that; in 1926? Did you bring over Swiss to work for the company?

Mr. HUMPHREYS. I did not bring them over, but I just simply went there and asked the consul if there was not something which could be done to expedite it, and he said he would fix it, or had fixed it—I forget which—and some of those people afterwards came over. That is all I did, sir. I was traveling with my wife and little girl.

Mr. RAUSHENBUSH. In a letter which I ask you to look at, addressed to Mr. Bardo, apparently dated the second of June 1926, you refer, apparently, to this matter of getting Swiss to come over here and work, and there seemed to be some difficulty about this, did there not? You say: "My personal relationship to a United States Senator did the trick."

Mr. HUMPHREYS. You say I referred to that in this letter?

Mr. RAUSHENBUSH. On the second page.

Mr. HUMPHREYS. I have not gotten to it here yet, but I know what I meant by that was that usually, when a stranger goes into a person's office, or a foreign office like that, you might have some difficulty, a day or two, to get a hearing, but when he knew that I happened to be the son-in-law of a former Senator—not a Senator—he immediately granted me an audience. That is all that amounted to.

Mr. RAUSHENBUSH. Why did this company want to have these Swiss come over here and work?

Mr. HUMPHREYS. They were over here.

Mr. RAUSHENBUSH. They were over here?

Mr. HUMPHREYS. Oh, yes.

Mr. RAUSHENBUSH. Were you not getting visas for new families to come over?

Mr. HUMPHREYS. No; these men refused to stay over here, as I remember, unless their wives could come over, or something like that; and the company over here wanted these men to stay here for 2 or 3 months longer, or something like that, and as I understand it, it was perfectly legal and everything. It was just a question of not being able to get the O. K.

Mr. RAUSHENBUSH. Do you know in what capacity those Swiss were employed over here when they finally did come over?

Mr. HUMPHREYS. You mean any that got over under that?

Mr. RAUSHENBUSH. Yes.

Mr. HUMPHREYS. No; I never knew who came on, if any came. In fact, I question if any did come, because it seems to me it was shortly after that that there was the break-up and they gave up the contract. But, as I understand it, they were not any employed. They were to be—like I see in this letter it refers to a Mrs. Looser. Here husband was in America on business and she and the children wanted to join him. That was, as I understood the whole thing; what it was. He was unhappy over here and refused to stay unless his family were permitted to come over.

Mr. RAUSHENBUSH. You did bring over about 200 Swiss at the time, did you not?

Mr. HUMPHREYS. You mean the wives and children?

Mr. RAUSHENBUSH. No; the working group.

Mr. HUMPHREYS. They were all over here prior to my going over, as I understood it. I did not know very much about it. It was all brought up to me suddenly as I was about to sail, or something like that.

Mr. RAUSHENBUSH. I will offer that letter of June 2, 1926, as an exhibit.

(The letter referred to was marked "Exhibit No. 1438" and is included in the appendix on p. 4879.)

ACTIVITY IN GENEVA IN 1926

Mr. RAUSHENBUSH. Did you get to Geneva in the course of this visit?

Mr. HUMPHREYS. Geneva?

Mr. RAUSHENBUSH. Yes. That is in Switzerland.

Mr. HUMPHREYS. Yes; I know. I am just wondering whether I did on that particular trip. I went to Zurich and from Zurich to Lucerne. Yes; we went to Geneva for about 2 days.

The CHAIRMAN. That was in 1927?

Mr. HUMPHREYS. I do not know the year, sir.

Mr. RAUSHENBUSH. That letter is dated in 1926. Did you make another trip in 1927?

Mr. HUMPHREYS. I might have, but if I did, it had nothing to do with the company. I do not recall whether I went over in 1927 or not.

The CHAIRMAN. What business would take you to Geneva?

Mr. HUMPHREYS. Just because my wife had not been there and we wanted to see the buildings of the League of Nations.

The CHAIRMAN. And you did see them?

Mr. HUMPHREYS. Yes, sir.

The CHAIRMAN. You visited there 2 days?

Mr. HUMPHREYS. I think 2 days only; and then went on to Paris.

The CHAIRMAN. Did you have any friends in Geneva?

Mr. HUMPHREYS. I think I saw a friend of mine there. Yes.

The CHAIRMAN. An American?

Mr. HUMPHREYS. Yes.

The CHAIRMAN. Who was it?

Mr. HUMPHREYS. Admiral Long.

The CHAIRMAN. A. T. Long?

Mr. HUMPHREYS. Andrew Long.

The CHAIRMAN. Andrew Long?

Mr. HUMPHREYS. Yes, sir.

The CHAIRMAN. Was there a conference on at that time in Geneva?

Mr. HUMPHREYS. I do not know whether it was on then or whether it had been on and was over. I want to say, since that has come up, that the New York Shipbuilding Co. had in no way ever asked me to see, or knew that I knew Andrew Long. I had met him years ago here in Washington, and I just happened to run into him there one morning at breakfast, and it had nothing to do with New York Ship. New York Ship never asked me. I cannot recall now whether I even asked him anything about the doings of the session, or anything, or whether it was on or not.

The CHAIRMAN. Did he volunteer any information concerning the prospects?

Mr. HUMPHREYS. That I do not recall. In our conversation I may have, as I probably would say to anyone when you are naturally over there and interested in things, in general, how they were getting along, or something like that, but there certainly was no business connected with it in any way, or any intention on my part to do it.

The CHAIRMAN. Did you encounter any other acquaintances while you were at Geneva besides Admiral Long? First, what did you understand Admiral Long's capacity at Geneva to be?

Mr. HUMPHREYS. I think he was one of a delegation, was he not?

The CHAIRMAN. The American delegation?

Mr. HUMPHREYS. The American delegation. Senator, if I may say so here, because this is going on the record, I am too good an American to have ever attempted to say anything for any company or for any amount of money, or anything else, to attempt in any way to try even to influence Admiral Long or anybody else about anything to do away with war, stop war, bring on war, or anything else.

The CHAIRMAN. We understand that your interest, then, was rather one of hoping that there might be agreement accomplished at Geneva, that would bring about disarmament, or some degree of it?

Mr. HUMPHREYS. That would be my personal wish. Yes. I certainly had no thought of doing anything opposed to any such thing as that. I do not recall now just what it was they were doing, I mean that particular year, just what they were doing, because I thought that was all fixed until this year.

The CHAIRMAN. Suppose you had gotten to Geneva and found Admiral Long, or any others, indicating that there was very large prospect for an agreement whereby there would be large disarmament on every hand, would you have felt that that was a matter to report to your employers in New York?

Mr. HUMPHREYS. I would have felt it, not with the idea of influencing it in any way, but that probably I should, being over there, tell them the true state of affairs, in order that they might trim their sails accordingly. I mean by that, that they should not get themselves committed to big purchases of steel, maybe, and they should not build new buildings, or something like that. Of course, I did not know what they did.

The CHAIRMAN. Did you report in that manner to the company?

Mr. HUMPHREYS. I do not remember whether I did or not.

The CHAIRMAN. What did you find to be the situation there at that time?

Mr. HUMPHREYS. As I recall, there was a kind of disagreement on the part of some of the rest of them—Senator, you know this has been a good many years ago and I was on a pleasure trip, but, as I remember it, they said they were just kind of not getting anywheres, as I remember it.

The CHAIRMAN. I asked you something and then we were diverted from it. What other acquaintances did you meet at Geneva besides Admiral Long?

Mr. HUMPHREYS. I have been trying to think ever since you asked me the question, and I do not remember another person.

The CHAIRMAN. Do you know Mr. Shearer?

Mr. HUMPHREYS. No, sir. Never saw Mr. Shearer, and, as long as we bring Mr. Shearer up, I never knew—and yet I was employed at the time by the New York Shipbuilding Co.—I never knew that Mr. Shearer was in any way connected with the New York Shipbuilding Co., or any other shipbuilding interests. All I know about it was in the papers, after I had left New York Ship in 1929. I had never heard of Mr. Shearer. Certainly Mr. Bardo or no one else connected with the company had ever asked me what I thought of him, or whether it was a good thing to hire him or not, and if they had I would have told them "no", because I am dead opposed to anything of that kind. And I was certainly very thankful that my name was not brought into the thing at that time because I would have hated to have my name connected with anything which was unpatriotic to my country.

I have never seen Mr. Shearer and would not know Mr. Shearer if I ran into him today.

The CHAIRMAN. Where did you encounter Admiral Long while you were there?

Mr. HUMPHREYS. I think I was eating breakfast, or he was eating breakfast. That is the way it seems to me. I just happened to run into him. I did not know he was there.

The CHAIRMAN. Did you have breakfast together?

Mr. HUMPHREYS. I think we did, but I am not sure of that.

The CHAIRMAN. Were you alone, you two, at breakfast?

Mr. HUMPHREYS. Yes, I do not think my wife and little girl were with me. It is all kind of hazy.

The CHAIRMAN. I wish you would try to recollect how, if at all, the subject of the disarmament conference was approached at that time. What was said about it?

Mr. HUMPHREYS. I think all there was was that I just kind of ran into him, and I certainly did not know he was there, either in the city or in the hotel or anywhere else. I happened to run into him and naturally, knowing him—this would only be supposition—I asked him what he was doing over there and he told me, and I said, "How are you getting along"? And he told me as I remember it, just what I said before, that they were not getting along very good. There were other countries that were all pulling apart and, therefore, they were not getting anywhere. That is as I recall it.

The CHAIRMAN. Did you consider Admiral Long an authority on the status of the question there at that time?

Mr. HUMPHREYS. I supposed he knew what he was talking about. That is all.

The CHAIRMAN. Did you report you conversation with Admiral Long to any of your employers?

Mr. HUMPHREYS. I am not sure on that. I may have in writing home, or something, may have sent them word. That certainly could not have been any different than what I am telling you now, unless my recollection is entirely wrong.

The CHAIRMAN. As a matter of fact, you found while you were there, did you not, that the cause of disarmament in that conference was rather hopelessly lost?

Mr. HUMPHREYS. Just from what he said; yes. I did not make any effort to investigate anywhere else to find out what the status was. We were there on a pleasure trip, and after I said good-bye to him we went on our way, and I never paid any more attention to it.

The CHAIRMAN. Are you able to recollect whether you encountered others besides Admiral Long at that time on your visit to Geneva?

Mr. HUMPHREYS. I cannot recall anyone else. I might have, but I cannot recall anyone else.

The CHAIRMAN. Mr. Humphreys, I hand you a letter, written in your own hand, evidently, written on June 7, 1926. [Handing paper to witness.]

Mr. HUMPHREYS. That happens to be my birthday.

The CHAIRMAN. This letter was addressed to Mr. Bardo. [Reading from "Exhibit No. 1439":]

> DEAR MR. BARDO: The yard has nothing to worry over anything drastic being done at the Disarmament Conference now being held at Geneva.
>
> I stopped off and saw some of my friends there last week.
>
> Suppose you received my cable and letter.

What is the next name there?

Mr. HUMPHREYS. It looks like "Baden." That is where I visited to deliver this letter.

The CHAIRMAN [continuing reading]:

> Baden advised me today Mrs.——

What is the next word?

Mr. HUMPHREYS. Mrs. Looser. That is the lady I referred to in the former letter who wanted to bring her husband over.

The CHAIRMAN [continuing reading]:

> Mrs. Looser had——

Is that "actually"?

Mr. HUMPHREYS [reading]:

> actually received her visa.

The CHAIRMAN [reading]:

> Very truly yours, Harry R. Humphreys, 6/7/26.

Then the letter states at the bottom:

> Suggest treat Geneva information as confidential. My source is dependable.

Does this awaken any recollection of your visit at Geneva at that time?

Mr. HUMPHREYS. Nothing more than what I have said. I had nothing more to base it on in any way.

The CHAIRMAN. What do you think would be the occasion of anything you might learn at Geneva that would be a cause for worry for your home friends?

Mr. HUMPHREYS. Well, as I said before, I thought with contracts they might be wondering whether they should place orders for steel, maybe, and maybe orders for all kinds of materials that entered into it. And if they knew there was not going to be any change in things, they could go ahead and do so. I do not know—the natural inclination of a man who had been in business would be that. They did not ask me anything about it. There was nothing mentioned about Geneva before I left there; and, of course, I had no thought of ever running into Admiral Long or anyone else, and I am sorry I have to bring his name into it here now, because he is a very wonderful fellow.

The CHAIRMAN. Admiral Long did indicate to you at that time that it was not likely that there was going to be agreement on the disarmament question, did he?

Mr. HUMPHREYS. Just to the contrary. He said that these other countries were all pulling apart, and they were left in the middle and could not get anywhere. I think he would have liked to have done it. He acted as if he wanted to bring about disarmament, but he said they could not get anywhere with it.

The CHAIRMAN. I will offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1439" and appears in full in the text.)

Senator VANDENBERG. Do you think Admiral Long gave you any information he would not give to any other citizen?

Mr. HUMPHREYS. No, sir.

Senator VANDENBERG. Then why the importance of keeping it confidential?

Mr. HUMPHREYS. Just because Admiral Long is a personal friend of mine—I had met him officially and personally—and I did not want him to get any publicity over it, and I certainly regret having to put it in here now, because he has had a very honorable career.

Senator VANDENBERG. A statement like this, "my source is dependable", sounds like more than casual information, does it not, to you, as you look back on it now?

Mr. HUMPHREYS. I may be a poor one in the choice of words.

Senator VANDENBERG. In other words, did you not think you were giving Mr. Bardo some pretty important information—some pretty important inside information?

Mr. HUMPHREYS. Not inside information. I think it was important information. I would not have bothered him with it if I had not thought that.

Senator VANDENBERG. Why would it have been any embarrassment to Admiral Long to say, "I saw Admiral Long, and we chatted about the conference, and he said they were not getting anywhere"? What embarrassment is there in that to Admiral Long?

Mr. HUMPHREYS. Those things get out, as a rule. It might not have embarrassed him; but I felt I did not want to mention his name, that is all.

Mr. RAUSHENBUSH. As far as you know, Mr. Humphreys, did any other citizens of the country, outside the shipbuilders, know as far back as 1926 that the situation was such that the shipbuilders had nothing to worry about from the Disarmament Conference?

Mr. HUMPHREYS. I do not know about anybody else. I do not know whether it had been sent to America by the newspapers. I suppose the newspapermen were around there; they were able to get the same information I was.

Mr. RAUSHENBUSH. You do not know whether that was in the newspapers or not—that the American delegation could get nowhere and that there was nothing to worry about—until 1926?

Mr. HUMPHREYS. I did not see it.

Mr. RAUSHENBUSH. The conference did not take place until 1927, did it?

Mr. HUMPHREYS. I do not recall now. I do not remember the dates at all. I could not have told you what year I was there, if you had not shown me the letter.

Mr. RAUSHENBUSH. Let the last two letters be entered with the proper numbers.

We have here a letter from Mr. Bardo to Brown Boveri Co., Ltd., Baden, Switzerland, presumably the letter being for you to take over there, saying [reading]:

> This will introduce to you Mr. Harry R. Humphreys, etc.

I show you a copy of his letter [handing paper to witness].

Mr. HUMPHREYS. I did not see that letter.

Mr. Raushenbush. In the course of it he says:

> As Mr. Humphreys will explain to you, it will probably be possible without trouble to obtain the necessary permits for the families of Baden men to enter this country; but the matter has become somewhat complicated as apparently the American consul general in Zurich has told you that he refused to grant visas to Mr. Looser's family. Mr. Humphreys is of the opinion, and we quite agree with him, that the best thing will be to take the case of Mr. Looser's family first and try to settle it, after which a precedent will have been established, which will make it simpler for future families to come across. I have informed Mr. Humphreys of the whole history that lies behind the question of visas, and I would be obliged to you if you will give him such further information as he may need before he visits the consul general in Zurich.

That certainly seems to look as if you had talked the matter over with Mr. Bardo about the visas before you left.

Mr. Humphreys. Is not that letter dated the same day I sailed?

Mr. Raushenbush. May 21. I do not know when you sailed.

Mr. Humphreys. When I talked to Mr. Bardo I was going to sail, he did mention something to me about these things, but he did not say anything about this letter. He said he was sending some papers, and I thought they were drawings. They were in a sealed envelope and I did not open it and did not know what was in there. But Mr. Bardo and I did talk about it probably a week before, when I said I was going.

Mr. Raushenbush. It was not a matter of giving the letters to you on the boat at the last minute, was it?

Mr. Humphreys. I got the letters the last minute. Mr. Bardo is here and probably he can tell you what was in the envelop. It was that thick. [Indicating.]

Mr. Raushenbush. I want to enter that with the proper number.

(The letter referred to was marked "Exhibit No. 1440", and is included in the appendix on p. 4879.)

ATTEMPTS TO INFLUENCE CONGRESS

Mr. Raushenbush. When you came back to this country here, what did you proceed to do for the company?

Mr. Humphreys. I do not think I did anything else than what I said before, just whatever happened to come along they wanted me to do.

Mr. Raushenbush. Is it not true that what you did was to come down to Washington and do everything that you could to see that the cruiser bill went through at the time, and that the private shipyards got as much of that building as they possibly could? Is not that a fair statement of what you tried to do?

Mr. Humphreys. I imagine that is a fair statement, because we had to fight for our rights as against the navy yards. The navy yards were doing all they could to get this work. The private shipbuilders had to do what they could to get their share of it.

Mr. Raushenbush. I hand you a memorandum dated December 10, 1926, from Mr. Bardo, asking that a brief be prepared for your use on the allotment of cruisers to the private yards, rather than the navy yards.

We find here in December, the 26th of December 1926, that you were reporting on the 10-cruiser bill before the House of Representatives.

The CHAIRMAN. Are these written from Washington?

Mr. RAUSHENBUSH. The letterhead is "The Willard" Washington.

Mr. HUMPHREYS. Yes; these apparently were.

Mr. RAUSHENBUSH. I will ask that those letters be entered in the record with the proper number.

(The documents referred to were marked "Exhibits Nos. 1441 and 1442" and are included in the appendix on p. 4880.)

Mr. RAUSHENBUSH. You say there that the—

> bill will be reported unchanged from the committee today and an accompanying report and a resolution for the Rules Committee to enable the House to pass on H. R. 15415 this session will be printed so I can send them to you tomorrow.

On the second page there is something about new construction, but I cannot make out the next word.

Mr. HUMPHREYS (reading):

> There is some money for new construction outside of the Navy—which will be available for new large ships for the Coast Guard as soon as bill which has passed both Houses comes from conference and is signed by the President.

That is a fair sample of part of my duties, to report on things like that.

Mr. RAUSHENBUSH. Here is a wire of January 8, 1927, to Mr. Bardo from yourself [reading]:

> Will continue effort in Senate to secure additional cruisers appropriation.

That is what you were doing down here, is it not?

Mr. HUMPHREYS. Yes, sir. That is the kind of thing.

Mr. RAUSHENBUSH. I will ask that that be entered and given the proper number.

(The telegram referred to was marked "Exhibit No. 1443" and appears in full in the text.)

Mr. RAUSHENBUSH. Here is a letter dated the 15th of January 1927, which I show to you [handing paper to witness]. Is that how you helped get those bills through?

Mr. HUMPHREYS. No, sir. I am explaining why I am staying down here and these names which are mentioned here were all ladies who were friends of my wife, who is now deceased. They were all personal friends of hers.

Mr. RAUSHENBUSH. That letter, I might state, is from Mr. Humphreys to Mr. Bardo. Why did you find it important to tell Mr. Bardo how many prominent Senators' and Representatives' wives your wife was entertaining? Is that part of the "social lobby" we hear about, Mr. Humphreys?

Mr. HUMPHREYS. I do not know, sir. My wife knew these ladies through her association with them for many years, and she never mixed politics or business with her social affairs, so far as I know.

Mr. RAUSHENBUSH. Did you?

Mr. HUMPHREYS. Did I?

Mr. RAUSHENBUSH. Yes.

Mr. HUMPHREYS. Not with these ladies anyhow.

Mr. RAUSHENBUSH. I will ask that that letter be appropriately numbered.

(The letter referred to is marked "Exhibit No. 1444" and is included in the appendix on p. 4881.)

Mr. RAUSHENBUSH. I show you a letter from yourself to Mr. Bardo, dated January 17, 1927, and ask you if that refreshes your recollection? [Handing paper to witness.]

Mr. HUMPHREYS. You know sometimes the salesmen will attempt to bolster up his case.

Mr. RAUSHENBUSH. Don't tell us these letters are all "sales talk", Mr. Humphreys. You do not really mean that, do you?

Mr. HUMPHREYS. I do not mean that altogether, but it has its effect.

Mr. RAUSHENBUSH. You were getting paid a good deal of money for this work down here. We have some checks of yours here. They are not complete at all but there is one here for $8,000. What period would that cover?

Mr. HUMPHREYS. I tell you I do not know about that, but——

Mr. RAUSHENBUSH. That was back in 1925.

Mr. HUMPHREYS. That was the time when Mr. Neeland was president.

Mr. RAUSHENBUSH. 1925?

Mr. HUMPHREYS. Yes, sir. He always explained to me they could not pay me much of a salary, but from time to time, as they did with other employees, they gave bonuses. I helped him out a lot when he was in bad health, and he always told me he certainly was appreciative of what I did, and could not pay me a salary, but whenever these bonuses were being given out that he would get that through for me easier than he could a larger salary.

Mr. RAUSHENBUSH. Then how much did your total in bonuses amount to? Maybe my other question was not complete.

Mr. HUMPHREYS. I do not know that. I knew at the time, of course, at the end of the year, and reported them.

Mr. RAUSHENBUSH. Did you get any more of these big $8,000 bonuses at one crack?

Mr. HUMPHREYS. No, sir; I think that is as big a one as I ever got.

Mr. RAUSHENBUSH. I wonder if you could go over your accounts and tell us that? The company does not seem to be able to do it.

Mr. HUMPHREYS. No, sir; I have no accounts. I never kept any record of those things. What I am trying to say is that I did at the end of the year, of course, keep a record of something like a bonus, and my salary, and reported it, and that is all there is to it.

Mr. RAUSHENBUSH. Did you have any other income except from this company?

Mr. HUMPHREYS. Some, yes. A part of the time I also had some income from my previous savings, and I had some income from my insurance work.

Mr. RAUSHENBUSH. So that these contributions from the company are not the bulk of your income?

Mr. HUMPHREYS. Yes; I would say that they are the bulk but not entirely.

Mr. RAUSHENBUSH. This letter which I have just showed you of the 17th of January 1927, again tells the story of watching these naval appropriation bills very closely and following them through; how they get along in the Senate and the House conferences, and all the rest.

Mr. HUMPHREYS. Is that the one I have here. I do not see any date on it.

Mr. RAUSHENBUSH. Yes, sir.

Mr. HUMPHREYS (examining letter). The 17th of January 1927.

Mr. RAUSHENBUSH. I will offer that for appropriate number in the record.

(The letter referred to was marked "Exhibit No. 1445" and is included in the appendix on p. 4881.)

Mr. RAUSHENBUSH. Was this while the disarmament conference was going on?

Mr. HUMPHREYS. Sir?

Mr. RAUSHENBUSH. Were all these letters, when you were actually getting your cruisers for the private companies, at the same time the disarmament conference was going on?

Mr. HUMPHREYS. That I do not know.

Mr. RAUSHENBUSH. I would like to know that.

Mr. HUMPHREYS. This disarmament conference was going on?

Mr. RAUSHENBUSH. Yes, sir. I think in 1927.

Mr. HUMPHREYS. You mean going on on the other side?

Mr. RAUSHENBUSH. In Geneva; yes, sir.

Mr. HUMPHREYS. I do not know.

Mr. RAUSHENBUSH. I think that is so. I would like to enter that with the proper number, as I have said.

Now on the same date, January 17, 1927, you wired Mr. Bardo as follows:

> Senate appropriation committee recommends million two hundred thousand three additional crusiers.

I would like to enter that for appropriate number.

(The telegram referred to was marked "Exhibit No. 1446" and appears in full in the text.)

Mr. RAUSHENBUSH. Now you wired Mr. Bardo on January 28, 1927, as follows:

> I am to have a conference with members of House Naval Affairs Committee tomorrow morning at 10 in reference to the Cramp situation and am therefore unable at this time to tell you if they will want you to come down soon. Conference arranged too late to write you.

What were you doing with relation to the Cramp situation?

Mr. HUMPHREYS. That is just what I am wondering. Is that the time when the Cramp people fell down on their contract and it was a question of the committee wanting the New York Ship to take it over?

Mr. RAUSHENBUSH. Did the House committee express itself to that effect?

Mr. HUMPHREYS. I do not know.

Mr. RAUSHENBUSH. You said the committee wanted New York Ship to take it over.

Mr. HUMPHREYS. I do not know whether the Committee did, but it seems to me—that is very hazy in my mind—but it seems to me that the Cramp Co. failed about that time, did it not?

Mr. RAUSHENBUSH. Yes; it did, about that time.

Mr. HUMPHREYS. And I think the Navy Department, or somebody, wanted the company to take it over. I am not sure of that. I am very hazy on that.

Mr. RAUSHENBUSH. I will ask that that letter be entered.

(The telegram referred to was marked "Exhibit No. 1447" and appears in full in the text.)

Mr. Raushenbush. Here is a letter dated February 4, 1927, to Mr. Bardo from yourself, which reads:

> The Navy Department are moving with extreme caution on account of the Harriman-Cramp-bond holdup combination so as not to enable those interested to put the blame for a breach of contract on the Government, I am informed today by most reliable and informed source.

Do you remember who that source was?

Mr. Humphreys. I have not the slightest recollection of that.

Mr. Raushenbush. I would like to offer that for the record.

(The letter referred to was marked "Exhibit No. 1448" and is included in the appendix on p. 4881.)

Mr. Humphreys. I do not remember much about that Cramp situation.

Mr. Raushenbush. Then you were writing Mr. Bardo again on the same day, the 4th of February 1927, as follows:

> Thought you might hear of a bill reported for relief of Bethlehem and of an estimate sent in by the President for additional appropriations for Navy. The former also applies to us. Those notes given the Government which contractors may now pay and secure a discount. The letter is explained by a report enclosed.
>
> The Naval Appropriations Conferees are meeting today now in session; will not in all probability agree or disagree to the Senate amendments until next week.

I ask that that be appropriately entered in the record with a proper number.

(The letter referred to was marked "Exhibit No. 1449" and appears in full in the text.)

Mr. Raushenbush. How many members of the committees there were you in active touch with during these years?

Mr. Humphreys. Active touch? I was not in with any of them, but I attended all the hearings, and consequently I got to know all the members.

Mr. Raushenbush. Here is a letter about the same date, Sunday the 9th. The photostat is rather hard to read, but I will show it to you. It is from you to Mr. Bardo and reads [reading]:

> Dear Mr. Bardo: I warned Congressman Begg, whip of the House——

Mr. Humphreys. Warned him?

Mr. Raushenbush. Is not that "warned"?

Mr. Humphreys. I cannot read it here. I cannot imagine warning Congressman Begg of anything.

Mr. Raushenbush. That is what we are interested in. Try it on this copy. [Handing another document to witness.]

Mr. Raushenbush. Would you read it out loud from that copy, Mr. Humphreys?

Mr. Humphreys (reading):

> I warned Congressman Begg, whip of the House on Wednesday, after Black of N. Y., Democrat, in speaking in favor of appropriation for the three cruisers tried to make a monkey out of Coolidge, that if such policy was not stopped and something done to offset that speech by some prominent Democrat, we would lose the fight in the House.

I do not know what that is about. [Continuing reading:]

> He assured me no one paid any attention to Black.
>
> The enclosed article by that great reporter, George Rothwell Brown——

He used to write a column for the Washington Post—

> hits the nail square on the head.

Do you want me to read it all?

Mr. Raushenbush. I wish you would.

Mr. Humphreys (reading):

> Had a talk with Senator Edwards then, Sunday morning. He was attending a banquet at Atlantic last night. I suggested to him that he not only not make Coolidge the issue, speaking straight to the necessity for the appropriation for three more cruisers now for purpose of national defense, but also try to keep all the other Democratic Senators from making Coolidge the issue, in all of which he heartily concurred.
>
> The bill will come up tomorrow at 10:30 before the Senate Appropriations Committee and will be reported to the Senate later in the week at a time not yet determined.
>
> Very truly yours,

I do not recall what that is all about.

Mr. Raushenbush. I will offer that letter for appropriate number.

(The letter referred to was marked "Exhibit No. 1450" and is included in the appendix on p. 4882.)

Mr. Raushenbush. In an earlier letter, "Exhibit No. 1449", you pointed out the President's suggestions for additional appropriations for the Navy. That seems to be the point, not to make Coolidge the issue on it. Is not that the point?

Mr. Humphreys. I do not remember about it at all.

Mr. Raushenbush. In February, when we think the Disarmament Conference was still on, you wrote another letter, this time to "Dear Walter." Do you remember who Walter is?

Mr. Humphreys. No; but if I see the letter perhaps I can tell.

Mr. Raushenbush. Perhaps you better read the first part of that.

Mr. Humphreys. I think that was the name of Mr. Neeland's secretary.

Mr. Raushenbush. Would you read the first part of that letter aloud, please?

Mr. Humphreys (reading):

> Am going to Washington tomorrow again. Will be at Willard if you want me. Will attend the Saturday hearing. Have a lot of missionary work to do on Navy appropriation bill, and other bills in which we are interested.

(The letter referred to was marked "Exhibit No. 1451" and is included in the appendix on p. 4882.)

The Chairman. What is the "missionary work"?

Mr. Raushenbush. What missionary work?

Mr. Humphreys. Missionary work.

The Chairman. What do you mean by "missionary work"? You say you have a lot of missionary work to do on the naval appropriation bill?

Mr. Humphreys. I suppose just going around and talking to different Members and asking them about it or putting our case up to them.

Mr. Raushenbush. Are you sure that letter was addressed to that particular secretary you mentioned, or to one of the Senators to whom you are related?

Mr. Humphreys. To whom I am related, did you say?

Mr. Raushenbush. Are you not?

Mr. Humphreys. Me related?

Mr. Raushenbush. Are you not related to some Senator?

Mr. Humphreys. No.

Mr. Raushenbush. Or former Senator?

Mr. Humphreys. Yes; he was not in the Senate at that time.

Mr. Raushenbush. His name was not Walter?

Mr. Humphreys. No sir. May I just there say that I have had both a father-in-law in the United States Senate and a brother-in-law in the United States Senate. At no time when my father-in-law was in the Senate, or since 1929, when my brother-in-law was a Senator, did I ever as much as come into Washington for a day. I even steered away from Washington when my brother-in-law took his seat, which almost broke my heart, as I did not want to do anything which would make it appear I was doing anything when I had a relative here.

Neither when my brother-in-law or father-in-law were in the Senate, was I ever in Washington.

The Chairman. Coming back to the issue in that letter, describe to the committee what you mean by "missionary work."

Mr. Humphreys. Just like, for instance—I do not remember just what this was on. Let me see. [Examining letter.]

If we had a contract on which we were dependent, and the men of our yard, for a lot of the appropriations to continue that contract, I would attempt to see them to say that we needed that money to keep our yard going at different times.

Mr. Raushenbush. Here on March 3, 1927, just before the close of that Congress, you were wiring Mr. Bardo—and I show you that wire:

> President signed both bills naval appropriation including extra cruisers and *Saratoga* increase working hard to slip through filibuster money for latter.

Is that one of your ships, the *Saratoga*?

Mr. Humphreys. Slip through?

Mr. Raushenbush. (Repeating):

> Slip through fillibuster money for latter.

Mr. Humphreys. There was a fillibuster on, and they were working very hard trying to get them to agree to let up on the filibuster for a minute so that we could get money through to keep the contract going. It would have cost the Government a tremendous amount of extra money if we had not got the money through, because to hold up the contract until the next session of Congress would have cost the Government millions. It was not all in the interest of the shipyard that I worked down here for appropriations.

Mr. Raushenbush. What happened?

Mr. Humphreys. I do not recall, but I think they raised the fillibuster for about 5 minutes.

Mr. Raushenbush. And did put it through? Is that your memory?

Mr. Humphreys. Yes, sir.

Mr. Raushenbush. What missionary work did you have to do which called for setting aside the filibuster for 5 minutes to pass the naval appropriations?

Mr. Humphreys. Senator, you know from all your multitudinous duties, that you cannot keep tab on everything going on down here, and, if I said to you, "Will you give me 5 minutes to tell you the real importance of this thing?", after you listened to it and got the real details of the thing, you would say, "I understand that, and I will stand on that and will help you on it."

That is what I call "missionary work" that is all there is to that.

Mr. RAUSHENBUSH. I offer that wire of March 3, 1927, for the record.

(The telegram referred to was marked "Exhibit No. 1452" and appears in full in the text.)

Mr. RAUSHENBUSH. I show you another letter dated April 13, 1927, from yourself to Mr. Bardo, and ask you for an explanation about the second paragraph. [Handing paper to witness.]

That letter reads in part. [Reading:]

> The paragraph the Secretary of the Navy refers to in his letter to our men' contained in the appropriation bill, we beat in the House, and could have beaten in the Senate, but when it was learned I was going to do so, Senator Hale, chairman of the Senate Naval Affairs Committee, and Mr. Rowser (?) the representative of the Navy Department, told Senator Edge, "to do so would beat the bill entirely and to eliminate it except to apply to repair work done would cause the Senators who favored the navy yards, to kill the bill, and as it is a practical impossibility to make definite and binding bids on the part of the navy yards, we need have no cause to be alarmed on these cruisers." Both Senators Edge and Edwards appealed to me to let it go and I then went to Senator Hale in the presence of Mr. Rowser and told him I wouldn't keep up the fight with the understanding we would be protected. We had other things besides the cruisers to not fight the Navy Department uselessly and just had to take our chances. I didn't tell any one that, of course, I wanted to keep every one under obligation to us. You will note Senator Edge in his letter of yesterday to you, copy of which he sent to me, refers to these informal bids by navy yards in his second paragraph referring to his letter to Secretary Wilbur. No other of the shipyards protested so far as I have been able to learn against the paragraph referred to by the Secretary of the Navy. I was not depending on either Edge or Edwards for the one Senator who would have killed the amendment.

Could you explain just what happened there?

I do not want to insert the third paragraph of the letter at all.

Mr. HUMPHREYS. Thank you very much.

Mr. RAUSHENBUSH. Could you explain what you mean there: "we beat in the House." What was it that you beat in the House, and you would have beaten in the Senate but when it was learned you were going to do so you got this other information?

Mr. HUMPHREYS. It is all very hazy to me, but I can imagine what it referred to. We had a big shipyard at Camden, and I imagine I got hold of the New Jersey delegation in the House and explained the situation to them and asked them if they would not put up a fight, and probably they did.

Mr. RAUSHENBUSH. The expression "we beat in the House" does not mean so much the New York Ship as somebody else?

Mr. HUMPHREYS. I would take it that meant there our New Jersey delegation; yes, sir.

Mr. RAUSHENBUSH. Then how do you explain the rest of it, "but when it was learned I was going to do so"—you were going to beat it?

Mr. HUMPHREYS. I suppose that was just a loose expression.

Mr. RAUSHENBUSH. Were you acting for any one besides the New York ship at this time?

Mr. HUMPHREYS. Down here?

Mr. RAUSHENBUSH. Yes, sir.

Mr. HUMPHREYS. No, sir.

Senator CLARK. Now were you going to "beat it" in the Senate?

Mr. HUMPHREYS. Senator, as I said earlier, I have not been connected with this work for so many years, and a lot of it is very hazy to me now that would have been probably clear if I had kept on continuous in the work, and when these things come up now, it has passed out of my mind.

Senator CLARK. Was it a common practice for you to be able to "beat" things in the Senate, so much so that it would not cause any impression on your mind?

Mr. HUMPHREYS. Will you repeat that?

Senator CLARK. Was it a common practice for you to be in a position to defeat measures in the United States Senate, as in this particular case where you say you were in a position to beat it, that it did not make any impression on your mind so as to be able to remember the dates?

Mr. HUMPHREYS. I was never able to "beat" anything in the Senate.

Senator CLARK. It says there that you felt you were going to be able to beat it.

Mr. HUMPHREYS. I suppose what it means is that the committee, or whoever were working against it in the House, were going to beat it, and that they did not want the bill beaten entirely.

Senator CLARK. You say:

> The paragraph the Secretary of the Navy refers to in his letter to our men, contained in the appropriation bill, we beat in the House, and could have beaten in the Senate; but when it was learned I was going to do so, Senator Hale, chairman of the Senate Naval Affairs Committee, and Mr. Rowser the representative of the Navy Department, told Senator Edge, "to do so would beat the bill entirely and to eliminate it except to apply to repair work done would cause the Senators who favored the navy yards, to kill the bill * * *."

In other words, you were certainly holding yourself out as not only being able to beat the measure but Senator Hale and the representative of the Navy Department thought you were in a position to do it.

Mr. HUMPHREYS. I think that was a foolish use of "I."

Senator CLARK. Maybe that is another one of the "sales letters" about which we have heard so much.

Mr. RAUSHENBUSH. Mr. Humphreys, in the course of that letter there is a sort of understanding referred to that you would not keep up the fight if you had an understanding that you would be protected. That means that when this cruiser bill went through, that the private yards would get their share, does it not?

Mr. HUMPHREYS. I would take that from it to mean that. I do not know.

Mr. RAUSHENBUSH. I will offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1453" and is included in the appendix on p. 4883.)

Mr. RAUSHENBUSH. I show you a letter or rather a telegram, addressed to the Secretary of the Treasury by the secretary of the New York Ship Building Corporation, dated April 15, 1927, and ask you if that is not along the same lines [handing paper to witness]?

It states in part:

> On April 5th we submitted bids for 2 scout cruisers out of 6 to be constructed the understanding was that this construction would be done by three remaining private yards. Acting in good faith and on this assumption, we expended large sums of money in preparation for this work.

They had also found out about a year ago from you that nothing happened at the disarmament conference, so that that is part of "acting in good faith", is it not [continuing reading]?

> Very unexpectedly the Department announced after opening bids that Mare Island and Puget Sound Navy Yards have submitted estimate for one each of these cruisers.

And the rest of the wire goes on to explain why those bids should be given to the private yards.

That was the understanding, was it not, that you would drop this fight in the Senate, which you thought you could win, on the understanding that the private yards would get the work, and you thought the Navy was double-crossing you in some way on that understanding?

Mr. HUMPHREYS. Of course, I did not write this letter from the secretary to the Treasury Department, and I do not know what other understanding somebody else connected with the company might have had. I cannot speak for what they meant by their understanding.

Mr. RAUSHENBUSH. I will offer that letter in the record for appropriate numbering.

(The telegram referred to was marked "Exhibit No. 1454" and is included in the appendix on p. 4883.)

Mr. RAUSHENBUSH. Were the other officers of the company down here at that time trying to get this legislation through?

Mr. HUMPHREYS. That I do not know.

Mr. RAUSHENBUSH. Do you remember any meetings down here with them, or did you handle the legislative work all by yourself?

Mr. HUMPHREYS. I do not recall on that particular piece of legislation at that particular time. I do not know even who was president of the company at that time. Do you know? Do you know the date when Mr. Bardo came in?

Mr. RAUSHENBUSH. Wilder was president.

Mr. HUMPHREYS. It must have been just about the time when Mr. Wilder became president, because when he became president I did not have anything to do with things down here very much.

Mr. RAUSHENBUSH. You do not know, you testify, then, what the understanding was that the New York Ship Building Co. had in the matter?

Mr. HUMPHREYS. No, I do not.

Mr. RAUSHENBUSH. You so testify?

Mr. HUMPHREYS. I cannot testify to it.

Mr. RAUSHENBUSH. There is a letter here which I show you, dated the 23d of October 1927, addressed to Mr. Bardo, which I will ask be appropriately numbered.

(The letter referred to was marked "Exhibit No. 1455" and appears in full in the text.)

Mr. RAUSHENBUSH. That letter reads in part as follows:

> The crowd at Washington feeling I could do a lot for them in helping to put through sale of ships at tomorrow's session of the Shipping Board kept the wires hot between Washington and my home yesterday and today urging me to go to Washington today and see several people.

What crowd was that? Do you remember?

Mr. HUMPHREYS. I do not remember that at all.

Mr. RAUSHENBUSH. These things do not seem to have left a very lasting impression.

Mr. HUMPHREYS. May I see the letter and maybe I can recall.

Mr. RAUSHENBUSH. Yes, sir [handing paper to witness]. Perhaps you better read the whole letter. That is the only photostat we have.

Mr. HUMPHREYS. At that particular time my mind was very much befuddled anyhow. This was the 23d of October 1927, and I had other troubles than this. My wife had just passed away, and I had a pretty heavy load on me.

Mr. RAUSHENBUSH. Will you read it out loud. It is the only copy I have.

Mr. HUMPHREYS (reading "Exhibit No. 1455":)

> The crowd at Washington feeling I could do a lot for them in helping to put through sale of ships at tomorrow's session of the Shipping Board kept the wires hot between Washington and my home yesterday and today urging me to go to Washington today and see several people. I knew the value to the shipyards of getting the lines out of the hands of the Government but as four of the Commissioners are opposed to the sale I felt even if I converted someone—let alone if I failed that it might hurt A. B. B. (American Brown Boveri) Co. in dealings with the Board on the proposition about which I know nothing except the papers seem to be full of it. So I regretted my inability to aid them unless I had your permission to do so and I tried in every way to reach you without success. Should the sale be postponed tomorrow for later in the week I will appreciate it if you will advise me at Racquet Club, Washington, D. C., where I go tomorrow, if you want me to aid them, as I have always worked along with their crowd which includes representatives of the shipyards who are on the job and in this case also the Senators and Representatives from the West Coast States particularly the new Senator from Oregon.
>
> Very truly yours.

I do not recall a thing at all about that. This letter was evidently written from my home.

Mr. RAUSHENBUSH. You were back and forth a good deal, were you not?

Mr. HUMPHREYS. Yes; but not so much, as I say, after Mr. Wilder became president. I had very little to do down here.

Mr. RAUSHENBUSH. The letter refers to keeping the wires "hot."

Mr. HUMPHREYS. They kept the wires hot, not me.

Mr. RAUSHENBUSH. Well, you listened. What advantage would there be to the private yards in the sale of Government vessels, to which you referred in that letter? Do you remember that at all?

Mr. HUMPHREYS. As I remember that, if they could get the vessels sold to private companies, then there was a feeling that with that competition withdrawn, that there would be more ship building; that the private companies would start to build more new ships.

Mr. RAUSHENBUSH. Is that all you remember about that?

Mr. HUMPHREYS. Yes. I do not recall that. I did not go down there and did not have to do anything, if I did.

Mr. RAUSHENBUSH. Do you remember this: On the 31st of December 1927 you were writing Mr. Bardo as follows:

> Dear Mr. Bardo: I have assurances from most responsible people that the matter you object to will be satisfactorily taken care of.

Do you remember that at all, what that whole story was about?

Mr. HUMPHREYS. No; I do not.

Mr. RAUSHENBUSH. Do these few letters which we have shown you refresh your memory at all as to what you really were doing here further, in any other respects, which you perhaps want to tell us about now, Mr. Humphreys?

Mr. HUMPHREYS. No; I think my first statement covers what I was doing, and all I did down here. I never did anything else. I kept tabs on everything that I thought was of interest either for or against the company.

Mr. RAUSHENBUSH. More than "keeping tabs." You were taking credit for beating amendments in the House and promising to do so in the Senate, were you not?

Mr. HUMPHREYS. And then conferring with Members afterward and trying to get them to see it our way. That is all there was to it. I think every business man has to do that.

Mr. RAUSHENBUSH. And you testified a moment ago that there were no other officers of the New York Ship Building Corporation down here engaged in these same matters at the time?

Mr. HUMPHREYS. No; I do not think I testified to that. I said I was not sure whether there were any down here at the time.

Mr. RAUSHENBUSH. When did your employment with New York Ship end?

Mr. HUMPHREYS. I think it was in 1929.

Mr. RAUSHENBUSH. Who was your successor?

Mr. HUMPHREYS. I do not know. I did not know that I had a successor. It seems to me they told me they could not afford to have anybody down here any more, and some agency or something was going to handle it, for all the companies, or something like that. I am not quite sure.

Mr. RAUSHENBUSH. I will offer the letter of December 31, 1927, for the record, with appropriate number.

(The letter referred to was marked "Exhibit No. 1456", and is included in the appendix on p. 4884.)

Mr. RAUSHENBUSH. We have here a letter dated December 10, 1928, addressed to you.

Mr. HUMPHREYS. What date?

Mr. RAUSHENBUSH. December 10, 1928, addressed to you at the Racquet Club, Washington. That letter reads in part:

> Dear Harry: Yours of the 7th, enclosing expense account received. Same has been passed for payment.
>
> I note that you are now prepared to devote all of your time when not needed in Camden or Trenton——

By the way, were you doing work at Trenton for the company at the capitol of New Jersey?

Mr. HUMPHREYS. If they would have a bill which they wanted to get through up there, or something detrimental, I would take up something like that there, the same as I did here.

Mr. RAUSHENBUSH. The same as in Washington?

Mr. HUMPHREYS. Yes.

Mr. RAUSHENBUSH (continuing reading):

> I note that you are now prepared to devote all of your time, when not needed in Camden or Trenton, at Washington for at least the balance of the session. What we are most interested in now is the defeat of the Dallinger amendment to the cruiser bill, * * *.

What was that?

Mr. HUMPHREYS. I am not sure, Mr. Raushenbush, but I think it was to put all the work in the navy yards. Mr. Dallinger, as I remember it, was always trying to put all the shipbuilding work in the navy yards.

Mr. RAUSHENBUSH. Do you remember whether it was all or half of it?

Mr. HUMPHREYS. He was always trying to put it all there.

Mr. RAUSHENBUSH (continuing reading):

> and this is being handled by Mr. H. G. Smith, vice president of the Bethlehem Company—

That is another one of the big shipbuilding companies, is it not?

Mr. HUMPHREYS. Yes, sir.

Mr. RAUSHENBUSH (continuing reading):

> although Mr. Ferguson—

Who is Mr. Ferguson?

Mr. HUMPHREYS. I do not know, unless it is Mr. Ferguson, the president of Newport News.

Mr. RAUSHENBUSH (continuing reading):

> and I have devoted some time and have interviewed a substantial number of Senators on the matter.

Is that the president of Newport News?

Mr. HUMPHREYS. I do not know. It might be. That is Mr. Bardo's letter to me.

Mr. RAUSHENBUSH (continuing reading):

> We are working in Washington with Messrs. Frank A. Lord, Hotel Blackstone., and James Barnes, who has an office on the sixth floor of the Albee Building You no doubt know them both. I suggest that you keep in close touch with them, so that our cooperation may be complete.

Do you not know that these two men were employed by New York Ship to take up where you left off?

Mr. HUMPHREYS. Who?

Mr. RAUSHENBUSH. Lord and Barnes.

Mr. HUMPHREYS. No, I do not know that because I paid no attention to it. When I was free there, I did not pay any more attention to what they did or what was going on.

Mr. RAUSHENBUSH. I will offer that letter for the record for appropriate number.

(The letter referred to was marked "Exhibit No. 1457" and is included in the appendix on p. 4884.)

Mr. RAUSHENBUSH. Coming back a minute to your payments, there is a letter here dated February 20, 1928, from Mr. Bardo to you, which reads as follows:

> FEBRUARY 20, 1928.
>
> Mr. HARRY R. HUMPHREYS,
> *Hotel Carlton, Washington.*
>
> DEAR MR. HUMPHREYS: In order to comply with requirements of our accounting department, it will be necessary that future expense accounts be detailed instead of a lump sum, as has been your practice heretofore.
>
> I can explain this to you when I see you again.
>
> Very truly yours,
>
> C. L. BARDO, *Vice President.*

(The letter referred to was marked "Exhibit No. 1458" and appears in full in the text.)

Mr. RAUSHENBUSH. Does that mean that up to February 1928 you had been getting payments in lump sums, without itemizing what they were spent for?

Mr. HUMPHREYS. Yes, sir; I never made out any detailed accounts.

Mr. RAUSHENBUSH. We were having some testimony the other day as to the difficulty on the part of the company getting up such a statement, and perhaps this is an explanation.

Do you think that the testimony you have given, Mr. Humphreys, so far completes the picture of what you did for New York Ship while you were employed representing it here in Washington?

Mr. HUMPHREYS. Yes; I do.

Mr. RAUSHENBUSH. The matter dealt with specifically the attempts to get more cruisers, did it not, and to get them put in the private yards? Did you also have activities in connection with the Jones-White bill?

It was largely on the cruiser business?

Mr. HUMPHREYS. As I said before, we had these contracts, and a good bit of time was devoted to trying to get paid for the contracts we had. It was not a question of getting more contracts. We had the contracts, and it was trying to be sure that we got enough money appropriated, and after we got it appropriated to get the money.

Mr. RAUSHENBUSH. There is a good deal more to it than that, is there not, Mr. Humphreys? Most of the correspondence we dealt with here pertained to getting the cruiser bills through and getting the ships put in private yards. Is not that what most of it was about?

Mr. HUMPHREYS. Most of the correspondence seems to be that way, but most of the work seems to me to be the other way. However, that is a fair picture of what I did.

Mr. RAUSHENBUSH. Did you attribute your employment to all your political connections at the time?

Mr. HUMPHREYS. My employment to my political connections?

Mr. RAUSHENBUSH. Yes, sir.

Mr. HUMPHREYS. No, sir; it had nothing to do with it.

Mr. RAUSHENBUSH. Did you attribute the fact that you were relieved in favor of other people to their political connections?

Mr. HUMPHREYS. No.

Mr. RAUSHENBUSH. With a change of administration?

Mr. HUMPHREYS. No; I thought it was an effort to economize.

Mr. RAUSHENBUSH. Mr. Chairman, I have no further questions at the moment to ask this witness.

The CHAIRMAN. Senator Clark, do you have any questions?

Senator CLARK. No, sir.

The CHAIRMAN. Mr. Humphreys, you may understand yourself excused.

Mr. HUMPHREYS. Thank you very much, Senator.

(Witness excused.)

The CHAIRMAN. Before calling the next witness, Mr. Raushenbush, will you make clear to the committee the status of our effort to accomplish the appearance here of Mr. Cord?

Mr. RAUSHENBUSH. Mr. Chairman, a few days after the New York Ship was invited to appear, in a letter dated I think January 2, 1935, Mr. Cord was invited to appear some time next week. I forget the exact date at the moment. His attorney, Mr. Pruitt, informed us that he was out of the country and could not appear, but that the information requested from Mr. Cord would be presented by Mr. Manning, the vice president of the Cord Corporation, who is scheduled to appear next week.

A letter was then sent to Mr. Pruitt, asking when Mr. Cord might be expected to return to the country, so that the committee might be on notice if they wanted him as a witness, and the reply was that the date of his return could not be determined at the time.

Senator Clark. That is the same fellow who flew away when the Black committee wanted him, is it not?

Mr. Raushenbush. I believe so.

The Chairman. Is Mr. Pruitt here?

Mr. Raushenbush. Yes, sir.

The Chairman. Are you Mr. Pruitt?

Mr. Pruitt. Yes, sir.

The Chairman. What can you advise the committee concerning the likelihood of Mr. Cord's return?

Mr. Pruitt. I notice an article in one of the newspapers this morning, which I think was a very unfair statement of the situation. It said that Mr. Cord was absent when the Black committee was looking for him, and was now absent again, when this committee was looking for him.

Senator Clark. That is a fact, is it not?

Mr. Pruitt. As a matter of fact, he was here in the United States continuously in the months of January, February, and March, when the Black committee was in session, and was never asked to appear. He was sent numerous questionnaires and answered them, and never at any time was asked to appear before the Black committee. He was in California at his home, and received threats that his children were about to be kidnapped, and he got into quite a nervous condition, as one would naturally under the circumstances, and decided to take a long vacation.

He went across to England and had his boat sent over there, and came back for a few weeks in September and October, and about the middle of October went over there again and is going on around the world.

Mr. Cord has business interests in various places besides the United States, including an air line in Australia, I believe.

The Chairman. Are we to understand that Mr. Cord has not been in this country since October?

Mr. Pruitt. He has not been in this country since about October 5, and the last time I heard anything from him he was in Genoa, Italy, and it is my understanding that he was going on his boat through the Suez Canal and down to Australia, and would be back here sometime around about June 1, I think, but I have no definite information, as I advised Mr. Raushenbush.

But he certainly is not outside the United States because of any activities of this committee, because I am quite sure he would be glad to appear here and tell you everything he knows—which is very little—about the New York Ship Building Corporation.

Mr. Raushenbush. May we have Mr. Bardo?

The Chairman. Mr. Bardo.

TESTIMONY OF CLINTON L. BARDO

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Mr. Bardo, of course, you understand that a certain measure of protection is yours against self incrimination by reason of your appearance and testimony before the committee.

Are you prepared and willing to waive any immunity that might be yours by reason of that constitutional provision?

Mr. BARDO. I do not know. That is a brand new question. I really do not know what the import of that all may be. I am here prepared to give any testimony that I can with respect to the inquiry.

The CHAIRMAN. I am going to submit for your consideration, Mr. Bardo, a suggested form of witness waiver. You may have a few minutes to consider it there.

(Thereupon a short recess was taken, after which the proceedings were resumed as follows:)

The CHAIRMAN. I think it would be very unfair, unless you are prepared to make up your mind now on this matter, to force you to do so, and if you want to consider it during the day and come back tomorrow morning and advise us your choice in the matter, we would be glad to accommodate you.

Mr. BARDO. I was just discussing it with Mr. Pruitt, and trying to find out what it all means. I am frank to say that in all my experience in any investigations, that I have never been asked to do this and been submitted this kind of a document, and I am not sure what its implications are.

Senator BARBOUR. I think you are quite right, Mr. Bardo. I think you should not be expected certainly to assume a position which you do not understand, and we want to give you that opportunity, and I am sure the Chair will agree with me.

The CHAIRMAN. I suggest that you do that if you wish.

Mr. BARDO. I will say very frankly, for the benefit of the committee, that I have got nothing I would want to conceal, and nothing that I would be apprehensive about, so far as any testimony that I might give before this committee, relating to the investigation, is concerned. I have no apprehensions as to that.

Senator BARBOUR. On the other hand, you do not want inadvertently to do something, being a layman like myself, that you might not know the full significance of.

Mr. BARDO. At this later period of my life I do not want to put myself in a position of doing something without knowing what it means.

The CHAIRMAN. Certainly. The committee appreciates the position you are in, and the Chair suggests that you take it under advisement and make yourself more conversant with the situation and report here tomorrow morning at 10 o'clock.

Mr. BARDO. I would be very glad to do that.

Mr. RAUSHENBUSH. I would like to have Mr. Langell.

TESTIMONY OF CHARLES J. LANGELL—Resumed

PREPARATION OF ESTIMATES

Mr. RAUSHENBUSH. Mr. Langell, you are the estimator for the New York Shipbuilding Corporation?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. How long have you served the company in that capacity?

Mr. LANGELL. Since November 1903, except for 2 years.

Mr. RAUSHENBUSH. Will you roughly outline for the benefit of the committee exactly what you do when you are told to estimate on a ship for the United States Navy?

Mr. LANGELL. The Government advertises, taking cruisers as a typical ship, and send us type plans and specifications. Those plans and specifications are distributed to the hull department, the engine department, and to the electrical department in the yard. Those departments get out the amount of material and quantities of the various articles that go into the proposed ship. Those quantities are sent to me.

In the meantime, those same departments write out to various people who supply the material for the ship, or who are supposed to if we get the contract, and those replies all come to me.

I figure out the cost of the material, and estimate the labor to complete the ship, and that is as far as I go.

I might say that the electrical department do furnish their estimate complete for labor and material.

Mr. RAUSHENBUSH. Your job, then, are we to take it, consists of supervising the estimate of the various departments under you for the hull and the machinery and the machinery engineering?

Mr. LANGELL. I have no jurisdiction over those people at all. I just have my own little department, five of us.

Mr. RAUSHENBUSH. And you figure out the price of steel and the price of labor and arrive at a figure which represents, then, as we take it, the actual cost as far as you can determine, and the labor that is going to be put on, on the ship?

Mr. LANGELL. The probable cost.

Mr. RAUSHENBUSH. The probable cost, as far as you can determine, or as accurately as you can. Is not that right?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. And what material is going into it?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. So that your estimate takes in, so far as those two elements, material and labor, go, everything that will complete the ship up to the point of the armament. Is that right?

Mr. LANGELL. Up to what point?

Mr. RAUSHENBUSH. Putting on the armament.

Mr. LANGELL. No; we install that, too.

Mr. RAUSHENBUSH. You install that, too?

Mr. LANGELL. Yes, sir; we install the armament.

Mr. RAUSHENBUSH. Is that included in your estimate for bidding?

Mr. LANGELL. We put what we think is going to be the cost to install it in our estimate.

Mr. RAUSHENBUSH. But not the cost of the material for the armament?

Mr. LANGELL. No; that is furnished by the Government.

Mr. RAUSHENBUSH. The Government furnishes the armament?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. So that your estimates are for the total material and the total labor and cost of installing the armament, but not including the armament?

Mr. LANGELL. Yes, sir

Mr. RAUSHENBUSH. So that when you get through estimating all added expenses of determinable kind, the ship is complete except what the Government is going to add by way of material for armament? Is not that right?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Now, in 1927, you were called upon, I take it, to prepare estimates for the no. 26 to no. 31 classification of ships?

Mr. LANGELL. Right; yes, sir.

Mr. RAUSHENBUSH. Do you have before you the estimates you made at that time?

Mr. LANGELL. I think you have it.

Mr. RAUSHENBUSH. We have them but if you have got them, read them off.

Mr. LANGELL. I have not the detail.

Mr. RAUSHENBUSH. I do not want the detail but the summary for material and for labor.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. These were light cruisers; class 26 to 31.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Will you read off the estimate you made for material and the estimate you made for labor and the total of those two?

Mr. LANGELL. The material amounted to $4,170,065. The labor was $3,780,115. I have not got them totaled. I would have to total that up.

Mr. RAUSHENBUSH. That totaled together is $7,950,000?

Mr. LANGELL. That is right, $7,950,180.

Mr. RAUSHENBUSH. And $180.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Shortly thereafter the company, did it not, made a bid for one of the cruisers at the rate of $10,815,000?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. There was a difference there between your estimate and the bid of $2,854,820. Can you explain to the committee the difference and what happened there, or what was the allocation for the difference, the point of the difference?

Mr. LANGELL. I hand this material and labor over to Mr. Bardo, and he prepares the bid. I have nothing whatever to do with the bid, in any way, shape, or manner.

Mr. RAUSHENBUSH. Your whole function in the situation is simply to estimate, as accurately as you can, the amount of material and the cost of labor going into that, and then the whole thing from that point on is beyond your handling, you say?

Mr. LANGELL. Absolutely.

Senator CLARK. You figure out how much it will actually cost, and somebody else figures out how much the traffic will stand. Is that it?

Mr. LANGELL. As I say, I have nothing whatever to do with the bid.

Mr. RAUSHENBUSH. Those cruisers, Mr. Langell, were later on designed for by the Marine Engineering Corporation, concerning which Mr. Metten testified the other day?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Before these bids were put in, did you have any information from the estimators of the other shipbuilding corporations as to about what figures they were arriving at?

Mr. LANGELL. Not a thing.

Mr. RAUSHENBUSH. Not in the least?

Mr. LANGELL. No, sir.

Mr. RAUSHENBUSH. Later on, in 1929, you prepared another estimate for the 1929 cruisers, the class 33 to 35, the *Indianapolis* and *Portland*?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. Will you summarize your estimate for the material and labor?

Mr. LANGELL. The material was $3,950,000 and the labor $3,223,000.

Mr. RAUSHENBSUH. And the total would be what?

Mr. LANGELL. $7,273,000. Is that right [making computation], $7,173,000?

Mr. RAUSHENBUSH. $7,173,000 for the total labor and materials, and how much was the bid of the company?

Mr. LANGELL. $10,903,000.

Mr. RAUSHENBUSH. And the difference between your estimate and the bid was how much?

Mr. LANGELL. I have not got it figured out.

Mr. RAUSHENBUSH. $3,730,200. That difference between your estimate and the bid was a good deal higher than it was in the earlier year, was it not?

Mr. LANGELL: Apparently so.

Mr. RAUSHENBUSH. Here you have in 1929 a difference of $3,730,000, and 2 years before you had only a difference of $2,854,000. There is almost $1,000,000 difference.

Let me call your attention to the fact, Mr. Langell, that your estimate in 1927 was a good deal higher than your estimate in 1929. It was higher by roughly $700,000 plus, and yet your bid was $100,000 higher instead of lower in 1929, and the difference there between your estimate and your bid is almost $1,000,000 in those 2 years.

Can you give us any help in explaining that?

Mr. LANGELL. No; I cannot. It is not my bid.

Mr. RAUSHENBUSH. It is not your bid at all. It is your estimate. Did you have any knowledge of what the estimates of other companies were in 1929?

Mr. LANGELL. Not the slightest.

Mr. RAUSHENBUSH. I want to show you a photostat taken from the Iron Age of January 3, 1935, showing your prices during those years, Mr. Langell, for structural shapes at Pittsburgh, cents a pound, and I want to read them off and see how they check with your own experience on prices of steel at that time. I seem to have only two copies of this steel exhibit, structural shapes at Pittsburgh, cents a pound, and I call your attention to that line showing roughly that in 1927 they were 1.83 cents a pound, and in 1928, 1.87 cents, and 1929 1.92 cents.

Steel seems to have been higher in 1929 than in 1927, and yet your estimate on material is a good deal lower in 1929 than in 1927. It is almost $200,000 lower.

The prices go on: 1930, 1.69 cents; 1931, 1.62 cents; 1932, 1.57 cents; 1933, 1.63 cents; 1934, 1.78 cents.

Do those check with your experience on the price of structural-steel shapes?

Mr. LANGELL. Yes; I would say they do, but reference to my detailed estimates there will show exactly what I did use.

Mr. RAUSHENBUSH. Can you find that quickly in your detailed estimate?

Mr. LANGELL. I think I can, if you will show it to me for a minute. This is 1927 which I am looking at.

Mr. RAUSHENBUSH. You are looking at 1927?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Which consists of three volumes, does it not?

Mr. LANGELL. Yes, sir. Mild-steel plates, I figure at 2.32.

Mr. RAUSHENBUSH. That included freight, however, did it not?

Mr. LANGELL. That included freight and also a differential for the Government material, which at that time I think was one-tenth of a cent. I think that is what it was.

Mr. RAUSHENBUSH. Would that differential for Government materials stay all the way through, so that your figures will be comparative throughout the year, freight plus the Government differential of one-tenth of a cent, so that we can get fairly good comparison?

Mr. LANGELL. Yes. There are high-tensile plates and all kinds of plates going into the ship.

Mr. RAUSHENBUSH. This is not "plates" but "shapes".

Mr. LANGELL. 2.32 for shapes.

Mr. RAUSHENBUSH. In 1927 you have 2.32 for both plates and shapes?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. All right. Now, I show you your estimates for 1929, for the cruiser *Indianapolis*, No. 399, which consists of five volumes of envelopes, and I wonder if you could state the price of steel there without too much trouble. [Handing volumes to witness.]

Mr. LANGELL. They are the same exactly.

Mr. RAUSHENBUSH. 2.32?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Then, the figures go on and show the 1934 and 1933 price of steel is a good deal lower than it was in 1927 and 1928. That is right, is it not? In 1927 it was 1.83, and in 1933, 1.63, and 1934, 1.78. So that the price of steel has gone down rather than up in these years?

Mr. LANGELL. Yes, sir; it has a trifle.

Mr. RAUSHENBUSH. This compilation from Iron Age is usually accepted as authoritative, is it not?

Mr. LANGELL. I do not use it in my estimates.

Mr. RAUSHENBUSH. You have to get the price of the freight and the Government differential on that?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. But in making comparisons, the Government differential of one-tenth of a cent, which is for the steel, is it not?

Mr. LANGELL. Yes, sir; and inspection.

Mr. RAUSHENBUSH (continuing). Would stay uniform comparatively. We have the same information from the N. R. A., which are practically identical, furnished by the Iron Institute.

Mr. Chairman, in view of the fact that we expected another witness to be on most of the day, I think we can close now.

(The document referred to was marked "Exhibit No. 1459" and is included in the appendix on p. 4885.)

The CHAIRMAN. Before we recess, how large a part of the material entering into the construction of a cruiser is steel?

Mr. LANGELL. May I have this estimate?

Mr. RAUSHENBUSH. For 1927?

Mr. LANGELL. Any time. This is 1927, which I think will be comparable right down the line. The total material was $4,170,000, and the steel in that is practically $780,000, out of that $4,000,000. I am talking about plates and shapes.

The CHAIRMAN. Can you say offhand what happened to costs of other materials than steel? Has the price trend been up or down?

Mr. LANGELL. The trend from 1927 was down.

The CHAIRMAN. From 1927 up to this time?

Mr. LANGELL. Well, no; I would not say up to this time. I would say up to 1932.

The CHAIRMAN. The trend was down to then for other material as well as steel?

Mr. LANGELL. Yes, sir; for other materials.

The CHAIRMAN. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12 noon, a recess was taken until tomorrow morning, Thursday, Jan. 24, 1935.)

INVESTIGATION OF MUNITIONS INDUSTRY

THURSDAY, JANUARY 24, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to the recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Pope, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee.

The Chairman. The committee will be in order.

The committee had on the coming Monday planned to hear Mr. Cornbrooks, who had been notified to appear before the committee at that time. Telegraphic notice is before the committee this morning as follows:

Collingswood, N. J.,
January 23, 1935.

Senator Gerald P. Nye,
United States Senate, Washington, D. C.:

Mister Cornbrook in hospital, will have him answer wire as soon as he is able.

Margaret K. Cornbrook.

The committee's former plan of convening on Monday morning has been changed, and will therefore provide for a hearing at Collingswood, N. J., at some time on Monday, to hear Mr. Ernest I. Cornbrook, or to take his deposition.

The committee has before it a telegram from H. Birchard Taylor, of Greenwich, Conn., which I ask be made a part of the record, to clear up what has developed, and which reads as follows:

Greenwich, Conn.

Senator Nye,
Chairman Senate Munitions Investigating Committee, Washington, D. C.

As an executive officer for many years of the Cramp Ship Building Co., unfortunately out of the marine business for some years, I note question has been raised regarding early cost plus contracts when the definition of costs included taxes of all kinds. The contracts were executed, if my memory serves me correctly, before the income-tax and excess-profit laws were enacted. I advised Secretary Daniels voluntarily that Cramps were willing to interpret the clause taxes of all kinds as not including income and excess-profit taxes. These amendments were executed. Let us not forget movements of a high moral plane during the war. Kindly submit this to your committee.

H. Birchard Taylor.

The committee would like to hear briefly this morning Mr. Stanley Matheson. Will you come forward, Mr. Matheson, and be sworn?

TESTIMONY OF STANLEY MATHESON

PROTECTIVE OR COMPLIMENTARY BIDS ON MERCHANT VESSELS

(Witness was duly sworn by the chairman.)

The CHAIRMAN. Your full name?

Mr. MATHESON. Stanley Matheson.

The CHAIRMAN. You were formerly with the New York Shipbuilding Co.?

Mr. MATHESON. I was.

The CHAIRMAN. In what capacity?

Mr. MATHESON. Draftsman in the design department.

The CHAIRMAN. Were you known as an assistant naval architect?

Mr. MATHESON. Not definitely. I was one of Mr. Riggs' assistants.

The CHAIRMAN. How recently were you employed by the New York Shipbuilding Co.?

Mr. MATHESON. I left there in August 1929.

The CHAIRMAN. What has been your employment since?

Mr. MATHESON. I have been a draftsman in the shipbuilding business. I went with the Dravo Contracting Business of Pittsburgh and later with Theodore Ferris, then with Bethlehem Shipbuilding Co., with Electric Boat Co., and I am now employed in Washington.

The CHAIRMAN. All right, Mr. Raushenbush.

Mr. RAUSHENBUSH. Mr. Matheson, the question came up yesterday as to the practice of estimators on naval vessels and other vessels to consult one another. Do you know whether that is occasionally done?

Mr. MATHESON. Just to what extent do you mean?

Mr. RAUSHENBUSH. The matter of getting in touch with the estimators of other yards and finding out what sort of estimates they are going to put in. Is that occasionally done, so far as your knowledge goes?

Mr. MATHESON. In regard to naval vessels, I have no knowledge whatsoever.

Mr. RAUSHENBUSH. On merchant marine vessels?

Mr. MATHESON. On merchant marine vessels, where a yard is perhaps not particularly interested in securing a contract, and does not prepare a full estimate, they may put in what is known as a "complimentary" estimate and then I believe figures are sometimes prepared to make sure that they do not slip up and their estimate is high enough to cover somebody's who may be expected to get it.

Mr. RAUSHENBUSH. You know that that has been done?

Mr. MATHESON. My recollection, going back to about 1922 or 1923, is I believe I heard a telephone conversation one time which would indicate that.

Mr. RAUSHENBUSH. You made a general statement just a moment ago that when a yard did not really want a ship, but simply wanted to put in a complimentary estimate, that that was occasionally done, that the estimators of other yards were occasionally consulted. Is that correct, so far as you know?

Mr. MATHESON. Yes.

Mr. RAUSHENBUSH. I have no other questions.

The CHAIRMAN. That will be all, Mr. Matheson. Thank you.

(Witness excused.)

The CHAIRMAN. Mr. Bardo.

TESTIMONY OF CLINTON L. BARDO—Resumed

Mr. BARDO. I want to apologize to your honorable committee for being late. I was caught in a very unfortunate situation and could not get here as soon as I thought.

The CHAIRMAN. The committee did not know you were late, because they did not call for you earlier.

Mr. Bardo, I expect you have something which you want to say to the committee regarding its request of yesterday.

Mr. BARDO. Yes, sir.

The CHAIRMAN. Do you have a statement prepared which you wish to read?

Mr. BARDO. I have.

The CHAIRMAN. Very well, you may proceed with it.

Mr. BARDO. I would like to say, before reading it, that it is submitted not with any desire at all of being antagonistic or in any way wanting to offend the dignity of the United States Senate, but the situation, as I see it, is one of such import that I felt that it was necessary, if you please, to prepare this statement and to make it in simple language that I will endeavor to use in it.

(The statement is as follows:)

> I was elected president of the New York Shipbuilding Co. in October 1928 and resigned November 1934. I am perfectly willing to testify as to any matters or transactions which occurred during my administration. I know of nothing in which I took part which is in any way reprehensible or in violation of the laws of the United States.
>
> This committee, however, has requested that I waive my constitutional rights as an American citizen, and since I am unwilling to do so it seems proper that I should here state my reasons for refusing to comply with your request.
>
> In the first place, the hearings before your committee are entirely ex parte. No opportunity is afforded any witness to be represented by counsel, nor to volunteer any explanation of evidence which has been taken in such ex parte examination.
>
> From the most innocent transactions inferences and innuendos are drawn intended to induce the newspapers to print and the public to believe that sinister influences have dominated the shipbuilding industry, and much that is reprehensible if not illegal has occurred.
>
> My opinion is that every citizen is assumed to be innocent until proven to be guilty and that the fifth amendment to the Constitution and laws pertaining to self-incrimination were adopted to protect citizens against inquisition of the character I refer to.
>
> Feeling as I do, it seems to me that your request that I sign the waiver submitted is a request that I renounce my constitutional rights, and this I respectfully refuse to do.
>
> I am perfectly willing to testify as to all transactions of which I have knowledge and hope that I may be afforded an opportunity to do so. My decision not to sign the waiver request is my personal decision.

The CHAIRMAN. Mr. Raushenbush, the committee would suggest that the questioning of Mr. Bardo proceed, but that the questioning be confined to a period leading up to and including 1931.

Senator VANDENBERG. And no further.

The CHAIRMAN. If you would refrain from questioning concerning the period beyond 1931, you would comply with the thought that is the committee's this morning.

Mr. RAUSHENBUSH. Yes, sir.

Mr. Bardo, will you describe briefly for the committee your connection with the New York Ship, your various offices?

Mr. Bardo. I first became connected with the New York Ship as a vice president of the American Brown-Boveri Electric Corporation, when that was organized late in 1925. My connection at that time was one intended to deal entirely with the development of the electric program by reason of the fact that I had been associated in the railroad field for a number of years handling electric traction, and it was the purpose of the organization of the new company to largely engage in the field of heavy electric railroad traction.

I went to Camden early in 1926 and began organizing and setting up the shop machinery and getting together the personnel to carry on the electric work.

At that time there was only one ship in the shipyard, and that was the *Saratoga*, and every indication pointed to the fact, in some investigations that the board had made, that the shipbuilding business was apparently over in this country, and that they would convert the shipbuilding plant from a shipbuilding plant to a plant for the manufacture of electric equipment.

Vice President Magoon and Vice President Groesbeck, who were respectively the operating and engineering vice presidents of the company, of the shipbuilding company, had indicated a desire to retire, and I was gradually asked by the president of the company if I would not follow up and become familiar with the shipbuilding activities and the shipbuilding operations, and that I did, carrying on at the same time my activities in the development of the electric operations.

Magoon and Groesbeck did retire, and former President Neeland retired. So that left the situation very much in my hands, and I carried it on as a vice president up until October 1928, when the electric business had grown to such proportions that the directors deemed it time to make a segregation. And they then separated the two properties, organized the American Brown-Boveri Co., as a subsidiary, and that activity was turned over to Mr. Burnham, and at that time I was elected president of the shipbuilding company.

Mr. Raushenbush. And you resigned when?

Mr. Bardo. November 1 last year; 1934.

Mr. Raushenbush. When did it come to your knowledge, first, that Mr. Cord, or the group he was connected with, had begun to acquire stock in your company?

Mr. Bardo. My recollection of that is that it was in August 1933.

Mr. Raushenbush. You mean until August 1933 you had no idea that the Cord interests were securing control of the company?

Mr. Bardo. That is correct.

Mr. Raushenbush. Then when on August 2, suddenly a meeting was held and the Cord Corporation took over, that was the first that you knew about it?

Mr. Bardo. I had heard of it only a very short time, probably a week or 10 days, before that. That was the first anybody had heard of it, as a matter of fact.

ALLOCATION OF MERCHANT VESSELS

Mr. Raushenbush. Mr. Bardo, will you tell us, as fully as possible, the practice that was prevalent in the shipbuilding industry concerning the bidding on merchant-marine vessels, supposedly part of the national defense, and the extent to which the shipbuilders talked among themselves about who would get those vessels, and the nature of their combined efforts, if any, to allocate those vessels? Will you tell us, as fully and freely as you can, the transactions let us say, surrounding the *Manhattan* and *Washington* in those respects?

Mr. BARDO. You are dealing with a very practical question. As a matter of policy, at least the policy of the yard with which I was connected, we undertook, just as far as we could, to so distribute our work between merchant work and Navy work as to not lose our position in either of those two fields.

We did not want to dominate or to have a majority, so to speak, of either one of those activities, because primarily of the fact that you never know very far in advance what you can expect from the standpoint of Navy work. And it was the view of our group, very definitely, that inasmuch as the Government of the country had been engaged in an endeavor to build up a foreign trade, that there would necessarily have to be a very substantial building of merchant ships, primarily because of the fact that we could not hope to maintain our place in the foreign trade unless we did have ships of the type and character that would compete successfully with the ships of foreign nations.

So that from that standpoint, we proceeded in the handling oi our business.

So far as allocation of the work is concerned, there never was any understanding, nor ever any discussion, as to where this work would be allocated. That never was done.

Mr. RAUSHENBUSH. Will you repeat that, Mr. Bardo?

Mr. BARDO. I say there was never any indication nor ever any understanding as to where this merchant work would be allocated.

Mr. RAUSHENBUSH. And it was never talked about at all among the shipbuilders?

Mr. BARDO. No, sir.

Mr. RAUSHENBUSH. Was it talked about with the officers of the United States Lines who were planning to buy those ships?

Mr. BARDO. You mean to build the two ships?

Mr. RAUSHENBUSH. Yes.

Mr. BARDO. As to who would build them?

Mr. RAUSHENBUSH. As to who would bid on them, what they would bid, and so forth?

Mr. BARDO. No, indeed; not to my knowledge. I discussed it personally with Mr. Sheedy, who was the operating vice president of the United States Lines repeatedly, and he indicated to me—I do not know whether he indicated to anybody else—that he was very desirous that we should build the ships. What conversation he had with any other shipbuilders, I do not kow.

Mr. RAUSHENBUSH. Was a Mr. Ferris acting for Mr. Sheedy in that connection at the time the bids were being prepared for the ships?

Mr. BARDO. I do not know any connection between Mr. Ferris and Mr. Sheedy. I could not say as to that. But our negotiations, and the whole question of design and construction was all one of purely local interest with us.

Mr. RAUSHENBUSH. And there was at no time, then, any comparison of notes by yourself with the officers of the Newport News or Bethlehem companies, for example, on what your bids would be for those ships?

Mr. Bardo. No, sir.

Mr. Raushenbush. Or with any of their subordinates?

Mr. Bardo. No, sir.

Mr. Raushenbush. We have here a letter from Mr. Ferris, addressed to one of the Bethlehem men, Mr. A. D. Homer, in which he seems to refer to such an arrangement, or suggests it. The letter is dated June 11, 1930, on the letterhead of Theodore E. Ferris, and he tells Mr. Homer of the Bethlehem Co. as follows:

> May tell you that the program is to have the three big yards individually estimate the cost of these ships. I have now made arrangements with the New York Shipbuilding Co. and the Newport News Shipbuilding & Drydock Co. to this effect. Therefore it would seem to be mutually agreed upon and with very fine spirit on the part of all concerned, that is, each yard to go ahead and figure up the cost of these ships, after which if it seems essential to do so, we can compare notes and arrive at something that will be substantially good and reasonably solid for the program ahead in connection with these vessels.
>
> This matter is as you know a request by Mr. Sheedy through me and this letter will serve to confirm the various conversations we have had on the subject.

Mr. Bardo. May I inquire whether that letter was not directed to an entirely different program?

Mr. Raushenbush. Surely.

Mr. Bardo. What is the date of it, if you please?

Mr. Raushenbush. June 11, 1930.

Mr. Bardo. There was a movement on foot to design a superliner, something that would match up, so to speak, with the *Leviathan*, and Mr. Ferris, I think, was commissioned by Mr. Sheedy to draw up such a plan. And when the plan was drawn up, if that is what it refers to, we did agree to make an estimate for Mr. Ferris' purposes for all three yards, so that he might have something as an economic basis upon which Mr. Sheedy might proceed to develop whether or not he could afford to build that type of ship.

Mr. Raushenbush. You do not think that refers to the *Manhattan* and *Washington* at all?

Mr. Bardo. I am quite sure that it does not refer to the *Manhattan* and *Washington*.

Mr. Raushenbush. We have a note from the Black committee records that when the bids went in for those ships, the Bethlehem and Newport News Cos. bid $9,750,000 apiece. They were exactly even. There was not 1 cent of variation. They bid exactly the same.

Mr. Bardo. I do not know anything about that.

Mr. Raushenbush. And that New York Ship then bid $9,515,000, and received the award.

Mr. Bardo. That is right. That is correct.

Mr. Raushenbush. Do you think that Bethlehem Ship and Newport News would have arrived at that figure, running into millions, $9,750,000 each, without at least a telephone conversation about it?

Mr. Bardo. I have had exactly that same thing happen to me, and I guarantee this committee that there was no contact of any kind between the two companies that made the bid. It happened that the Grace Liner *Santa Clara*, the bid which we made, and which was made by the Federal Shipbuilding Co., was exactly the same. When I walked into President Carter's office, he laughed at me and said right out, "You fellows must be in collusion." None of us had had any conversation of any kind with the Federal Shipbuilding Co.

Again, when the four Grace liners which were built by the Federal Shipbuilding Co. were bid on, our bids in that case were $10,000 a ship apart.

In making an estimate, you might just as easily hit the figure of another shipyard as to miss it. You do not know what they are going to do.

The CHAIRMAN. Mr. Bardo, are you wanting us to conclude that there really is nothing in this, then, about the fact that three companies would bid and that two of them would bid an identical figure, $9,750,000?

Mr. BARDO. Senator, that is true. And I think this will help to enlighten you on how this thing works: There are two principal phases. First, you have got labor, and you have got materials. There are these three yards that were bidding upon an identical ship. We made the same investigation. We made the same inquiries to all of the suppliers of steel, auxiliary facilities, and auxiliaries of every kind, and it is fair to assume that we got the same quotation from all of them. You would not find very much difference there, if any. You might find a little in the way that the thing was assembled and put up.

Now when it comes to the question of labor, that is always a very important question, and the three yards kept very close in touch with one another as to our labor costs and our labor wages and our labor conditions, because we wanted to know and we wanted to keep tabs on what was going on, and what was happening, and what was likely to happen.

Mr. RAUSHENBUSH. Were you the one which kept in touch with the other yards on labor and material?

Mr. BARDO. No. One of the men on my staff did that.

Mr. RAUSHENBUSH. Who was that?

Mr. BARDO. Mr. Taylor.

Mr. RAUSHENBUSH. What capacity did he have?

Mr. BARDO. I think he had the title of assistant comptroller.

Mr. RAUSHENBUSH. He was the one who kept finding out what the other yards were paying for labor and material?

Mr. BARDO. He did not know anything about the material. He did not get that figure because that was out of his line, but that is the man who kept the record for us on labor costs and labor wages.

Mr. RAUSHENBUSH. When he got that information, did he communicate it to you or the estimating department?

Mr. BARDO. It came to me.

Mr. RAUSHENBUSH. The estimating department did not have that?

Mr. BARDO. They did not have that information.

Senator VANDENBERG. Would he be advised as to what the labor element would be on a given bid?

Mr. BARDO. No. He simply reported the facts. That is all.

Senator VANDENBERG. You did not need an N. R. A. to standardize your practices?

Mr. BARDO. No, sir; we did not.

Senator VANDENBERG. You beat the N. R. A. to it.

Mr. RAUSHENBUSH. Mr. Bardo, assuming, then, that you knew what the labor figure on a given ship would be in other yards and all. did you have a practice of adding to the labor and material figure of your own estimator a certain percentage for overhead to arrive at your final bid price?

Mr. Bardo. That varied as the conditions varied. You see, here is a contract which goes over a period of 2 years—26 months. When we got the estimates from the estimator as to labor and material, it was my practice to call the staff into the office—the vice president, the shopmen, the comptroller, and sometimes the purchasing agent—and we would sit down and consider and analyze, just as far as we could, what we thought the situation was going to be during the life of that contract. So that we were not leaving ourselves out on the end of a limb.

Then our price would again be influenced by two other factors: First is the amount of work that we had in the yard, and over which we could prorate the overhead, if we got the contract; and, second, other work that was in prospect, which we might get, and where we would again prorate the overhead.

So that there were a number of fluctuating factors always to be considered every time we sat down to make an estimate on ships.

Mr. Raushenbush. The final decision was yours, as to whether you would add $3,000,000, three and a half million dollars, $2,800,000, or whatever it would be?

Mr. Bardo. Yes; that is the result of the conference. Usually it was my responsibility to decide where we would finally stop and what we would finally do.

Mr. Raushenbush. Have you testified here this morning that before doing that, you never in any way consulted with the heads of the other big shipbuilding concerns as to what their final figures would be?

Mr. Bardo. That is correct.

INCORRECT INFORMATION GIVEN SHIPPING BOARD ON BRITISH COSTS

Mr. Raushenbush. Before leaving this question of the merchant ships, I call your attention to a letter dated August 12, 1931, signed by A. G. Foster, and addressed to you, Mr. Bardo. Was Mr. Foster at that time your Washington representative?

Mr. Bardo. He was both in New York and Washington. He was at New York first and Washington later. Is that dated New York or Washington?

Mr. Raushenbush. It is interoffice correspondence. I cannot make out where it comes from.

Mr. Bardo. I think that is while he was in the New York office. That would be my feeling about it.

Mr. Raushenbush (reading):

> Dear Mr. Bardo: As requested by you, attached hereto, please find papers which I received from Mr. Sheedy this morning.
>
> Mr. Sheedy apologized for not having been in town when you called and explained that he did not reach New York until late last night.
>
> He wished me to emphasize the fact that the attached bids for the 705-footers were based on the original 82-foot beam and that correspondence from British shipyards suggesting increase in beam crossed our revised plans calling for 86-foot beam.
>
> Mr. Sheedy said that he would be very glad for us to make copies of all this correspondence; however, naturally wishing us to keep it confidential.

There was some British bidding on the ships? Was there not?

Mr. Bardo. There was.

Mr. RAUSHENBUSH. And the explanation of that is in this last paragraph which reads:

> Mr. Sheedy said that he gave the amount of the bids from British yards to the Shipping Board at a figure lower than actual for mail-contract reasons.

Mr. BARDO. I know nothing about that. You will have to ask Mr. Sheedy about that. I know nothing about that.

Mr. RAUSHENBUSH. I will offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1460" and appears in full in the text.)

Mr. RAUSHENBUSH. What advantage would there be in portraying to the Shipping Board a picture that the shipyards in Britain were bidding a great deal under the American yards? Can you give any information on that?

Mr. BARDO. They were not a great deal under. As a matter of fact, as I recall it, there was only about $700,000 difference in what one of the bids was and our bid, between one of the British yards and ourselves.

Mr. RAUSHENBUSH. One of them was over $2,000,000 under, was it not?

Mr. BARDO. Not as I recall the figures.

Mr. RAUSHENBUSH. John Brown & Co., Ltd., Clyde Banks, Scotland, $7,295,260. That is over $2,000,000.

Mr. BARDO. That would be, if that was one of them.

Mr. RAUSHENBUSH. And the other one, Fairfield Shipbuilding & Engineering Co., $8,169,000. That is again over $1,000,000 under.

Mr. BARDO. I think it would also be enlightening to the committee, if you understood something as between the difference that applies in building a ship in an English yard and what applies in building that same ship in an American yard.

Mr. RAUSHENBUSH. That is a long and complicated question, Mr. Bardo, and we expect to get back to it later.

Mr. BARDO. All right.

Mr. RAUSHENBUSH. But at the moment the point here is that the Government was given incorrect information. Mr. Sheedy was president of the United States Lines at that time, was he?

Mr. BARDO. No; I think he was the executive vice president. Mr. Chapman was president, as I recall it.

Mr. RAUSHENBUSH. The Government was given incorrect information on a bidding arrangement under which the American yards arrived at a very similar price in two cases and apparently expectation that that would influence the mail-contract rates, if the Shipping Board thought, or was told, that the British yards could build a great deal cheaper than they actually could.

Mr. BARDO. Of course, that is something which Mr. Sheedy can tell you. I could not answer that question.

SHIPBUILDERS AGREE ON MERCHANT WORK

Mr. RAUSHENBUSH. Here is a letter addressed by Robert Haig, of Sun Ship, to you, Mr. Bardo, on August 19, 1933, coming up to date a little bit, which reads:[1]

> DEAR C. L.: We are very keen to get this Gulf Pacific boat, as you know we have not one thing on the way.
>
> Mr. Roger Williams—

---

[1] See Hearings, Part XX, for Newport News Shipbuilding Co.'s testimony regarding above letter.

He is with Newport News Ship, is he not?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH (continuing reading):

> Korndorff—

He is connected with Federal, is he not?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH (continuing reading):

> And Wakeman—

He is connected with Bethlehem?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH (continuing reading):

> have promised to go along and I have been trying to get you yesterday and will call you again next week.
>
> Turn this over in your mind and I would like to get this work.

Do you remember anything about that?

Mr. BARDO. I do not.

Mr. RAUSHENBUSH. It certainly seems to be an indication that the Sun Co. was getting a promise from Newport News, Federal, and Bethlehem to go along on certain of the merchant-marine work?

Mr. BARDO. That may be true or it may not. I think you have got to find out either from them or Mr. Haig just what he was talking about.

Mr. RAUSHENBUSH. The letter was addressed to you. That was not very long ago. That was August 1933. Do you not remember what you replied to this?

Mr. BARDO. I do not remember the letter at all.

Mr. RAUSHENBUSH. I will show it to you a minute [handing paper to witness].

Mr. BARDO. Where did you get it?

Mr. RAUSHENBUSH. From the New York Ship file.

Mr. BARDO. This letter?

Mr. RAUSHENBUSH. Yes, sir.

Mr. BARDO. I do not think you did. You got that in the Sun files.

Mr. RAUSHENBUSH. We have not been in the Sun files, Mr. Bardo.

Mr. BARDO. You did not get it out of our files, I do not think.

Mr. RAUSHENBUSH. Where is the answer to that?

Mr. BARDO. There is not any answer. If there was an answer, it would be here.

Mr. RAUSHENBUSH. It might have been in your New York files.

Mr. BARDO. You went through the files. It was all there. You had free access to them.

The CHAIRMAN. What makes you think, Mr. Bardo, that this was not taken from the New York Ship files?

Mr. BARDO. Because I think the question was raised by some of the investigators there, and they said they found this letter in the Sun files, but did not find it in ours, and they wondered where it was. That is where I got my information from. It is a carbon.

Mr. RAUSHENBUSH. Was it our investigators or the Black committee investigators who were so informed?

Mr. BARDO. It is my recollection it was one of your investigators.

Mr. RAUSHENBUSH. I can assure you that we have not been in the Sun files at all.

The CHAIRMAN. The committee has had nothing to do with the Sun files.

Mr. BARDO. That is the information which came from one of the persons.

The CHAIRMAN. There is evidently confusion, and what you have in mind is that the Black committee investigators perhaps went into the Sun files.

Mr. BARDO. This is a carbon copy of the letter and not an original. My letter would be an original, and this is a carbon.

Mr. RAUSHENBUSH. Your own files would have, of course, had a carbon of your reply to Sun, if you had made a reply?

Mr. BARDO. Yes, sir; it would.

Mr. RAUSHENBUSH. And you do not remember replying to Sun over the telephone or any other way?

Mr. BARDO. Not in any way.

Mr. RAUSHENBUSH. When you left the company, Mr. Bardo, did you examine all your files before going?

Mr. BARDO. What files? The company files?

Mr. RAUSHENBUSH. Such files as you may have had in your own office.

Mr. BARDO. No, sir.

Mr. RAUSHENBUSH. You did not take anything with you at the time?

Mr. BARDO. Only my personal files. I took my personal files with me.

Mr. RAUSHENBUSH. This letter is labeled "personal and confidential."

Mr. BARDO. That did not go in my personal files. That has to do with the business of the company.

Mr. RAUSHENBUSH. Leaving that aside at the moment, it does seem to be the case that in shipbuilding you were trying to get Newport News, Federal, and Bethlehem, and not only trying to but did get them to promise to go along on certain bidding. You were not startled, were you, at this apparent agreement on the part of the four big companies, or startled on your part on being asked to be the fifth in that arrangement? It was not so unusual, was it, that you remembered it at all?

Mr. BARDO. I do not think I was asked. I am trying to make it perfectly plain to you that I do not think that letter reached me, if that letter was ever written. That is the point I am trying to make clear to the committee.

Mr. RAUSHENBUSH. This is the first time you ever saw this?

Mr. BARDO. This is the first time I ever saw that letter; yes, sir.

AGREEMENT ON 1927 CRUISERS AND DESIGN WORK

Mr. RAUSHENBUSH. Now, Mr. Bardo, we want to go into the question of the bidding further on the cruisers 26 to 31 class in 1927. Will you recall for us any meetings you had with other shipbuilders, the other members of the "Big Three" group, about this bidding by date and place and time?

Mr. BARDO. I recall no conferences we ever had as to the question of bidding. The invitations to bid on those ships specified a new requirement, and that is that a very large part of the propelling and auxiliary machinery of that type of ship was to be identical duplicates, which was the first time in the history of the industry that that sort of a provision had ever appeared in the inquiries for ships.

That immediately raised the question as to just how our engineering forces could be organized in order that we might carry out the requirements of the invitation to bid, or the requirements of the contract when it was finally executed.

We had a number of conferences about that. We had conferences with the admirals in charge of the Bureau of Construction and Repair and of Engineering, and I think it was Admiral Buret in charge of the Construction and Repair, and Admiral Halligan, in charge of Engineering. We had conferences with them in order that we could find an accommodation point between the Navy and the shipyards.

Senator VANDENBERG. Whom do you mean by "we"?

Mr. BARDO. The shipyards.

Senator VANDENBERG. All the shipyards?

Mr. BARDO. The shipyards who were interested and who were capable of building these two ships.

Senator VANDENBERG. Is that just the three big ones?

Mr. BARDO. Just the three yards.

Senator VANDENBERG. No conferences with Federal or Sun in this connection?

Mr. BARDO. No. Sun definitely was not interested in Navy business and Federal at that time was not.

So that the obligation really rested upon the three yards to find a way in which we could carry out these requirements.

Senator VANDENBERG. When you speak of "we", you are speaking of the three big yards?

Mr. BARDO. I am speaking of the three big yards. Yes, sir; to carry out this requirement. While the bids were being prepared, this matter was discussed, I do not know how many times, because it was a difficult thing to find a common denominator upon which the engineering forces of the three yards were inclined to agree to begin with.

As a matter of fact, I think it is only fair to say that the competition on this type of ship is competition in brains rather than in price. What the Navy Department wants all the time is the very best that they can get, the best performance for the least money. So that we had to harmonize those very difficult stituations with the engineering groups in the first place.

Senator VANDENBERG. The Navy Department does not possess this engineering capacity itself?

Mr. BARDO. They did not at that time.

Senator VANDENBERG. In other words, the Navy Department had to rely upon external cooperation?

Mr. BARDO. That is correct. They had to depend upon us, because they were not equipped to go on and carry through the intricate designs for a ship of this type.

I do not recall whether it was after the contracts were awarded or before, that as a result of these prior discussions, it was agreed that we would set up a separate engineering organization to handle the plans for all the yards.

We became rather involved in the question because the plan contemplated that Mr. Metten, who was our vice president in charge of engineering, was the man that was to head up as president the Marine

Engineering Corporation. That embarrassment to us was because of the fact that we had taken over the Cramp contract, and as that was taken over with the provision that Mr. Metten would stay with that job until it was finished because of the fact that he had originated it, it left us in a rather difficult situation. Because I could not release at all the endeavors that we were making to carry on the engineering required for the *Salt Lake City* and the machinery for the *Pensacola* and divert his abilities and his attention to another activity.

But we were finally able to work out that plan and organized the Marine Engineering Corporation and put Mr. Metten in charge. Mr. Freer, who was a retired naval constructor from the Bethlehem Co., was put in charge of the C. & R. work. We set up an independent organization in Philadelphia, and they furnished the plans for all the ships, both those which were built in the navy yards as well as those in the private yards.

Mr. RAUSHENBUSH. We had considerable testimony about the Marine Engineering Corporation the other day, when Mr. Metten was here, Mr. Bardo. Have you told us pretty fully about all the meetings and tried to place them in time and date as far as you could, that you had with the other shipbuilders during bidding on the 1927 cruisers?

Mr. BARDO. So far as I know, I have. If there is anything I have not, I would be glad to enlighten you, if I can.

Mr. RAUSHENBUSH. You have no diary or other information which would indicate that?

Mr. BARDO. No, sir.

Mr. RAUSHENBUSH. Did the Newport News Co. at any time in the late part of 1926 or the early part of 1927 suggest to your company that it might be well for you to compete on only one of the two ships which were called for?

Mr. BARDO. I do not recall that they did. In any event, if they did, my recollection is that we bid on two.

Mr. RAUSHENBUSH. Do you remember that you made no particular estimate for two ships?

Mr. BARDO. My recollection is that we did; that we not only made an estimate but that we bid on two.

Mr. RAUSHENBUSH. My point is about the estimate.

Mr. BARDO. If we made an estimate on one, that same estimate would carry for two, except there are some elements in there which would be divided by two instead of one.

Mr. RAUSHENBUSH. Did you have a normal percentage reduction there from one ship to two?

Mr. BARDO. It is not exactly normal. That, again, depends on just what duplication you might be able to work in.

Mr. RAUSHENBUSH. You say that you do not remember at all that Mr. Ferguson in any way took up with you the possibility of bidding on only one of the ships?

Mr. BARDO. I do not.

Mr. RAUSHENBUSH. About that time do you remember meeting with the others, late in 1926, when this cruiser program was first up—that is, do you remember meeting with the other representatives of the shipbuilders and going to the Secretary of the Navy and the President and fighting for the proposition that the private yards, rather than the navy yards, get these ships?

Mr. Bardo. We did.

Mr. Raushenbush. In that meeting and discussion did you talk over with the other shipbuilders at all, as to who would be getting these ships when they came along?

Mr. Bardo. No.

Mr. Raushenbush. Do you remember a meeting March 23, in the office of the Bethlehem Ship Corporation, concerning these ships, with the members of the other big shipbuilders and their attorneys?

Mr. Bardo. Yes; we had a number of meetings for the purpose of trying to arrange with the Department to change the form of the contract. The provisions of the contract we regarded as very onerous and unnecessarily so, and we discussed, a number of times, among ourselves and with the Secretary of the Navy, with Mr. Nagle, the Judge Advocate, what we could do, and we finally did succeed in getting the contract modified in some of its most punitive features.

Mr. Raushenbush. What, particularly, were you trying to modify in all these conferences?

Mr. Bardo. I do not know that I can distinctly recall what we were trying, but there was an old form of Navy contract that had been in use for many years, and our lawyers were very strongly of the opinion that we ought to try to see if it could not be modified so as not to convey quite such severe penalties as the old contract did. I cannot tell you the particular details now because that has escaped my mind.

Mr. Raushenbush. I offer for the record these two letters.

(The two letters referred to were marked, respectively, "Exhibits Nos. 1461 and 1462" and are included in the appendix on p. 4886.)

Mr. Raushenbush. That meeting on March 23, 1927, in the office of the Bethlehem Shipbuilding Corporation, is referred to there. You may look at them before they go in, Mr. Bardo, and make any comment upon them you may care to.

Mr. Bardo. That one there is in connection with the meeting (referring to Exhibit No. 1461) and I think both of those meetings probably were held in an effort to get the viewpoint of the legal departments of the three shipyards, to agree on just what form that revision would take.

Mr. Raushenbush. I show you a letter from yourself to Mr. Wilder, dated April 12, 1927, concerning a visit to the Navy, in which, on page 2, in the fifth paragraph, you inform the Bureaus of Construction and Repair and Engineering as follows [reading]:

> * * * that it would be the height of business folly in the present state of the shipbuilding industry with respect to work other than that of the Navy, to undertake a contract for either one of these cruisers or for the Cramp cruiser alone, as it would substantially commit the stockholders to the assumption of $2,000,000 of overhead in one case and $4,000,000 in another, over the 3-year period, and that I hoped they would give consideration to this phase of the matter in making their recommendations.

What you wanted the Navy to do at that time, Mr. Bardo, was to give you one of the Cramp ships and one of the new cruisers, was it not?

Mr. Bardo. Let me read the letter first and see what is in there.

Mr. Raushenbush. This is only one of a great many letters at the time——

Mr. Bardo. What particular paragraph do you refer to, Mr. Raushenbush?

Mr. RAUSHENBUSH. On page 2, the paragraph beginning—

> In discussing with the Bureaus at this conference * * *.

Mr. BARDO. All right. I do not know that I can enlighten you very much as to the import of that particular paragraph. I am of the opinion that this took place during the time that negotiations were under way, either with the Department or with the Cramp Co., with respect to our taking over the building of a cruiser on which they intended to default.

Mr. RAUSHENBUSH. Was it not a sort of——

Mr BARDO. May I finish?

Mr. RAUSHENBUSH. Go ahead.

Mr. BARDO (continuing). With one cruiser in the yard, and undertaking to absorb all of the overhead of the yard, amounting to something near $2,000,000 a year, on one cruiser, would simply mean that you would suffer a very great loss. And with two cruisers, why, it was barely possible that you might double that loss.

Mr. RAUSHENBUSH. And you had practically, or were in the process of making a bargain with the Navy that you would not take that Cramp cruiser unless they gave you one of the new scout cruisers. Is not that true?

Mr. BARDO. I would not go as far as that, because there was not such an understanding. The Navy were very greatly embarrassed by reason of the Cramp default. It was the first cruiser under their new program, and, as I recall it, neither Newport News nor Bethlehem would take over the contract. Finally, it rested in the discussion with us.

We finally reached a conclusion with the Cramp Co. and their sureties as to a basis upon which we could undertake the job.

I transmitted that to Secretary Wilbur, and he was very much pleased to know that the thing would be taken over and would be carried on and the Department would not be embarrassed by reason of this default.

I do not have any hesitancy in saying that I think that did have a very sudden effect, possibly, on the decision of the Department in the awarding of these contracts which came along, in awarding to us one of those, although I do not now recall what the relation to price was, that is, as between ourselves and the other yards. I do not recall that.

(The letter referred to was marked "Exhibit No. 1463" and is included in the appendix on p. 4886.)

Mr. RAUSHENBUSH. Then that practically was the situation, that the Navy, you say, was appreciative in the matter and had made an arrangement or an understanding by which you would get one of the new scout cruisers, the 26 to 31 series, in addition to the other one?

Mr. BARDO. No. I would not want the record to show that there was an understanding, because that is not so.

Mr. RAUSHENBUSH. Mr. Bardo, yesterday we put into the record a wire from the New York Shipbuilding Corporation to A. W. Mellon, Secretary of the Treasury, dated April 15, 1927. That wire read:

> On April 5 we submitted bids for two scout cruisers out of six to be constructed. The understanding was that this construction would be done by three remaining private yards. Acting in good faith and on this assumption we expended large sums of money in preparation for this work.

Unless you had had a definite understanding, Mr. Bardo, would you have expended large sums of money in advance of both awarding the bids for the 26 to 31 cruisers and in advance of the awarding of the Cramp contract?

Mr. BARDO. That understanding came out of what has been previously described this morning in the invitation to bid, and the discussions which necessarily followed as to the standardization of these ships.

Mr. RAUSHENBUSH. That is not quite responsive, Mr. Bardo. You apparently, according to this wire, had expended large sums of money in preparation for this work. Did not that have to do with the Cramp work which you were expecting to take over at that time?

Mr. BARDO. It would have something to do with it, but it also would have something to do with what we would expend in the way of rebuilding our facilities and fixing up our machinery and getting ready to do shipbuilding.

Mr. RAUSHENBUSH. That was also shortly after Mr. Humphreys had written you from Geneva that your company had nothing to worry about from the disarmament conference, and it felt free to go ahead with the building of ships, due to that understanding?

Mr. BARDO. What Mr. Humphreys wrote me from Geneva had nothing to do with it. We were dealing with a concrete thing in this country, an invitation to bid and an invitation to build ships for this Navy, and that is the thing which was immediately in front of us.

Mr. RAUSHENBUSH. No companies usually spend large sums of money before they get a particular award, do they?

Mr. BARDO. No, not generally; but there are a lot of things, if you are going to get ready and complete the ships within the contract time.

Mr. RAUSHENBUSH. Do you not suppose the other yards wanted the ships just as much as yourself?

Mr. BARDO. I would suspect so.

Mr. RAUSHENBUSH. Is it not a fact that Secretary Wilbur rebuked both Newport News and Bethlehem for not bidding on this Cramp contract and leaving it entirely to you?

Mr. BARDO. I do not know what right he would have to rebuke them.

Mr. RAUSHENBUSH. Were you not there when it happened?

Mr. BARDO. No.

Mr. RAUSHENBUSH. You do not remember anything about it?

Mr. BARDO. No, sir.

Mr. RAUSHENBUSH. Anyhow, you were the only bidder on this Cramp contract, were you not?

Mr. BARDO. I think that wants to be cleared up.

Mr. RAUSHENBUSH. All right.

Mr. BARDO. After we had made this agreement with the Cramp Co., which was approved by the Secretary of the Navy, it then became apparent, from a decision, I think, of the Judge Advocate General, that that contract could not be transferred and that, therefore, it would necessarily have to be rebid.

He said:

> In view of that, I shall have to ask for bids on this ship over.

And he asked for bids, and with a very short period, and we bid essentially the amount that we had agreed with him and with Cramps.

Mr. RAUSHENBUSH. Let me interrupt a moment. Before that short period was over, were there not several extensions over a period of many months, before that bid was finally given?

Mr. BARDO. No. As I recall it, they worked along after the agreement was reached, and, as quick as the Cramp Co. formally defaulted. Of course, the Secretary could do nothing until he had a formal default from the Cramp Co. As soon as he reported that, my recollection is that he acted very promptly and without any delay.

Mr. RAUSHENBUSH. I will be able to get the exact dates of these postponements in just a minute. Will you proceed?

Mr. BARDO. So that the Secretary advertised for bids, and we submitted the bid, as we had agreed, as I say, with the Cramp Co. and with the Secretary, that we would take it over on basis of the Cramp Ship to the Navy, and made a settlement between Cramp and ourselves as to what the sureties would pay us, in order that we would take over the contract.

Mr. RAUSHENBUSH. The net result was, however, that the other yards as much as they wanted ships, decided, apparently, not to bid, and did not bid?

Mr. BARDO. You will have to ask them about that. I cannot answer that question.

Mr. RAUSHENBUSH. Those are the facts in the case.

Now I will show you a letter and ask for an explanation of it, being a letter from Mr. Wilder to you, dated April 21, 1927, which seems to imply that there were a good many meetings about this scout cruiser business.

The letter reads:

> I had a very interesting discussion with Mr. Grace this afternoon, although very difficult to begin with.

Mr. Grace at that time was president of Bethlehem Ship, was he?

Mr. BARDO. Yes; I think he was. He was president of the Bethlehem Steel Co., which owns the Bethlehem Ship.

Mr. RAUSHENBUSH [reading]:

> Wylie——

Mr. Wylie is an official of the Bethlehem?

Mr. BARDO. I think he refers to Wakeman, whose first name is Wylie.

Senator VANDENBERG. What was Wakeman's position?

Mr. BARDO. He is vice president of the Bethlehem Shipbuilding Co.

Mr. RAUSHENBUSH [continuing reading]:

> Wylie, I think, is guilty of having put us in rather a nasty and untenable position with Mr. Grace as regards the outcome of our understanding at a meeting which I attended some time ago.

That seems to be a definite reference to an understanding, does it not?

Mr. BARDO. You will have to ask Mr. Wilder that.

Mr. RAUSHENBUSH. Let us see whether you cannot remember something about this, please, Mr. Bardo [continuing reading]:

> I wish you would send back to me the chart which I gave you on cross-section paper, as well as the details, particularly as to oil-consumption guaranties, which were finally presented by all three of us.

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. There was certainly some discussion about oil-consumption guaranties, was there not?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. Which is a large part of the bidding, because the evaluation of the bids goes up or down according to the oil guarantees, does it not?

Mr. BARDO. That is right.

Mr. RAUSHENBUSH [continuing reading]:

> I am afraid when you talked to Wylie—

Mr. Wakeman—

> You were not well informed, as he has used what you said, i. e., that you had made a mistake and that you had correspondingly raised the price, as a serious argument not only against you but against the good faith of this company.

Meaning the good faith of this company as against the other two companies?

Mr. BARDO. That is right.

Mr. RAUSHENBUSH [continuing reading]:

> The center field figure for oil consumption at cruising speed was to have been within plus or minus 1 percent of 494.

By "center field" may we take it that is the middle bid?

Mr. BARDO. The oil consumption runs from 10 knots, 15, 18, 20, 24, and up to the top speed of the ship, and there are a number of spots on the chart which run through the list.

Mr. RAUSHENBUSH. It turned out later, did it not, that Bethlehem was the middle bidder, Newport News was the low bidder, so that Bethlehem was the middle or center field, and you were high?

Mr. BARDO. I do not recall the details.

Mr. RAUSHENBUSH. I will read off these figures which we put in the record yesterday:

Newport News bid $10,642,000, Bethlehem bid $10,675,000, and your bid was $10,815,000 for one ship.

So Bethlehem was center field, and supposedly Newport News were left field and you were right field on that, were you not? [continuing reading]:

> From report of your telephone conversation from Washington of April 5, I understand the figures submitted by the center field was 475 instead of this 494. If these facts are correct, you should have attacked rather than been on the defensive.
>
> I want to go over this matter with Mr. Grace and should, therefore, appreciate full detail.

I will offer that letter for the record as "Exhibit No. 1464".

(The letter referred to was marked "Exhibit No. 1464" and is included in the appendix on p. 4888.)

Mr. RAUSHENBUSH. This letter, Mr. Bardo, does refresh your memory, does it not, that you were in some of the conferences with the other shipbuilders at the time this bidding on certain matters involved came up?

Mr. BARDO. Mr. Wilder says he was.

Mr. RAUSHENBUSH. It also says that you were, does it not?

Mr. BARDO. No.

Mr. RAUSHENBUSH. Well, were you?

Mr. BARDO. I do not recall that I was.

Mr. RAUSHENBUSH. I show you a letter——

Mr. BARDO. I am not through with this yet.

Mr. RAUSHENBUSH. Before leaving that statement, are you sure you did not acknowledge that letter on the next day?

Mr. BARDO. Mr. Wilder's letter?

Mr. RAUSHENBUSH. Mr. Wilder's letter. You do not recall any session you had with the others on the matter?

Mr. BARDO. No, but that now refreshes my memory.

Senator BARBOUR. What is the date of this conference, Mr. Raushenbush?

Mr. RAUSHENBUSH. This is April 21, 1927, referring to the earlier discussions, apparently before bids were put in.

The CHAIRMAN. It seems to me it is about the time of year that the ball teams come out of their spring training, is it not? Is there anything to indicate where they trained that spring?

Mr. RAUSHENBUSH. Here is a letter of which we have only one copy, so that I will read it, being addressed to Mr. Wilder from Mr. Bardo, dated the next day, April 22, 1927, headed "Scout cruisers" [reading]:

> Your confidential memorandum from New York:
>
> The oil guarantees as submitted in the bids for the three companies were as follows:

Then you give, under "f", American Brown Boveri, 449, Bethlehem, 475, which is the figure mentioned in the earlier letter, and Newport News, 486.

> You were correct regarding the cruising radius guaranteed of 494 as discussed in our meeting in New York. This was later changed by a conversation which I had with Mr. Wakeman, to 475. There were one or two other changes in the upper part of the scale.

Mr. BARDO. That was a meeting with Mr. Wakeman.

Mr. RAUSHENBUSH. Do you remember that?

Mr. BARDO. I do remember that.

Mr. RAUSHENBUSH. Was he the only shipbuilder you talked to about this, Bethlehem?

Mr. BARDO. That is the only one.

Mr. RAUSHENBUSH (reading):

> The guarantee as submitted by Newport News was above the guarantee specified by the Department's general board, and it was my understanding that the guarantees in the new contract with the News will be modified downward.
>
> As a matter of fact, the guarantees submitted by the three companies in their proposal for these new cruisers has nad no bearing whatever on the decision of the Department in making the award, since the navy yards were without information as to the matter of guarantees. The Department could not evaluate price and the guarantees.

Let me stop there a minute. Were those bids made without guarantees published, or what does that sentence mean?

Mr. BARDO. No. My impression would be that the navy yard did not have it, and, therefore, they could not evaluate the Navy's estimate of what these ships would cost in the navy yards. I think that is what that is intended to mean. They would have to depend upon the private yards for the guarantees, and, therefore, until they had that, they could not make an evaluation bid or estimate, which the navy yard would submit as opposed to the same price in private yards.

Mr. RAUSHENBUSH. Your guaranties were in and the Navy knew them?

Mr. BARDO. Our guaranties were submitted with our bid.

Mr. RAUSHENBUSH. And as a result of this conference which you had had with the other shipbuilding companies, referred to in the earlier letter——

Mr. BARDO. No.

Mr. RAUSHENBUSH (continuing). In which Bethlehem Steel apparently thinks there has been some double crossing.

Mr. BARDO. I cannot help how they think. As a matter of fact, what we did was to submit the estimates of performance which were submitted to us by our engineering department. I disregarded entirely anything that had gone before in a way that might be interpreted as an agreement as to what guarantees we would submit. We submitted the very best guarantees that our engineering department were willing to support. That is the basis on which we submitted that bid.

Mr. RAUSHENBUSH. Then, how do you explain all this conversation between Mr. Wakeman, Mr. Grace, and Mr. Wilder, about apparent bad faith on the part of the "center field" or "right field", or whatever you were?

Mr. BARDO. I cannot explain anything that took place, for I was never a party in the matter.

Mr. RAUSHENBUSH. Were you not brought up to date on this? You seem to know enough about it to answer, right the following day.

Mr. BARDO. I knew exactly what happened. I knew exactly what we did, and I gave them the information.

Mr. RAUSHENBUSH. And exactly what you were expected to do, from your conversation?

Mr. BARDO. I was not expected to do anything except to submit a bid on the best information we had, as to what we could do in the way of guarantees. I was not going to surrender the benefit of the brains of my organization.

Mr. RAUSHENBUSH reading:

> The award of the cruisers has, therefore, been made, first, as a matter of price, to Newport News, and to Bethlehem for one ship, and the award to us, in my opinion—

You were high at that time—

> has been made in order that all of the yards might have some support in this cruiser-building program and that their organizations might be kept together for the benefit of future Navy work.
>
> There was no disposition on our part to take any advantage. As a matter of fact, upon a basis of evaluation, Bethlehem and ourselves were on a par as between one and two ships in so far as evaluated value applied.

Mr. BARDO. I think that is true.

(The letter referred to was marked "Exhibit No. 1465" and is included in the appendix on p. 4888.)

Mr. RAUSHENBUSH. The last statement, namely, "There was no disposition on our part to take any advantage", meant any advantage of Bethlehem by the fact that these oil guarantees were changed from the time that the conference with Mr. Wakeman had taken place, and the other guarantees had been fixed?

Mr. BARDO. I would rather state the advantage the other way. In other words, we were under no obligation to sacrifice, if you please, any engineering advantage that we might have for the benefit of anybody else.

That is exactly what we did.

Mr. Raushenbush. I also want to offer at this time as "Exhibit No. 1466" the report of the Bureaus to the Secretary of the Navy, containing a summary of the bids received from private yards at this time, which is certified to be a true copy.

(The report referred to was marked "Exhibit No. 1466" and is included in the appendix on p. 4889.)

Mr. Raushenbush. Does even this brief discussion, Mr. Bardo, bring to your mind further discussions that took place between the other shipbuilders and this company about these bids between the time they were prepared and the time they were finally awarded?

Mr. Bardo. There may have been discussions, and probably were—I would not say there were no discussions, because there probably were. Here was a new field and neither Bethlehem nor Newport News had built any cruisers for a long time, and we were new, and I was particularly new in the shipbuilding business. It is perfectly obvious that I would and did, no doubt, discuss with them a good many phases about this thing, for the purpose of educating myself so that I might more intelligently supervise the job I had to supervise, because I lost the benefit of the vice presidents who were there, and who had been familiar, and I lost the works manager, and I had a new organization practically from top to bottom, and I was new at the business myself.

Mr. Raushenbush. There is a letter here which I show you from Mr. E. W. Payne [handing paper to witness]. Was he connected with your organization?

Mr. Bardo. I think he was at one time my chief clerk.

Mr. Raushenbush. It is addressed to you, dated May 28, 1927, which I offer as "Exhibit No. 1467."

(The letter referred to was marked "Exhibit No. 1467" and is included in the appendix on p. 4892.)

Mr. Raushenbush. That reads:

> "I have notified Mr. Palen's home"—

That is Mr. Palen of Newport News, is it not?

Mr. Bardo. Yes, sir.

Mr. Raushenbush (continuing reading):

> and wired Wakeman—

Mr. Wakeman is connected with the Bethlehem Co., is he not?

Mr. Bardo. Yes.

Mr. Raushenbush (continuing reading):

> that you would meet them at 9 Tuesday morning at the Biltmore. Mr. Palen's request was for 9 o'clock and I have therefore reserved your tickets for 7 o'clock daylight time, held in your name at Broad Street Station, seats 12, 14, car 1.
>
> Mr. Palen further stated, but asked me to not mention it in my wire, that he had some information for you on the Chesapeake steamer that you should have before the bid was presented; I have therefore asked Bob Workman to await instructions from you before putting in his bid.

Mr. Bardo. Yes, sir.

Mr. Raushenbush (continuing reading):

> Mr. Hines has been advised that you will be there after your conference with Wakeman and Palen.

Who is Mr. Hines, by the way?

Mr. BARDO. He was the vice president of the electric department.

Mr. RAUSHENBUSH (continuing reading):

> He says Berdeau has all the information together and they will wait in readiness for you.

Mr. BARDO. That had to do with some dredge work, I think, which we were doing.

Mr. RAUSHENBUSH. What was the significance of this meeting between Newport News, Bethlehem officials, and yourself?

Mr. BARDO. I do not know that I recall. I know that Newport News built the ship, but I do not know that I recall any particular conversation that we had.

Mr. RAUSHENBUSH. That was before the awards were made on the cruisers, was it not?

Mr. BARDO. On the cruisers?

Mr. RAUSHENBUSH. Yes, sir.

Mr. BARDO. I do not recall the date of the award on cruisers. I do not recall that now.

Mr. RAUSHENBUSH. Mr. Bardo, did all of these meetings between the shipbuilders really take place without any discussion about the chances of one yard getting a ship as opposed to another yard? Is it just humanly likely that with these millions of dollars worth of work in the field and on the way, that there would not be at least some discussion about who was going to get them and who might get them?

Mr. BARDO. There was never any discussion as to who would get the jobs, because nobody knew who would get the jobs. The Secretary of the Navy always had the authority to award any of this work to anyone he wanted. The Navy might refuse all the bids and award it all to the navy yards, so that, as far as this agreement is concerned, as to who would or would not get these naval jobs, it was idle talk.

Later on the Comptroller General of the United States protested the award to you. Did you know that?

Mr. BARDO. I do not think I ever did.

Mr. RAUSHENBUSH. He protested it to the Secretary of the Navy on the ground that you were the highest bidder and under that clause should not have gotten one of the ships as you did get one. I offer the protest of the Comptroller General to the Secretary of the Navy for the record as "Exhibit No. 1468."

(The letter referred to was marked "Exhibit No. 1468" and appears in full in the text.)

Mr. BARDO. I never heard of it.

The CHAIRMAN. What is the date?

Mr. RAUSHENBUSH (reading):

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, April 17, 1928.

The honorable the SECRETARY OF THE NAVY.

SIR: In connection with the preaudit of vouchers presented to this office to be certified for payment under Navy Department contracts for the construction of scout cruisers nos. 26, 27, 28, 29, 30, and 31, it has been brought to my attention (1) that the award of the contract no. NOd–67 for scout cruiser no. 27 was made to the American Brown Boveri Electrical Corporation, the third lowest bidder in price therefor; (2) that the award of the contract no. NOd–68 for scout cruiser no. 26 was made to the Bethlehem Shipbuilding Corporation, Ltd., the second lowest bidder in price therefor; (3) that the proposals for the contracts for the six scout cruisers numbered 26, 27, 28, 29, 30, and 31 limited the number of vessels to two to be constructed by any one bidder; and (4) the contract for only one of the vessels was awarded to the Bethlehem Shipbuilding Corporation, apparently the second lowest bidder in price for two of such vessels.

It is requested that there be furnished this office a report as to the facts involved, together with copies of related papers, relative to the awarding of the contracts for the six scout cruisers, and explanations as to why the awards were made to other than the lowest bidder; and why bidders were each limited to submitting bids on only two vessels.

Respectfully,

J. R. McCarl,
Comptroller General of the United States.

Mr. Bardo. May I ask if you have the Navy Department's reply to that?

Mr. Raushenbush. We are just putting it in. Then, on May 11, 1928, there is a summary here of the report from Construction and Repair and the Bureau of Engineering to the Judge Advocate General of the Navy, answering the Comptroller General, and which I offer for the record as "Exhibit No. 1469."

(The summary referred to was marked "Exhibit No. 1469" and is included in the appendix on p. 4892.)

Mr. Raushenbush. In that they say that actually the bids of the two companies evaluated were really very close on the two ships.

The Chairman. How long was that between the request made by the Comptroller General and the reply of the Secretary of the Navy?

Mr. Raushenbush. The Secretary of the Navy's letter, which I am now offering as "Exhibit No. 1470," was dated June 9, 1928, which was approximately 2 months afterward.

The Chairman. Does the letter indicate why there was such delay, that is, in the Secretary's response.?

Mr. Raushenbush. I do not find it there.

(The letter referred to was marked "Exhibit No. 1470" and is included in the appendix on p. 4893.)

Mr. Raushenbush. Coming to the actual bids themselves, you bid $10,815,000 for the cruiser and got one. Later the Navy asked you to make certain changes, which brought it down to $10,750,000. Is not that right, so far as your memory goes?

Mr. Bardo. I do not recall those things. There are changes constantly going on which you cannot keep track of.

Mr. Raushenbush. We had testimony the other day that bids from Bethlehem and Newport News were such-and-such figure, and Bethlehem was only $33,000 above Newport News. Is not that very close for a bid on a ship involving that figure, for one company to come within $33,000 of the other?

Mr. Bardo. Not necessarily so, when you are dealing with exactly the same factors. You are bidding on an identical ship.

Mr. Raushenbush. You think they can get that close, within a very small fraction of 1 percent?

Mr. Bardo. The facts seem to indicate that they did. I do not see any reason why they should widely differ.

Mr. Raushenbush. On two ships Newport News bid $10,480,000 and Bethlehem $10,540,000, and New York Ship bid $10,708,000, in which case Bethlehem got within $60,000 of Newport News and New York Ship got $168,000 above Bethlehem, still within 1 or 2 percent.

Mr. Bardo. That is for each of two?

Mr. Raushenbush. That is for each of two; yes, sir.

Mr. Bardo. That would depend altogether on what amount each yard applied to the cost of the first ship as covering the second ship.

Mr. Raushenbush. It ought to be noted here, Mr. Chairman, that in the bidding on two, Newport News came down a considerable amount more than the others, and that in its estimates of material and labor it dropped as much as $365,000. Bethlehem in its estimate for two dropped as much as $395,000. In other words, there could have been a saving to Bethlehem of $395,000 in the second ship, but instead of lowering its bid to get under the Newport News bid, it did not drop a large portion of that in savings, although it could easily be dropped as little as $193,000 and have gotten below Newport News on its bid for two cruisers, and, presumably, on that basis, have gotten it.

It did not do it, although it had a very wide margin. It had $395,000 saving estimated, and instead of doing that, it made a comparatively small reduction in its bid for two cruisers.

The estimates from Bethlehem and Newport News are in our possession and will be discussed more fully when they come in.

We did not find on your estimator's sheets yesterday, Mr. Bardo, any special estimate for two ships. Would the calculation of the estimate for those two ships be made by you or your estimating department?

Mr. Bardo. It would not be made by me. It would be made either by the estimating department, in consulation with the engineering and the yard, or could be made by Mr. Workman in consultation with the engineering and the yard as to just what economies they agreed would be effected in the building of 2 ships as compared with 1.

Mr. Raushenbush. Here was the situation, then. You had been in negotiation with the Navy about taking over the Cramp contracts, and had apparently been spending some considerable amount of money before the award of those contracts, and before the award of these scout cruisers contracts, and where Newport News was very definitely below you and Bethlehem on both 1 and 2 cruisers; for Bethlehem was referred to as "center field" before, it is in the middle, and apparently, on the face of it, a little before you on two, but not really as low as it might have been on the basis of its estimate, and where you put in the highest bid and had no particular estimate made out as to the other two companies, for the 2 cruisers and contract for 1 ship, which is protested by the Comptroller General as being high.

Now with all of those complicated elements entering into the situation, was there not any discussion between you and the others outside of those noted here as to the chances of one company or the other getting 1 or 2 cruisers?

Mr. Bardo. There was not. I want it perfectly clear as to that.

Mr. Raushenbush. So far as you know, there was none?

Mr. Bardo. Yes, sir.

Mr. Raushenbush. You were not in it, if there was any?

Mr. Bardo. Yes, sir.

Mr. Raushenbush. Is that what you mean?

Mr. Bardo. I do not know that there was. If there was, I think I would have been in, because it was my job.

Mr. Raushenbush. When they are discussing something as intimate as these oil guaranties, or something as important as the oil guaranties, which were finally the thing which gave the Navy a reason for telling the Comptroller General that your bid for 2 ships was really as low as the Bethlehem bid for 1, you were certainly dealing with matters that turned the award of that contract from one company to the other, were you not?

Mr. BARDO. I certainly was not.

Mr. RAUSHENBUSH. How else could one explain all this?

Mr. BARDO. I was dealing with the situation exactly as we developed it, with out own forces, our own technical crew, and our own estimators, and without regard to what anybody else might say or anybody else might do.

Mr. RAUSHENBUSH. How could the president of the company say " * * * is guilty of having put us in rather a nasty and untenable position with Mr. Grace" of Bethlehem?

Mr. BARDO. I do not know. You will have to find that out from him.

Mr. RAUSHENBUSH. All right. We will try.

(Continuing reading:)

> As regards the outcome of our understanding at a meeting which I attended some time ago.

It would seem that there was a pretty definite understanding on that, would it not?

Mr. BARDO. He evidently refers to the oil guaranties.

Mr. RAUSHENBUSH. The oil guaranties were what finally allowed the Secretary of the Navy to make an explanation that really saved your bid, although it was $100,000 higher, on the face of it, than the Bethlehem bid, and the two actually evaluated about the same, and made an excuse for giving the highest bidder one cruiser.

Mr. BARDO. I gave you the information that our oil estimates, Mr. Raushenbush, are the oil estimates that were developed by our scientific department, our engineering department, and which they submitted to me as the estimates which they were willing to stand behind, and those were the estimates used in our bid, regardless of any understanding or discussion there may have been with anybody else, as to what the oil guaranties were going to be. That is what I mean when I say that competition here is competition in brains more than in price.

Mr. RAUSHENBUSH. Competition in brains more than price, and yet you were pooling the brains at that time in the Marine Engineering Corporation, were you not?

Mr. BARDO. That was done because of the standardization required by the Navy Department.

Mr. RAUSHENBUSH. That kind of competition in price is interesting especially when you pooled the brains on the other side, but what was the purpose of having a meeting on these oil guaranties, in which certain arrangements or understandings can be made which can cause bad feelings of breach of faith, if it was not to deal very definitely with how these bids would be finally presented to the Navy Department? What point would there be at all in talking this over?

Mr. BARDO. I cannot answer that, because, regardless of whether there was an understanding or not, I want the record to be perfectly clear that it had no bearing on the guaranties which we submitted. We submitted the guaranties which our engineering department submitted to us, and we submitted them based on what our estimators gave us as the cost to build the ship.

Senator VANDENBERG. Mr. Bardo, 2 days ago there was a letter submitted here, which you wrote under date of November 21, 1927, "Exhibit No. 1427."[1] I do not know to whom it was addressed.

Mr. RAUSHENBUSH. I think it was addressed to Newport News.

Senator VANDENBERG. That is right. I read the following sentence from the letter, and this is Mr. Bardo speaking [reading]:

> The contract between the three shipyards which brought the Marine Engineering Corporation into existence contemplates, if it means anything, that Marine Engineering Corporation is to be the official mouthpiece of the three yards insofar as their relations with the Department for the cruiser's construction are concerned.

There seems to be no limitation upon the function to be served by this "official mouthpiece." Does not that letter indicate something more than a mere contact with respect to design?

Mr. BARDO. Let me see the rest of the letter, because I wrote a letter to Mr. Palen that I have some recollection of.

Senator VANDENBERG. You are complaining in this letter about a practice. I would be interested to know what it is you are complaining about.

Mr. BARDO. No; I think the genesis of that letter was this: Mr. Palen, who was the representative of Newport News, was a fellow who was inclined to start off—notwithstanding that we had executed a three-party agreement, covering the Marine Engineering—start off and begin to give instructions to Mr. Metten, without the knowledge of the other two yards. I know I called him on the phone about it, and I criticized him, and I said, "If this is a three-party agreement, it must be a three-party agreement. It cannot be a three-party agreement run by one party."

That letter, as I recall it, is what followed the discussion with Mr. Palen.

Senator VANDENBERG. In other words, you are asserting in the letter that Marine Engineering was to be your mouthpiece?

Mr. BARDO. That is right.

Senator VANDENBERG. And you wanted to be very sure that it was your mouthpiece?

Mr. BARDO. That is exactly so.

Senator VANDENBERG. And that everybody knows what everybody else knows? Does not that include in it the bids?

Mr. BARDO. That was purely an engineering matter to get plans for the building of the ships. The bids were all over with and awards made and pricing done, and the Marine Engineering Corporation had been organized, and, as I recall it, he had given Mr. Metten some instructions about some things without the knowledge of the other two, and certainly without my knowledge.

Senator VANDENBERG. Then you are complaining because this partnership seems to be violated, after the bids are let?

Mr. BARDO. This all took place after the awards were made.

Senator VANDENBERG. Did you ever find any breach of partnership before the bids were put in?

---

[1] Entered as an Exhibit, during hearings of January 22, 1935, see supra p. 4571.

Mr. BARDO. What do you mean by "partnership"? We had no partnership.

Senator VANDENBERG. The thing you are speaking about. You discussed this three-way institution, that it was your mouthpiece in dealing with cruiser construction and not design.

Mr. BARDO. Of course; it had to do with construction and design. It carried both.

Senator VANDENBERG. Construction includes design and a lot of other things?

Mr. BARDO. Yes, sir.

Senator VANDENBERG. Did you ever have any occasion to complain prior to that time about any lack of exchange of information?

Mr. BARDO. We have not had anything before that, Senator. This Marine Engineering Corporation to which you refer came about as a result of the requirements of the Department to standardize these ships, and the difficulty was that we could not possibly standardize them if we made them from three different engineering organizations.

Senator VANDENBERG. I can understand that, Mr. Bardo. The thing which I want to know is whether your complaint against the failure to completely exchange information does not involve something more than design?

Mr. BARDO. No; not in this case.

Senator VANDENBERG. In any case.

Mr. BARDO. No; not in any case.

Senator VANDENBERG. Is this the only complaint you ever registered in respect to the interchange of information?

Mr. BARDO. No. I registered a number of complaints in the meeting of the board of directors of this organization respecting some things that one of the other yards was doing without keeping everybody informed, as to design and as to construction, through Mr. Metten.

Senator VANDENBERG. When you used this term in the letter—that if the three-way understanding means anything it means it is to be the mouthpiece for cruiser construction—you do not say "design."

Mr. BARDO. It includes design.

Senator VANDENBERG. Of course it includes design, but was it not more than design?

Mr. BARDO. No; because this was aimed particularly at the conversation which Palen had with Mr. Metten where he gave him some instructions. That was after the Marine Engineering Corporation was organized and after all the awards had been made.

Senator VANDENBERG. I understand.

Mr. BARDO. We were all at work getting the job done. Mr. Metten called me and said what had happened. I immediately called Mr. Palen on the telephone and said:

> This is a three-way agreement; and it will not be run by any one man, so far as I am concerned.

Senator VANDENBERG. There was a three-way agreement before the bids were opened, was there not?

Mr. BARDO. No, sir; there was not any three-way agreement. I had a letter on that.

Senator VANDENBERG. That is all.

Mr. RAUSHENBUSH. In this reply of yours to Mr. Wilder on April 22, 1927,[1] coming back to that a minute, the statement is made:

> The award of the cruisers has, therefore, been made first, as a matter of price, to Newport News and to Bethlehem for one ship; and the award to us, in my opinion, has been made in order that all of the yards might have some support in this cruiser-building program and that their organizations might be kept together for the benefit of future Navy work.

The accusation was made the day before by Mr. Wilder that Bethlehem thought there was bad faith between you and, apparently, the other two companies, or at least against Bethlehem; and in this letter of April 22 you used an interesting phrase, namely, "There was no disposition on our part to take any advantage."

That is certainly not what open, arms-length, competition bidding is supposed to be, is it? You are supposed to do everything you can to take advantage away from your competitors. Here you are being rebuked, or somebody is being rebuked, by the president of the company, on what seems to be a double cross of a supposed competitor and your reply was:

> There was no disposition on our part to take any advantage. As a matter of fact, upon a basis of evaluation, Bethlehem and ourselves were on a par as between 1 and 2 ships insofar as evaluated value applied.[2]

Mr. BARDO. By that sort of expression I should say what I meant to convey was this: That our bid was a bid which was made up as a result of the conferences of our men. It was based on our estimates of materials and labor, and upon the best estimate we could make as to what our overhead charges would be, and upon the basis of our guaranties, which our engineering department submitted to us. If I wanted to take advantage of them, of course—you would eliminate some of these items if you wanted to take advantage of your competitor. You would eliminate some of these items in the hope that you probably somewhere would find some way of escaping them later on. That is what I think I meant when making that statement.

Mr. RAUSHENBUSH. How can you eliminate items like that, Mr. Bardo? Are not they definite items? They are not purely fictitious items.

Mr. BARDO. Take the item of overhead—$2,000,000 a year on overhead—and you allocate your overhead on the basis of your productive labor as between the various jobs which you have got in the yard. You might say, "We can shift that one way or another." It is something which you have the right and the prerogative to do. But so far as I was concerned I was always guided entirely by the judgment of the group as to what allocation we ought to put in or how it should be distributed and how we could reasonably expect this work to run and the spread of it. I never undertook to figure, myself, as to what the cost of these jobs was.

I think if you will go through all the bids we have submitted, you will find they have been very consistent all the way.

Mr. RAUSHENBUSH. In what respect?

Mr. BARDO. One following the other.

Mr. RAUSHENBUSH. Is that your information?

Mr. BARDO. I am quite sure it is.

---

[1] Entered as "Exhibit No. 1465", see p. 4652.

[2] Ibid.

Senator VANDENBERG. You mean consistent as between the "Big Three"?

Mr. BARDO. No; consistency of bids as we ran along over this cruiser program. We built the *Salt Lake City*, the *Chester*, the *Indianapolis*, and the *Tuscaloosa*, and the new ships.

Senator VANDENBERG. Do I understand that you say your yard never designed any?

Mr. BARDO. You are referring to the Marine Engineering Corporation?

Senator VANDENBERG. Yes.

Mr. BARDO. Yes.

Senator VANDENBERG. Did you not also have an agreement for the exchange of information regarding purchases and prices?

Mr. BARDO. Yes, sir. That was all done through the Marine Engineering Corporation.

Senator VANDENBERG. Precisely. Would not an exchange of views respecting purchases and prices, plus commonalty of design inevitably produce harmonious net results, just as 2 and 2 make 4?

Mr. BARDO. You are talking, Senator, about what happened after the Marine Engineering Corporation was organized, after those awards were all made, and after everybody was getting to work on the job. We took over, in the Marine Engineering Corporation, Mr. Gehr, who had been the purchasing agent for the Cramp Co. Then, in the interest of simplicity and to get that done, each of the three yards delegated to Mr. Gehr the authority to buy for each yard, because it was all duplicate equipment.

That followed after these awards were all made and after the job was under way.

Senator VANDENBERG. Before the awards were made was there no exchange of information regarding prices?

Mr. BARDO. There was not.

Senator VANDENBERG. Prices of material?

Mr. BARDO. Prices of material?

Senator VANDENBERG. Yes.

Mr. BARDO. Take the item of boilers. We might have had a price on boilers for three companies, and we may have asked one another what price was quoted, just to check up and see if we were all getting the same prices.

Senator VANDENBERG. Exactly.

Mr. BARDO. On the price of a particular big item.

Senator VANDENBERG. Exactly. You exchanged this information on everything up to the point of the bid, and at that point you stopped?

Mr. BARDO. Do not make that statement because it is not so.

Senator VANDENBERG. I do not want to make any misstatement.

Mr. BARDO. I do not want it to get in the record. We may have exchanged information. I do not say we did not, but we would get a price on 12 boilers, which is a big item, and I would get the price and I may ask the other fellow, "What price did he quote you?" and find out he quoted the same price. That is all there is to it.

Senator VANDENBERG. Did you have a regular system for the interchange of this information?

Mr. BARDO. No, sir.

Mr. RAUSHENBUSH. Coming back to your statement a moment ago, Mr. Bardo, that the additions which you made were always uniform—do you remeber the statement?

Mr. BARDO. I did not say they were uniform.

Mr. RAUSHENBUSH. Or consistent with each other. Was not that it?

Mr. BARDO. Yes. You are talking now about our bids?

Mr. RAUSHENBUSH. Yes, sir.

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. Always consistent with each other?

Mr. BARDO. I say relatively so.

Mr. RAUSHENBUSH. Let us look at the word "relatively." Here on the *Chester* in 1927, which we have been discussing, your estimate, referred to by Mr. Langell, was $7,950,180, and you added $2,854,820 and put in a bid.

Now in 1929, 2 years later, your estimate was way below your estimate on the *Chester*.

Mr. BARDO. Surely.

Mr. RAUSHENBUSH. This is the *Indianapolis*. It was $7,173,000. That is almost $700,000 lower.

Mr. BARDO. That is right.

Mr. RAUSHENBUSH. And yet, in that year, you added on $3,730,200.

Mr. BARDO. That is right.

Mr. RAUSHENBUSH. With an estimate down $700,000 you added on $900,000.

Mr. BARDO. That is right.

Mr. RAUSHENBUSH. A spread of $1,600,000.

Mr. BARDO. That is correct.

Mr. RAUSHENBUSH. What is there consistent in that?

Mr. BARDO. In one case—I do not recall the precise details—but I would say in one case we probably had 1 ship, and in another case we had 3 or 4 ships, or a lot of work in progress, over which we could allocate the overhead.

Mr. RAUSHENBUSH. In 1929, did you have a lot of other work in prospect?

Mr. BARDO. I think it was in 1929, some time in that year, that we took on the *Manhattan* and the *Washington;* I am not sure.

Mr. RAUSHENBUSH. It was not until 1930, was it, that the awards were made for the *Manhattan* and *Washington*?

Mr. BARDO. It may have been 1930. I would not be sure.

Mr. RAUSHENBUSH. You knew ahead of time that you were going to get the *Manhattan* and *Washington*?

Mr. BARDO. We did not know until the contract was awarded.

Mr. RAUSHENBUSH. We put in the bid of Bethlehem and Newport News $9,750,000 each in 1930, and your bid was below that. Now you come along with an explanation for an inconsistency of $1,600,000 between estimate and final bid on these 1929 cruisers on the ground that you knew ahead of time that your overhead was going to be lower during that period of construction. That all seems to work together, does it not, Mr. Bardo?

Mr. BARDO. Here are other factors. In 1929 we were on a rising flood. Prices, as I recall it, were going up, and likely to go, and we certainly knew that labor was dissatisfied. It was a contract running over a period of 3 years. You have got to make the best estimate and best guess you can as to what is going to happen to you in 3 years.

As to the particular details upon which that final plan was built up, I do not know that I could say now. I should have to go back and review, if they are available, the figures which were used at that time in setting it up.

Mr. RAUSHENBUSH. We are very much interested in that question, that is, how you do arrive at a figure, let us say in this case in 1929, for the *Indianapolis*, and jumped the bid almost $1,000,000 over the bid of 1927; and if you can enlighten us as to how you split that, what goes into taxes, what goes into bonds, interest, what goes into profits, and so forth, we would appreciate it. By the way, roughly, how much proportion of this differential between your estimate and your bid goes to profit?

Mr. BARDO. We never know until the job is all finished and is delivered and final acceptance 6 months later. We never know what we can figure on getting.

Mr. RAUSHENBUSH. Before putting in a bid, you make a calculation?

Mr. BARDO. We do. As I said before, there is a figure of 10 percent for profit.

Mr. RAUSHENBUSH. On what?

Mr. BARDO. On labor and material.

Mr. RAUSHENBUSH. On your estimators' estimate?

Mr. BARDO. Estimate of material and labor added together. I think there are certain parts or elements of the overhead added to that, and we take 10 percent of that.

Mr. RAUSHENBUSH. Which elements of the overhead?

Mr. BARDO. I think it was what you might call out-of-pocket elements of overhead.

Mr. RAUSHENBUSH. Taxes?

Mr. BARDO. No; taxes are not included.

Mr. RAUSHENBUSH. Officers' salaries?

Mr. BARDO. Officers' salaries and all that.

Mr. RAUSHENBUSH. Bond interest?

Mr. BARDO. Bond interest is included in our overhead.

Mr. RAUSHENBUSH. It is one of the items?

Mr. BARDO. It may not be any one of them but a combination of them. As I say, unless I could review that basis upon which we set up that, I could not answer the question in detail.

Mr. RAUSHENBUSH. How can we get it to review it? Where are the papers or the notes which you have made on it, if any?

Mr. BARDO. Usually we would discuss this question with the estimators' stuff in front of us.

Senator CLARK. Discuss which question, Mr. Bardo?

Mr. BARDO. Of what our final price would be.

Senator CLARK. You mean what your final bid would be?

Mr. BARDO. What our final bid would be.

Senator CLARK. I understood your estimator testified here the other day that he had nothing on earth to do with it.

Mr. BARDO. He does not, but I have his estimate in front of us and that is the base line from which we start to go.

Then we have the best information we could get on what the trends of labor, what they would be, and what the trend of prices was likely to be, and the trends of new business were likely to be, and what chances we have of getting it, if we get it at all.

It was with those combinations definitely in front of us at that time, that we set up what was finally our final bid,

Mr. RAUSHENBUSH. The 1929 bidding, in which you were able to jump $1,000,000 over your 1927 estimate, had this peculiar characteristic further about it, did it not, Mr. Bardo, that although the Navy had requested the shipbuilders to bid on one and two ships, they actually none of them did so? They only bid on one.

Mr. BARDO. Now, that may be. I would have to go back and refresh my memory a little as to that. I think it was in 1929 I had made a firm contract with the Dawson people to build five ships for them, contingent upon their being able to do certain financing, and I gave them, as I recall it—the contract was made possibly in April or May—and I gave them until August or it may have been later—I extended it once I know—to exercise their option on that building space. My recollection is that with that over our head, I could not afford to compete on more than one Navy ship, if I had the contract, if I had a firm contract to build five ships with relatively short deliveries.

Mr. RAUSHENBUSH. And then the *Manhattan* and *Washington* were also coming along?

Mr. BARDO. If they were not awarded until 1930, they were under discussion but I do not think they had gotten to any point where they were reasonably imminent.

Mr. RAUSHENBUSH. You testified a little while ago that you were expecting a very lowered overhead on that. Actually, by the way, I see, Mr. Bardo, in 1929, that you were expecting a lower overhead and the addition is a 52-percent increase over your estimate, where the addition for profit and overhead in 1927 is only 35 percent.

So that if you were expecting a decreased overhead, that excess which you were adding on to your 1929 bid leads to this question, Mr. Bardo, how could you have ventured to have added on that much unless you had had some conversations with Bethlehem and Newport News as to what they were going to bid?

Mr. BARDO. I want to make sure that we had no conversation with the Newport News or the Bethlehem as to what they were going to bid, and I want to make equally sure that they did not know what I was going to bid.

I want the record perfectly clear on that. As to that particular question, I could rather expect the situation was just the reverse from what you say it is, and that is that the outlook in 1929 for new business was very light, and that is one reason why we got the larger percentage of overhead applying to that particular business.

Mr. RAUSHENBUSH. It is contrary to what you said a little while ago, that you expected a lowered overhead on account of coming business. I said——

Mr. BARDO. I said we may have expected it. I would have to go back. My recollection is not keen enough to remember what particular things we discussed when giving that price.

The CHAIRMAN. I think in its present form the record rather indicates that this arrangement which found a right and a left and center, was between the big three in bidding is true as respects all of the bidding that was done by the so-called "Big Three." Is that the case?

Mr. RAUSHENBUSH. We have been trying to find out from the the witness about this matter, Mr. Chairman. There seem to be many indications leading in that direction, certainly in 1927 and 1929, the 2 years we have started on. We have not finished with 1929 at all.

The CHAIRMAN. Do you mean by that, that the positions occupied by the three companies were the same in all of those tests?

Mr. RAUSHENBUSH. No; in 1929, Bethlehem was low and New York Ship was second low. Both of those got cruisers in that year, and Newport News having gotten two in 1927, bid very high compared to its previous bids.

Senator BARBOUR. Mr. Raushenbush, in order to make sure that I am properly following the significance of this questioning, at the same time these ships were being constructed and sold to the Government by private yards, was the Government itself building ships of the same sort in the navy yards, or approximately the same type of ship?

Mr. RAUSHENBUSH. Yes, sir. But I believe, Senator, that in the class bid on in 1927, the 26 to 31 light cruisers, 2 ships went to the navy yards, and in 1929, if I remember correctly, the Dallinger amendment had been passed which made it obligatory for the Government to build an equal number of ships in navy yards, and at that time 3 ships were given to the navy yards.

Senator BARBOUR. That was my impression. I suppose we are chiefly concerned with the final cost of a ship to the Government?

Mr. RAUSHENBUSH. Yes, sir.

Senator BARBOUR. Was there a difference in prices between the cost to the Government in the cases of the navy-yard ships as may have been the case in the other instances to which you are referring?

Mr. RAUSHENBUSH. Sir, the information which was had by the Navy at the time of these bids was, of course, not final cost. That could not be determined until 3 years later, when the ship was finished, both for the private yards and the navy yards.

And at the time, as some of these reports which we have put in show, they had estimates from the navy yards which showed very considerably below the bids of the private yards.

Now the point is that those were not final costs.

Senator BARBOUR. My impression is that there was a great difference between the cost to the Government with respect to the different ships, and more or less the same type in the different navy yards.

Mr. RAUSHENBUSH. Between the different navy yards.

Senator BARBOUR. Yes, sir.

Mr. RAUSHENBUSH. I believe that is correct. Yes, sir.

Senator BARBOUR. That is all.

Senator Clark. That is the thing which caused some complaints to Secretary Mellon because the Navy awarded these ships to the navy yard on the Pacific coast.

Mr. RAUSHENBUSH. The only wire we have is when the bidding was still open and there was talk about it.

Senator CLARK. To make Mr. Mellon intercede in the matter.

Mr. RAUSHENBUSH. The New York Ship claimed to have already spent a considerable amount of money on the ground that there was an understanding that the private yards would get these ships. The point we were trying to make in the questioning was that there was also an understanding on the Cramp contract, that if New York Ship took that over, it would also get one of the scout cruisers.

Senator CLARK. And they were appealing to Secretary Mellon, the Secretary of the Treasury, to make the Navy Department respect that understanding which they had?

Mr. RAUSHENBUSH. That is the significance of it.

Senator BARBOUR. The point I am trying to make, Mr. Chairman, is the fact that even in the case of Government work, they had access to all the information in respect to all the yards, and there is a difference, a justified difference perhaps, in the cost of the manufacture of these ships. I think a study of the situation, as it affected by the Government's own manufacture, it is only fair with respect to a study against the same thing in connection with private manufacture.

Mr. RAUSHENBUSH. Would the Senator suggest that in order to have this information direct from the responsible heads of the navy yards, both as to the estimates they put in and as to the costs, that we ask the Secretary of the Navy to have those various admirals and commandants here?

Senator BARBOUR. So far as I am concerned, it seems to me to be quite as much a part of the picture as concentrating on the part of the manufacturer. I am not inferring that either or both of them have done anything that is improper in relation to the cost. What we are trying to get, apparently, is what these different ships would cost the United States, and I think in such a big undertaking there is bound to be room for a difference.

The CHAIRMAN. Let the committee take under advisement the method of procuring that information.

Mr. BARDO. Mr. Chairman——

The CHAIRMAN. Mr. Bardo.

Mr. BARDO. If I may say so, I have listened quite closely to the comments which have just been made by the other members of the group, and as I interpret that, the import of it is to put on the record a statement to the effect that there was an understanding on the part of the Navy Department with me that if we took over the Cramp cruiser, we would get consideration with respect to the award of additional cruisers.

Now, that is a very unfortunate conclusion; if that is the conclusion which is in the minds of the committee, and as one of the principals in the matter, I want to definitely put on the record that there was no such understanding.

Senator CLARK. There was an understanding, to which you referred in your telegram, Mr. Bardo.

Mr. BARDO. That was not to my understanding.

The CHAIRMAN. What was the understanding to which you referred?

Mr. BARDO. It was not to that understanding, and I want to be sure of it.

Senator CLARK. What was the kind of understanding to which you were appealing to Secretary Mellon to make the Navy Department refrain from giving the awards to the navy yards?

Mr. BARDO. I think that may have had its genesis more or less in the fact that the private yards had gone on their standardization of engineering in the organization of the Marine Engineering Corporation, and that on the things which we had done were entitled to get this work.

Senator CLARK. You say here:

> A. W. Mellon, Secretary of the Treasury Washington, D. C. (copy to Eighteenth Street and Massachusetts Avenue, Washington).
>
> On April 5 we submitted bid for 2 scout cruisers out of 6 to be constructed the understanding was that this construction would be done by three remaining private yards.

With whom did you have the understanding?

Mr. BARDO. If there was an understanding—and that may have been the unfortunate use of language——

Senator CLARK. I would say so, Mr. Bardo.

Mr. BARDO. I only want to clear up the point that you are trying to put something into their hands or into the Navy here, that would be unfortunate because I do not want that impression to prevail.

Senator CLARK. What impression do you intend to create on Secretary Mellon's mind by saying that the understanding was that this construction would be done by the three remaining yards?

Mr. BARDO. Because I think, that is probably an unfortunate use of certain language. I want to make clear that the Navy had nothing to do with it, so far as I am concerned.

Senator CLARK. You did have an understanding?

Mr. BARDO. I do not know just what that particular language means.

Senator CLARK. You go on and say:

> Acting in good faith and on this assumption we expended large sums of money in preparation for this work.

You must have relied on that understanding or you would not have spent large sums of money.

Mr. BARDO. We had to rehabilitate the yard, as it had gone down since that time.

Senator CLARK. You certainly must have known with whom the understanding was or you would not have spent the money.

Mr. BARDO. I want to make sure it was not with the Navy Department on the Cramp cruiser.

Senator CLARK. With whom was it?

Mr. BARDO. I cannot say whom it was with.

Senator CLARK. You were not in the habit of spending large sums of money on understandings when you did not know with whom the understanding was, were you?

Mr. BARDO. I will grant that is true, Senator. It is something that I do not want to misinterpret.

The CHAIRMAN. If the understanding was not with the Navy Department, was it with Mr. Mellon?

Mr. BARDO. No; I never talked to Mr. Mellon—I say I never did; I did just meet him once, incidentally.

The CHAIRMAN. Did Mr. Mellon reply to your telegram at all?

Mr. BARDO. I do not think he did.

Senator CLARK. Did you understand he had control over the Navy Department?

Mr. BARDO. No.

Mr. RAUSHENBUSH. But you did receive one cruiser and the other two yards did not bid on the Cramp cruiser. You got the one scout cruiser, although you were high and the other two yards did not bid on the Cramp cruiser.

Mr. Bardo. That is true. The record is clear, but I have no apologies to make on that.

Senator Barbour. What I have in mind is the fact that there is some discussion as to the differences in price which your yards charged for different ships, and I think there might be the same difference comparing it with the Government yards and the relations on which they bid.

Mr. Bardo. I think that is true, Senator.

I have reviewed the reports of the Navy Department and I think you will find there that in the cost of cruisers built in the navy yards that there is quite a fluctuation of cost.

Senator Barbour. That is the only thing involved in my observation.

Mr. Bardo. I think the records of the paymaster's department will disclose that.

The Chairman. Is Mr. Parker present?

Mr. Pruitt. He was excused until next Tuesday.

The Chairman. Who is there who can speak for the New York Shipbuilding Corporation here today?

Mr. Pruitt. About what, Senator?

The Chairman. Merely a request that the committee has for information that we would like to have gathered and brought to the committee.

Mr. Pruitt. I am here as their counsel. I would be glad to get whatever you want.

The Chairman. Senator Vandenberg has a request for information which the committee would like.

Senator Vandenberg. I would like to have a statement showing the total insurance and the premiums upon that insurance placed by the New York Shipbuilding Corporation during the last 5 years, with what companies placed, and through what agents.[1]

Senator Clark. I just want to ask one other question.

The Chairman. Go ahead.

Senator Clark. Mr. Bardo, how did you happen to send this telegram to the Secretary of the Treasury instead of the Secretary of the Navy?

Mr. Bardo. I think largely on the fact that he was a member of the Cabinet and would probably have some influence and might be helpful.

Senator Clark. Since he had formerly owned control in the New York Shipbuilding Corporation and was still also retaining bonds of it, did that have anything to do with your appealing to him?

Mr. Bardo. No; I do not think that was the answer.

Senator Clark. You communicated with him because he was a member of the Cabinet and could discuss it in the Cabinet meeting rather than take it up with the Navy Department?

Mr. Bardo. I know I discussed it with the Navy.

Senator Clark. Did you wire any other Cabinet members?

Mr. Bardo. No, sir; I did not wire any other Cabinet members.

---

[1] Statement requested was supplied to committee on Feb. 16, 1935. See Hearings, Part XIX, p. 5081

Mr. Pruitt. Mr. Chairman, I believe you were about to adjourn, and, before doing so, in view of Mr. Bardo's refusal to sign the waiver, and in view of your statement that there were certain transactions after 1931 about which you do not wish to examine him, I have a very short statement I would like to make, on behalf of the Cord Co., the present owners of this company. May I do so?

The Chairman. You may.

Mr. Pruitt. Cord Corporation which controls New York Shipbuilding Corporation through stock ownership, has learned that C. L. Bardo, former president of the New York Shipbuilding Corporation, has refused to sign the waiver requested before testifying before the Senate Munitions Investigating Committee. In view of this situation, it is deemed necessary to explain that the present owners of the New York Shipbuilding Corporation have no control over or responsibilities for the actions of any former officers or directors of the New York Shipbuilding Corporation, nor for any transactions of the company which occurred prior to August 1933 when Cord Corporation's first purchase of New York Shipbuilding stock was made.

This stock was purchased as a business investment in the belief that the shipbuilding industry under existing conditions afforded an opportunity for profitable investment, as well as service to this country. No effort has been made or will be made to hamper the committee in carrying out its investigation, and we will approve any honest effort to bring about the adoption of legislation which in the event of another war will enable the Navy Department in its purchases of ships and equipment, to avoid the mistakes and costly errors of the past. All present officers and employees of New York Shipbuilding Corporation are ready and have been willing at all times to testify before your committee when properly requested to do so.

That is, as far as we are able to do so, we will bring them here and have them testify.

The Chairman. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12:20 p. m., a recess was taken until tomorrow, Friday, Jan. 25, 1935, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

FRIDAY, JANUARY 25, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357 Senate Office Building, pursuant to the recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, Pope, and Vandenberg.

Also present: Stephen Raushenbush, secretary to the committee.

The Chairman. The committee will be in order. Mr. William Calvin.

TESTIMONY OF W. A. CALVIN

FAILURE OF 1933 EMERGENCY EMPLOYMENT PROGRAM

(The witness was duly sworn by the chairman.)

The Chairman. Give your full name and your capacity.

Mr. Calvin. W. A. Calvin, secretary and treasurer Metal Trades Department, American Federation of Labor.

Mr. Raushenbush. Mr. Calvin, you were subpenaed to come before the committee today. Will you tell us of the events leading up to certain protests you addressed in regard to the matter of the shipbuilding program?

Mr. Calvin. To do that intelligently I believe it will be necessary to give a brief résumé of the naval-construction program of 1933 under the N. I. R. A.

A committee, representing organized labor, realizing the necessity for the construction of several naval vessels, ascertained from the Secretary of the Navy and from the White House that they would welcome a treaty-strength Navy. Consequently, organized labor—and I say that meaning the American Federation of Labor in cooperation with the Metal-Trades Department—gave its full support to legislation leading up to the treaty-strength Navy bill.

Senator Pope. That is the so-called "Vinson bill"?

Mr. Calvin. The Vinson bill, but prior to that in 1933 appropriations were obtained in the amount of $238,000,000 for the construction of naval vessels.

Mr. Raushenbush. Mr. Calvin, let me interrupt a moment. Was not that rather a change in the historic policy of the labor groups in regard to such matters?

Mr. Calvin. During recent years considerable attention has been given to the maintenance of an adequate national defense by the labor organizations. In bygone years they did not take a very active part in the preparation of naval and military defenses. But during more recent years, they have looked with favor upon the maintenance of an adequate national defense.

Mr. RAUSHENBUSH. Will you proceed.

Senator POPE. What sort of official action did you take to show that attitude or policy?

Mr. CALVIN. In conventions of the metal trades department, and more recently of the American Federation of Labor, we have approved of resolutions—this is before my time but I know of the action—we have approved of a resolution providing for an adequate national-defense system.

In 1933, when the National Industrial Recovery Act was adopted by the Congress, we were actuated by possibly selfish motives. We, representing labor, wanted to see as many of our workers placed at work as we could possibly obtain, and to do that, of course, we sponsored this naval construction program which would relieve the distressing unemployment conditions prevalent throughout the shipbuilding industry.

Senator POPE. Do you think that was the primary reason for it?

Mr. CALVIN. That was the selfish reason. Then, again, we were actuated by a desire to have an adequate Navy for defensive purposes.

Therefore, we did lend our full support to legislation leading up to the appropriation or earmarking of funds for naval construction.

The administration, being fully cognizant of the conditions of unemployment which contributed of course to the adoption of the National Industrial Recovery Act, acting in good faith, inserted in each and every contract provisions that all contractors would disregard the otherwise normal progress in the construction of ships and would exert themselves to restore and reemploy the largest number of men possible, especially during the first and second twelve-month periods of the contracts.

Therefore we assumed, owing to this language which I am quoting from the contract, that that would be done [reading]:

> Owing to the national emergency existing, making it imperative that the maximum number of men be returned to gainful employment without delay and to effectuate the purpose of the National Industrial Recovery Act, approved June 16, 1933, the contractor hereby expressly agrees that from the beginning he will prosecute the work with the utmost vigor and dispatch and will make every possible effort, without reference to the otherwise normal rate of progress, to accomplish the maximum amount of work within the first and second year thereof.

In addition to that language, which is admittedly strong, the contractors were requested by the Navy Department to estimate the degree of completion that would be accomplished on each and every vessel during the first and second years of the contracts.

Being aware of that, and being interested in restoring our men to gainful employment, I obtained copies of the progress reports of the Navy Department per month, and I could not help but notice that in no instance were the contractors meeting the estimated degree of completion. Consequently, I protested the delay in the construction of the naval vessels, because our members were still unemployed, both in private and navy yards. The navy yards, being dependent upon private yards for plans from which they might proceed with construction, had a large number of men on rotative leave and furlough.

Senator VANDENBERG. Mr. Calvin, do you consider that the navy yards are still dependent upon private contractors for designs?

Mr. CALVIN. The contracts for the preparation of the designs and engineering plans have been awarded to private contractors. That is not an evasive answer, but that is the best one that I can give at the present time.

Senator VANDENBERG. I wondered if you had any information on the subject. I am very much interested in this apparent inability of the Navy Department in the matter of construction of private design. I was wondering if you, from your general contact with the problem, can tell us whether it is your opinion that the Navy is dependent upon private designs?

Mr. CALVIN. I would assume that the Navy is dependent upon the private contractors for designs, in view of the fact that the new naval vessels are being constructed under designs prepared by private contractors and the ships being constructed in navy yards are built from those designs.

Senator VANDENBERG. Go ahead with your story, please.

Mr. CALVIN. In carrying our protest to the various people whom we contacted, and finally to the Metal Trades Department convention in San Francisco last September, I decided that to portray the picture in the most intelligent manner possible that it would be advisable to have a chart showing the exact conditions prevalent in the yards.[1] I have that chart and would be glad to display it, if the committee so desires.

Mr. RAUSHENBUSH. Let us look at it.

Mr. CALVIN. The difficulty is going to be in spreading this thing out. It is about 12 feet long.

Mr. RAUSHENBUSH. I will give you a hand with it.

Mr. CALVIN. This represents, as far as I am able to ascertain, the number of available shipbuilding ways in navy yards, and the number of contracts or orders in the navy yards, which indicates a considerable degree of congestion which may be prevalent in the yards. For instance, we have Puget Sound with the 1933 contracts and the 1934 contracts, which cannot go on until one ship at least is launched.

Mare Island is in the same condition. This "S. S." is a submarine. If you understand naval terminology, "S. S." is submarine. "C. L." light cruiser, "C. A." is armored cruiser, "D. D." is destroyer, "P. G." is gunboat, and "C. V." is aircraft carrier.

That is a submarine ordered in 1934 [indicating on chart]. Those 2 are destroyers, 1 partly completed and the other keel, I believe, is laid [indicating on chart]. The 1934 destroyer, the keel has not been laid.

Charleston, S. C., has 3 harbor cutters, being small cutters for the Coast Guard, 1 cruiser cutter, and 1 gunboat.

Norfolk, Va., with 2 large ways and 1 way too small to be serviceable, has contracts or orders for the construction of 5 destroyers and the keels for the 1933 destroyers have just been laid.

At Philadelphia contracts or orders are now on hand in the navy yard for a destroyer no. 372, Coast Guard no. 65, Coast Guard no. 68, light cruiser no. 41. This cruiser was ordered in August of 1933 and the keel has not yet been laid, and our men are walking the streets on rotative leave in many instances.

---

[1] A chart similar to the one mentioned above by Mr. Calvin was entered into the record as "Exhibit No. 1471." See appendix, facing p. 4893.

Coast Guard no. 66 and Coast Guard no. 67, destroyer no. 373, cannot be on the ways until something is launched. And the armored cruiser no. 341 cannot get on the way until space is available. The New York Navy Yard has the light cruiser no. 40, awarded in August of 1933. The keel has not yet been laid. This is the cruiser for 1934 and the keel cannot be laid until some of these ways are cleared to put that keel down.

We have the destroyer 353, Coast Guard no. 70, gunboat no. 50, Coast Guard no. 69 there. On the light cruiser or two light cruisers, rather, keels have not been laid, and the keel has not been laid for Coast Guard cutter no. 69.

Mr. RAUSHENBUSH. Pardon, Mr. Calvin, a minute. You are speaking as of the progress reports as of August 1, 1934?

Mr. CALVIN. I am speaking as of the progress reports as of August 1, 1934; yes. This was prepared at the expiration of the first 12 months of the contracts.

We have the same conditions of congestion in the Boston yard. I think these 2 have been completed and launched [indicating] and 4 are yet to be constructed, all destroyers.

Portsmouth, N. H.: They are making rather splendid progress on the submarines of 1933, but there is another submarine which will have to be constructed after one is launched.

Now at the expiration of the first 12 months of the contracts in the private shipyards, we find Newport News with 2 aircraft carriers, and in 1934 they were awarded 1 light cruiser. There is no congestion in the Newport News shipyard. They have ample building ways for the construction of additional vessels. However, we are particularly regretful that they have not made more progress on the aircraft carriers, because the employees in that district have suffered terribly as a result of unemployment.

The New York Ship of Camden, N. J.: You can see the picture of a full yard at the expiration of the first 12 months of contract.

This "C. L." no. 43, the light cruiser no. 43, was awarded at the same time that the light cruiser no. 42 was awarded, and I am not positive, but I think the Navy progress report of January 10, 1935, indicates that the keel for the no. 43 here has not yet been laid. There are 4 heavy destroyers occupying 2 large ways, 2 destroyers on each way, and there are 2 tankers, occupying 2 ways, and I understand they are 42 or 41. I understand that one tanker has been launched, which will make it possible to lay the keel for the no. 43, and I assume that the other tanker, which was placed at the same time will also be launched, which will make it possible to lay the keel for the cruiser of 1934.

The United Drydocks has just room enough to handle all of their contracts but has fallen down on the degree of completion, as estimated.

The same is true of the Federal Shipbuilding Corporation. They have 4 ways and 4 contracts.

Bethlehem Ship has room enough for all the contracts, 2, 4, 6, 8 contracts, 2 cruisers and 6 destroyers.

Senator VANDENBERG. Can Federal Ship build a cruiser?

Mr. CALVIN. I assume that they could, if they are capable of building Government destroyers, flotilla leaders, 1,850-ton destroyers and have the proper personnel, I assume they can construct a cruiser. The only difference in the ships is that one is a larger ship than the other.

Bethlehem is full. Bethlehem estimated 26.6 percent degree of completion in the first 12 months, and they have made very good progress. They have 21.7 percent accomplished at the expiration of the first 12 months.

Electric Boat has made very splendid progress on her submarines of 1933. They are preparing plans for the 1934 submarines, and have made considerable progress on the submarines of 1933, and were awarded three more in 1934.

The Bath Iron Works of Bath, Maine, has 4 ways and 2 destroyers, 1933 destroyers. They estimated 15.5 percent in the first 12 months and actually accomplished 8.4 percent according to the progress report.

Senator VANDENBERG. That all represents contracts?

Mr. CALVIN. On all this side represents the contracts to private shipbuilders [indicating], and on this side it represents the navy yard orders.

Senator VANDENBERG. And appropriations were allocated in each instance for all of these ships?

Mr. CALVIN. Oh, yes.

Mr. RAUSHENBUSH. Mr. Calvin, before you take that chart down, could you explain the column which you have over there on the right?

Mr. CALVIN. This, of course, is rather ancient now. This was at the expiration of the year. This is the first 12 months of construction progress in the 1934 program.

Mr. RAUSHENBUSH. You mean up to August 1, 1934?

Mr. CALVIN. Yes; for the 1933 contracts up to August 1, 1934. Contracts are shown for 2 aircraft carriers, 2 heavy cruisers, 2 light cruisers, 8 one-thousand-eight-hundred-and-fifty-ton destroyers, 6 fifteen-hundred-ton destroyers, and 2 submarines, and the total of 21 keels were laid except the keel of the "C. L." 43.

The percentage of completion, for the average of all yards, promised which might better be termed "estimated", for the first 12 months is 22.2 percent, actually accomplished 12.8 percent.

Mr. RAUSHENBUSH. Let me interrupt there a minute, Mr. Calvin. When you say "promised" or "estimated", you mean when the bids were put in with the Navy, they say they are going to be done in 24, 36, or 45 months. Is that what you base that on?

Mr. CALVIN. In my previous statement I said that in addition to the language which I read from the contract form that on each and every contract the contractor was required to estimate the degree of completion that would be accomplished in the first and second 12 months' periods of the contracts. So that there estimations were very high.

The time required to complete the 1933 contracts, at the rate of progress made during the first 12 months' period of the contract, would be 7 years, and on the left with reference to navy yards, due again to their dependence on private yards for engineering plans and designs, we find that at the expiration of the first 12 months of contracts, while 14 ships were ordered for construction in the navy yards, in August 1933 only 2 keels had been laid at the expiration of a year. That is why we complained. Our men were not going to work, and they were hungry, and their dependents were hungry.

The percentage of completion in all navy yards during that 12-months period was only 4.6 percent, and the time required to complete all contracts of 1933 at the rate of progress accomplished within the first year would be 20 years.

Senator VANDENBERG. Mr. Calvin, will you say it again, why you think the progress in the navy yards is so much slower than in the private yards?

Mr. CALVIN. It is a personal opinion, that it is due to the dependence of the navy yards on the private yards for engineering plans and designs.

Senator VANDENBERG. Exactly.

Mr. RAUSHENBUSH. Are you through with the chart?

Mr. CALVIN. Yes, sir; Thank you so much.

I want to submit for the record a copy of the progress report issued by the Navy Department as of January 10, 1935. This is official, showing the number of contracts on hand in each private yard, also the orders on hand in navy yards.

Mr. RAUSHENBUSH. Mr. Chairman, I think we can take that as an exhibit. We have the same thing here, and for the information of the committee we have prepared this chart, to which I call your attention, dated January 1, 1935, which differs to some extent from the chart which you have just seen. The number of ways is not put in there, but it is marked in one different way. The ships having dots show the ships for which P. W. A. money was given, and that is a correct report based on that exhibit.

The CHAIRMAN. Then let the exhibit which has just been handed to the chair be identified for the record.

(The Progress Chart for Naval Shipbuilding referred to was marked "Exhibit No. 1471" and is included in the appendix, facing p. 4893.)

Senator VANDENBERG. Mr. Calvin, referring again to this delay caused by reliance upon the designs of private yards, what, in your opinion, is the reason that private yards are unable to facilitate the designs for the navy yards? Is it due to the fact that they have not the adequate capacity, or that they subordinate the Navy necessities to their own, or what is the cause in your opinion?

Mr. CALVIN. Senator, I do not think I can answer that question.

Senator VANDENBERG. I thought perhaps you might have an opinion. I know you are not a technician.

Mr. CALVIN. I am really not familiar enough to say. It is not that I have any hesitancy in answering the question you propounded, to the best of my ability, but I know that there is an abundance of competent draftsmen and designers who would be only too glad to have employment. It is certainly not on account of securing employees or potential employees, because there is an abundance of these draftsmen, marine draftsmen and architects, who would be delighted to have work.

Senator BONE. Mr. Calvin, do you have any studies indicating the tonnage now on the ways in private yards and navy yards?

Mr. CALVIN. I think possibly I have. Yes; I will submit this for the record [producing paper].

(The data referred to was marked "Exhibit No. 1472" and is included in the appendix on p. 4894.)

Mr. Calvin. Necessary to build up to Navy strength: Airplane carriers, three; tons, 55,000. According to the award of August of 1933, two were awarded in the amount of 40,000 tons.

Senator Bone. You mean 40,000 tons?

Mr. Calvin. 40,000 tons. Leaving one airplane carrier still to be constructed, a 15,200-ton vessel.

Cruisers B, necessary to attain treaty strength, are seven of 73,000 tons. Four have been awarded up to August 1933, of 40,000 tons, leaving three of 33,000 tons yet to attain treaty strength.

Senator Bone. I do not know yet whether you understood my question. I am talking of the allocations, where made to the Government yards and the private yards. Have you any figures indicating what proportion is going to each of the yards? I do not mean in category of vessels but in tonnage.

Mr. Calvin. On a tonnage basis, in 1933, the navy yards came out very light. Of course there was no application of the tons of the Dallinger amendment in 1933. Twenty-one vessels went to private yards and fourteen to navy yards, which according to the chart practically filled the yards.

But on a tonnage basis, the heavier ships went to the private yards. For instance, in 1933 the navy yards' heaviest ships were the light cruisers—10,000-ton cruiser. The rest, and most of the navy yard awards in 1933, were submarines and 1,500-ton destroyers. They did not get any of the flotilla leaders, the 1,850-ton destroyers. So that on a tonnage basis the navy yards were considerably below the private yards.

The Chairman. Mr. Calvin, there has been large appropriation of Public Works funds, has there not, for this building program?

Mr. Calvin. Yes, sir.

The Chairman. What advantage lies in that, so far as the Government yards are concerned? Are they making use of the Public Works money?

Mr. Calvin. Senator, in the navy yards many of those have been placed, but unfortunately the progress on those for construction has been very unsatisfactory, so far as labor is concerned. We still have navy-yard employees on rotative leave and furlough. Seventeen months after these orders for ships have been placed in navy yards, the work has not started, and our men are walking the street destitute.

Senator Bone. Is it because the slips are full and the facilities are all being used, or what is the reason in that case?

Mr. Calvin. The work in many instances has not started. For instance, in Philadelphia the C. L. No. 40, the light cruiser No. 40, was awarded to that yard in August of 1933. The keel has not been laid for that ship. Certainly the mechanics cannot go to work until they are prepared to lay keels and start the work on the hull and frame.

The Chairman. Mr. Calvin, coming back to my question, are the moneys which were appropriated out of Public Works funds being expended at this time?

Mr. Calvin. The money is being expended, but so far the benefits to navy-yard employees have not been very great. I understand that a lot of equipment is being purchased, machinery must be purchased for the vessels which are to be constructed, various naval vessels appurtenances must be purchased, which, of course, does call for the expenditure of huge sums of money.

The CHAIRMAN. But have not appropriations been made for that direction?

Mr. CALVIN. Oh, yes; the money has been appropriated.

The CHAIRMAN. How long is it going to take before there is need for the moneys which have been appropriated from the Public Works fund for this naval-construction program?

Mr. CALVIN. A lot of that money, as I say, has been expended for steel, for equipment, and for component parts of vessels.

Our complaint is that the membership of the shipbuilding organizations and shipyard mechanics and navy-yard mechanics, are not deriving benefit in sufficient proportion to what they should be getting since the program for the construction of a treaty strength Navy has been adopted. I want to submit for the record this indication of tonnage now ordered and awarded by contract and order, and the tonnage still necessary to attain treaty strength.

Mr. RAUSHENBUSH. Is that an official preparation, or what is it?

Mr. CALVIN. This is taken and copied from the Navies of the World comparative statistical data for the Committee on Naval Affairs, December 31, 1932.

(The statement referred to was marked "Exhibit No. 1473" and is included in the appendix on p. 4894.)

Senator VANDENBERG. Mr. Calvin, would it be a fair interpretation of your charts, which interest me tremendously, that for some reason, work in the navy yards appears to be either less efficient or less expeditious than in the private yards? Is that a conclusion to be drawn from your charts?

Mr. CALVIN. On account of my familiarity with the navy yards and the personnel in the navy yards, I would hesitate to say that they were less efficient, because some of the best mechanics obtainable, the best supervisors obtainable, are employed in navy yards.

Senator VANDENBERG. Then it is not a matter of efficiency. Is it solely this matter of design and the necessity for relying externally for design?

Mr. CALVIN. It would be rather difficult for me to say what it is. I would suggest that someone representing the navy yards be summoned before this committee to explain, if they can explain, why this work has been delayed to such an extent that this protest was entered.

Senator VANDENBERG. That is what I am trying to get at. It is obvious that there is some factor which holds things up in the navy yards as compared with the private yards.

Mr. CALVIN. Very obviously; yes, sir.

Senator VANDENBERG. You do not think that it is a greater efficiency, but it is some other kind of a factor?

Mr. CALVIN. Exactly. I will say that the navy yard civilian personnel are as efficient, certainly so far as mechanics are concerned, as any employees anywhere.

Senator VANDENBERG. Have you ever heard the suggestion that in connection with this necessity for external design that it might be to the interests of the private shipyards to retard the expedition which is accomplished in the navy yards?

Mr. CALVIN. I have heard a lot of things like that, Senator, but it is just hearsay, somebody talking about why we were not working, and all that sort of thing. Naturally, when a man is unemployed and his dependents are looking to him for support, and he cannot obtain support, he has a lot of queer notions from time to time.

Senator VANDENBERG. You have no information?

Mr. CALVIN. No positive information; no, sir.

Senator VANDENBERG. If we could identify this factor which retards the navy yards' progress, we would largely answer the problem which you have in mind?

Mr. CALVIN. You would, and I would welcome such an identification.

I am now submitting for the record, analysis of the progress report of January 10, 1935, indicating the degree of work estimated or the degree of completion estimated by the private shipbuilders during the first and second 12-month periods of their contracts, then reduced to 17 months on their own figures, indicating the degree of completion which would have been accomplished had they lived up to their estimated progress, the degree of actual completion, and the default over their own estimates.

I submit that for the record.

(The statement referred to was marked "Exhibit No. 1474" and is included in the appendix on p. 4894.)

Mr. RAUSHENBUSH. Mr. Calvin, on that matter, did I gather from your testimony that they were asked in some way to speed up on this matter, and then made new estimates as to how fast they could complete the work?

Mr. CALVIN. To expedite the reemployment of many thousands of men.

Mr. RAUSHENBUSH. Was that done in connection with the P. W. A. funds?

Mr. CALVIN. It was; yes, sir.

For the committee's information, you can obtain copies of the contract form signed by the contractor and by Navy Department officials, showing the degree of completion promised on each ship.

They are obtainable at Ninth and F, at the Old Patent Office.

I would also submit the progress report of January 10, 1935, some notations of my own on the right-hand side showing the accomplishment and the estimated accomplishment.

(The document above referred to was marked "Exhibit No. 1475" and is included in the appendix on p. 4896.)

Mr. CALVIN. I also wish to submit for the record the official statement as to the number of shipbuilding ways in navy yards and their present condition.

(The statement referred to was marked "Exhibit No. 1476" and is included in the appendix on p. 4899.)

The CHAIRMAN. Mr. Calvin, when there is agitation this winter, as there will be, and as there has been each winter, for larger construction of our naval requirements in the Government yards, is it not obvious that the answer is going to be that the navy yards are not able to take care of what has already been allotted to them?

Mr. Calvin. Certainly. The indication is that the 1935 and 1936 naval building programs, assuming that there will be such programs, will be said to be such that the congestion will obviate the possibility of division of ships between the navy yards and private yards on numerical divisional basis.

That, of course, is caused by the fact that the Navy Department only had, according to a statement I received last summer, 13 serviceable ways. Many of the ways, you understand, are large enough to accommodate 2 to 3 vessels and a graving dock can take 4 vessels.

The Chairman. What are the costs, roughly, Mr. Calvin, of building these ways? Let us say an additional way at Norfolk, what would it cost?

Mr. Calvin. I am not entirely clear on that, but I understand a temporary way, capable of holding a destroyer, can be constructed for approximately $30,000, but I am not sure of that. It seems that someone told me that temporary ways could be constructed for that.

Senator Bone. Have you had occasion to look over these various Government yards?

Mr. Calvin. Pardon?

Senator Bone. Have you ever, in your experience, looked over these Government yards?

Mr. Calvin. It is necessary, as a representative of the Metal Trades Department, that I visit certain yards from time to time. I have visited several navy yards.

Senator Bone. It is quite possible to expand their size, is it not, in the matter of slips and so forth?

Mr. Calvin. Yes, sir; that is possible.

Senator Bone. That was testified to by one of the admirals in hearings before the Naval Affairs Committee.

Mr. Calvin. I think it is always possible to do it everywhere.

Senator Vandenberg. It will not do any good to expand the navy yards, as long as they are tied down by this external design.

Mr. Calvin. We would be delighted if the navy yards were operating at their full capacity now, sir.

There is one other thing, gentlemen of the committee, that I would like to mention, and I consider that of vital importance, and that is the construction necessary to attain treaty strength. Now I am informed that to attain treaty strength, 146 new naval vessels must be constructed, ranging in type from submarines to aircraft carriers. But during the next 2 years of our present fleet of 377 vessels, 291 will become over-age and consequently obsolete. An over-age naval vessel is not a modern vessel and we have practiced limit armaments in this country to an almost dangerous degree, while other nations have been building right up to treaty strength.

I want to impress this fact upon you in the most forceful manner possible: That from 1922 to 1933, the United States laid keels for 44 naval vessels, while Great Britain laid keels for 151, Japan 153, Italy 140, and France 145.

Therefore, to attain treaty strength, we not only have to build 146 vessels, to attain our quota as provided for in the naval treaties, but we also must replace 291 vessels which will become over age and obsolete.

Senator BONE. How much do you suppose it would cost to build those 291 vessels at present-day prices?

Mr. CALVIN. That is rather a difficult thing to estimate, because the prices fluctuate. Destroyers and submarines cost in the neighborhood of $3,000,000 plus.

Senator POPE. These over-age vessels could be modernized?

Mr. CALVIN. They are modernizing some of our dreadnaughts from time to time. It will cost approximately $10,000,000 to modernize a superdreadnaught. Then our destroyers cost approximately 3½ million dollars, we will say, it may be a little more or maybe a little less. Cruisers are now running in the neighborhood of 11½ million dollars, or 11 million dollars plus.

Mr. RAUSHENBUSH. That is without armament, is it not, Mr. Calvin?

Mr. CALVIN. Yes, sir.

Senator VANDENBERG. The cruiser neighborhood is a pretty big neighborhood, is it not?

Mr. CALVIN. Yes, sir. Aircraft carriers, of course, are a much larger ship and they cost considerably more.

Senator BONE. The figures which you are employing are based on what? Some calculations of 2 years ago, or present calculations?

Mr. CALVIN. Predicated upon the contract prices of 1933 and 1934.

Senator BONE. You are aware, are you not, that bid prices on certain types of cruisers have gone up 100 percent in the last 2 years?

Mr. CALVIN. I was aware of a rather tremendous increase, but I did not know exactly what the percentage was.

The CHAIRMAN. Do you know, Mr. Calvin, the comparative costs as involved in British construction and our own?

Mr. CALVIN. No; I am not familiar with that, Senator.

The CHAIRMAN. Have you made any recent study on it?

Mr. CALVIN. No. But possibly I am American-egotistical enough to believe that we can construct ships as cheaply in this country and as efficiently as they can be constructed in any country in the world.

The CHAIRMAN. While even paying a little better wage to the workers than they do abroad?

Mr. CALVIN. It just happens that I spent approximately 5 years on the other side during the war. Naturally, an American shipbuilder and boilermaker, on my furloughs I would visit the plants of the shipbuilders and fraternize with the shipbuilders along the Clyde. And regardless of the fact that the American workman may receive a higher wage rate per hour, that does not mean anything because on the productivity, you will find the productivity per man-hour and per mechanic in the United States to run all the way from 25 to 50 percent, and in some instances up to 75 percent higher than that of his competitive European workman.

Senator POPE. That applies generally to industry, does it not?

Mr. CALVIN. That applies generally, not only to shipbuilding but to any industry you can name.

Senator BONE. You do not find the shipbuilding industry agreeing with you on that theory, do you?

Mr. CALVIN. I have not had an opportunity of discussing that with very many of the shipbuilding industry.

Senator BONE. That is not their argument.

Mr. Calvin. I possibly am a little bit fanatical on that one subject, because I have heard so much discussion, so much argument, about the cheaper European labor, and I am so familiar with the European labor, that I realize that the hourly cost means nothing. You have to predicate any estimation of that on the productivity of your mechanical personnel.

Senator Clark. In other words, it is your contention that the greater efficiency of our labor makes up for higher price in the cost of the product?

Mr. Calvin. Certainly; and it does.

Senator Vandenberg. Mr. Calvin, would you be able to state in a general way what the percentage of increase in American labor costs was between January 1933 and August 1934? That is a spread of about 18 months.

Mr. Calvin. The percentage of increase?

Senator Vandenberg. Yes.

Mr. Calvin. In wages of mechanics?

Senator Vandenberg. Yes.

Mr. Calvin. That would be rather difficult for anyone to say. We are not able to obtain the wage rates from the various yards, and if we do, we find so many sidetracks and deviations. For instance, a basic rate will be established and then possibly a bonus system will be established. Then there will be a classification of the men above and below that rate. For instance, they will say machinists, first-class, second-class, third-class, handyman helper.

So that it would be very difficult for me to say what increase has been made.

Senator Pope. Can you give a general answer?

Mr. Calvin. I know since 1933 there has been an increase in wage rates, but prior to 1933, and in many instances as late as March and April 1933, wages were reduced.

Senator Bone. Let us take a Government navy yard as an example, if you are unable to determine it in a private yard. Based on your experience and your knowledge as an officer of the American Federation of Labor, would you tell us what the increase, if any, or decrease, if any, has been in the Government navy yards on all this kind of work?

Mr. Calvin. I can answer that. The hourly wage rate in navy yards has remained stationary since 1929, but I would prefer that the president of the Metal Trades Department who is subpenaed to appear before your committee—Mr. John P. Frey, to answer the question with reference to navy-yard wage rates, because he is a member of the wage board, and he can answer it much more intelligently than I can.

The Chairman. Mr. Frey.

TESTIMONY OF JOHN P. FREY

NAVAL OFFICERS FAVOR LONGER WORK WEEK AT N. R. A. CODE HEARING

(Witness was duly sworn by the chairman.)

The Chairman. Mr. Frey, what is your official connection?

Mr. Frey. I am president of the Metal Trades Department of the American Federation of Labor.

The CHAIRMAN. You are as intimate, are you not, as any one connected with the labor cause with activities in the navy yards?

Mr. FREY. I believe I am.

The CHAIRMAN. All right, Mr. Raushenbush.

Mr. RAUSHENBUSH. Mr. Frey, are you also a lieutenant colonel in the Reserves?

Mr. FREY. I am.

Mr. RAUSHENBUSH. Will you tell us fully about your connections with the ship-building code and problem in 1933 and 1934? We want the whole connection dealing with the various protests that were put in.

Mr. FREY. When the ship-building code came for a public hearing, the metal working international unions, who comprise the metal trades department, were vitally interested, and I was selected as one of those to look after the interests of these international metal working unions, and to appear before the hearings.

I was also at that time a member of the Labor Advisory Board of the N. R. A., so that I had a dual interest in seeing that an appropriate code for the ship-building industry was entered into.

At the first public hearing the question of the hours of labor was raised prominently. We desired a 32-hour week, for the purpose of placing as many metal-working mechanics at work as possible. The shipbuilders were opposed to that and desired a 40-hour week. I was astounded to have two naval officers appear before the Deputy Administrator in charge of the hearings, Admiral Land and Captain Wyman. Both of them made a very strong argument in favor of a 40-hour week. In other words, they supported the arguments presented by the private shipbuilders.

I objected very strongly to one department of the Government at that time endeavoring to secure longer hours of labor than seemed to be necessary.

Senator CLARK. May I inquire what reasons these naval officers assigned for entering into the controversy on behalf of the private shipbuilders, if any?

Mr. FREY. One of their arguments was that if the shipbuilders were given a 40-hour week, it would put more mechanics to work than if the hours of labor per week were less.

Senator CLARK. In other words, it was their contention that more men would be employed at 40 hours than 32 hours?

Mr. FREY. That was their argument, or 36 hours. They also argued that it was impossible to carry on satisfactory production in a shipyard under less than a 40-hour week.

I asked Admiral Land whether he spoke as a representative of the Navy Department, and he said that he did, that he was there carrying out instructions.

I then prepared a statement in reply to the admiral's position at the hearing, and I took a transcript of his testimony and that of Captain Wyman's, and of the brief which I prepared, and made a formal protest to the Navy Department because of their appearance and the position they had taken.

To be certain that it was known that this protest was not a mere wave of the hand, I filed a record——

Mr. RAUSHENBUSH. With whom, Mr. Frey?

Mr. FREY. With the White House.

Mr. RAUSHENBUSH. That was a protest specifically against what?

Mr. FREY. It was a protest against the Navy Department participating in the question of the labor provisions of a code, and particularly advocating the 40-hour week at a time when the available statistics indicated that labor was employed on an average less than 32 hours a week.

Senator VANDENBERG. Mr. Frey, would the navy yards necessarily have had to operate on precisely the same schedule that the code developed for private yards?

Mr. FREY. No; the hours in the navy yards were at 40. That was the result of those regulations that they placed on the Navy Wage Review Board through act of Congress. The hours of labor in navy yards are fixed by act of Congress.

Senator VANDENBERG. And there is no relationship between the working conditions which a code might establish in a private yard and the conditions which subsequently would naturally develop in the navy yards?

Mr. FREY. I do not understand, Senator, what you mean by relations.

Senator VANDENBERG. I mean if the code established a 30-hour week in the private yard, would the navy yard continue to operate 40 hours or would it have been forced to 32 hours?

Mr. FREY. No, they would have continued to operate 40 hours. The shipowner, that is, the shipyard management, contended that that would be unfair competition with them.

Our position was that there was no competition at all as between navy yards and private shipyards, because Congress, in making appropriations since the 15-cruiser bill, has generally allocated so many ships to navy yards and so many to private yards, and, therefore, there was none of that competitive condition that exists where a governmental department endeavors to produce work at a lower price than private industry.

Senator VANDENBERG. Is there a further differential as between hours of labor in the private yard and the navy yard, in that the navy-yard employee has a substantial vacation with pay in the course of the year?

Mr. FREY. There is that distinction, of course, because, until the Economy Act, navy-yard employees received 30 days per annum with pay.

Senator VANDENBERG. That would make a very substantial offset?

Mr. FREY. A very substantial offset, one-twelfth.

Mr. RAUSHENBUSH. Did you receive replies to these protests of yours, Mr. Frey?

Mr. FREY. They were acknowledged. They were discussed with the Navy Department, but the only official reply I received was an acknowledgment of their receipt.

Mr. RAUSHENBUSH. Later on, when the code was in operation, did you find the question of wages under the code coming up at all?

Mr. FREY. The question of wages in the private shipyards had come to the surface a number of times, but that was not the most prominent question which came up under the code.

Mr. RAUSHENBUSH. What was the most prominent question?

Mr. FREY. The refusal, from our point of view, by the shipyards to recognize labor's rights under the code, particularly section 7a. The larger yards, that are known as the "Big Three", had either embryo company unions or some other shop organization which they had built up. When the code was approved by President Roosevelt, these organizations were revived. They were given——

Senator CLARK. You mean company organizations?

Mr. FREY. The company unions, yes, sir. And perhaps one of our most difficult problems, industrial problems, since the code was signed by the President is by the attitude of all of the private shipyards toward the right of their employees to voluntarily organize, as they might desire, or to choose representatives to speak for them.

Mr. RAUSHENBUSH. Are you implying, Mr. Frey, that there was a sort of combined labor policy of the "Big Three"?

Mr. FREY. I have no knowledge as to a combined policy, but had they been combined they could not have acted differently from what they did. There was one general policy that we encountered at all of the private shipyards, that is, all the large private shipyards, those which were building vessels for the Government.

Senator VANDENBERG. Was there a different attitude on the part of the private shipyards which were not building ships for the Government?

Mr. FREY. There have been some yards who have had most friendly relations with their employees, but our experience has been that it is difficult, if not impossible, for them to secure contracts from the Government.

Senator VANDENBERG. So that you are speaking chiefly of the "Big Three" in this discussion?

Mr. FREY. Yes, and if the committee desired, I could easily give you a definite illustration of the experience of a smaller yard, with friendly relationship with its employees, in securing Government contracts.

Mr. RAUSHENBUSH. What yard is that, Mr. Frey?

Mr. FREY. The Albina Iron Works, of Portland, Oreg., some 5 years ago bid for three lightships. The Bureau of Lighthouses—and something else which I cannot recall—failed to give them the contract, although they were the lowest bidder.

I took up the matter with the Chief of the Bureau, and he said the contract had not been awarded because the firm was not capable of building those ships at that price without very serious loss, and the Bureau did not intend to give contracts to individuals when it meant their bankruptcy.

I pressed the case and I was finally told that a naval officer had been detailed to inspect this yard, to determine whether it was competent to build lightships. His report was that the yard was not competent to build lightships.

I thought by this time I had better see the Senators from Oregon, and I did. After seeing them, the Bureau informed me that they would give the Albina Iron Works, of Portland, Oreg., one of the lightships, but they certainly would not give them the other two. I learned by this time that the Albina Iron Works intended to build the three lightships on one way; that they expected to lose money in the construction of the first, but with all the preparation required to build that one, they then expected to derive a substantial profit from the other two. Eventually, they secured the contract for the three lightships.

They informed me, after it was over, that they had made a very satisfactory profit.

They employ union men and have for many years, and have agreements with them.

Some year or so afterward, the Government desired three more lightships. No private yard on the Pacific coast was requested to submit bids. The Albina Iron Works did not know that estimates had been called for until 4 days before the bids were opened in Washington.

Senator CLARK. Who were requested to submit bids? Do you know?

Mr. FREY. Yards along the Atlantic coast.

Senator CLARK. The "Big Three"?

Mr. FREY. I could not answer that.

The Albina Iron Works immediately telegraphed its bid. Its bid again was lower than that of any of the other yards, but the bid was thrown out on the technicality that it was not accompanied by a satisfactory bond. It was impossible for the firm in Portland, Oreg., within 4 days, to secure a satisfactory bond and have it in the Department's hands in Washington.

And so on the second occasion they lost out, and the contract went to the Atlantic seaboard yards.

Senator CLARK. They require a bid bond as well as a performance bond in those contracts, do they not?

Mr. FREY. I do not know.

Senator CLARK. So that if they had not had notice of the letting of the contracts, it would have been impossible, naturally, for them to have secured a bid bond, in any event, in time to comply with such technical requirements?

Mr. FREY. What interested the Metal Trades Department was that that yard was paying better wages than the private yards along the Atlantic coast, and on the second occasion it failed to get anything.

Senator CLARK. What interests me is that they did not notify these people of the letting, and made it impossible for them technically to comply with the requirements for a bid bond.

Mr. RAUSHENBUSH. Coming back a minute to the code matters, Mr. Frey, you say the Navy entered into the situation on the question of hours. Did it enter in in any other way?

Mr. FREY. Merely to the extent of the general statement as to wages, that the deputy administrator hearing the code must keep in mind the fact that if the minimum wage in the code was placed too high, it would place an unjustifiable burden on the taxpayers, but that was merely a general statement and not specific.

NAVAL OFFICERS OPPOSE EXPANSION OF SHIPYARD FACILITIES AT N. R. A. CODE HEARING

Mr. RAUSHENBUSH. Did it enter into the situation at all with regard to the extension of the yard facilities to get some of these ships built and finished?

Mr. FREY. At that time the question did not come up.

Mr. RAUSHENBUSH. When did it come up?

Mr. Frey. That came up very shortly after the code had been signed by the President.

The Chairman. That is in the summer of 1933?

Mr. Frey. That is in the summer of 1933.

Mr. Raushenbush. Will you tell us about that, please?

Mr. Frey. I have only a general recollection. It was that the general principle established by the Dallinger amendment in the 15-cruiser bill some years ago should be carried out. In other words, that there would be an equitable distribution of these vessels between navy yards and shipyards.

Mr. Raushenbush. My question was directed to the clause that the shipbuilders apparently wanted to put in at the time, that no further shipbuilding facilities be allowed.

Mr. Frey. Oh, yes. The shipbuilders argued in favor of a provision in the code which would prevent the construction of any more ways in any shipyards in the United States. It would limit the number of ways to those already in existence.

Mr. Raushenbush. Did the Navy enter into that situation at all?

Mr. Frey. They expressed no opinion that I remember.

The Chairman. Did Admiral Land inject himself into that controversy at all?

Mr. Frey. Yes.

The Chairman. In what direction?

Mr. Frey. I would have to have the transcript of that hearing to be accurate. As my memory serves me, he expressed the opinion that the number of ways in existence in navy yards and in private yards was ample to meet the national requirements.

The Chairman. Meaning, then, that he was opposed to the building of additional facilities in the Government yards?

Mr. Frey. Yes. It would imply that, but I would like to have the transcript of that hearing before me, because on that point I just have a recollection and not a positive one.

The Chairman. How far did they get with their effort to include such a clause in the code? Was there great danger that it might be included?

Mr. Frey. Oh, yes.

The Chairman. What finally prevailed that caused its rejection?

Mr. Frey. I do not recall, Senator. I assumed that so far as the shipbuilding code was concerned, that there were consultations between the Navy Department and General Johnson, because what was involved in that code was the building of naval vessels, among other things. And the Navy Department at all times had a representative of the Navy on the ground. As a matter of fact, Captain Williams, I believe, worked with the Code Authority. He may be working with them now. I know he did until recently. That was because of the Navy's legitimate interest in the building of naval vessels.

The Chairman. During that controversy did the Navy, or any of its officials at any time, indicate a desire to eliminate that clause?

Mr. Frey. I cannot answer that question. I do not know.

Mr. Raushenbush. Was it your opinion, Mr. Frey, that such a clause would even tighten further the custom which seemed to have grown up of only the "Big Three" yards getting the ships?

Mr. Frey. That was my opinion, and it is still my opinion, but it is merely an opinion.

Mr. RAUSHENBUSH. When were the bids on the 1933 ships opened?

Mr. FREY. In August 1933.

Mr. RAUSHENBUSH. Early in August?

Mr. FREY. If my memory serves me correctly, yes. One reason for rushing through the shipbuilding code was to enable the Navy Department to secure contracts and immediately begin the construction of the vessels.

Mr. RAUSHENBUSH. Did you have any reason to believe that there had been any agreements between the shipbuilders before the bids were put in for the 1933 ships?

Mr. FREY. I had reason to believe that that was a possible condition.

Mr. RAUSHENBUSH. Did your reasons for believing that as a possible condition lead you to discuss the matter with the N. R. A. Administrator, who was General Johnson at the time?

Mr. FREY. Yes.

Mr. RAUSHENBUSH. Will you relate to the committee your conversation?

Mr. FREY. A former president of a New York shipbuilding company visited the office of the Metal Trades Department——

The CHAIRMAN. Who was this?

Mr. FREY. Mr. Wilder. He seemed to be interested in the efforts that the Metal Trades Department had made to secure the earmarking of the $238,000,000 in the Public Works.

Senator CLARK. You mean the Public Works funds?

Mr. FREY. The Public Works funds. Mr. Calvin has already gone over that. The department launched that effort on official assurances that it was welcome or acceptable to the administration, and then took it to the American Federation of Labor for the approval of the executive council, and then came to the Capitol and worked for it.

Senator CLARK. How many keels have ever been laid under that allotment, Mr. Frey?

Mr. FREY. Mr. Calvin, in his chart, gave you all the keels that have been laid, and explained that 2 of the light cruisers that have to be built in the Philadelphia yard, and 1 at the Brooklyn Navy Yard, had not had their keels laid down, although the contracts were entered into 17 months ago, for the reason that the Navy Department had contracted with the New York Shipbuilding Co. to prepare the designs for these cruisers, and they had not yet completed the designs.

Senator CLARK. Do you know whether there is any prospect that they ever will complete them?

Mr. FREY. Yes, I assume so.

Senator BONE. You think they will eventually get around to it in a tired, languid sort of fashion?

Mr. FREY. I have reason to believe since last summer the Navy Department has brought as strong pressure as it could upon the New York Shipbuilding Co. to supply it with the designs which it contracted for.

The CHAIRMAN. What evidence is there that that effort has accomplished any results?

Mr. Frey. Statements which the New York Shipbuilding Co. have made to the Navy Department on the progress of completing these designs. That is all I know of it.

Senator Clark. Is it a fact that the Navy is totally incapable of preparing its own plans for vessels of war, and must depend upon the engineering forces of this so-called "Big Three" for those plans?

Mr. Frey. That is wholly a matter of opinion. My opinion is, from contact with naval officers over a long period of years, that no nation has a more competent set of naval officers in design and technical work than the officers in our Navy.

Senator Clark. It is a fact that in practice the plans for these various vessels which are authorized by Congress are not constructed in the Navy Department, but are constructed by the engineering department of these "Big Three", is it not?

Mr. Frey. That is a fact.

Senator Bone. What sort of pressure do you think the Navy brought, or attempts to bring on this company to expedite preparation of the plans? You spoke of their putting pressure on the New York Shipbuilding Co. What might that pressure consist of?

Mr. Frey. In calling attention to the contract which they had with the company, and the delay in laying down the keels of these two cruisers, that has resulted in the company's failure to supply designs in time.

Senator Bone. In other words, just a polite request to expedite the thing?

Mr. Frey. No, I doubt whether it was a polite request. The Metal Trades Department—and by that I mean the international unions of metal workers, those men who are employed in navy yards—became seriously disturbed early in the year over the failure of this work, that is the placing of men at work on these ships which had been contracted for. As a result, there was a conference in the Navy Department early in May, at which we laid before the Assistant Secretary of the Navy all of the data which Mr. Calvin has placed before you this morning, and with the statement that we did not know whether our data was accurate. I had copies of it and gave a copy to the Assistant Secretary and to the admirals, chiefs of bureaus, who were at the conference.

I said, "Now, we do not know whether these are accurate or not. We merely assume that they are. If they are, however, then we have something to say."

They admitted that they were substantially accurate. And that led us to point out that unless rapid progress was made during the summer and fall, there would be many thousands of metal workers who would not be able to secure work on these ships.

Senator Clark. That is just what I was coming to, Mr. Frey, on the question which I asked you a moment or so ago. Congress in May or June 1933 made the most extraordinary appropriation ever made in the history of the world, not for the purpose of constructing warships but for the purpose of providing employment for American workmen who were unemployed.

Mr. Frey. Yes, sir.

Senator Clark. Your organization and the Navy Department, and several other organizations, as I understand it, working in combination, secured an authorization to apply some $238,000,000 of that fund to the construction of naval vessels. That is correct, is it not?

Mr. FREY. Yes, sir.

Senator CLARK. How many men have been put to work in that period under this arrangement of having the "Big Three" construct the naval plans? How many men have been put to work, if you have any information on it, under that allotment of $238,000,000? [1]

Mr. FREY. I can supply the committee with the exact figures, but I did not assume that that question would be asked and I did not bring the data with me.

Senator CLARK. We would be glad to have it.

The CHAIRMAN. Can you supply it now?

Mr. FREY. No, sir.

Senator CLARK. Because, as I say, the purpose of that appropriation was not for the purpose of making a war appropriation, but for the purpose of securing employment.

Mr. FREY. I do not remember the exact figures, Senator, but I will file them with your committee.

The CHAIRMAN. Has there been some increase in employment?

Mr. FREY. There has been some increase in employment, both in the navy yards and the shipyards.

Senator BONE. Then, Mr. Frey, you want to give us the impression, I take it, which seems to be a fact, that this whole program must pass through this bottle neck created by the "Big Three" in the matter of designing and drafting?

Mr. FREY. Yes, sir; as far as the light cruisers are concerned.

The CHAIRMAN. Is not the light cruiser the large part of our program?

Mr. FREY. No, it is a material part. The heavy cruisers and the aircraft carriers and the submarines and destroyers are quite a large part of the whole program.

Senator CLARK. What proportion of the employment which was contemplated to be established by this allotment of $238,000,000 was represented by the work on which the plans were to be drawn by the "Big Three"? [1]

Mr. FREY. I could not answer that without going over all the ships and making an estimate.

Senator CLARK. Will you supply us with that information?

Mr. FREY. That will be supplied.

Senator CLARK. We would be glad to have it, if you will.

Mr. FREY. I would like to add now, so that there will be no misapprehension, that until May of last year, the Metal Trades Department was of the opinion that the Navy Department was not pressing the construction work and pressing for the designs from the New York Shipbuilding Co. as actively as it might. I have no reason to feel that the Navy Department, since then, has not done all that it could.

Senator CLARK. What do you mean by "doing all that it could", Mr. Frey? Do you mean to say that the Navy Department is absolutely at the mercy of the New York Shipbuilding Co. to supply it with plans, whenever it chooses, and withhold them as long as they please?

---

[1] Figures concerning employment were supplied later by Mr. Frey and entered into the record as "Exhibit No. 1480". See appendix, p. 4915.

Mr. FREY. My understanding is that the contract with the New York Shipbuilding Co. included supplying the Navy with the designs for the light cruisers.

Senator CLARK. Was there any time stipulation in there?

Mr. FREY. I believe there was no time stipulation in there.

Senator CLARK. In other words, the Government obligated itself to accept these plans whenever the New York Shipbuilding Co. chose to supply them, without any limitation of time whatsoever?

Mr. FREY. If it is so that there was no time limitation for the plans in the contract.

Senator BONE. Mr. Chairman, may we have that table of figures which Mr. Frey says he will supply put in the record at this point, so that the record will run smoothly?[1]

The CHAIRMAN. The reporter will make a note of that.

Senator BONE. Mr. Frey, do you have a copy of the agreement between the Navy Department and the private ship building companies to supply plans?

Mr. FREY. No; I have not.

Mr. RAUSHENBUSH. We can probably get that from the Navy Department, Senator.

Senator BONE. May we have that put in the record at this point, so that the record will read smoothly?

The CHAIRMAN. Yes, sir.

(The contract referred to was marked "Exhibit No. 1478" and is included in the appendix on p. 4900.)[2]

ADVANCE KNOWLEDGE OF 1933 AWARDS

Mr. RAUSHENBUSH. Mr. Frey, before the question got back to the P. W. A. funds, you were asked whether you had any reason to believe that there had been an agreement among the shipbuilders as to the prices which would be bid on the 1933 program, and you had begun to relate your conversation with General Johnson on that subject. Will you please continue on that point?

Mr. FREY. When Mr. Wilder was at my office, some 10 or 12 days before the bids were opened, he made the statement that he could give the names of the yards who would be the lowest bidders on all of the category of ships to be contracted for.

I told him that that was interesting. I had heard so many rumors about various things since I had been in Washington, that I had to have something more substantial than that before I would give it any consideration. He said, "I will give it to you now, and I will seal it."

So that on my desk——

Mr. RAUSHENBUSH. Just a minute. Let me interrupt you a minute, Mr. Frey. How many days was this before the bids were opened?

Mr. FREY. Ten or twelve days before the bids were opened.

Mr. RAUSHENBUSH. That placed the date somewhere in July 1933?

Mr. FREY. It would.

Mr. RAUSHENBUSH. And that was in your office?

---

[1] See footnote on page 4690.

[2] There was no Exhibit marked "No. 1477".

Mr. Frey. That was in my office.

Mr. Raushenbush. Where?

Mr. Frey. In the presence of my associate, Mr. Calvin.

Mr. Raushenbush. Mr. Calvin was also present when this happened?

Mr. Frey. He was present when this took place.

Mr. Raushenbush. Will you continue, please?

Mr. Frey. Mr. Wilder then wrote out the names of the shipyards who he held would be the lowest bidders on all of the categories of ships. I handed him an envelop and he sealed the envelop.

Some 3 days before the bids were opened, I was with General Johnson, in connection with the shipbuilding code, and my personal thought as to the intention of some of the shipyards to live up to their own code, and I finally said, "Well, it is my opinion that there is going to be collusive bidding, and I have in my pocket a sealed envelop which purports to contain the names of the shipyards who will be the lowest bidders."

Senator Clark. This was 3 or 4 days before the bids were opened?

Mr. Frey. Yes.

The Chairman. Let the record be clear. The sealed information was given 10 days before?

Mr. Frey. Yes; about 10 days or 12 days before. Three days before the bids were opened I was in General Johnson's office, discussing the ship-building code and my own impression as to the intentions of the shipbuilders, and I said, "They are all in collusion." I was talking then about the code. I said, "I think they are also in collusion so far as the bids for these new vessels are concerned."

I said, "I have had given to me a list of names of the shipyards who would be the lowest bidders for one type of vessel."

I said, "It is here in my pocket", and I took it out and I said, "Here, you take this. This will be interesting to you."

Johnson said, "That is too hot. I am not going to get mixed up in anything of that kind. I have got troubles enough of my own."

And General Johnson refused to take the sealed envelop. A great deal was going on at that time to occupy my interest, and I put the envelop in my desk. The day after the bids were opened and the bids published in the daily press, I called Mr. Calvin into my office and said, "Let us find out whether Wilder was filled with hot air or whether he really knew what he was talking about."

We opened the envelop and we checked them off and Mr. Wilder was accurate in every instance. He had named the lowest bidders.

Senator Vandenberg. Who were the three lowest bidders?

Mr. Frey. There were submarines to be built, and destroyers to be built, and light cruisers, and armored cruisers, and aircraft carriers.

Senator Vandenberg. Who were the successful bidders which Mr. Wilder identified?

Mr. Frey. There I have to depend on memory. I believe that the Bath Iron Works, the Bethlehem Shipbuilding Co., the New York Shipbuilding Co., the Newport News Shipbuilding & Dry Dock Co., and I think there may have been one other.

In any event, as we checked up, we find that the statement which Mr. Wilder had given to me 10 days before was right.

Senator Vandenberg. Did you mention Bethlehem?

Mr. FREY. Yes. Afterward I asked Mr. Wilder how he could give us so accurately the information, and his reply was perhaps characteristic. He said, "I have been in the game myself."

He was president of the New York Shipbuilding Co. for a while.

Senator VANDENBERG. How many ships were involved in this contract letting?

Mr. FREY. All of the ships that were contracted for under the original $238,000,000 appropriation.

Senator VANDENBERG. It was a large number of ships?

Mr. FREY. Yes.

Senator VANDENBURG. Thirty-odd ships?

Mr. FREY. Yes, sir.

Senator VANDENBERG. In various tonnage categories?

Mr. FREY. Yes, sir; from submarines to aircraft carriers.

Senator CLARK. The Bath Iron Works got one or two, Mr. Frey?

Mr. FREY. I think they secured two.

Senator CLARK. A very small proportion of the whole?

Mr. FREY. Yes.

Senator VANDENBERG. And with respect to all this diversified contractual structure, all of these various types of ships, Mr. Wilder's estimate as to the prophecy of who was to get the same, made 10 days before the bids were opened, proved scrupulously accurate in every respect?

Mr. FREY. In every instance. I forgot to mention that—and Mr. Calvin has refreshed my memory on this—that the Federal Ship Yard and the United Dry Docks were also bidders and also secured contracts at that time.

The CHAIRMAN. While Mr. Calvin is forward here, I should like to ask him a question. Have you heard Mr. Frey's testimony?

Mr. CALVIN. I have.

The CHAIRMAN. Concerning this sealed statement as to what was going to happen?

Mr. CALVIN. I have.

The CHAIRMAN. Has his statement been true and correct to your knowledge?

Mr. CALVIN. So far as any reference to conferring with me is concerned, it is absolutely correct. I was not with him when he attempted to convey the information to General Johnson.

The CHAIRMAN. As he referred to your connection with it, it was entirely correct?

Mr. CALVIN. Indisputably correct; yes, sir

Senator VANDENBERG. You saw him open the envelop and you saw the list, and you know it is accurate?

Mr. CALVIN. I was in his office and checked the list against the awards of the bids.

Senator CLARK. You were also there when that list was sealed up in the envelop, I understood you to say, Mr. Calvin?

Mr. CALVIN. Yes, sir.

Senator CLARK. You saw the list put in the envelop and saw it taken out?

Mr. CALVIN. Correct.

The CHAIRMAN. Did the committee understand you still have that statement, Mr. Frey?

Mr. Frey. I do not know, Senator. We were receiving truckloads of material in our headquarters at that time, in connection with all the codes, and I am quite certain that it must be somewhere in my files. I have had my private secretary, since I was subpenaed to appear before you, go through the files, and we have not yet located it. I believe it will be.

The Chairman. Mr. Frey, did you not speak to some Members of Congress, perhaps in a rather casual way, about this at the time?

Mr. Frey. At the time, Senator, I informed everyone that cared to talk about it.

The Chairman. It seems to me that I rather vividly recall your having spoken to me about it at that time.

Mr. Frey. Yes, I spoke to you about it at that time. You bring that to my memory.

Senator Clark. Mr. Frey, there was a total in this program of 21 vessels, as I understand it.

Mr. Frey. Yes.

Senator Clark. And Mr. Wilder, 10 days before the opening of the bids, or the letting of the awards, called the turn on every one of the 21 vessels?

Mr. Frey. On every one.

Senator Vandenberg. Did you talk to General Johnson about it afterward?

Mr. Frey. Yes.

Senator Vandenberg. What did you tell him? That he was right?

Mr. Frey. I told him that the statement I had in the sealed envelop had turned out to be 100 percent accurate.

The Chairman. As Senator Vandenberg suggests, it was as hot as he thought it might be?

Mr. Frey. It was.

Senator Vandenberg. What was his further comment on it?

Mr. Frey. I do not think there was any. The General was having difficulties of another kind with the shipbuilding industry just then, and his comment was about that and the methods the shipbuilders were adopting in endeavoring to force his hand against his judgment.

Mr. Raushenbush. Mr. Frey, will you explain once more in what connection you mentioned this matter to General Johnson originally and offered him this envelop? What connection with any possible agreements between shipbuilders as to who were to get ships would there be with the code matter? Were you trying to prove that they were together on the labor policy, or other things, or what was the purpose?

Mr. Frey. I was trying to convey to the general my belief that as far as the code was concerned, that they were acting as a unit. I believe that they were, because I had found them acting as a unit in the past. My personal experience had been that in matters affecting their interests, so far as the Navy Department was concerned, that they took an official interest in the fixing of the wage scales for the employees in the navy yards. For a number of years, in fact, at the present time, I am the lay member of the Navy Wage Review Board, which makes recommendations to the Secretary of the Navy, fixing the scale for wages.

During the period that I have been a member of that Naval Wage Review Board, which consists of two representatives of the Navy and one of the American Federation of Labor, the National Council of American Shipbuilders has every time officially objected to the Navy Department giving any advance in wages.

In 1929 their president, and other representatives, appeared before the wage board—not at a public hearing; they asked for a private hearing, and the public hearing was over, and it was granted—and they insisted that the Navy must not increase the wages of employees in the navy yards because, if it did, it would be competing with them in securing competent mechanics.

Senator VANDENBERG. Mr. Frey, was the code in operation at the time of this contract letting?

Mr. FREY. Yes.

Senator VANDENBERG. Could it be pleaded that the code in any way required or invited or justified collusion on this bidding?

Mr. FREY. I know of no reason why that could be inferred, any more than you would infer that there would be collusive bidding because any of them, at any particular time, would have to pay the market price for pig iron or for steel or for any other material. All the code did was to say what the minimum wage rate should be, and what the hours of labor should be.

Mr. RAUSHENBUSH. Mr. Frey, when you examined the reports in the newspapers, you did not find the prices on the bids all the same, did you?

Mr. FREY. No; they were not. There was quite a variation.

Mr. RAUSHENBUSH. This letter, I understand, simply mentioned who was going to be the lowest bidder?

Mr. FREY. That is all, the lowest bidder.

Mr. RAUSHENBUSH. Were you taking up with General Johnson and the N. R. A., generally, the question of observance of section 7a?

Mr. FREY. Yes; the Department took that up with General Johnson and with every other authority under N. R. A.

Mr. RAUSHENBUSH. Did we understand you correctly in your earlier testimony to say that there was a good deal of trouble about that in the shipyards?

Mr. FREY. At the present time there is not one of the big three—I take that back. At the present time the Newport News Shipbuilding & Drydock Co. and the Bethlehem Shipbuilding Co., at its plant in Quincy, Mass., and at its plant in San Francisco, are still refusing to carry out the provisions of section 7a.

Senator CLARK. What was that company in Massachusetts?

Mr. FREY. The Bethlehem Shipbuilding Co., at its Fore River plant.

Senator CLARK. That is the Bethlehem Steel Co.?

Mr. FREY. That is a subsidiary company of the Bethlehem Steel.

Senator CLARK. And the United Drydock is controlled by the United States Steel Corporation?

Mr. FREY. I do not know. The same is true of the Bethlehem Shipbuilding Co.'s plant at San Francisco.

Mr. RAUSHENBUSH. Mr. Frey, this is somewhat interesting because of evidence put in in December, when the question of war-industries plans for a future war was discussed, as to the extent of observance of Government regulations one might expect from the various companies during the pressure of a war. You are saying, if I understand your testimony correctly, that even in peacetimes you are having a great deal of trouble in getting enforcement of certain governmental provisions, 7a. Is it correct that there is trouble about that today?

Mr. FREY. Yes; it is impossible for us to have section 7a carried out, and the Government or N. R. A. have made their efforts to prevail upon the shipyards to observe section 7a and those that I named are now not observing it.

Mr. RAUSHENBUSH. Where is your appeal in a case like that, where you find Bethlehem or somebody not observing it? Where do you appeal in that case?

Mr. FREY. There has been set up, under the code, and with the approval of the President, an industrial relations board for the shipbuilding industry. It was provided for in October 1933. Because of the shipbuilders' opposition it was not given an official status until August of last year. Mr. Calvin is one of the labor members of that board. It now has official sanction. It seems to be operating, and we are in hopes that this industrial relations board for the industry will be able to work out the problems which, up to the present, have not been worked out.

Mr. RAUSHENBUSH. Let us get this straight. How is this Board constituted?

Mr. FREY. It consists of 3 representatives of the shipbuilding industry, selected by the industry, and of 3 representatives of labor who were nominated by the Labor Advisory Board of N. R. A., and who were then appointed by President Johnson—I mean General Johnson.

Senator VANDENBERG. "President" Johnson was not far from it. You refer to ex-President Johnson.

Mr. RAUSHENBUSH. You were being troubled with the provisions of N. R. A. in August 1933 and July 1933, as I understand it?

Mr. FREY. Yes, sir.

Mr. RAUSHENBUSH. And you had no appeal to a board of your own until August or September of this year?

Mr. FREY. September of this last year; yes, sir.

Mr. RAUSHENBUSH. A whole year intervened there?

Mr. FREY. Yes, sir.

Mr. RAUSHENBUSH. Are your complaints in this matter before that Board?

Mr. FREY. Some of them are and others will be brought there.

Mr. RAUSHENBUSH. That is a 50–50 board. Suppose they split 50–50 in the matter of interpretation? Where is your appeal from there?

Mr. FREY. That is a question. General Johnson desired to have the board composed of an independent chairman and three representatives on each side. I was strongly opposed to that set-up. I told him that if he named a seventh man, we would then have the atmosphere of a court room, with opposing counsel endeavoring to influence him very much. Instead of having three men of each group endeavoring to find a solution for the question before them, we would have those three men planning the best campaign to influence the odd man, and that I felt that until there was a break-down, a complete break-down of that equal number of men on each side, to adjust the questions that would arise, I was opposed to the appointing of a seventh man.

I presume that if there was a seventh man, and his decision was seriously unsatisfactory to one or the other of the groups, that there would be an effort to appeal. I presume that they might appeal to the National Labor Relations Board, or they might carry their appeal to the highest authority in N. R. A., or they might place their problem before the President of the United States.

Mr. RAUSHENBUSH. Let us get down to that exactly. Here it has taken a year, on certain matters, in which you think that the shipbuilding companies have not been observing the laws of the country. There was a year before your authority was officially sanctioned as a labor relations board for the industry.

Presumably, the other day, the President took away from the National Labor Relations Board the authority to hear specific complaints, where industries have their own labor boards.

Mr. FREY. Yes.

Mr. RAUSHENBUSH. That being the situation, where are you going to from your 50–50 board in case the decision, as it may very well, I suppose, split on a 50–50 basis? Just as a matter of routine, of getting things done, of getting them settled one way or the other, how are you going to act, or where can you go under such circumstances?

Mr. FREY. I assume that the President's opinion would be based upon information and advice given to him by a legal adviser who has been active in N. R. A. affairs, because the President's position was similar to the one which Mr. Donald Richberg took when the Jennings case, to which you referred, was first handed down. After the National Labor Relations Board had made its decision, Mr. Richberg went before the Board and told them that they were without authority to make any such decision.

And, if my memory serves me, he requested the Board to surrender any jurisdiction in the case, and the National Labor Relations Board refused to do so, and if the point which the White House announced the other day is on all fours with that which Mr. Donald Richberg took some time before, I would be inclined to think that Mr. Richberg gave the President the reasons why he thought that was necessary. I do not know what we can do.

I have had some experience with industrial relations for many years.

I believe the present method of setting up in an industry an industrial relations board is the most practical one. I would assume that if any dispute in the shipbuilding industrial relations board reached a deadlock, that the case then could be naturally carried to the National Labor Relations Board.

Mr. RAUSHENBUSH. As I understand it, the letter from the President, that would depend upon the desire of that Labor Relations Board for any particular industry, whether it is publishing or coal or shipbuilding, or whatever it was, to have its board vote it up, to go up to the National Labor Relations Board. That would take a vote which would carry, and you have only a 50-50 board.

That is important to us, Mr. Frey, let me say again, on the questions raised during December, whether during a war there would be any chance of having the matter enforced. Now, there may be very nice plans, but will they be enforced?

Therefore, this peace-time proposition of yours is very much in point.

Then we got an agreement of something similar to the National Labor Relations Board, with respect to labor provisions, and setting it up so that nobody should reject the findings of that board, and it should not go to the N. R. A. or anybody else.

The President's order of the other day, as I understand it, cancelled that. So that you are here in a situation where you cannot appeal to the National Labor Relations Board, because you need a majority vote to do it, and you have not got anybody else to go to.

Is it not a fair inference that, in addition to the year or year and a half which has already elapsed, that another year is going to elapse before you can carry that out, with all the desire in the world, and get that up as far as the President? You have no board to go to, have you?

Mr. Frey. My answer is this: Since we have begun to—I was going to say operate; since we have tried to operate under N. I. R. A., innumerable decisions have been made by highest authority, and when it was found that the result of that decision interfered with the adjustment of questions, why, new decisions have been made. In other words, it has been recognized by those active under N. R. A. that it was something novel and new. It was an experiment; that it would be impossible at any one stage to lay down an inflexible rule as to some of them which would govern the processes by which we would adjust ourselves under codes. The experimental feature of it has been recognized. So, when either side feels that it has been done an injury, and makes its protest, secures its hearing, ways have been found which, while not wholly satisfactory, indicate, at least, that it is not a cast-iron system that we are under, but a flexible one.

Mr. Raushenbush. There is one other question. In your earlier testimony you wanted put before you the transcript of Admiral Land's statement at the P. W. A. hearings on the code. Do you recall these statements here with regard to that question of whether the Navy Department was for or against the further expansion of industry [handing document to witness]?

Mr. Frey. Yes; that is it.

Mr. Raushenbush. Do you recognize this sentence of Admiral Land's testimony beginning:

> The Navy Department is of the opinion that some provision should be included in the code such that it will avoid establishment of new shipbuilding yards, reopening of those long since inoperative, or expansion of small yards and repair plants for shipbuilding purposes.

Did you hear that?

Mr. Frey. Yes; I heard that.

Mr. Raushenbush. Do you recognize hearing this statement there at the same time. [Reading:]

> On that basis I have no hesitancy in saying that the present existing, growing shipbuilding facilities of the country are more than ample to take care of the Navy program, any prospective Navy program, and, so far as my knowledge goes any merchant-marine program.

Mr. FREY. That refreshes my recollection. I testified that it was my recollection that a statement of that kind had been made.

Now, I have the transcript to refresh my memory.

Mr. RAUSHENBUSH. In view of the incompletion record on these boats, do you think it was an accurate statement on the part of the Admiral?

Mr. FREY. No; I think it was a most inaccurate statement.

Senator VANDENBERG. Mr. Frey, can you state, in a general way, what the increase, if any, in shipbuilding-labor wages was between January 1933 and August 1934, a period of about 18 months?

Mr. FREY. What the changes were?

Senator VANDENBERG. Yes, sir.

Mr. FREY. Senator, it is impossible to secure that information from The Navy Department, in its efforts to secure wages paid in private industry, so that the Naval Wage Review Board could prepare a schedule of wages for navy yards, has never been able to get accurate information.

It would require not only expert bookkeepers, but require experts in industry to discover just exactly what the private shipyards pay.

The only study that has been made of one pay roll was made by the Deputy Administrator for the Shipbuilding Code, and included the Newport News Shipbuilding & Drydock Co. They did not keep these lists of machinists—I am thinking of one trade—as a whole, but the number of machinists employed in each of the shops where machinsists worked.

I checked up 19 different wage rates for machinists, and then discovered that they had a class of "handyman", who were not competent mechanics, who were listed as receiving higher wages than the machinists were, or than many of them were.

Then to that basis of wage there are bonuses and premiums, and piecework rates paid.

So that it would be a tremendous task to discover just what wages were being paid, for the reason that I gave, that, in addition to that base rate, there are all of those variations.

Senator VANDENBERG. I can understand the difficulty in arriving at an accurate conclusion.

Mr. FREY. Yes, sir.

Senator VANDENBERG. But can you state in a general way whether there was any substantial increase in labor pay scales in shipyards during that period?

Mr. FREY. It is my information—I have not the data—that it was part of the information—that the private shipyards did give an advance in wages about the time the code went into effect.

Senator BONE. How much in percentage?

Senator VANDENBERG. About how much?

Mr. FREY. I was told in some cases it amounted to 25 percent.

Senator VANDENBERG. That is the most you ever heard?

Mr. FREY. Yes; but even that, unless it was—and I hesitated to say that I had heard the amount or any amount—but even that could be very largely dissipated by the way the work was done.

I want to illustrate that and give you in one shipyard—I do not care to name this yard and I do not think that the committee will insist that I do because I do not think it is necessary—just what the picture is. This yard has a number of competent mechanics. They advanced their wages. They also had an apprentice school. Now, my information is that they laid off mechanics and the instructors of apprentices, brought the apprentices into the shops to do the work, and brought helpers into the shops to do the work that these mechanics had formerly done.

Now supposing the record indicated that these mechanics had received a 10, 15, or 25 or 50 percent advance in wages, and then we found that they had been displaced by apprentices and helpers, working under the instructions of the apprentice school instructors, you see you would have a factor coming in there which would wipe out the advance in wages entirely.

Senator BONE. Mr. Frey, how long has this method of paying men in private yards been going on?

Mr. FREY. I presume almost from the beginning of the building of iron ships.

Senator BONE. Is there any way of allocating wage costs to tonnage?

Mr. FREY. I presume that every shipyard has a very accurate record of the labor cost for ship construction.

Senator BONE. Do you know whether the Navy Department has ever shown any break-down of wages, costs, in the private shipbuilding yards?

Mr. FREY. I do not know. I have not knowledge on that point.

Senator BONE. Over the years you have never had any information?

Mr. FREY. No.

Senator BONE. One other question that I have in mind. How many keels of cruisers have been laid down in public yards, in Government navy yards, since this $238,000,000 program was launched with P. W. A. funds, on plans supplied by the private shipbuilding companies?

Mr. FREY. I would have to have the records here to give that accurately.

Senator BONE. Can you supply that information?

Mr. FREY. My associate probably has that here.

Mr. CALVIN. The navy yards, in no case.

Senator BONE. This outfit which supplies these plans for cruisers has not supplied one of them to a Government navy yard; is that right?

Mr. CALVIN. The company which is under contract to provide plans for the construction of light cruisers started construction some time ago on one light cruiser, in their own plant, for the navy yard, but has not laid down keels for either the C. L. no. 42 or 40 or 43, whatever it was. One is known as the "*Brooklyn*" and the other one is the "*Philadelphia*", built in the respective yards.

Senator BONE. Which is that?

Mr. CALVIN. That is the light cruiser. The Bethlehem laid down the keel for an armored cruiser, and New York Ship has laid the keel for a light cruiser, and, so far as my information goes, I think that is about all. I do not think the new keels have been laid. Possibly some keels have been laid for the 1934 ships, but I seriously doubt that.

The CHAIRMAN. Mr. Frey, we have had, this morning, and have listened to certain information concerning the allotment of Public

Works funds. How largely are these funds being used today in the naval construction program?

Mr. FREY. They are being used in some yards, largely the Washington yard, in the manufacture of guns and turrets and other equipment that goes into cruisers. This yard has been kept very busy within recent months. In fact, this yard is working three shifts, whereas, in some yards of the, they are furloughing men, rotating them, because there is no work.

The CHAIRMAN. Have the appropriations or has the allotment of something like $238,000,000, been used in its entirety? Do you know?

Mr. FREY. Oh, my, no.

The CHAIRMAN. How long is it going to take to use it?

Mr. FREY. I wish I could answer that question.

The CHAIRMAN. At the present rate.

Mr. FREY. At the rate of progress that was made up to June of last year, it would take about 20 years.

The CHAIRMAN. About 20 years to use this allotment?

Mr. FREY. At the rate of progress going on then, but I think there has been an improvement since that time.

The CHAIRMAN. And yet these funds were allotted for the purpose of affording employment in this emergency?

Mr. FREY. That was one of the principal reasons that the American Federation of Labor and the Metal Trades Department offered for the earmarking of that enormous sum.

Senator BONE. Do you recall, Mr. Frey, any ships of war built on the Pacific coast in private yards in the last 15 years?

Mr. FREY. Private yards; no. There may have been, but I cannot recall any.

Senator BONE. Has there been a warship built out there since 1917 or 1918, in the private yards?

Mr. FREY. Not that I recall.

The CHAIRMAN. What do you see that might be done to expedite the utility of this Public Works money that has already been allotted?

Mr. FREY. That is a difficult question, Senator. If the Navy Department now should undertake to prepare the designs for these light cruisers, they would have to start all over again, or largely all over, and it might take 6 months or 9 months additional delay before they would have plans.

Senator BONE. What do you mean by starting all over? They have the plans available, have they not?

Mr. FREY. No, they would be laying down the keels for these cruisers if they had the plans which the Government contracted for with the New York Shipbuilding Co.

Senator BONE. Are they building these cruisers under those plans in private yards?

Mr. FREY. Yes.

Senator BONE. Why are not those plans available to the Government?

Mr. FREY. I cannot say.

Senator BONE. In a preparedness program to get ready for war, why are not those plans available to the Government?

Mr. FREY. I do not know.

Senator BONE. You do not know?

Mr. FREY. No.

Senator Bone. Is there anything in the law which precludes the Government using those in its own yards in a program of national defense?

Mr. Frey. I cannot answer that, Senator. I am not a lawyer.

Senator Bone. Do you know of any reason why this Government should not use those plans? Is there anything sacred about them? Do they belong to anyone?

Mr. Frey. No. I presume that if their plans were completed for the two light cruisers to be built in navy yards, the Navy Department or Government would have begun construction some time ago.

Senator Bone. You understand, do you not, that the Government pays for those plans?

Mr. Frey. Oh, yes.

Senator Bone. Then why cannot it use them in its own yards and go ahead with this program?

Mr. Frey. I understand that the plans are not completed for these light cruisers, if they were to be built in navy yards.

The Chairman. The cruisers to be built in the navy yards could not be built, then, upon the same plans that the larger cruisers in the private yards are being built on?

Mr. Frey. Oh, no. Every type of ship has to have its own design.

Senator Bone. Then it is your understanding that the Government waits upon these private companies to create the plans for these ships, and has no planning board of its own at all?

Mr. Frey. So far as my testimony goes, it has indicated that the reason that these light cruisers have not been laid down in navy yards is because the Navy Department contracted 17 months ago with the New York Shipbuilding Co. for designs, and has not received them yet.

Senator Bone. Seventeen months ago?

Mr. Frey. Yes, sir.

Senator Bone. Can you, from your experience, tell us how long it takes to create a set of plans of that type?

Mr. Frey. No.

Senator Bone. What would we do in case of war, if we had to have plans. We could not wait 17 months.

Mr. Frey. I made the statement, Senator, that it was my opinion, from long contact with chiefs of bureaus in the Navy Department, that the American Navy has as competent designers and constructors as any Navy in the world.

Senator Bone. Does the Navy Department agree with you in that connection?

Mr. Frey. It would all depend on what question would be up.

Senator Bone. Did you ever put it up to them squarely?

Mr. Frey. Yes, I have.

Senator Bone. What was the answer?

Mr. Frey. The answer was that certain designers in private industry had been giving so much more of their time to designing that their helpfulness was necessary. They also said that it was necessary to have a certain number of private designers occupied so that if there ever came a national emergency, it would not be necessary for the Navy to depend wholly upon its own technical staff.

The Chairman. Mr. Frey, do you know emphatically that the plans are not now in the navy yards?

Mr. FREY. I know emphatically that they were not a few weeks ago.

The CHAIRMAN. You know that?

Mr. FREY. When I was discussing the question with the Navy Department, they were not?

The CHAIRMAN. If they are there, they have come in in recent days?

Mr. FREY. They have come in in the last few days.

The CHAIRMAN. What is the total of P. W. A. moneys now alloted to the Navy?

Mr. FREY. I have not those records here either.

The CHAIRMAN. We have been referring to a figure this morning of approximately $238,000,000, but it is considerably more than that, is it not?

Mr. CALVIN. The $238,000,000, Senator, was for 35 vessels, to be known as the 1933 program. In 1934 funds were appropriated for the construction of 24 additional vessels, and I am not sure of the exact amount of that money. It would, of course, amount to several more millions of dollars.

The CHAIRMAN. The committee plans to hear Secretary Ickes next week upon the matter, so that I suppose it is not material that we have that in detail now.

Do you have anything more you want to develop from Mr. Frey, Mr. Raushenbush?

Mr. RAUSHENBUSH. No, sir.

The CHAIRMAN. We thank you, Mr. Frey, and you, too, Mr. Calvin.

The CHAIRMAN. Mr. Bardo, when the committee recesses today, it will be recessing until probably Tuesday. It is not now evident that we shall want you Tuesday. In all probability we will not, but we will advise you when next week we would like to have you return.

Mr. BARDO. I shall be available at any time.

The CHAIRMAN. Thank you, Mr. Bardo.

The committee stands in recess until call of the Chair.

(Thereupon, at 12:12 p. m., the committee recessed until call of the Chair.)

INVESTIGATION OF MUNITIONS INDUSTRY

TUESDAY, JANUARY 29, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357, Senate Office Building, pursuant to the call of the chair, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee, and F. W. LaRouche, investigator.

The Chairman. The committee will be in order. Admiral Land, if you will come forward and be sworn.

TESTIMONY OF REAR ADMIRAL E. S. LAND [1]

DELAY IN 1933 SHIP DESIGN PROGRAM

(The witness was duly sworn by the chairman.)

The Chairman. Admiral, be seated. Give the committee your full name and connection with the Navy Department.

Admiral Land. Rear Admiral E. S. Land, Construction Corps, United States Navy, Chief of the Bureau of Construction and Repair.

Mr. Raushenbush. Admiral Land, on Friday of last week, evidence was given before the committee concerning what seemed to be the very considerable delay in the construction of the 1933 cruiser program, and one of the witnesses stated that to the best of his knowledge and belief, a large part of that delay was presumably due to the fact that the designing and working plans had been contracted out to the New York Shipbuilding Corporation, and that that corporation had not made substantial progress with those plans and with those working drawings, with the result that the cruisers, both in the navy yards and in the other private shipbuilding yards, were far more retarded than they should be.

May we ask at the moment about how many working plans are usually involved in the construction of a cruiser?

Admiral Land. The total number of plans involved in the construction of a cruiser varies from 5,000 to 7,000 plans. It may be broken down into contract plans and plans made by the firms or by the Bureau, and there are, in addition, subcontractors' plans of an unknown number.

---

[1] A letter from Admiral Land to the committee regarding his testimony was introduced as "Exhibit No. 1668" during hearings of Mar. 12, 1935.

On a destroyer there are at least 1,500 and on a cruiser there would be more of these subcontractor plans. That is a varying number, depending upon the type and nature of the design.

Mr. RAUSHENBUSH. In the case of these 1933 cruiser designs, how many working plans did you expect to get roughly from New York Ship?

Admiral LAND. I cannot give you an answer in numbers. I can give you an answer in percentage of where they stand as of January 1.[1]

Mr. RAUSHENBUSH. I would like to get a rough number first, if you could approximate it.

Admiral LAND. I have not that data with me, the number of plans, but only the percentage taken from curves that they keep and check curves that we keep.

Mr. RAUSHENBUSH. Is it impossible for us to find out roughly how many drawings they were expected to turn over?

Admiral LAND. No; it is not. I think I can get that data for you.

Mr. RAUSHENBUSH. Was it about 2,500 for the hull and 1,780 for the machinery? Is that roughly right?

Admiral LAND. It is about 4,000 plans in all; yes.

Mr. RAUSHENBUSH. About how many of them were turned over a year after those contracts were let, about August 1934? [1]

Admiral LAND. I cannot answer that question as to numbers now. I can give you the data.

Mr. RAUSHENBUSH. You mean later?

Admiral LAND. Yes.

Mr. RAUSHENBUSH. When these working plans are turned over to the Navy, does the Navy frequently disapprove them?

Admiral LAND. I would not say "frequently." The Navy criticizes the plans. They less frequently disapprove them, but they nearly always criticize them and require modifications.

Mr. RAUSHENBUSH. And alterations?

Admiral LAND. Yes, sir.

Mr. RAUSHENBUSH. And then the plans would go back to the shipbuilding yard that had the contract for them, and they would have to do them over again, would they not?

---

[1] Under date of Jan. 31, 1935, Admiral Land submitted the following tabulation relative to the total number of plans to be prepared by the New York Shipbuilding Co. in connection with the construction of light cruisers and the progress on same on certain specified dates:

LIGHT CRUISERS NOS. 40-43.—*Status of plan work, New York Shipbuilding Corporation*

	Construction and repair	Engineering
Number of plans required	[1] 1,470	1,900
Number of plans approved Aug. 1, 1944	274	169
Percentage of drafting completed Aug. 1, 1934	28	22
Number of plans issued and approved Sept. 1, 1934	358	180
Percentage of drafting completed Sept. 1, 1934	30	24
Number of plans approved Jan. 1, 1935	547	996
Percentage of drafting completed Jan. 1, 1935	51	52

[1] Does not include development plans, sketches, etc. (about 400), nor subcontractor's plans.

Admiral LAND. That is correct.

Mr. RAUSHENBUSH. When was the design work on the 1933 cruisers let to New York Ship?

Admiral LAND. The 1933 program under discussion covers four light cruisers, the *Brooklyn*, at the New York yard, the *Philadelphia*, at Philadelphia, the *Nashville* and *Savannah* at New York Ship. The contract with the New York Ship was let on August 3, 1933. On the same date allocations were made to New York and Philadelphia. The contract plans were not drawn for these light cruisers by the Navy Department, as is its custom, owing to the fact that this large program consisted of seven new designs, a greater number than had ever before obtained in the history of the Navy Department.

Three sets of contract plans were contracted for, namely, carriers, Newport News, light cruisers, at New York Ship, and heavy destroyers at New York Ship.

The other four sets were prepared by the Navy Department with some major assistance on submarine plans from the Electric Boat Co.

The contract plans for these light cruisers at New York Ship were materially delayed, behind the date of contract award, due to the fact that they had to be prepared by contract, and they were signed in December 1933 by the Secretary of the Navy. I think the date was December 15, but I am not positive of that date. The time elapsed from August 3 to December 15 in preparation of contract plans.

Mr. RAUSHENBUSH. In preparation of the contract about the plans, you mean, do you not?

Admiral LAND. I mean the preparation of contract plans.

Mr. RAUSHENBUSH. Then, in December the contract was signed, do I understand you correctly to say, concerning the plans?

Admiral LAND. No, sir; the contract plans were signed in December. The contract was awarded on August 3 and executed at some subsequent date. I am drawing a distinction between contract and contract plans.

Mr. RAUSHENBUSH. Then, you can give us the progress of those plans up to date as working plans?

Admiral LAND. January 1 these plans were 50.9 completed.

The CHAIRMAN. That is January 1 of this year?

Admiral LAND. Yes, sir. On January 1, 1935, C and R plans were 50.9 percent completed, and the engineering plans were 52.4 percent completed.[1]

Mr. RAUSHENBUSH. And are those percentages now in the hands of the Department?

Admiral LAND. Yes, sir.

Mr. RAUSHENBUSH. Is it possible for the men in the navy yards to proceed in all this building without the remainder of the plans, or do they have to wait until all the plans are completed before they can go ahead?

Admiral LAND. No; they can proceed with what plans they have. Plans are progressive. Starting in with merely hull plans, after the lines are laid down in the mold loft floor, then they progressively come out as hull and structural plans, following along in due course with engineering plans, for machinery installations, piping, wiring, and so forth. It is a progressive matter, and just as a matter of actual fact, plans of a ship practically are never completed until the ship is scrapped and off the Navy list, because we keep running plans from the time that the contract plans are prepared, and we keep booklet plans and all kinds of alteration plans on all ships in the bureaus and in the home yards, as well as on board ship, so that actually the plans are never entirely completed until the ship demises.

---

[1] See footnote on preceding page.

Mr. Raushenbush. Can men work on the machinery before all the hull plans are in?

Admiral Land. In some respects; yes. Admiral Robinson can give you a better answer to that than I can. But certain machinery plans can be proceeded with before certain hull plans are finished.

Mr. Raushenbush. Has there been a great rush of these plans in after the Secretary of the Navy reproved New York Ship for its delay as to the speed of getting in those plans in the last few months?

Admiral Land. We have been endeavoring to speed up plans from October 1933 until to date, and the Secretary and Assistant Secretary have written letters to various contractors, endeavoring to expedite not only plan work but all work, and the Chief of the Bureau of Engineering and myself have constant pressure on the superintendent of construction and the inspector of machinery, to do the same, as well as putting all the pressure we know how on everybody in the respective companies from the president down.[1]

Mr. Raushenbush. We have a letter here from the Secretary of the Navy to the New York Ship., dated September 22, 1934, which I show you, and which you will probably recognize [handing paper to witness].

On the second page of that letter it states:

> The Department has not been satisfied with the progress made at your plant with particular reference to the light cruisers. The situation with regard to plans is clearly understood, but it is a matter of vital importance that all practicable pressure be brought to bear on this plan situation in order that it

---

[1] Under date of Jan. 31, 1935, Admiral Land submitted the following data in connection with the steps taken by the Navy Department to prosecute the shipbuilding program as expeditiously as possible in order to relieve unemployment and prevent discharges:

Seven new designs were involved in this program. This is a greater number of designs than ever before obtained at any time in the history of the Navy.

The preparation of contract plans for 3 of the designs was allocated to 3 different private yards best able to undertake the work. By this action it was possible to utilize the best design talent in the United States familiar with combatant-ship design. A "traveling design staff" was organized and sent "on the road" in order to expedite action on plans.

Special clauses were incorporated in the contracts with private yards requiring them to do everything practicable to relieve unemployment and in general to expedite work during the first and second years of the life of the contract. The design bureaus not only permitted but required unusual and unprecedented procedures, particularly with regard to plans and various short cuts were authorized and directed in order to expedite the work. Private yards, navy yards, and the Bureaus concerned made special efforts along procurement lines, even though the material would not be needed for a year or two.

A special letter was written by the Secretary of the Navy in August 1933 to all private shipbuilders.

A special letter was written by the Secretary of the Navy in August 1933 to all commandants having new construction at their yards.

A weekly report was made to the Secretary of the Navy and to the Assistant Secretary of the Navy relative to progress being made.

A special follow-up letter to all private shipyards and all commandants was sent by the Assistant Secretary of the Navy in January 1934 to check up on progress being made and to urge greater efforts on the part of all hands.

During this year's construction period several strikes occurred; one in particular was of such long duration as to seriously retard the work on this program. The Department used its best endeavors to assist in the settlement of these strikes.

A special letter was sent out by the Secretary of the Navy Jan. 17, 1935.

> may be practicable to put men to work, not only in your plant, but also in the two Navy yards which are building cruisers from the plans prepared by your company.

Admiral LAND. Yes, sir; I am familiar with that letter.

Mr. RAUSHENBUSH. The letter continues:

> A resurvey of the situation will undoubtedly indicate to you ways and means for more thoroughly carrying out the spirit and letter of the contract requirements and it is hoped that you will see your way clear to make this resurvey in order that the 1933 program may be more rapidly advanced as well as making as rapid progress as possible on the light cruiser awarded to you under the 1934 program.

I offer that for the record.

(The letter referred to was marked "Exhibit No. 1479" and is included in the appendix on p. 4915.)

Mr. RAUSHENBUSH. The question there was whether within the date after September 22, 1934, when an official reprimand was addressed to the company for the delay, the plans came speeding in after that time?

Admiral LAND. There has been a material improvement, and constant pressure is being applied by the Navy Department to make that improvement greater.

Mr. RAUSHENBUSH. Can you give us the status of the plans, either in numbers or percentages, about that time when this reprimand was addressed to the company?

Admiral LAND. I can furnish it for the record. I have not it with me.

Mr. RAUSHENBUSH. We have here a document from the files of the New York Shipbuilding Corporation which I would like to read and ask you as to its correctness. It is dated May 15, 1934.

After pointing out the clauses in the New York Shipbuilding Corporation's contracts, urging speeding up, it says:

> This clause applies with equal force to the contract to supply the design for the vessels and to the contract for the construction of vessels; New York Ship offered in its bid for this work, to have the *Savannah* 30 percent complete at the end of the first year and the *Nashville* 20 percent complete 1 year after the award of the contract. On May 1, 1934, or 9 months after the award, the Navy progress reports indicate that the New York Ship has defaulted on its contract. The figures are as follows:

It goes on and shows that the *Savannah* was supposed to be 30 percent complete and the first hull is 1.9 percent and the machinery 3.5 percent completed, in comparison with 30 percent promised.

On the *Nashville*, where they promised 20 percent in the first 12 months, the first hull is 1.9 percent and the machinery 2.9 percent.

And on the *Brooklyn*, the first hull is 1.5 percent and 0.1 percent on the machinery. [Continuing reading:]

> All of these vessels are in the early design stage. No material for their construction can yet be safely fabricated in the shipyards or elsewhere until the main designs are completed. The only men now employed are those working on the design in the New York Ship drafting room.
>
> On May 12, 1934, New York Ship had completed the following drawings:

It gives the total number of drawings required, hull, 2,500, machinery, 1,780, and as compared with that the total number of drawings completed of 25. That is 1 percent. And it shows the machinery with the total number of drawings completed of 40 out of 1,780.

Is that approximately the situation as you remember it as of the middle of May 1934?

Admiral LAND. That reference to the contract is entirely in error.

Mr. RAUSHENBUSH. What reference was that?

Admiral LAND. The reference about being a certain percent completed at a certain time. There is no such clause in the contract.

Mr. RAUSHENBUSH. They were not supposed, under this special arrangement for getting men back to gainful employment in the use of P. W. A. funds and the like, and they did not make any promises that the plans for the vessels would be 30 percent completed?

Admiral LAND. There is nothing in the contract which requires that. There is a clause requiring extraordinary effort in the first and second year, but it does not require specification of completion.

Mr. RAUSHENBUSH. Is that in the bid, that they expected those percentages of completion?

Admiral LAND. I do not know. I will find out.

Mr. RAUSHENBUSH. I think that would be pertinent to have at this moment.

The memorandum goes on to state:

> In the week of May 5, 1934, the Navy Department is reported to have rejected New York Ship's design for the machinery pieces of these vessels.

Do you remember that?

Admiral LAND. There were some parts of some plans which were not approved about that time. It would not be a rejection in our sense of the word. We do not use that term. We approve or disapprove. We modify and we alter. The basic is merely redrawn.

Mr. RAUSHENBUSH. You would call those alterations which took place?

Admiral LAND. In this case it would be a modification, something that they proposed which we did not approve.

Mr. RAUSHENBUSH. That memorandum then goes on to say:

> Change in this fundamental design will dictate changes in the design of the entire vessel and makes all former detailed plans worthless. Progress reports for May 12, 1934, should therefore be amended to read:

	Hull	Machinery
C. L. Savannah	0	0
C. L. Nashville	0	0
C. L. Brooklyn	0	0
C. L. Philadelphia	0	0

Admiral LAND. I do not recognize that letter. There are a lot of things there that I do not know what they are talking about. Certainly the statement that they made that all these plans are worthless is incorrect.

Mr. RAUSHENBUSH. They only apparently turned over at that time 25 drawings on the hull and 40 on the machinery, in May 1934, according to this memorandum.

Admiral LAND. I do not recognize that memorandum. Has that ever been given to the Navy Department?

Mr. RAUSHENBUSH. It is from the files of the New York Ship.

Admiral LAND. I know nothing about their files.

Mr. **Raushenbush**. The memorandum continues:

> No men can be put to work in the New York and Philadelphia Navy Yards on the cruiser construction assigned to them, until after designs have been received by the Navy Department from the New York Ship acceptable to the Department. Nor can these vessels be designed by the navy yards themselves, as they lack the necessary skilled and experienced design personnel.
>
> Failure of New York Ship to live up to its contracts is not only causing delay in the building of the vessels, but delay in the reemployment in its own yard, and in the two most important navy yards dependent on it for design.
>
> The causes for this inexcusable delay in cruiser design are in no way related to the shipbuilders' strike just settled at New York Ship, as their draftsmen did not leave their work. The delay is due primarily to New York Ship's having too much design work on hand, and its contractual obligation to get out certain private contract work ahead of the cruisers.

Let me interrupt there a minute, Admiral Land. Do you know how much outside non-Navy work the New York Shipbuilding Corporation had at this time?

Admiral **Land**. They had two tankers.

Mr. **Raushenbush**. And were they also drawing designs for Brazilian ships they expected to get?

Admiral **Land**. I do not know. That was in the picture, but what they did I do not know.

Mr. **Raushenbush**. Did each of those two tankers for Standard Oil take up one each of their ways?

Admiral **Land**. Yes. When the keels were laid, they each took up one way.

Mr. **Raushenbush**. How many active ways are there at New York Ship?

Admiral **Land**. I am not sure when you say "active ways" what you mean. I have the data. I would have to look it up, though, because I do not remember offhand. I have got it in the ship's data book and I have also got it in another form. I will have to put it in because I cannot tell from memory as to "active ways."

Mr. **Raushenbush**. All right. I was simply making this point: Here is the picture of the New York Ship industry from the progress report of the Navy, dated January 1, 1935, showing a very considerable degree of incompletion on the 1933 and 1934 cruisers; and, in addition to that, the picture should really include two tankers more, which would crowd their ways to that extent.

Admiral **Land**. You know that New York Ship has three sets of ways. They have the north plant and the south plant and the old war plant. The old war plant is in no way active.

Mr. **Raushenbush**. The south yard is not being used?

Admiral **Land**. Not in any way, so far as I know.

Mr. **Raushenbush**. Not since the war?

Admiral **Land**. No; not since the war.

Mr. **Raushenbush**. So that we can talk about the north yard and the five active ways there.

The memorandum goes on to state:

> The Navy itself furnished rather complete designs and specifications for the destroyers awarded New York Ship, but a sketch design only for the cruisers. It is therefore necessary for the New York Ship engineers to work up the fundamentals involved in the cruiser design, such as space and weight to be allocated to boilers, machinery, ammunition, supplies, and having made such allocation, determine the dimensions and strength of the hull. All of this must be checked and approved by the Navy Department before detail

> design work can commence in the drawing rooms, as any change in any one of the above fundamentals would necessitate change in design throughout the vessel, and each detail design must be approved by the Navy Department before it can be sent to mold loft.

The comment here, as I take it, Admiral Land, is that a change in any one of the fundamentals of those designs would necessitate change in the design throughout all the others. Is that approximately correct?

Admiral LAND. If you and I understand the term "fundamentals" the same way; yes, that is correct.

Mr. RAUSHENBUSH. Then it talks about having an exception in the code for the draftsmen but even then they would not work them full time.

Then, do we gather roughly the picture that when contract for the light cruisers was signed—and I show you numbers 41 and 42, and here is 43—it says on the second page, article 4:

> Time being of the essence of the contract, it is agreed that plans submitted to the Department will be acted on and returned to the contractor as promptly as possible—

and so forth.

Does the Navy feel at all that there has been undue delay on the part of New York Ship in supplying those working plans?

Admiral LAND. We feel there has been delay. I would not state undue delay. They are behind. They have been behind. Their present progress is between 4 and 5 percent behind the check curve which we have. It is not as good as we would like. And it is not as good as we had hoped for. But it is a fair approximation to what was anticipated, but not what we would like to have.

Senator VANDENBERG. Admiral, if that is a fair anticipation of what you expected, how could you have hoped to use P.W.A. money for the purpose it was intended, namely, to create immediate employment?

Admiral LAND. Senator, we actually did relieve unemployment outside the shipyards and the navy yards, and, more important, we kept people who were employed from being let out by virtue of this program.

Senator VANDENBERG. How?

Admiral LAND. By the construction of this program.

Senator VANDENBERG. How much money did you get from P. W. A.?

Admiral LAND. $238,000,000.

Senator VANDENBERG. How much of that money do you think actually went into unemployment relief?

Admiral LAND. I know how much we spent the first contract year.

Senator VANDENBERG. How much?

Admiral LAND. We estimated $46,000,000, and including both of these 32 ships and the 5 increased Navy which were let at the same time, we spent $47,000,000 the first contract year on construction.

Senator CLARK. That was for both wages and materials?

Admiral LAND. That is everything which was spent out of the Treasury.

Senator CLARK. Total expenditure for that year?

Admiral LAND. Out of the Treasury; yes, sir.

Senator Clark. $47,000,000, Admiral?

Admiral Land. $47,000,000 plus. Our own private estimate was about $43,400,000 on these ships, and we spent about 43,700,000 on the 32 ships. The $47,000,000 covers the 37 ships.

Senator Vandenberg. Your own estimate was that you were going to expend $43,000,000, as I understand it.

Admiral Land. On the 32 ships.

Senator Vandenberg. Out of $238,000,000.

Admiral Land. The first year of construction.

Senator Vandenberg. Was not the $238,000,000, so far as the P. W. A. was concerned, in contemplation of complete expenditure in 1933?

Admiral Land. No, sir; it is not my understanding. The law extends for 2 years, and by interpretation of the authorities, the funds are available under our contracts until expended.[1]

Senator Vandenberg. But the P. W. A. money was not for the purpose of building battleships?

Admiral Land. No, sir.

Senator Vandenberg. It was for the purpose of creating immediate employment, was it not?

Admiral Land. Yes, sir; as I understand it; but it was 2 years. I am not sure. You know more about that than I do. I think it was 2 years.

Senator Vandenberg. Let us say 2 years. How much out of the $238,000,000 would you spend in 2 years?

Admiral Land. I can give you a pretty accurate estimate of that. I cannot do it now because the end of the 2 years is not yet.

Senator Vandenberg. In general.

Admiral Land. The last figure we had was something like $87,000,000 up to around the first of January, and the average expenditure is running anywhere from $7,000,000 to $9,000,000 a month, with very much of an upgrade as to expenditures.

Senator Vandenberg. You made your total estimate for 2 years?

Admiral Land. Yes, sir; for the first 2 years of construction. I would be glad to submit that.

Senator Vandenberg. Can you not make an estimate now just broadly? Our governmental practice now is so loose in handling millions that we will not hold you down very closely on your estimate.

Admiral Land. I think around $150,000,000.

Senator Vandenberg. $150,000,000. That would be $70,000,000 more than you have spent up to date?

Admiral Land. Yes, sir; in the first 2 years of contractual construction.

Senator Vandenberg. And you have no information as to whether or not the P.W.A. thought you were going to use the $238,000,000 in 1 year to serve the unemployment problem for which the P.W.A. was created?

---

[1] Under date of Jan. 31, 1935, Admiral Land submitted the following information regarding the time element relative to contracts incurred under N. I. R. A.:

(*a*) Appropriations are available after the close of the year for which made for the payment of contracts properly made during the year (sec. 3690, Revised Statutes).

(*b*) Available for 2 years after the year for which made for settlement of obligations properly incurred during the year, including contracts (sec. 3691, Revised Statutes).

(*c*) Orders placed with Government-owned establishments for work or material considered as obligations in the same manner as provided for similar orders or contracts placed with private contractors and appropriations will remain available accordingly (Naval appropriation for the fiscal year 1923, approved July 1, 1922).

(*d*) Decision of Comptroller General Jan. 9, 1935, A–59268.

Admiral LAND. I do not believe I can answer that question, Senator.

Senator VANDENBERG. Probably you cannot. You can see what challenges my interest.

Admiral LAND. Yes, sir.

Senator VANDENBERG. The Congress provides for unemployment relief and the P.W.A. administers it and gives you $238,000,000 to build battlehips, justifiable only on the theory that it is creating employment.

Senator CLARK. Immediate employment?

Senator VANDENBERG. Immediate employment, and, as I understand it, it is employment within the 1933 program. Yet up to date you have only spent $87,000,000 of the $238,000,000, so that obviously you have not served the purpose of the creation of the P.W.A.

Admiral LAND. You do not expect me to agree with that conclusion, do you, sir, because I do not?

Senator VANDENBERG. I would be happy to know where you disagree. You do not think that the P.W.A. funds are appropriate to be used on a naval program, unless that program creates immediate employment, do you?

Admiral LAND. We have employed and kept employed out of this fund somewhere in the neighborhood of 50,000 men. That is made up of some accurate figures of the men at the site and some estimated figures of men away from the site.

P.W.A. NAVAL ALLOTMENT IN 1933

The CHAIRMAN. Admiral, did you have any hand in the request that was made of the P.W.A. for these funds?

Admiral LAND. Senator, we, all of us in the Navy Department, had a hand in endeavoring to get a shipbuilding program, which we had been working on for years, and this specific program dates back to about 1930. As an assistant to Admiral Pratt, in Operations at that time, one of my jobs was to work as liaison between him and the General Board in the preparation of a shipbuilding program.

The CHAIRMAN. How was the request of the Public Works Administration initiated?

Admiral LAND. I am not sure. I think it was initiated by the Secretary of the Navy.

Senator CLARK. Admiral, do I understand you correctly to say that this building program had been prepared and was in existence some years before, without any reference to the P.W.A. matter at all?

Admiral LAND. Not the P.W.A. program; no, sir. I did not say that. We had a building program, of which it now turns out that this P.W.A. program incorporated certain parts of the Navy building program.

The CHAIRMAN. Had there been no Public Works program, ought the committee to understand that the requested appropriations by the Navy Department would have been larger than were those directly requested by appropriation?

Admiral LAND. I cannot answer that question directly because at that time there were two steps required by law and by the Congress to obtain a Navy program: (1), authorization, and (2), appropriations. One affects, as you know, the Naval Affairs Committee of both Houses, and the other affects an entirely different committee, the Appropriations Committee.

The CHAIRMAN. Did you have the authorization in 1930?

Admiral LAND. No, sir; excuse me, I do not want to answer that incorrectly. We had some authorization, namely, the cruiser law of 1929.

The CHAIRMAN. You did not have the authorization for the work that is under way at the present time, did you?

Admiral LAND. Only part thereof.

The CHAIRMAN. What was your first knowledge of the effort to obtain allotment from the Public Works funds?

Admiral LAND. I cannot remember the first time we made that, Senator. It is over 2 years ago.

The CHAIRMAN. Forgetting the time, who first acquainted you with the effort that was to be made to get these P.W.A. funds?

Admiral LAND. I think the matter was initiated when it appeared probable that an N.R.A. program with P.W.A. subsection in the bill was being considered by the Congress. I feel quite sure that that was about the time those officials of the Navy Department charged with these matters took very keen interest in what was being done, with the hope that some allocation might be made for a shipbuilding program.

The CHAIRMAN. In requesting the allocation, did you have any hand in shaping the plans or amounts that were to be requested?

Admiral LAND. Yes, sir.

The CHAIRMAN. Upon what was their request based?

Admiral LAND. It was based on estimated costs of each program as laid down in the General Board's annual program for shipbuilding.

Senator CLARK. How much did you ask for?

Admiral LAND. To the best of my recollection, we asked for the sum that we got, $238,000,000.

The CHAIRMAN. Were you estimating at the time how long you would be in expending this money?

Admiral LAND. Absolutely. We knew pretty closely how long it takes to build each class of ship in this country except in war time. We have ample data on peace time construction.

Senator CLARK. Was your information furnished to the P.W.A. Board in requesting this allocation as to the length of time in which it would be spent?

Admiral LAND. I do not know, sir, specifically.

Senator CLARK. You do not know whether the P.W.A. ever requested the information, or whether they simply allocated 100 cents on the dollar what you asked for?

Admiral LAND. I think you gentleman know better than I do how this $238,000,000 was allocated. As to the questions with regard to time, as to whether they were asked or answered, I do not know, but those cognizant of Navy shipbuilding in this country knew about what length of time it required.

The CHAIRMAN. Admiral, did the New York Shipbuilding yards indicate to you that the Navy ought to make part of these Public Works funds available to them?

Admiral LAND. Not to my knowledge, not as far as I recollect.

Senator VANDENBERG. The $238,000,000 was established as a figure from the viewpoint of the naval program rather than from the viewpoint of the employment needs of P.W.A., was it not?

Admiral LAND. I cannot answer that, sir.

Senator VANDENBERG. What was Admiral Peoples' status at this time?

Admiral LAND. When this P.W.A. matter came up?

Senator VANDENBERG. Yes.

Admiral LAND. I am not sure that Admiral Peoples was here at all at that time. I would have to check up from the Navy Register when he was appointed Chief of the Bureau of Supplies and Accounts, but to the best of my recollection, he had no active part in the matter at that time, that is, in the spring of 1933. May I ask Admiral Robinson?

Senator VANDENBERG. Yes.

Admiral LAND. Was Peoples here in the spring of 1933?

Admiral ROBINSON. I do not remember. He came along about that time, but the exact date I do not remember. He did not have anything to do with this program, if that is the answer.

Senator VANDENBERG. That is what I was inquiring about.

Admiral LAND. That is what I wanted to say but I wanted to be sure, because I do not want to give you gentlemen any misinformation that I would have to correct. I do not think that he was here, and I do not think that he had anything to do with the program.

The CHAIRMAN. Admiral, would you like to have Admiral Robinson up here at the table this morning? Might he have information which we are asking for which you cannot furnish?

Admiral LAND. We have worked jointly on this thing since it started.

The CHAIRMAN. I would suggest that Admiral Robinson come forward and be sworn.

TESTIMONY OF REAR ADMIRAL S. M. ROBINSON

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Give the committee your full name, Admiral.

Admiral ROBINSON. Rear Admiral S. M. Robinson, Engineer in Chief, Chief of the Bureau of Engineering.

Senator VANDENBERG. Admiral Land, who in the Navy Department would be the appropriate witness to testify for the Navy Department as to how this figure of $238,000,000 was arrived at, and why? [1]

Admiral LAND. The Secretary and Assistant Secretary, and Chief of Naval Operations, and I suppose the president of the general board, and Admiral Robinson and myself. Is that about it?

Admiral ROBINSON. Yes. They all had a hand in it.

Admiral LAND. We were all concerned in it.

Senator CLARK. Admiral, a moment ago you asked Admiral Robinson whether Admiral Peoples was here when this program was prepared in 1932. Do I understand that this program was prepared then in 1932?

Admiral LAND. It was discussed in the fall of 1932 and the spring of 1933.

---

[1] In connection with this question see statement of Admiral Land, appendix, p. 4956.

Senator CLARK. But the P.W.A. program was not enacted into law until June 1933.

Admiral LAND. When I said " this program ", I am talking about the Navy building program.

Senator CLARK. That is exactly what I am trying to get at, Admiral, whether this program was prepared actually to accomplish an ordinary program of building warships, or whether it was prepared with special reference to P.W.A. purposes of putting men to work?

Admiral LAND. The program was prepared originally as part of the Navy Department's building program.

Senator CLARK. In other words, it was for naval purposes, rather than for reemployment?

Admiral LAND. Originally; yes, sir.

Senator CLARK. That is what I was trying to get at.

Mr. RAUSHENBUSH. Admiral, was there not more than $238,000,000 allocated to the Navy?

Admiral LAND. Not for ships.

Mr. RAUSHENBUSH. What was the rest of it allocated for?

Admiral LAND. I do not know.

Mr. RAUSHENBUSH. You think that is the total figure?

Admiral LAND. That is for ships in 1933.

Mr. RAUSHENBUSH. We, somewhere, ran across a figure of another $40,000,000. Was that for something else?

Admiral LAND. Are you speaking of 1934?

Mr. RAUSHENBUSH. Yes, sir; I think so.

Admiral LAND. That is the 1934 allocation.

Mr. RAUSHENBUSH. How much was that?

Admiral LAND. It is $40,000,000 plus, which was allocated in what was known as " increase of the Navy emergency construction." Of that sum, $25,000,000 plus was allocated for ships in 1934. This was done by the Administration through the Treasury to the Navy Department.[1]

Mr. RAUSHENBUSH. So when we are talking about P.W.A. funds, altogether, we have a total of somewhere around $278,000,000 to talk about. Is that correct?

Admiral LAND. I am not able to confirm that or deny that because I do not know about the P.W.A. connection with the increased Navy emergency construction.

---

[1] Under date of Jan. 31, 1935, Admiral Land submitted the following information regarding the 1934 building program and the $40,000,000 allotment to the Navy:

(*a*) $40,661,905 were allotted to the Navy Department June 29, 1934.

(*b*) $25,050,333 of this amount was reallocated by the Secretary of the Navy for ship work Aug. 23, 1934.

(*c*) This amount covers the first year's estimated expenditures for 6 submarines and 14 destroyers.

(*d*) This matter was thoroughly discussed before the Deficiency Appropriation Committee of the 73d Cong., 2d sess., on p. 275, etc., of their hearings entitled "Additional Appropriations for Emergency Purposes ", dated May 22, 1934.

The National Industrial Recovery Act, which became law on June 15, 1933, indicates what is included in public works. Ships and aircraft are included (National Industrial Recovery Act, sec. 202, p. 8).

Public works are defined in Public, No. 2, Seventy-third Congress, " credit bill ", approved Mar. 20, 1933, p. 7, sec. 4, subpar. 2, from which the following is quoted:

" 'Public works' as used in this section shall comprise all projects falling in the general classes enumerated in Budget Statement No. 9, pages A177 to A182, inclusive, of the Budget for the fiscal year 1934, and shall also include the procurement of new airplanes and the construction of vessels under appropriations for 'Increase of the Navy.' The interpretation by the Director of the Bureau of the Budget, or by the President in the cases of the War Department and the Navy Department, of 'public works' as defined and designated herein shall be conclusive."

Mr. RAUSHENBUSH. You were testifying a few minutes ago to the effect, if I understood you correctly, that $42,000,000 or $43,000,000 of P.W.A. funds had been spent. Is that correct?

Admiral LAND. During the first construction year, of the 1933 program, on the N.R.A. program $43,000,000 plus, or on the total program $47,000,000 plus was spent out of the Treasury.

Mr. RAUSHENBUSH. How much of that went to machinery?

Admiral LAND. I do not know.

Mr. RAUSHENBUSH. Did not the bulk of it go to machinery?

Admiral LAND. I should very much doubt that. You could break that down. I think, on the contrary, probably more went to hulls, merely because hulls are usually in advance, in the early stages, particularly, of machinery, because you have to have a hull in which to put your machinery. That I am not able to answer correctly.

Mr. RAUSHENBUSH. Would Admiral Robinson be able to answer that?

Admiral ROBINSON. From the percentages of the completion of the ships, it is obvious that a considerable more portion of it was spent on the hulls than on the machinery.

Mr. RAUSHENBUSH. About how does the proportion run?

Admiral ROBINSON. On the *Brooklyn* the hull is 17.6 percent completed and the machinery is 4 percent completed. On the *Philadelphia* the hull is 15 percent completed and the machinery 2.5 percent completed. On the *Savannah* the hull was 15.5 percent completed and the machinery 18.5 percent completed. On the *Nashville* the hull was 14.5 percent completed and the machinery was 18.5 percent completed.

Mr. RAUSHENBUSH. 14.5 percent on the hull and 18.5 percent on the machinery on the *Nashville* would look like a large part of it had been spent on machinery.

Admiral ROBINSON. On that particular ship. I thought you were referring to all of the ships. Some have a little bit more on the hull than on the machinery, and some have a little bit more on the machinery than on the hull.

Senator VANDENBERG. Admiral Robinson, you cannot translate that for us into dollars and cents, in a general estimate as to how much of the $47,000,000 probably went for labor and how much for materials?

Admiral ROBINSON. We have a figure which we use for estimating labor and material which is, as I remember it, about 70–30, 70 labor and 30 materials. That is a rough figure which we use for covering all our work. It is fairly accurate.

Senator VANDENBERG. Seventy percent of $47,000,000 is about $34,000,000?

Admiral ROBINSON. That is about right; yes, sir.

Senator VANDENBERG. That would be the outside figure on labor, would it not?

Admiral ROBINSON. I think it is just about the correct figure.

Senator VANDENBERG. $34,000,000 out of $238,000,000 was spent for labor the first year in round numbers?

Admiral ROBINSON. Yes, sir; about that.

Senator CLARK. Admiral Land, did I understand you to say a moment ago that after the first allotment of $238,000,000 of P. W. A.

funds, then in 1934 they got an allotment of $40,000,000 from P.W.A. funds?

Admiral LAND. No, sir; I did not say that. I am unable to differentiate accurately as to just what the second allotment means or its source. I know what we call it. It covers new ships. It covers 20 new ships. It is not the same program at all but an entirely different program.

Senator CLARK. I am speaking of the program. You do not know where you got the money?

Admiral LAND. Yes, I know where we got it, but I do not know how it is allocated.

Senator CLARK. Was it authorized in any act of Congress and appropriated for in an appropriation bill?

Admiral LAND. Not under increase of the Navy; no, sir.

Senator CLARK. If you only spent $87,000,000 out of the $238,000,000 during the first year, what was the cause for granting an additional $40,000,000?

Admiral LAND. A new program.

Senator CLARK. A new program. Did that put additional men to work?

Admiral LAND. Yes, sir.

Senator CLARK. How many?

Admiral LAND. I cannot answer that accurately. I can give you general information that 80 to 85 percent of any appropriation so far as shipbuilding is concerned goes to labor.

Mr. RAUSHENBUSH. How do you arrive at that figure, Admiral? I ask the question because in the estimates of the company introduced so far, they allocated about 50–50 to labor and materials. That ran on a cruiser roughly $4,000,000 for labor, $4,000,000 for material.

Admiral LAND. That is at the site. I have a complete break-down of that with percentages, which has never been challenged, and which was given to the Naval Affairs Committee last year, and I would be glad to resubmit it, an actual break-down of that 85 percent labor.[1]

Mr. RAUSHENBUSH. I think we ought to have that, Mr. Chairman.

Admiral LAND. All right; I will be glad to submit it.

Senator VANDENBERG. You said that the $40,000,000 was for a new program?

Admiral LAND. Yes, sir.

Senator VANDENBERG. You mean a new Navy program?

Admiral LAND. A new Navy program, of which $25,000,000 was allocated to ships, 20 ships, in the 1934 Navy shipbuilding program.

Senator CLARK. What I am getting at, so far as the reemployment is concerned, Admiral, was in spite of the fact that you were only able to spend for that purpose in the first year $87,000,000, and had approximately $150,000,000 unexpended in the first allocation, why you came back and got another $40,000,000 in the second year.

---

[1] Under date of Jan. 31, 1935, Admiral Land submitted the following analysis and break-down regarding his statement about the percentage of labor in shipbuilding costs:

Shipbuilding costs are made up approximately as follows: 40 percent labor plus 40 percent material plus 20 percent overhead equals 100 percent. About 40 percent of the cost of building a ship goes to labor at the site. Of the 40 percent cost of material about 70 percent goes to labor away from the site, namely, in the field, all the way back to the forest and the mines; 70 percent of the 40 percent equals 28 percent. Of the overhead cost about 80 percent goes to labor; 80 percent of 20 percent equals 16 percent. Therefore, we have 40 percent plus 28 percent plus 16 percent equals 84 percent which goes to labor in the shipbuilding industry.

Admiral LAND. That is what we got.

Senator VANDENBERG. Have you an application with them for further allocation for the coming year?

Admiral LAND. We have a bill before the Congress for increase of the Navy under the present appropriation bill of 24 ships. That is all.

Senator VANDENBERG. Have you an application with the P.W.A.?

Admiral LAND. Not for ships, so far as I know.

Senator VANDENBERG. Have you an application with the P.W.A. for anything?

Admiral LAND. I expect so. I think so.

Senator VANDENBERG. Do you recall what it is?

Admiral LAND. No, sir. It is not in my province.

Senator VANDENBERG. Is not the Navy asking for $100,000,000 more from P.W.A.?

Admiral LAND. I do not know.

Senator VANDENBERG. You have not heard that was the figure?

Admiral LAND. I have not heard that figure. I know the Navy is asking for something, and I have seen the break-down of the items, but it comes more directly under the Bureau of Yards and Docks, that is the public-works part of the Navy Department.

Senator VANDENBERG. I am not quarreling with you, Admiral, or with the Navy, but I am trying to discover whether P.W.A. money is being spent for P.W.A. purposes or Navy purposes.

Mr. RAUSHENBUSH. In that connection, Admiral Land, what effect did the code for shipbuilding have on the number of hours worked? Let us say before June 1933 the men were working longer time than after that, were they not?

Admiral LAND. Yes, sir.

Mr. RAUSHENBUSH. About what reduction was there in hours weekly?

Admiral LAND. That is a variable quantity as to shipbuilders. After the code went into effect for private shipbuilders it was 32 hours, which was subsequently changed to 36 hours, where it now stands.

Mr. RAUSHENBUSH. Before then how long were they working?

Admiral LAND. That is dependent entirely on the shipyard.

Senator CLARK. Admiral, you estimated a while ago that the authorities hold that you can use this $238,000,000 until it is expended, no matter how long that may take. What authorities made such a ruling as to that?

Admiral LAND. I think the bill itself and the Comptroller General.

Senator CLARK. The Comptroller General passed on that?

Admiral LAND. I am not sure of that, but my understanding is that the bill itself permits a given contract to remain in force until expended.

Senator CLARK. So that as soon as you lay down the keels on this program for Public Works, it is necessarily not of any great moment to the Navy Department when they are completed, because you have got control of the funds to complete them, no matter how long it may take?

Admiral LAND. No, sir.

Senator CLARK. Then you can turn around on the reemployment business and ask for an additional appropriation in the next year?

Admiral LAND. That is not correct, sir. It is of the greatest interest to us to complete those ships as efficiently and economically and at the earliest possible date.

Senator CLARK. What steps have the Navy Department taken with the New York Shipbuilding Corporation to get these plans for light cruisers?

Admiral LAND. We have taken extraordinary steps, all of which are listed here, and I would be glad to furnish them step by step.[1]

Senator CLARK. We certainly would be glad to have them.

Admiral LAND. It is all available, sir, and I have it in the testimony I gave last week to Mr. Vinson's committee in the House, and I would be very glad to submit it here.

Senator CLARK. Is there any specification in your contract with the New York Shipbuilding Co. as to when those plans would be completed?

Admiral LAND. Not as to date; no, sir. There are clauses, or, rather, the contract clause requires the ship to be completed on a given date, under penalty.

Senator CLARK. I am speaking of the plans which they were preparing for ships to be constructed by the Navy.

Admiral LAND. It is the same thing. They have got to get their plans to build their own ship. I can give you very briefly just what happened to those plans. As a matter of fact, we get the plans from them sometimes before they actually get them around their own plant.

Senator CLARK. What I am trying to get at, Admiral, is as to whether there was any provision in the contract which required the New York Shipbuilding Corporation to have those plans prepared at a certain time.

Admiral LAND. No, sir.

Senator CLARK. In other words, taking your previous statement as to the ruling of the Comptroller General that these funds were available to the Navy Department until expended, and putting it together with the statement that there was no provision in the contract with the New York Shipbuilding Corporation, the New York Shipbuilding Corporation might have delayed 10 years in preparing the plans, and therefore the P.W.A. funds would still be available to the Navy Department.

Admiral LAND. No, sir; they cannot do that, unless they want to bankrupt themselves, because there are very severe penalties in the contract about the time of building the vessels.

Senator CLARK. They were not building the vessels about which I am speaking, but the plans for constructing the vessels in the navy yards.

Admiral LAND. It is the same thing. We get the plans and approve them. There are plans and we get them at the navy yard just as soon as they get them at their own plant, after approval.

Admiral ROBINSON. May I say a word, Senator?

Senator CLARK. Yes, sir; certainly.

---

[1] See footnote on p. 4708.

Admiral Robinson. The plans to which you are referring are exactly the same for the navy yard ships as the New York Shipbuilding Corporation. When they get some plans ready, after we put them into form for our own yards, they are ready for us; they are the same plans, and the plans have to be completed. There was no time given, because no time is included in the contract time for the ship.

EMPLOYMENT RESULTING FROM P.W.A. FUNDS

The Chairman. Admiral Land, are you undertaking at all this morning to estimate how many men this Public Works money has afforded employment for?

Admiral Land. So far as our N.R.A. program is concerned, I have reasonably accurate figures which I have already given, and I am trusting a little bit to memory here, but, roughly, it is about 39.000 plus at the sites, and at least 15,000 away from the sites. My estimate is around 50,000 men, both at the sites and away from the sites.

The Chairman. What has contributed to that employment? Has it been the Public Works funds that have been allotted to you, or has it been the new hours of employment that have been called for under the codes of the N.R.A.?

Admiral Land. I think it has been the funds which have been allotted. I am not capable of stating an answer to the second part of your question.

Mr. Raushenbush. Mr. Chairman, a witness on Friday, Mr. John Frey, was called upon by one of the Senators to furnish that information, and he secured it from the Chief Clerk of the Navy Department, and I have it before me.

The Chairman. Let it be read.

Mr. Raushenbush. Employment in navy yards, June 30, 1933, total number of employees in navy yards, on both coasts, 30.224; December 31, 1934, 37,294.

Now, the question which I was getting at a moment ago, Admiral Land, was this: If the hours in the shipyards before the codes, back in June, were 48 hours, and they were cut down to 36 hours, that would be a 25-percent cut in hours. That would supposedly give work to that many more men. Now, here we find a change of about 20 percent, less than the 25 percent, 20 percent between June 30, 1933, and December 31, 1934, when supposedly the program was humming along, just about 22 percent.

Now, would it not be a fairly correct deduction from that that the bulk of the employment was due to changes in hours rather than P. W. A. funds?

Let me show you those figures [handing "Exhibit No. 1480" to witness].

Senator Vandenberg. Do I understand, Mr. Raushenbush, that these figures indicate an increase in employment of only 7,000 men from June 30, 1933, to December 31, 1934?

Mr. Raushenbush. Yes, sir; 7,070 men. It is also given on the exhibit which are the east-coast figures, which show that the bulk of the additional amount was on the east coast and almost nothing on the west coast.

Senator VANDENBERG. How do you reconcile that, Admiral Land, with your statement about 50,000 men? Is there some other employment which you have in mind?

Admiral LAND. If there had been no P.W.A. allotment, there would have been no employment for the people who got this money. That is just axiomatic. To differentiate there between the number of hours, I cannot do it; but I gave my estimate of the situation, which is that the P.W.A. allotment permitted an increase of employment, other than that which would have obtained, of about 50,000 men.

Senator VANDENBERG. I want to be sure I understand you. Fifty thousand men for a week, or a month, or a year, or what?

Admiral LAND. It commenced from zero and worked up to that, and is on the increase.

Mr. RAUSHENBUSH. Fifty thousand in addition to the 22,000 employed?

Admiral LAND. I did not say that at all.

Mr. RAUSHENBUSH. I did not understand. I am sorry. You mean an addition between that figure of 30,000 and 50,000 would be an additional 20,000? Did I understand that?

Admiral LAND. No; that is not what I stated.

The CHAIRMAN. Let us get that clear. What is the 30,000 estimated to be, Mr. Raushenbush? What is it the total of?

Mr. RAUSHENBUSH. These figures were supposedly obtained from the Chief Clerk of the Navy Department just the other day, after that request was put in, and they are supposed to show the total number of employees in navy yards on both coasts as of June 30, 1933.

Admiral LAND. Mr. Chairman, these data are probably correct. It has nothing to do with what I am talking about; that is, navy yards.

Mr. RAUSHENBUSH. That is navy yards.

Admiral LAND. I am talking about the whole principle. I cannot compare those figures with my figures.

Senator VANDENBERG. In other words, the difference between these figures and yours would be taken up in the construction in the private yards?

Admiral LAND. Yes, sir; and in the subcontractors' plants, all the way back to the forests and mines.

Mr. RAUSHENBUSH. So far as you know, those figures represent about the situation as it exists in the navy yards?

Admiral LAND. If they were given you by the Chief Clerk, I feel they are quite correct.

(Statement referred to was marked "Exhibit No. 1480" and is included in the appendix on p. 4915.)

Mr. RAUSHENBUSH. In the private yards, in addition to these changes which may or may not be due to the hourly changes, you stated how many men had been given work; that was due not to any changes in hours, but just due to P. W. A. money.

Admiral LAND. That was the knowledge that I have, and I stated very definitely that it was made up of two parts; that is, retention of employees and reemployment.

Senator VANDENBERG. Admiral Land, when you allocated this $238,000,000 to the various ships to be constructed, did you allocate the complete cost of the ship, or did you divide the $238,000,000 among a considerably larger number of ships than the $238,000,000 would pay for in total?

Admiral Land. No, sir; this was a specific sum, for a specific number of ships which were advertised for, and contracts awarded to private yards, the remainder being allocated to navy yards.

Senator Vandenberg. Do you mean that $238,000,000 would pay the full bill for all the ships that were started under the allocation?

Admiral Land. Thirty-two ships. That was our estimate.

Mr. LaRouche. Admiral, I believe I can throw a little light on that. I think that what the Senator has in mind is that these ships will not be completed on this money, exactly as in the past ships have been completed under increases in the Navy. In other words, are there not some extras which are considered an essential part of that, which are not provided on these ships?

Admiral Land. That is probably correct. These were estimates based on ships complete and ready for sea, and there will be some reserves, particularly ordnance reserves, that we will have to get, probably get additional funds for. Also, conditions have very materially changed since the estimates were made. We all know that prices have gone up since that time, and they may go up further, so that no one can give you an accurate estimate as to the final cost of these 32 ships at this time.

Senator Vandenberg. Could you give me a general idea of how much more than $238,000,000 is necessary to finish the one job which was started with the $238,000,000? [1]

Admiral Land. Yes, sir; somewhere between 40 and 55 million dollars is the estimate as of today. That includes, as I say, all reserves which were not originally estimated on.

The Chairman. That will complete the job for which the Public Works funds were allotted?

Admiral Land. Yes, sir.

NAVY'S ABILITY TO DESIGN

Senator Vandenberg. May I ask Admiral Land whether the Navy is equipped to completely design a cruiser within its own engineering facilities?

Admiral Land. Yes; that is not only possible but probable. We are not fully equipped to do it in any rapid length of time, because we have insufficient personnel to do all the design work that is involved in a combatant ship of the type of a cruiser. It can be done, but we could not do it particularly expeditiously with our present set-up.

Senator Clark. How long has it been since the Navy actually did design a cruiser, Admiral?

Admiral Land. We make contract plans, which are proper to design the ship, but when we get into 5 to 7 thousand plans, we do not make them; we do not make the largest percentage of them. They are made by the successful contractor, and they are made by the subcontractors, all the way back to the men who build a pump or a blower or a motor. We could do it, but it would not be economical and would not be efficient with our present set-up. It would take a great many more men under Admiral Robinson and myself, and it would take more men in the navy yards to make a complete design to include every contract plan and working plan down to the last detail in the construction of a man-of-war.

---

[1] Under date of Feb. 27, 1935, the Secretary of the Navy informed the committee that up to that time no additional allocation from any source had been received for the 32 vessels building under the N. R. A. Act. In hearings of January 1935 before the Committee on Naval Affairs of the House of Representatives the statement was made that an estimated $55,000,000 additional would be required to finish the 32 vessels. The greatest part of the deficit being accounted for by ordnance reserves not included in the original estimate. See "Exhibit No. 1669" in hearings of Mar. 12, 1935.

Senator CLARK. The Navy formerly did that work, Admiral, did it not?

Admiral LAND. Not to my knowledge. It never has. I can go back about 35 years.

Senator CLARK. Do you consider it an economical practice, Admiral, to have the plans drawn by the contractors themselves?

Admiral LAND. It has been established over a long period of years, and over long experience, that it is the most economical way to do it, because we have not had a regular shipbuilding program in this man's Navy of ours. We have humps and hollows. When you have a hump, why, we can employ and keep busy a large number of high-class technical men. When we have a hollow, we cannot, and they like to get fixed employment, where they are somewhat assured. Also, we are a training school, to a large degree, and I say " we " meaning particularly Admiral Robinson and myself, as we lose our expert men from time to time to go to outside concerns. That is not true only of the shipbuilding industry but elsewhere.

The CHAIRMAN. How does the private industry take care of humps and peaks?

Admiral LAND. They have other sources than Navy shipbuilding. They have merchant shipbuilding. Some of them are in the manufacturing business, some of them build boilers, some of them build turbines, and some of them build their own auxiliaries, all the way through, both for Navy and the merchant marine, and they have side issues of various kinds to take care of the humps and hollows, and have a somewhat more stable load than we have been able to do from a navy yard point of view.

Senator CLARK. When they have a hump, they just step out and take your personnel, Admiral?

Admiral LAND. There is something in what you say.

Senator BARBOUR. I want to be sure, Mr. Chairman, that I understand the Senator's question correctly. When you speak of the ability of the Navy to make all these designs themselves, do you refer, for instance, to the designing of a marine boiler, and the details of that, Senator Clark, or Senator Vandenberg?

Is that what you have in mind, or as against getting bids of concerns which for years have made marine boilers?

Senator VANDENBERG. If you are asking me, I am not trying to detail this thing down to the boiler room. I am interested in the general inquiry as to whether the Navy is dependent upon the private shipyard for designs, speaking abstractly and generally, and it is my understanding that under the set-up today they are absolutely dependent upon the private shipyards. Is that correct?

Admiral LAND. I would not say absolutely, Senator. We are, in a way, dependent upon them, but, as I say, by a great augmentation of our forces, we could do this. It would not be economical and probably would not be efficient, because we would then become standardized in the Navy and would not have the benefit of the design and engineering information which exists in the shipbuilding world in the United States.

Senator VANDENBERG. I understand that. Let me get back to this matter again. I understand you to say that you might augment your forces and become independent.

Admiral LAND. That is possible.

Senator VANDENBERG. All right. That still leaves us with this contemplation, as I understand it, that during the last 20 years, and at the present moment, you are dependent upon outside shipbuilders for design.

Admiral LAND. In a sense of the term, that is correct.

Senator VANDENBERG. Actually that is a fact, is it not?

Admiral LAND. We are not dependent for contract plans except in an emergency program. We are dependent upon detailed design; yes.

Senator VANDENBERG. Now, to what extent does that put you at the mercy of the outside shipbuilder?

Admiral LAND. I do not think it puts us at their mercy; no, sir, as I understand the term. We always have the whip hand in any situation of that kind, and, if anybody tries, through vicious attributes, to perpetrate something on the Navy Department, we are in a position to go ahead and do it ourselves. We have been doing it, now, for years. I can cite instances in the manufacturing game where it looked as if we were being treated pretty hard, and we talked it over and found out the reason.

Senator VANDENBERG. You could not take over the planning when it was dragging due to any such conditions?

Admiral LAND. We could not take over 7 different designs, a greater number than we have ever had in the Navy Department.

The CHAIRMAN. Some of those designs and plans are common for ships being built in the private yards and those built in the navy yards, are they not?

Admiral LAND. Yes, sir.

The CHAIRMAN. Has a ship ever been started in the navy yards under its plans ahead of the start in the private yard?

Admiral LAND. That would depend entirely, Senator, on whether the contract required the navy yard to draw the plans, or whether it required the shipbulder to draw the plans. If it requires the shipbuilder to draw the plans, there is a clause in the contract, from which we got the plans, at the cost of labor and material for the blueprinting, tracing, and what not. If it is done by the navy yard, it would be the other way; that is, the shipbuilder would pay us. It can be done either way. We are actually building two gunboats and we have not had any assistance from outside, from anybody at all.

The CHAIRMAN. Did the navy yards do all the designing on that?

Admiral LAND. Not the navy yards. The bureaus and the navy yards.

Senator VANDENBERG. When the American Federation of Labor constantly protested to your Department over the failure of this Navy program to take up unemployment in the degree they thought it should, what was the reason that the Navy Department always gave the American Federation of Labor for the delay and for the comparatively small amount of employment provided? What was the reason that the Navy Department always gave the American Federation of Labor?

Admiral LAND. We gave them, in many conferences, simply the same reasons I have endeavored to give this committee this morning.

Senator VANDENBERG. I do not want to go into detail, but, in a word, was there not always, or almost always, delay in plans?

Admiral LAND. That is always the neck of the bottle in a shipbuilding program, so far as the start is concerned.

Senator VANDENBERG. Precisely.

Admiral LAND. Yes, sir; that is correct.

Senator VANDENBERG. Therefore, the responsibility for the delay, if there was a delay, was on the failure of the designs to be produced expeditiously in the private yards?

Admiral LAND. To a certain extent. Some of that responsibility belongs on our shoulders.

Senator VANDENBERG. Why?

Admiral LAND. Because we did not have contract plans, which has been the practice of the Navy Department for years.

Senator VANDENBERG. I do not want to leave any misunderstanding on the record, and let me ask you this: You do not mean that there is any responsibility on you because you did not pursue the shipyards for these plans?

Admiral LAND. Not at all. I hate to repeat, but I again must state that we had precipitated upon us seven new designs in 1933.

Senator VANDENBERG. They were not precipitated upon you. You were very eager and solicitous of getting the privilege of having them precipitated upon you, were you not?

Admiral LAND. Absolutely; but they were precipitated just the same.

Senator CLARK. You were standing around waiting for the invitation.

Admiral LAND. Surely, with a large blanket to catch them all.

Senator BARBOUR. As I understand it, Admiral, it is your opinion that if the United States Government wanted to spend enough money, regardless of whether it would be a more expensive way than otherwise. from the point of view of the taxpayer, obviously the Navy Department could do the whole thing itself?

Admiral LAND. Yes, sir; that is correct.

Senator BARBOUR. I know that if anybody had money enough you could do any and all those things. So that if the committee is trying to find out whether it would be possible for the United States Government to make all the designs and build all the ships, it could be done if they wanted to spend enough money to do it?

Admiral LAND. That is correct.

Senator BARBOUR. It would not necessarily follow that, under all the circumstances. it would be the best and most economical approach to the situation.

Senator VANDENBERG. I think that that is so; that there is no conclusive evidence as to whether it is or is not the better plan. But how can you say, Admiral, in the existing arrangement, that it is the better or more economical plan if you have never tried the other one?

Admiral LAND. We have tried the other one. I cited an instance. We were doing it with the gunboats. I would like again to draw the committee's attention to this fact: It is well known in the United States that the private shipbuilders think they are better designers than the Navy Department, and the Navy Department thinks they are just as good as the private shipbuilders. To get the best results it stands to reason that a little competition is the life of trade, and if we are going to make the progress which you gentlemen expect the United States to make in connection with design and construction of combatant ships, it seems reasonable to me to have this competition between the private shipyard designers and the Navy Department designers to get the best results, and probably the best results and the cheapest.

Senator VANDENBERG. That is what I have been trying to dicover, if there is any competition; and I have not been able to discover any. It seems to me instead of a monopoly in the Navy with respect to the designs, the monopoly exists externally with the Navy, and to a substantial degree they are at the mercy of the private shipyard. Is that an erroneous statement?

Admiral LAND. I think it is only a half truth, because we are not at the mercy of them, as I have explained. If we are being jammed and feel we are getting the worst of it, we can always take the thing away from them.

Senator VANDENBERG. Have you ever felt during the last 2 or 3 years that you were getting the worst of it from the private shipyards?

Admiral LAND. In certain instances, yes, sir; and we have gone after the private shipyards as best we could, bait, hook, and sinker.

Mr. RAUSHENBUSH. What instances were those, Admiral?

Admiral LAND. Dozens of instances in connection with the plans. Dozens of instances in connection with the changes of design, installations going into ships. We have a continuous row with the contractor over changes to bring these ships up to date. They are down in the Navy Department practically every day complaining of our action on this and that, and our inspectors are asked for recommendations every day in the week, and they are complaining about different things. It is no beer and skittles between the Navy Department and the private shipyards by any manner of means.

Mr. RAUSHENBUSH. Did you ever throw out any bids because they were too high?

Admiral LAND. Yes, indeed.

Mr. RAUSHENBUSH. That is one of the things which you mentioned. You said you had particular control over it.

Admiral LAND. What I meant was that the Navy Department always has the whip hand in connection with the matter, from the inception, the beginning, to the end of the contract, all the way right through it.

Mr. RAUSHENBUSH. Which time was it you threw the bids out because they were too high, Admiral?

Admiral LAND. There have been a great many times when high bids have been thrown out. It nearly always obtains that high bids are thrown out, because we attempt and, so far as I know, we always do award to the lowest satisfactory bidder.

Mr. RAUSHENBUSH. That was not the question. I asked when you threw the bids out.

Admiral LAND. You are speaking of the bids on the *Wichita* last summer, 1934?

Mr. RAUSHENBUSH. I was asking the question when it was done.

Admiral LAND. On that particular ship all the bids were thrown out, and the cruiser was allocated to the Philadelphia Navy Yard.

Mr. RAUSHENBUSH. That was because the bids were too high?

Admiral LAND. In our opinion the bids were too high.

Mr. RAUSHENBUSH. All the bids?

Admiral LAND. All the bids. I think there were four or five bidders on the thing, some of them ranging from a minimum of around $14.000.000 to $16,600,000, and some odd thousands.

Mr. RAUSHENBUSH. Just in passing, will you identify this joint letter from the Bureaus to the Secretary, summarizing the bids in August of 1933?

Admiral LAND (examining letter). That is our letter.

Senator VANDENBERG. When was it that these bids were thrown out? In 1934?

Admiral LAND. Yes, sir.

The CHAIRMAN. What month in 1934?

Admiral LAND. August.

Senator VANDENBERG. Were there any bids thrown out in 1933 because they were too high?

Admiral LAND. Not specifically thrown out. They were not awarded, but no complete class was rejected.

Senator BARBOUR. Admiral, with the chairman's permission, if it is a fair question, I would like to ask you this: Assuming that you had a situation where war should be imminent, would it mean that your navy yards would be greatly engaged with last-minute alterations and repairs and supplementing carriers of one kind or another with armament and equipment? In other words, would your yards be used, certainly, to a very unusual extent, and would it not then be of advantage to the country to have private yards that could go along with the building of new boats?

Admiral LAND. Yes, sir. Our experience in the last war very definitely proved that. When engaged in war, no navy yard can carry out shipbuilding. It has to concentrate all its efforts and expand to the limit to take care of repairs, alterations, and conversion jobs.

Mr. LAROUCHE. May I ask a question? Admiral, is it not a fact that the conversions which you speak of are the most immediate thing and the thing most needed to prosecute war at that time?

Admiral LAND. I am not in a position definitely to answer that. It is one of the most important things.

The CHAIRMAN. It is far more important to have a ship ready for service in 10 days than in a year, is it not?

Admiral LAND. Yes, sir.

The CHAIRMAN. Admiral, how hard did the Navy have to go to work to accomplish the allotment of these Public Works funds?

Admiral LAND. Senator, do you think that is a fair question and is capable of an answer? You say "how hard." I am afraid I cannot answer that.

The CHAIRMAN. Let me ask it in another way. Did you have an active part in prevailing upon the authorities to grant this Public Works appropriation?

Admiral LAND. To the best of my ability; yes, sir.

The CHAIRMAN. To whom did you go to present your plea for this money?

Admiral LAND. To my immediate superiors.

The CHAIRMAN. Did you go to the Public Works Administrator?

Admiral LAND. I did not.

The CHAIRMAN. Who, from the Navy Department, did go to the Public Works Administrator?

Admiral LAND. I do not know.

The CHAIRMAN. You did not go with others from the Navy Department to the Public Works Administration in connection with this at any time?

Admiral LAND. I have already answered that, Senator. I did not.

The CHAIRMAN. Did you go to the White House in connection with it? You did, did you not?

Admiral LAND. Yes; I went to the White House with my Navy superiors.

The CHAIRMAN. In connection with this Public Works program?

Admiral LAND. Not in connection with the Public Works program as a program, but in connection with the Navy building program; yes.

The CHAIRMAN. That is right, and with your plea for funds from the Public Works Administration to go ahead with this program?

Admiral LAND. Absolutely.

The CHAIRMAN. How many ships have been started and will be completed with Public Works funds already appropriated?

Admiral LAND. As I understand the matter, there are 32 ships, that is, 32 which we have been discussing this morning under N.R.A. That is the 1933 program. I cannot differentiate this 1934 program as to the allocation of funds.

The CHAIRMAN. Now, are we to understand that there are 32 ships started that could not have been started without this Public Works allocation?

Admiral LAND. That is correct, unless Congress had appropriated otherwise for it.

The CHAIRMAN. That is right.

Senator VANDENBERG. How many are started out of the additional $40,000,000 you got in 1934?

Admiral LAND. Twenty.

The CHAIRMAN. All right, Mr. Raushenbush.

RULING OF COMPTROLLER GENERAL IN 1931 REGARDING FIRMS BIDDING ON THEIR OWN DESIGNS

Senator VANDENBERG. I would like to ask Admiral Land one further question. Did you ever hear of a criticism, an official criticism, by the Comptroller General of the United States in 1931 upon this practice of letting ship contracts to private yards upon their own private designs?

Admiral LAND. I have heard of it; yes, sir.

Senator VANDENBERG. What did the Comptroller General have to say on that subject? Do you recall?

Admiral LAND. I was not in the Bureau of Construction and Repair at that time.

Senator VANDENBERG. Do you remember in a general way what the attitude of the Comptroller General was?

Admiral LAND. Only in a very general way.

Senator VANDENBERG. Mr. Raushenbush, is this a statement of the Comptroller General [exhibiting paper]?

Mr. RAUSHENBUSH. Yes, sir; at the time the United Drydocks had put in a bid, and felt that it was low, and Bethlehem was given the award on its own design. There was correspondence back and forth, and you hold in your hand the final letter from the Comptroller General to the Secretary of the Navy insisting that the Navy do certain things to remedy the situation.

Senator VANDENBERG. I think, Mr. Chairman, I better read this into the record. It is a communication from the Comptroller General, Mr. McCarl, dated December 10, 1931, addressed to the Secretary of the Navy. The entire document is pertinent, and we will mark it as an exhibit.

(The letter referred to was marked "Exhibit No. 1481" and is included in the appendix on p. 4916.)

Senator VANDENBERG. I read as follows:

> It is realized, of course, that the United States should obtain the best possible vessels for the money expended, and that in connection with construction work of this character the Navy Department has its problems and would find it advantageous to utilize the best skill of the country in designing hull, machinery, etc. The results reported as obtained in the instant matter suggest the benefits possible through obtaining the views and suggestions of experts not in the Government service, but the procedure followed not only fails in fully meeting the requirements of section 3709, Revised Statutes, but will invariably breed dissatisfaction among bidders. Each bidder submitting an alternate design will doubtless believe, and honestly, that his is superior to all other designs submitted, and it would seem most difficult, if not quite impossible, to work out in advance and without intimate knowledge of the details of designs to be submitted, an evaluating formula that would be considered fair by any bidder whose design was not accepted, and charges of favoritism and even fraud may too frequently follow, with protests raising questions going to the availability of the appropriation proposed to be charged.
>
> The law requires that specifications state the actual need of the Government and that award be made to the low responsible bidder proposing to supply such need. Considering the administrative problem to be as stated in matters of this character there is suggested for your consideration and as a means to enable the Navy Department to lawfully obtain the assistance of the skill in private industry when new vessels are to be designed and constructed, the advisability of acquainting the Congress with the situation and need with a view to securing authority to employ a reasonable amount of the appropriation to secure from competent sources outside of the Government a limited number of designs of hulls, machinery, etc., to supplement or for purposes of comparison with plans and specifications drafted by the engineers or the Navy Department, to the end that there may be worked out in every detail the best possible design and the final result submitted for competitive bids and construction by the low responsible bidder.
>
> It is understood that on the assumption the procedure followed was sufficient compliance with the applicable law there has been adopted for building in two navy yards the design submitted by the Bethlehem Shipbuilding Corporation, and award made to said corporation for the construction of a vessel of such design. In such circumstances and in view of the apparent good faith of the Navy Department in following the procedure herein discussed and which should hereafter be otherwise, this office will make no further objection thereto.

The final sentence, Admiral, would seem to be virtually an order from the Comptroller General to change your procedure, would it not?

Admiral LAND. It appears that way from that. I am not sufficiently legally advised to know exactly what that means, Senator.

Senator VANDENBERG. Do you know whether any change was made after the Comptroller General submitted this memorandum?

Admiral LAND. I do not, offhand, know. I was not there, so that I would not be cognizant of the action of the Department in connection with this particular matter.

Senator VANDENBERG. Do you agree with the analysis that the Comptroller General makes of the situation?

Admiral LAND. Frankly, I do not, because I think it is essential to have class 2 bids, but then that is merely an opinion, and I am not a lawyer.

Senator CLARK. You think it is essential for what?

Admiral LAND. To have class 2 bids. Class 1 are Navy Department designs and class 2 are private-shipyard designs. Again, we want to get the best we can. We do not think that all the best brains in design rest down there, and if somebody else can beat us, go to it.

Senator VANDENBERG. You feel quite to the contrary, do you not, Admiral; and you are, at the present time, I want to be sure I am right about it, dependent upon the outside designs?

Admiral LAND. I would like to have Admiral Robinson answer that. I have answered it three times, and apparently not to anybody's satisfaction.

Senator VANDENBERG. Is the answer yes or no?

Admiral LAND. It cannot be answered that way.

Admiral ROBINSON. Senator we make up the designs for these ships always. We design the ship. That is a general design. We call them "contract plans." That is the plan of a ship.

Senator VANDENBERG. You could not build the ship from that?

Admiral ROBINSON. We could not build the ship from that, but you can use that to make the details for building the ship. For example, every plate which goes into a ship has to have a plan for it. The shipbuilder makes his plan and shows where the holes are going to be punched, and he shows the foundation of the ship. Those are all detailed plans. They have to be made when the ship is being made. It takes a year or two to make them. They are not actually finished until the ship is finished. Those two things go together. The Navy Department originates the plan and the shipbuilder or, in our case, the navy yard, furnishes the plans. In certain cases we depart from that and let the shipbuilders make contract plans as well. That was done in that particular case under discussion, because there were so many plans called for that summer that we could not in the Navy Department, with our force, get them all out. We took the way which we thought would be most expeditious to build them and had the shipbuilders submit this as a part of their contract work.

That, as a matter of fact, resulted in a delay in getting the plans for the ships, because it took 3 or 4 months that the Navy Department would have devoted to that work and have had ready when the contract was made, had to be done after the contracts were let. In that case that was the development of a contract plan by the shipbuilders.

That is not a usual procedure. The Navy Department ordinarily makes its own contract plans. There are exceptions, and we have exceptions right along, but that is the usual procedure.

Then the developments having to do with the thousands of detailed plans which have to be gotten out are carried out by the shipbuilders or the navy yards.

That is a composite picture. The Navy Department makes a part of the plans and the shipbuilder makes a part of them.

In no way could the Navy Department itself make all the plans which go into the building of a ship. Some of those plans have to be made on the spot. They could be made at a navy yard, or at a private shipyard, or wherever the ship is being built, but they could not all be made on the original private design; they have to be made when the plans are being designed. The man making them has to go down on the ship and see what is there in many instances.

Senator VANDENBERG. Do I understand you correctly to tell me that the plans which the private yards make are merely detailed plans?

Admiral ROBINSON. Ordinarily, yes. In the particular ship we are discussing, no. They made all the plans, including the contract plans, but that is not the usual procedure. It was done here because we wanted to get seven different types of ships at once, and we did not have the time or force to get out all those contract plans. We got out some of them—all that we could—and then we got the rest of them from private shipbuilders.

The ordinary procedure for building a ship is that the navy yard gets out the general ship plans, and those go into quite some detail and run into probably 100 plans or more altogether, and they show what kind of a ship it is going to be, where the boiler is going to be, what kind of a boiler, where the machinery is going to be, and what kind of machinery, the location of the decks, the location of the bulkheads, the thickness of the armor, the location of the turrets, the ammunition, and even pipe lines, in many instances, are shown in the Navy Department contract plans, but, of course, that is a long way from being a ship.

Senator VANDENBERG. That is the point. In 1933 what did you say was the reason for saying they could not even make their own contract plans?

Admiral ROBINSON. We made contract plans, but not for this ship. We made them for other types of ships, for submarines for one thing. The reason we did not do it was because we did not have the time. We were starting seven different types of ships at once, and, as Admiral Land said, we did not have the force to develop those plans, and developed all we could, and then we got the rest of them from the private shipbuilders, and this happened to be one of them.

The CHAIRMAN. How extensively are we training men at Annapolis in shipbuilding?

Admiral ROBINSON. We do not train men at Annapolis in shipbuilding at all. That is done as a post-graduate course after they leave Annapolis.

The CHAIRMAN. Designing is taught there?

Admiral ROBINSON. Designing is not taught at Annapolis except in a very elemental way. Every midshipman learns something about that, but it is very meager.

Senator CLARK. Where is that training carried out, Admiral?

Admiral ROBINSON. For the naval construction it is carried on at Massachusetts Institute of Technology and for engineers at the University of California.

Senator CLARK. Admiral, let me ask you this question: As to your department and Admiral Land's department, are officers, designers, or engineers placed in those departments and allowed to remain there, or are they taken off from that duty after having one tour of duty, and put at sea duty, and then taken off sea duty and put at some other duty? In other words, do they rotate through the departments, or do you have a fairly constant personnel in the department?

Admiral ROBINSON. The situation is a little different in the two cases. I would prefer to answer for the engineering personnel.

Senator CLARK. All right.

Admiral ROBINSON. The engineering personnel in the Bureau is mainly composed of people who have been selected for engineering duty only. There are others there, in a junior capacity, for training, but the controlling ones and the important positions are filled by officers who are specialists in engineering. They have been selected for that duty from the line and transferred into that status. They are practically all people who have post-graduate training at college and at Annapolis, and in addition to that they have training at navy yards.

About 25 percent of those go to sea. I mean, you have about 25 percent of them at sea all the time. We feel that is necessary to keep them in touch with seeing the machinery work after they have had the experience in laying it down on paper. A certain percentage of them are at navy yards in connection with building ships, and a certain percentage are at shipyards in connection with the inspection of ships.

Senator CLARK. But when a man goes into that department, he does become more or less of a specialist, so far as the designs of the Navy are concerned.

Admiral ROBINSON. That is correct.

Senator CLARK. How about your department, Admiral Land?

Admiral LAND. Entirely specialists. We have a lesser percentage at sea than Admiral Robinson does, and our officers rotate on three or four main jobs. That is, a few at sea, Bureau duty, inspectors at private plants, and navy yard work.

Senator CLARK. But within your department, in other words, they do not take them from your department and put them to work on gunnery?

Admiral LAND. No. They are all specialists from the time they are selected for post-graduate courses at Massachusetts Institute of Technology, and they stay that way throughout their service careers.

Senator CLARK. That is the story of how they get there.

The CHAIRMAN. Admiral Land and Admiral Robinson, we are going to have to excuse you now, and we will notify you when we shall want you to return.

TESTIMONY OF W. A. CALVIN

OFFER TO "FIX" NAVAL AWARDS

(The witness had previously been sworn by the chairman.)

Senator CLARK. Will you state for the record again what your business is in connection with the American Federation of Labor?

Mr. CALVIN. I am Secretary and Treasurer of the Metal Trades Department of the American Federation of Labor.

Senator CLARK. Mr. Calvin, you were present the other day when Mr. Frey testified as to the letter or as to the envelop, the sealed envelop, which was handed to him by Mr. Lawrence Wilder, containing the names of the contractors, or containing schedule of awards which would be made on the 32 vessels which made up that program?

Mr. CALVIN. Yes, sir.

Senator CLARK. Were you present when that envelop was handed to Mr. Frey?

Mr. CALVIN. I was.

Senator CLARK. Were you present when the envelop was opened?

Mr. CALVIN. I was.

Senator CLARK. Are you familiar with the awards which were made in these cases?

Mr. CALVIN. In detail I am not. I remember at the time the envelop was opened, we compared the estimated or predicted awards with the actual awards or the low contractors.

Senator CLARK. What was the result of the comparison between the list handed to Mr. Frey in your presence by Mr. Wilder and the awards actually made?

Mr. CALVIN. In every instance they were identical.

Senator CLARK. Now, Mr. Calvin, I will ask you whether, during the year 1933, any other evidence came to your knowledge tending to corroborate Mr. Wilder's assertion at that time?

The CHAIRMAN. Meaning to corroborate the charge of understanding?

Senator CLARK. Yes.

Mr. CALVIN. It would be rather difficult to answer the question, Senator. I might say that that was taken up.

Senator CLARK. Were you present at any time in Mr. Wilder's room in a hotel in Washington?

Mr. CALVIN. I was.

Senator CLARK. When a proposition to Mr. Wilder was made to secure part of this work?

Mr. CALVIN. I was.

Senator CLARK. Will you state to the committee what happened on that occasion?

Mr. CALVIN. On August 3, 1933——

Senator CLARK. First, Mr. Calvin, will you identify Mr. Wilder?

Mr. CALVIN. Yes.

Senator CLARK. I say, will you identify him? State to the committee who he was.

Mr. CALVIN. Mr. Wilder came to me with a letter of introduction from our members in Pensacola, Fla. Mr. Wilder had been a former president of the New York Shipbuilding Corporation, of Camden, N. J. At that time he was chairman of the executive board of Gulf Industries of Pensacola, Fla.

Senator CLARK. What business was Gulf Industries engaged in, Mr. Calvin, if you know?

Mr. CALVIN. They aspired to be engaged in the shipbuilding industry, as I understand it.

Senator CLARK. Do they have a shipyard?

Mr. CALVIN. They have.

Senator CLARK. Did they have a shipbuilding organization?

Mr. CALVIN. The official personnel. I do not think there were any mechanics or mechanical personnel employed. I may be wrong about that because I had only known Mr. Wilder a brief period of weeks at that time.

Senator CLARK. Just state to the committee what occurred.

Mr. CALVIN. On August 3, 1933, in response to an invitation from Mr. L. R. Wilder, chairman of the executive board of Gulf Industries of Pensacola, Fla., I visited Mr. Wilder in his suite in the Washington Hotel, Washington, D. C. Mr. Wilder informed me that on the previous day, August 2, he had been approached by a Mr. Gravem who professed to be a close friend of an influential citizen of Washington, D. C., who could have the Navy shipbuilding program extended for a consideration, and have certain ships awarded to the Gulf Industries for construction.

Mr. Wilder stated that as soon as he learned Mr. Gravem's intention, he requested him to return on the following day, in order that I might hear this proposal.

Mr. Wilder had submitted bids for three destroyers, but his bids, although lower, were not favorably considered, and the destroyers for which he submitted his bid were awarded to a competitive firm which had submitted a higher bid.

Mr. Gravem stated, in my presence, that Mr. Wilder would have to do business through his friend whom he referred to as "the fixer", in order to obtain any naval building contracts. Mr. Gravem further stated that his friend, "the fixer", was the most influential civilian in Washington, and that he had drafted the shipbuilders' and ship repairers' code, and prepared all bids for the shipbuilders for naval vessels allocated under the N.I.R.A.

He stated that his friend, "the fixer", was disappointed because he had not made more money out of the awards for new naval vessels; and that if Mr. Wilder would give him the sum of $250,000 that he could obtain 10 to 15 million dollars' worth of naval construction for the Gulf Industries, provided the yard was capable of producing same.

The CHAIRMAN. Let me ask you, Mr. Calvin, a question. You appear to be reading a statement. Is this something which you have prepared upon notice that the committee wanted to discuss this matter?

Mr. CALVIN. It is not, Senator. I realized the importance of it, of what I had overheard, and immediately upon my return to my office, while it was fresh in my memory, I dictated this to my secretary.

The CHAIRMAN. And this is the original statement?

Mr. CALVIN. And this is the original statement itself.

The CHAIRMAN. It has not been altered in any particular since?

Mr. CALVIN. It has not been altered in any particular. This is the statement.

The CHAIRMAN. All right.

Mr. CALVIN. Mr. Wilder replied that if it became known that there was collusive bidding for naval construction that a Senate investigation might be ordered, to which Mr. Gravem replied that the keels would be laid for all vessels before a Senate investigation could start, which would, in his opinion, obviate the possibility of revocation of contracts by the Navy Department.

Mr. Gravem stated further that his friend, "the fixer", knew 2 weeks in advance of every Navy announcement, to which Mr. Wilder replied, "I never knew before that the Navy Department was crooked."

Mr. Gravem answered, "This is purely a practical matter."

Those present at the time Mr. Gravem made these statements were Mr. L. R. Wilder, of Gulf Industries; a Mr. Hyde, assistant counsel for the Gulf Industries and former treasurer of the city of New York; Miss Judy Kitchen, secretary to Mr. Wilder; and myself.

Senator CLARK. Mr. Calvin, were you present in the room during this conversation between Wilder and Gravem?

Mr. CALVIN. I was sitting in the adjoining room, inside an open door, not more than 8 feet distant from Mr. Gravem, at the time he was making that statement.

Senator CLARK. Where were you with regard to the two gentlemen you have mentioned?

Mr. CALVIN. Miss Kitchen was sitting inside of the open door of the same room that I occupied at that time, making notes of the conversation. Mr. Wilder was ill and in his bed, and Mr. Hyde was in Mr. Wilder's room, at his bedside.

Senator VANDENBERG. You are sure Mr. Gravem used the term you have suggested?

Mr. CALVIN. Very sure. I am very confident of that.

Senator VANDENBERG. Did anybody ask him who the "fixer" was?

Mr. CALVIN. I think there had been some conversation on the previous day, and they tried to obtain the name of the "fixer", without any success.

The CHAIRMAN. Proceed, Mr. Raushenbush.

Mr. RAUSHENBUSH. Mr. Calvin, was that at the time these 1933 bids showed a considerable jump over the previous bidding?

Mr. CALVIN. That was at the time the bids were opened, and I believe there was considerable increase in the cost over previous contracts, but, of course, I am not familiar with that.

Mr. RAUSHENBUSH. All this happened, I take it, after the letter had been written out and offered to General Johnson, in which the lowest bidders in each case were accurately mentioned?

Mr. CALVIN. Of course, that was after the letter.

Mr. RAUSHENBUSH. This was after that?

Mr. CALVIN. Because the letter was submitted to Mr. Frey several days prior to the opening of the bids.

Mr. RAUSHENBUSH. And this conversation you overheard between this gentleman and Mr. Wilder took place after the opening of the bids?

Mr. CALVIN. Yes, sir.

Mr. RAUSHENBUSH. And the fact that you had already gleaned from this letter that it would be known by someone ahead of time who the lowest bidders would be lent some semblance of credence, I take it, to your belief in this man's ability to arrange the things he promised to arrange?

Mr. CALVIN. Obviously.

Senator VANDENBERG. Do you know who Mr. Gravem is, Mr. Calvin?

Mr. CALVIN. I was told that he was an attorney of Washington, D. C. I saw him only the one time, and from an adjoining room, so that I do not know any of his background or his history.

Mr. RAUSHENBUSH. Did you also gather that regardless of what this gentleman could or could not do, or promise, or said that other people generally considered, that the bidding on these cruisers, on these ships, was a prearranged matter? I mean, did everybody take this as a normal conversation; I mean the part of it which dealt with a certain prearrangement? Did they take that as normal?

Mr. CALVIN. I would assume that Mr. Wilder had accepted that as a normal condition. Otherwise, unless he is a pretty good guesser, he would scarcely be able to estimate so accurately who would be awarded certain contracts. Of course, that is something that I know nothing about. Our interest is putting men to work, not acting as detectives to find out how contracts are awarded.

Senator BARBOUR. Your presence at this conference, Mr. Calvin, was in that general connection in respect to your duties?

Mr. CALVIN. I assume that my presence, Senator, was that as a witness.

Senator BARBOUR. I see.

Senator CLARK. You had no reason to be other than a disinterested witness, so far as Mr. Wilder was concerned?

Mr. CALVIN. Absolutely no reason whatsoever.

Senator CLARK. Did I understand you to say your acquaintance with Mr. Wilder had been of a very brief duration?

Mr. CALVIN. It had been very, very brief.

Mr. LAROUCHE. Had Mr. Gravem any official position, either then or earlier, that you know of?

Mr. CALVIN. That I would not be in a position to answer. I understand from hearsay—of course I remember I am under oath—but from hearsay, I understand he had been officially connected with the R.F.C. from the time of its creation until a short time previous to this conversation. I was told that, and I do not know anything about Mr. Gravem beyond what I actually heard in Mr. Wilder's hotel suite.

Mr. RAUSHENBUSH. Was there any conversation at the time having to do with any allocation of this P.W.A. money or R.F.C. money to particular companies?

Mr. CALVIN. None that I recall.

Mr. RAUSHENBUSH. May I ask again about the last part of your statement? What was the conversation there toward the end, something about the practical matter. How did that take place?

Mr. CALVIN. Mr. Wilder stated that if it become known that there was collusive bidding that it would probably result in a Senate investigation, to which Mr. Gravem replied that the keels would all be laid before a Senate investigation would start, which, in his opinion, obviated the possibility of such an investigation proceeding very far.

Then Mr. Wilder stated that he never knew or believed that the Navy Department was crooked, to which Mr. Gravem replied that this was purely a practical matter.

Senator Barbour. When he spoke about the keels of these ships being laid before an investigation could start, I support he meant by that that under the contracts as soon as the keels were laid, investigation or no investigation, the contracts could not be abrogated.

Mr. Calvin. Possibly he had a limited degree of actual knowledge as to what might occur, but I would assume that that was his presumption.

Senator Barbour. Yes; that is the inference I get too.

Mr. Raushenbush. Are you a practical shipbuilding man, Mr. Calvin?

Mr. Calvin. I am a practical boiler maker and shipbuilder.

Mr. Raushenbush. Do you know enough about shipyards to know whether it is possible to lay down the keels and then pick them up again?

Mr. Calvin. Oh, yes; it is possible.

Mr. Raushenbush. Is it ever done?

Mr. Calvin. It could be done. I do not know whether it is ever done or not.

Mr. Raushenbush. Is it a very expensive thing?

Mr. Calvin. Not necessarily; that is just so far as the keel is concerned, but after the hull has really attained some degree of progress or completion, it would be impractical and quite expensive to disassemble the hull, the plates, and then raze them. But the keel could be done.

Senator Barbour. I was referring, Mr. Raushenbush—and I do not know, mind you this is just a guess—I was referring more to the possibility that in the contract it had some provision that when the keel was laid, the contract had to go forward.

Mr. Raushenbush. Yes, sir. I do not know whether there was or not.

Senator Barbour. That is a legal proposition?

Mr. Raushenbush. Yes, sir.

Senator Barbour. Or a shipbuilding proposition?

Mr. Raushenbush. Yes, sir.

Mr. Calvin, about this time, did Senator Trammell write a letter, or do you remember that Senator Trammell wrote a letter to the Secretary of the Navy, protesting the character and nature of the bidding? [1]

Mr. Calvin. Yes.

Mr. Raushenbush. Was that before or after this conference?

Mr. Calvin. That was after the conference, as I recall it.

Mr. Raushenbush. He made statements to the effect that the bidding there showed obvious agreement between the companies, did he?

Mr. Calvin. He inferred that in his communication, hinted at the collusive bidding.

Senator Barbour. Were these bids actually alike, Mr. Calvin, as to the amounts involved?

---

[1] See p. 4759 for Senator Trammell's letter.

Mr. Calvin. Pardon me?

Senator Barbour. Were these bids all alike so far as the estimated amounts for the cost of the ships were concerned?

Mr. Calvin. The bids were not all alike; no, sir. There would be a low bidder and several bidders on each ship higher than the lowest bidder.

Senator Barbour. Let me make that clear. However, I am not challenging anything.

Mr. Calvin. The bids were not identical, because that would naturally result in calling for new bids, if everyone bid the same on every ship.

The Chairman. Let it be made clear, Senator Barbour, that the list which was prepared by Mr. Wilder did not pretend to state the amount which was being bid. It pretended to state only who would be the low bidders.

Senator Barbour. I see.

Mr. Calvin. It indicated who would be the successful bidders.

Senator Barbour. I understand.

Senator Clark. Mr. Calvin, from your experience, you have had the opportunity to observe collusive bidding, more or less?

Mr. Calvin. To some limited degree.

Senator Clark. It is the practice in case there is collusion between several bidders that the bidders who are not scheduled to get the award make what is called protective bids, a little higher than the bidder who intends to get it? Is that correct?

Mr. Calvin. Of course, if there was no collusion, what would be the necessity or justification for collusion unless it was understood that those who were not anxious to have certain ships would protect the lowest bidder by putting in a higher bid.

Senator Clark. But they do not customarily put it in the newspaper that there is collusion by making identical bids.

Mr. Calvin. I do not think their collusive machinery would be very effective if they did.

Senator Vandenberg. What do I understand Mr. Wilder said to Mr. Gravem in response to this suggestion?

Mr. Calvin. Mr. Wilder said to Mr. Gravem in response to this suggestion that if it became known that there was collusive bidding, that a Senate investigation would very probably result.

Senator Vandenberg. Mr. Wilder rejected the suggestion that Mr. Gravem made to him?

Mr. Calvin. He did.

Senator Vandenberg. Then Mr. Gravem left without any further argument?

Mr. Calvin. Then Mr. Gravem left.

Mr. Raushenbush. Did you find out later who Mr. Gravem was? I mean, his initials and his residence.

Mr. Calvin. I made no effort to find out who Mr. Gravem was. I did not think that was my job.

Mr. Raushenbush. Do you know whether it is a Mr. A. B. Gravem in the Shoreham Building?

Mr. Calvin. I do not know his initials.

Mr. Raushenbush. Do you remember exactly what that language was there at the end—I am asking the same question which the

Senator was asking I think—when Mr. Wilder was reported to have said that it was the first time that he had heard that the Navy Department would lend itself to this sort of thing. What was the reply of Mr. Gravem? "This is purely a——

Mr. CALVIN. Practical matter." In order not to trust a rather atrocious memory, I dictated that to my secretary immediately upon my return to my office, presuming that I might have to present it at some such hearing as this.

The CHAIRMAN. Has there ever been any call for its presentation prior to this time?

Mr. CALVIN. Never has.

The CHAIRMAN. Have you had occasion to reveal its contents to anyone since its writing or not?

Mr. CALVIN. No occasion for an official revelation whatever, until I was subpenaed by this committee.

The CHAIRMAN. How long ago did the representative of this committee first approach you upon this matter?

Mr. CALVIN. I would say that was along about August or September of 1934, when Mr. LaRouche——

The CHAIRMAN. Mr. LaRouche here at the table?

Mr. CALVIN. Yes, sir.

The CHAIRMAN. Did you show the memorandum to Mr. LaRouche at the time?

Mr. CALVIN. Yes, sir; and he asked me to turn it over to him and I refused.

Senator VANDENBERG. And you showed the same memorandum to Senator Clark and Senator Nye and Senator George and myself?

Mr. CALVIN. Yes; but it was after I had been called before the committee.

Senator VANDENBERG. I am just fixing the fact that it is the same memorandum.

Mr. CALVIN. The identical memorandum, which I am submitting as this committee's property.

The CHAIRMAN. Mr. LaRouche, are you prepared to state that the memorandum which was read this morning is the same one which you originally saw?

Mr. LAROUCHE. I can better tell after I examine it.

The CHAIRMAN. Do you have any reason to doubt it at all?

Mr. LAROUCHE. No, sir, it sounds exactly the same.

The CHAIRMAN. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12 noon, the committee recessed until 10 a. m., Jan. 30, 1935.)

INVESTIGATION OF MUNITIONS INDUSTRY

WEDNESDAY, JANUARY 30, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee, and F. W. LaRouche, investigator.

The Chairman. The committee will be in order.

Miss Kitchen, will you come forward and be sworn?

TESTIMONY OF MISS JULIA MARGARET KITCHEN

OFFER TO "FIX" NAVAL AWARDS

(The witness was duly sworn by the chairman.)

The Chairman. You may be seated, Miss Kitchen.

Give the committee your full name.

Miss Kitchen. Julia Margaret Kitchen.

Senator Vandenberg. Miss Kitchen, what position did you hold in August 1933?

Miss Kitchen. I was Mr. Wilder's secretary.

Senator Vandenberg. Mr. L. R. Wilder?

Miss Kitchen. Yes.

Senator Vandenberg. Were you working here in Washington?

Miss Kitchen. Yes.

Senator Vandenberg. Do you recall an occasion in August 1933 when you and Mr. Calvin and some others were in Mr. Wilder's apartment in the Washington Hotel when the cruiser bids were discussed by certain gentlemen?

Miss Kitchen. Yes.

Senator Vandenberg. How did you happen to be present that day?

Miss Kitchen. I was generally there. I was working at that time, and I was there most of the time.

Senator Vandenberg. How many rooms were there in Mr. Wilder's apartment?

Miss Kitchen. There was one room and a living room which was used as an office, and a small entrance.

Senator Vandenberg. Where were you on the morning of August 3, 1933, in this apartment? Were you in the same room with Mr. Wilder?

Miss KITCHEN. No; I was in the living room.

Senator VANDENBERG. You were in the living room?

Miss KITCHEN. Yes; Mr. Wilder was sick.

Senator VANDENBERG. Mr. Wilder was sick and in the bedroom?

Miss KITCHEN. Yes, sir.

Senator VANDENBERG. Who was in the room with you?

Miss KITCHEN. Mr. Calvin and another secretary.

Senator VANDENBERG. Mr. Calvin and another secretary?

Miss KITCHEN. Yes, sir.

The CHAIRMAN. Secretary to whom?

Miss KITCHEN. Another of Mr. Wilder's secretaries.

Senator VANDENBERG. Who was the other secretary?

Miss KITCHEN. Mrs. Phillips.

Senator VANDENBERG. Who was in the other room with Mr. Wilder?

Miss KITCHEN. A man named Hyde,[1] and Mr. Gravem, and Mr. Wilder.

Senator VANDENBERG. Were you in a position where you could hear what occurred in the other room?

Miss KITCHEN. Yes; I was. I was just outside the door.

Senator VANDENBERG. Did you make a memorandum at the time respecting what you heard?

Miss KITCHEN. Mr. Wilder made a memorandum of that, and, from what I heard of the conversation, I agreed with the memorandum.

Senator VANDENBERG. Have you a copy of that memorandum?

Miss KITCHEN. I have it right here.

Senator VANDENBERG. May I see it, please?

Miss KITCHEN. Yes [handing paper to Senator].

Senator VANDENBERG. What is this book in which this is pasted?

Miss KITCHEN. That book is a scrapbook of the various things that happened during the 1933 period.

Senator VANDENBERG. And this memorandum was made the same day that the conversation occurred?

Miss KITCHEN. Yes. It was made immediately after the conversation.

Senator VANDENBERG. I offer this for the record, and perhaps I had better read it. It is headed "Memorandum" [reading]:

> On Wednesday, August 2, 1933, early in the afternoon, Mr. Charles S. Barrett, Shoreham Building, Washington, D.C., phoned to ask if he might bring up and introduce a friend of his. He brought up and introduced A. B. Gravem, Tower Building, Washington, D.C., telephone National 7648. There were present, besides, Mr. Wilder and and Mr. Charles M. Hyde, attorney, 1701 H Street NW., Washington, D.C.

Let me interrupt the reading a moment to be sure we understand each other. Were there two interviews between Mr. Wilder and Mr. Gravem?

Miss KITCHEN. Yes, sir.

Senator VANDENBERG. The memorandum I am now reading describes the first interview?

Miss KITCHEN. Yes, sir.

Senator VANDENBERG. Mr. Calvin was not present during the first interview?

Miss KITCHEN. No, sir; he was not.

Senator VANDENBERG. I continue the reading:

---

[1] During hearings of Feb. 4, 1935, a letter from Mr. Hyde, regarding above testimony, was read into the record. See Hearings, Part XIX, p. 5001.

Mr. Barrett, who is an old intimate friend of Mr. Wilder, and also a director of Gulf Industries, said that he thought Mr. Gravem had a matter of considerable interest to put before us. Without preamble Mr. Gravem made the following assertion:

That he, Gravem, since the earliest days of the R. F. C. and up to a week or two ago, had been one of the counsel for that body; that in that capacity he had put through some 200 millions of the most difficult loans and that he had now set up his own law offices in Washington.

He stated that he did not want a nickel, nor a job, nor any other consideration. He further stated that he had, just prior to calling here, left an intimate and long-time friend of his, who has offices in Washington; that this friend had offered Gravem office space in his suite and that he would see his friend immediately after he left the Washington Hotel. He stated that it was possible for us to secure some Navy shipbuilding awards, and that he had secured the award of two destroyers for the Bath Iron Works. Inasmuch as the Bath company's bids were higher than Gulf Industries' bids, Mr. Wilder expressed surprise and asked if the award had been made to the Bath company. Mr. Gravem said it was as good as made. He stated that while he (Gravem) did not, as above stated, expect or want a nickel, a job, or any other consideration, that his friend was (in his own language) a "chiseler" and that if we (Gulf Industries) would subject ourselves to this "chiseling", his friend would get us an award, and that without it we would not get an award. He further stated that his friend had handled the negotiations from the beginning, including the drafting of the codes and specifications, and was now arranging the awards between all of the private yards. He did not volunteer, nor did we demand, the name of his friend, but he was brazen in his statement that the awards were being made in this way and that his friend was making money out of them.

Upon leaving he said that he would see his friend immediately and would communicate with us either later in the afternoon or the following morning. Mr. Wilder said that he could not believe it possible that the President or Secretary of the Navy would permit awards for the building of warships on any such basis and that he did not see the necessity for the services offered by Mr. Gravem. Mr. Gravem constantly reiterated that this was a practical administration and nothing could be done, nor could an award be secured, except through his friend.

Mr. Gravem stated that in the 20-odd months he had been in Washington he had made many contacts and learned the ropes and that the methods he suggested were the only ones which would produce results.

Mr. Gravem referred to the letter of Senator Trammell, chairman of the naval committee of the Senate, which was published in the newspapers on that day, August 2. He intimated that it might result in scandal and that his friend and the other shipbuilders would prefer to let us in rather than to have the scandal aired.

That appears to be the memorandum describing the first interview. That is a correct statement of the interview?

Miss KITCHEN. Yes.

The CHAIRMAN. Miss Kitchen, did you make any notes while these interviews were in progress?

Miss KITCHEN. No; I did not make any notes, but this thing was dictated immediately afterwards, so that I am quite sure it is right.

Senator VANDENBERG. It was dictated by Mr. Wilder?

Miss KITCHEN. Yes, sir; it was; and I remember agreeing to it.

Senator VANDENBERG. You agreed to it?

Miss KITCHEN. Yes, sir.

Senator VANDENBERG. The second interview occurred the following day, as I understand it?

Miss KITCHEN. Yes, sir.

Senator VANDENBERG. I now read the memorandum on the second interview, which is headed "Second interview" [reading]:

On Thursday, August 3, shortly after the Navy released its awards, none having been awarded to Gulf Industries, Mr. Hyde phoned Mr. Gravem from room 620, Hotel Washington, and Mr. Gravem stated that he would be over to see Mr. Wilder between 2 and 3 in the afternoon. He came over to the room about 3 o'clock on Thursday, August 3. There were then present Mr. Hyde and Mr. Wilder and in the next room, through which the door was wide open, Mr. William Calvin, vice president, International Brotherhood of Boilermakers, with offices in the American Federation of Labor Building. Mr. Gravem stated that, of course, it was too late to do anything about this particular batch of naval awards, and that his friend had not made as much as he expected, but that he had arrangements by which he would receive something like $60,000.

Then the words "in commissions on the sale of accessories used in the ships to be built" are stricken out. What is the significance of that?

Miss KITCHEN. Will you read that again?

Senator VANDENBERG. Mr. Raushenbush, show her the sentences which are stricken out.

Mr. RAUSHENBUSH. Yes, sir [handing book to witness].

Miss KITCHEN. This was a first draft of that. All these papers which are here are the first draft. There are several words written in here. This was the first draft, and it was redrafted afterwards, and that was to be left out and was not put in the second draft.

Senator VANDENBERG. Continuing with the memorandum:

> He insisted that, on account of the close friendship he had with the President and others of influence in the Navy, he could have the naval program extended and that he would have no trouble in having some of them, say 10 or 15 million dollars, awarded to us for the consideration of $250,000.
>
> On this occasion he said that there would be no Senate investigation and that anyway it would be too late because the keels of the ships would be laid and the ships well advanced in construction, a fact which would make any investigation futile, and that "they" had determined to go on with the awards.

Miss Kitchen, these penciled changes on the memorandum were made at the time?

Miss KITCHEN. Yes, sir; at the time.

Senator VANDENBERG. You concur, do you, that this memorandum which was dictated to you by Mr. Wilder that day is a correct report of the conversation as you heard it?

Miss KITCHEN. Yes; it is.

Senator VANDENBERG. I think that is all, Miss Kitchen.

The CHAIRMAN. Miss Kitchen, just 1 minute. Has it been your custom, or the custom of Mr. Wilder, to make memoranda following these conferences of this kind?

Miss KITCHEN. That was a rather unusual occasion.

The CHAIRMAN. And you were counting it at the time a very unusual case?

Miss KITCHEN. Yes, sir.

The CHAIRMAN. That is all.

(The information regarding bids and valuations is made a part of the record at this point, pursuant to the instructions of the chairman.)[1]

TESTIMONY OF LAURENCE RUSSELL WILDER

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Mr. Wilder, before proceeding, a little matter is required to be taken care of. Are you aware of the so-called "waivers of immunity"?

---

[1] See appendix, p. 4923, for Navy figures on bids and evaluations to and including 1933.

Mr. Wilder. Yes, sir.

The Chairman. Are you prepared to sign such a waiver of immunity at this time?

Mr. Wilder. I am.

The Chairman. I present you, Mr. Wilder, a form of such waiver and ask you to read it, and, if you consent to do so, to sign it [handing paper to witness].

Mr. Wilder. I would be glad to.

(The witness thereupon executed the waiver of immunity.)

The Chairman. Mr. Wilder, will you give the committee your full name?

Mr. Wilder. Laurence Russell Wilder.

The Chairman. And your present address and occupation, Mr. Wilder?

Mr. Wilder. Lee House, Washington, D. C., engineer.

Senator Clark. Mr. Wilder, what is your business?

Mr. Wilder. It used to be shipbuilding; trained as an engineer, and I have been in practically all branches of mechanical and electrical engineering and manufacture.

Senator Clark. You were formerly president of the New York Shipbuilding Corporation?

Mr. Wilder. Technically I was president of the American Brown Boveri Electric Corporation, sir, of which the New York Shipbuilding Corporation was part, and I was the chief executive of that concern.

Senator Clark. Who was the president of the New York Shipbuilding Corporation at the time you were president of the American Brown Boveri Electric Corporation?

Mr. Wilder. There was not any. The New York Shipbuilding was a merger of a number of concerns.

Senator Clark. The New York Shipbuilding at that time was operated by the American Brown Boveri Electric Corporation?

Mr. Wilder. It was the American Brown Boveri Electric Corporation.

Senator Clark. During what period was that?

Mr. Wilder. 1925 to January 1, 1928, that I was president. From January 1, 1928, on to 1929 I was chairman of their shipbuilding division or chairman of their advisory staff.

Senator Clark. Mr. Wilder, were you present on yesterday when Mr. Calvin testified?

Mr. Wilder. I was not, sir.

Senator Clark. Did you hear Miss Kitchen's testimony this morning?

Mr. Wilder. Yes. I think, Senator Clark, I am familiar with it. I had it reported to me what occurred yesterday.

Senator Clark. Mr. Frey and Mr. Calvin testified during last week, and Mr. Calvin again on yesterday, that in 1933, several days prior to the opening of the bids for some 32 ships, making up the naval building program for that year, that you placed in an envelop, sealed, and handed to Mr. Frey a list containing the awards which were to be made by the Navy Department upon the opening of the bids, and that upon the awards being made, they opened the envelop and discovered your list to be correct. Will you tell us about that transaction?

Mr. **Wilder**. That is not quite correct, sir. That list that I gave to them——

Senator **Clark**. I believe that is 37 ships and not 32. I was in error.

Mr. **Wilder**. That was in July 1933, prior to the opening of the bids and was not what the awards would be, but who would be found to be low bidders on the various types and categories of ships. Subsequently that proved to be true, and I found that the awards were made on that basis.

But the contents of that letter was not who would get the awards, but who would be low bidders. In other words, the thing was prearranged in advance.

Senator **Clark**. How long before the opening of the bids did this incident take place, Mr. Wilder? Do you recall?

Mr. **Wilder**. The opening of the bids was, sir, on July 26, and the incident took place a week before, perhaps. Just what day I could not tell you now.

Senator **Clark**. Where did you get your information as to who would be the low bidder in this matter?

Mr. **Wilder**. It was general knowledge.

Senator **Clark**. What do you mean by " general knowledge "?

Mr. **Wilder**. The subcontractors knew, and my vice president, Mr. T. M. Cornbrooks, was a principal source of information.

Senator **Clark**. Who was T. M. Cornbrooks?

Mr. **Wilder**. T. M. Cornbrooks was formerly a shipbuilder and was formerly with the Sparrows Point yard, then Bethlehem, and then New York Ship, from which he retired, just before I came in.

Senator **Clark**. With whom was he connected in 1933?

Mr. **Wilder**. He was with me.

Senator **Clark**. You mean he was associated with you?

Mr. **Wilder**. Yes, sir.

Senator **Clark**. In what way?

Mr. **Wilder**. We were trying to get Gulf Industries, a southern yard, going.

Senator **Clark**. And Mr. Cornbrooks was associated with you in Gulf Industries?

Mr. **Wilder**. Yes, sir.

Senator **Clark**. Do you know where Mr. Cornbrooks got his information as to who would be the low bidders?

Mr. **Wilder**. His brother was operating vice president of New York Ship, and he had been in New York Ship and had been with Bethlehem as well. He did not tell me where he got his information.

Senator **Vandenberg**. What is his brother's name, Mr. Wilder?

Mr. **Wilder**. Ernest.

Senator **Vandenberg**. Ernest Cornbrooks.

AGREEMENT AMONG SHIPBUILDERS

Senator **Clark**. In your experience as president of the New York Shipbuilding Corporation, Mr. Wilder, was collusive bidding customary on these naval contracts?

Mr. **Wilder**. Not to any such extent as occurred in 1933 and 1934, sir. Through the National Council of American Shipbuilders——

Senator CLARK. What is the National Council of American Shipbuilders?

Mr. WILDER. It is a meeting ground for contractors, sir.

Senator CLARK. Who composes it?

Mr. WILDER. H. Garrish Smith, formerly the vice president of Bethlehem Steel, is president. Mr. Henry Hunter is secretary of the council.

Senator VANDENBERG. Is that a " m-e-a-t-i-n-g " ground?

Mr. WILDER. Very well put, sir.

Now, in one instance, I must confess to having been guilty of talking matters over in advance. This was the incident where Cramp defaulted and we took the contracts over.

Senator CLARK. With whom did you talk the matter over in advance?

Mr. WILDER. I discussed that with Wakeman and Ferguson.

Senator CLARK. Who is Wakeman?

Mr. WILDER. I think he was vice president of Bethlehem Ship, Wiley Wakeman.

Senator CLARK. You were at that time representing New York Ship?

Mr. WILDER. Yes, sir.

Senator CLARK. And you discussed the matter with Bethlehem and whom else?

Mr. WILDER. News.

Senator CLARK. Whom?

Mr. WILDER. Newport News.

Senator CLARK. Newport News Shipbuilding Co.?

Mr. WILDER. Yes, sir.

Senator CLARK. They make up what is called the " Big Three "?

Mr. WILDER. That is the " Big Three ", the unholy three.

Senator CLARK. What was the nature of this discussion which you had with Bethlehem Shipbuilding Co. and with the Newport News Shipbuilding Co.?

Mr. WILDER. To this effect, sir: The Cramp Co. had gotten into very serious difficulties in its building of merchant ships. It was having great trouble with the *Malola.* They stood to lose about 3½ million dollars on this contract.

Senator CLARK. What was the name of that ship?

Mr. WILDER. *Malola*, American-Hawaiian; and also had two for Eastern Steamship Co.—the *Evangeline*, and the other I do not remember. They had the contracts for one cruiser and machinery for another cruiser.

Senator CLARK. When was that, Mr. Wilder?

Mr. WILDER. 1926.

Senator CLARK. Go on.

Mr. WILDER. The keel had been laid for the cruiser, but she was done, if I remember—do not hold me to that, because it is just a rough guess—she was 6 to 9 months late.

I told Mr. Wakeman and Mr. Ferguson that if they defaulted I was prepared to take that contract over at the Navy's contract price with Cramp.

Senator CLARK. You mean you told the Bethlehem and Newport News executives that, on behalf of the New York Shipbuilding Co., that you proposed to take over this cruiser?

Mr. Wilder. From Cramp, if Cramp defaulted, at the Navy contract price, less the amounts paid by the Navy toward the construction. I would probably get something out of the bondsman, because it is costly to pick up the keel and move it across the river.

Senator Clark. It cannot be done.

Mr. Wilder. It was done.

Senator Clark. What was the nature of the arrangements you had with Bethlehem?

Mr. Wilder. There was not any. I told them we were prepared to do that, and they thought I was a damned fool.

Senator Clark. Did you do it?

Mr. Wilder. Yes.

Now, on one other occasion, when I discussed the matter——

Senator Clark. Just a minute before that. Let us finish with this transaction, Mr. Wilder.

Mr. Wilder. Yes, sir.

Senator Clark. Did you have any understanding with Bethlehem, or with Newport News, or with the Navy Department as to getting an additional cruiser as a result of taking over for the New York Shipbuilding Corporation this work and completing this work for Cramp?

Mr. Wilder. No understanding; no, sir. Certainly no collusion.

Senator Clark. What occasioned that question was this, Mr. Wilder: There was a telegram read in evidence last week from Mr. Bardo—[1]

Mr. Wilder. That was news to me.

Senator Clark (continuing). —to Secretary of the Treasury Mellon, complaining of the award of two cruisers to two navy yards on the Pacific coast, and stating that there had been an understanding that the New York Shipbuilding Corporation was to obtain the awards for cruisers as an outgrowth of this transaction, taking over the cruiser from Cramp. Do you know anything about that matter?

Mr. Wilder. No, sir; I do not. It was news to me.

Senator Clark. Go ahead about the other instance you started to tell us about.

Mr. Wilder. The other instance was the *Saratoga*. The *Saratoga* started off life as a battle cruiser. I believe she was laid the 16th of March 1917. Then, under the Disarmament Conference, she was transferred to the category of an experimental aircraft carrier. There had been three or four changes of contract on that ship when I appeared with New York Ship. She was on what we call a " cost-plus fixed fee ", the fixed fee having been paid.

Senator Clark. What do you mean by " cost-plus fixed fee ", Mr. Wilder?

Mr. Wilder. You usually think of cost plus 10 percent. This was not. You have got the amount, and it was cost plus $2,000,000, $2,000,000 being for the organization, the profit——

Senator Clark. The velvet?

Mr. Wilder. The velvet. There was plenty of " velvet " in it.

Now, part of that contract was to the effect that the *Saratoga* should bear that portion of the total overhead, your interest and depreciation and your repairs, and the men who are on direct labor and salary changes and telephone and all that sort of thing, and the number of men directly employed on her bore to the total in the yard. That is, if we were working 3,000 men on the *Saratoga* and another 1,000 on something else, she took three-quarters of the burden.

---

[1] Entered into record as " Exhibit No. 1454 ", see text, p. 4621.

Senator Clark. Of your overhead?

Mr. Wilder. Of all overhead.

Senator Clark. Did that include executive salaries, and so forth?

Mr. Wilder. Oh, everything.

There was general understanding, obviously, that that should not be 100 percent. That was the real motivation of going after the Cramp cruisers. Going after new business, that I could lay my hands on, so as to relieve the burden on the *Saratoga*, I mean. As I remember it, we took on several Coast Guard cutters, the little fellows, 135 feet, and got a lot of car ferries and car floats, anything we could lay our hands on. Then I ran into this difficulty:

If you were driving rivets on the *Saratoga* and Senator Clark on a Pennsylvania car float, Senator Clark would come to me and say, "Give me 10 cents an hour, 10 cents more an hour, as the Navy pays you." And I have to give him that 10 cents an hour, the same as I would give it to you.

I went in to see Secretary Wilbur and said: "You can have two choices; take this ship to the Philadelphia Navy Yard and finish it there, because I have no control over the organization in the Navy, or put it on the flat price. If you agree to take the keel up, we will agree for so much money that we will deliver this vessel on a certain day. That is, either take up the extra cost in the navy yard, where you can stand this sort of thing, or put it on a flat price."

The shipbuilders never forgave me for that.

Senator Clark. What shipbuilders?

Mr. Wilder. Bethlehem and Newport News; Bethlehem in particular.

Senator Clark. Why was that ?

Mr. Wilder. They had a sister ship, and we were using the drawings for that, and we got the *Saratoga* out 6 months ahead of that and I believe at $9,000,000 less cost.

Senator Clark. $9,000,000 less cost to the Government?

Mr. Wilder. The *Saratoga* cost 34½ million dollars, and I was informed the *Lexington* cost $43,000,000.

Senator Clark. What was the basis of letting to the Bethlehem Co.?

Mr. Wilder. Same basis, cost plus fixed fee, and they finished on that contract and we changed over to a flat contract. I discussed it with them, but they did not like it.

Senator Clark. When you say "they did not like it", what did they say? With whom did you discuss it?

Mr. Wilder. Wakeman, Ferguson, and Palen.

Senator Clark. They are the executives of those two companies?

Mr. Wilder. Yes, sir. I said, "I must close up this yard unless I put the contract on a flat price." What can you do with a labor situation of that kind? The men were right.

Senator Clark. What course did they advocate, Mr. Wilder?

Mr. WILDER. Go on and drift along on the cost-plus.

Senator CLARK. Cost plus a percentage?

Mr. WILDER. No; cost plus a fixed fee. They did not propose to change that contract.

Senator CLARK. You were advocating the proposition of making a definite offer to the Government to build the ship?

Mr. WILDER. To finish the ship. We were building the ship; to finish it.

Senator CLARK. At so much money?

Mr. WILDER. Yes, sir. By negotiation we changed that contract.

Senator CLARK. You mean by negotiation with the Navy Department?

Mr. WILDER. By negotiation with the Navy Department we changed the contract. They set up a board of three admirals—Capps, Halligan, and Beuret, if I recall it—and they made the recommendation to Secretary Wilbur, and we closed on that basis.

Senator CLARK. What was the name of the sister ship?

Mr. WILDER. *Lexington*.

Senator CLARK. Mr. Wilder, referring to the transaction in which you took over the cruiser from Cramps', did you have any agreement or negotiation with the Bethlehem and Newport News companies leading to an agreement to take over that work without bids?

Mr. WILDER. They could not have taken it over. First, physically, we were the only yard that could have taken it over. The pieces were too large to ship them around the country anyway, but to float them. We could lift them across the river, being only about 3 miles apart. You realize, Senator, the proposal was to take it over at the price which the Government had allowed to Cramp, less what the Government had paid. We did negotiate with the bondsman, and I have forgotten how much, but we shook them down for something, I think about $900,000.

Senator CLARK. Then, if I understand you correctly, Mr. Wilder, the fact that Bethlehem and Newport News did not bid on this work was due to the fact that it was physically impossible?

Mr. WILDER. Physically impossible, and, so long as we did not make a bid higher than that which the Navy had been satisfied with, I felt we were giving the Navy a square deal.

Senator CLARK. Referring again to this transaction in 1933, Mr. Wilder, when you supplied this list to Mr. Frey and Mr. Calvin, you say that that was a matter of general information at that time?

Mr. WILDER. Yes, sir.

Senator CLARK. Will you describe a little further what you meant by "general information"?

Mr. WILDER. General knowledge would be a better word.

Senator CLARK. General knowledge?

Mr. WILDER. Yes, sir. Such people as the Chicago Pneumatic Tool, Westinghouse, or any large corporation that is supplying the shipbuilders, knew what the arrangements were.

Senator CLARK. What were the arrangements?

Mr. WILDER. Knew where to look for the business.

Senator CLARK. What were the arrangements?

Mr. WILDER. I will have to have that book back. I can tell you from memory, and can correct it if I am wrong.

Bethlehem was to get the heavy cruiser, 10,000-ton, 8-inch gun, and four 1,850-ton destroyer leaders.

New York Ship had two light cruisers, two 10,000-ton, 6-inch-gun cruisers, and four 1,850-ton destroyer leaders; and Newport News was given two aircraft carriers.

Senator CLARK. Did you have any information on the basis of that arrangement?

Mr. WILDER. You mean the price? No.

Senator CLARK. I mean as to the basis of division between Newport News and Bethlehem.

Mr. WILDER. It adds up, if you except one controversial point [examining paper]. That statement is correct. It is about an equal divide, Senator. If you take the cruiser that Bethlehem got on a fighting bid in December 1932 and add this additional heavy cruiser——

Senator CLARK. What do you mean by that statement, Mr. Wilder?

Mr. WILDER. You have got an excellent chart right here, which I have never seen before, and I have never seen a better one.[1]

Maybe Mr. Raushenbush better explain it. It is his baby. Here are the cruiser bids. New York Ship is in red, Newport News black, and Bethlehem green. They are running along from 1927 up through 1930 and 1931. Then you have this fighting bid.

The CHAIRMAN. You had what?

Mr. WILDER. You have this fighting bid.

Senator CLARK. What do you mean by " fighting bid ", Mr. Wilder?

Mr. WILDER. When you expect competition and you do not want it, you sometimes bid so low that it discourages the other fellow. You have heard of a " fighting ship ", have you not?

Senator CLARK. Yes, sir.

Mr. WILDER. Same thing.

Senator CLARK. You mean by a " fighting bid " a bid where there is actual competition?

Mr. WILDER. You bet your life there is competition there. It is fine.

Senator CLARK. What was the price?

Mr. WILDER. $8,196,000.

Senator CLARK. For what type of cruiser?

Mr. WILDER. The heavy cruiser.

Senator CLARK. Go on with your statement.

Mr. WILDER. Here we are down here on Bethlehem [indicating on chart]. Bethlehem got scared; got scared that much. They were afraid United was coming in.

The CHAIRMAN. Just how much is that? About $2,000,000?

Mr. WILDER. About $1,500,000.

Senator CLARK. Who is United?

Mr. WILDER. United is the United Drydocks, a Hayden-Stone combine of X shipbuilding plants, repair ways, and one thing and another in New York Harbor, headed by Joe Powell, a former naval constructor. Joe Powell used to be head of the old Fore River plant before it became a part of Bethlehem.

Senator CLARK. Did the United Drydocks submit a bid on this?

---

[1] See appendix, facing p. 4927, for chart used in discussion.

Mr. **Wilder**. So far as I know. Did they, Mr. Raushenbush?

Mr. **Raushenbush**. This blue line shows in the first half of 1933 on those cruisers that United got into the picture for the first time with a bid which was below that of the other two companies. Up to that time the big three alone had been bidding, and here United got in with a very considerably lower bid. For some reason not heretofore explained Bethlehem Ship had been coming along here on this green line at about $10,000,000.

Senator **Clark**. What does the green line represent?

Mr. **Raushenbush**. The green line represents Bethlehem's bidding.

Senator **Clark**. I understand; but what does it figure compared with a straight line?

Mr. **Raushenbush**. It is over $10,500,000 in 1927, about the same in 1929, and then suddenly, without any corresponding decrease in prices, it drops about 10½ million dollars in 1931 away down to a little over 8 million dollars.

Senator **Clark**. What does the next bid represent?

Mr. **Wilder**. The next bid was in 1933.

Mr. **Raushenbush**. The next bid was in 1933, and apparently was close to $12,000,000.

Mr. **Wilder**. $11,720,000.

Mr. **Raushenbush**. That is right; $11,720,000.

Senator **Clark**. What is the next bid after that?

Mr. **Wilder**. $16,000,000.

Mr. **Raushenbush**. I think there was an intermediate bid of 13.

Mr. **Wilder**. There was no intermediate bid.

Senator **Clark**. What is the next bid shown on the chart for Bethlehem, Mr. Raushenbush?

Mr. **Raushenbush**. It is over $16,500,000.

Senator **Clark**. When was that?

Mr. **Raushenbush**. In 1934.

Senator **Vandenberg**. The chart shows that all the bids went down in 1932 and all of them came up in 1933.

Mr. **Wilder**. They got a war scare here. They got a new factor in the picture.

Senator **Clark**. The chart does show that all the bids submitted made a very sudden and noticeable drop in the fall of 1932, and then immediately going steeply up to more than double what had been a comparatively uniform basis for a period of several years. That is correct, is it not, Mr. Wilder?

Mr. **Wilder**. Yes, sir.

Senator **Vandenberg**. Are these bids on comparable ships, all of them?

Mr. **Wilder**. Yes, sir; there is really very little difference between an 8-inch and a 6-inch gun cruiser. If the Navy is wise, it is the same ship.

Senator **Clark**. Mr. Wilder, you spoke, a while ago, about the National Council of American Shipbuilders. Were these matters discussed at the meetings of the National Council of American Shipbuilders?

Mr. **Wilder**. I have been so informed.

Senator **Clark**. Have you ever been a member of the National Council of American Shipbuilders?

Mr. **Wilder**. No; I stayed out. I would not play.

Senator **Clark**. Were you invited to become a member of it?

Mr. **Wilder**. Not after the *Saratoga*.

Senator **Clark**. Coming back to the *Saratoga*, the matter of the six cruisers let in 1927, and the matter of your taking over the *Pensacola* and *Salt Lake City* from Cramp, and the matter of securing the last penny profit from the *Saratoga* and the *Lexington*, were all on the boards at the same time, were they not?

Mr. **Wilder**. Yes, sir.

Senator **Clark**. And it was all discussed between the New York Shipbuilding Corporation, or the American Brown Boveri, and the Bethlehem Shipbuilding Co. and the Newport News Shipbuilding Co. at the same time, was it not?

Mr. **Wilder**. With the exception of those 1927 new cruisers, I do not recall any discussion, at least never when I was in on it.

Senator **Clark**. I am speaking of the six new cruisers in 1927 and the matter of the New York Shipbuilding taking over the *Salt Lake City* and the *Pensacola* from Cramp, and the matter of the *Saratoga* and the *Lexington;* they were all on the boards at the same time and were all a matter of discussion and agreement between the big three at the same time. Is not that correct?

Mr. **Wilder**. I do not agree with you, Senator.

Senator **Clark**. All right.

Mr. **Wilder**. The *Saratoga* was a matter of very little disagreement.

Senator **Clark**. They were all a matter of discussion between the three of you at the same time, were they not?

Mr. **Wilder**. Not that bunch of 1927 cruisers; no, sir.

Mr. **LaRouche**. Excuse me, but is it not a fact that your taking of units of the 6 cruisers was contingent upon your taking over the Cramp job? That is, was there not some discussion as to whether you would accept one job if you did not get the other, and that you insisted on the two?

Mr. **Wilder**. I think in the discussions with the Navy we said we hoped we would get another cruiser to balance up the difficulty of taking over the Cramp cruiser. But you must realize, Mr. LaRouche, just as Senator Clark says, they were more or less on the boards at the same time, and there was no inclination on the part of anybody in that regard. They were afraid the Navy would force Bethlehem to do the same thing, and they did not want that. I could not even go into a luncheon club in New York after that for a while.

Mr. **LaRouche**. Was not your position with respect to the *Saratoga* used as a club to force that situation?

Mr. **Wilder**. No, sir, certainly not by me.

Mr. **LaRouche**. Was it by anybody?

Mr. **Wilder**. Not that I know of; not that I have any knowledge of.

You asked, Senator, about the divide in 1933. Counting the cruiser that Bethlehem got down there on that particular bid, that, plus a new cruiser, plus 4 destroyers, equals 2 cruisers for New York Ship and 4 destroyers, and equals in value 2 aircraft carriers for Newport News. It was just a shuffle. Anybody could figure that out.

Senator Clark. As I understand it, Mr. Wilder, you divided up the awards in the 1933 building program, so far as the value to the shipbuilding companies was concerned, and, as you say, Newport News, New York Ship, and Bethlehem each got approximately one-third of the value?

Mr. Wilder. Counting that job, the 1932 job.

Senator Clark. In other words, counting in the bid which you say Bethlehem took at a loss?

Mr. Wilder. I do not say that; no, sir.

Senator Clark. I understood you to say that.

Mr. Wilder. I said a "fighting bid."

Senator Clark. What do you mean by a "fighting bid"? I thought you said that meant they were willing to take a job for the purpose of putting a competitor out of business?

Mr. Wilder. Yes; but I do not think at that price there was any loss in it.

Senator Clark. Counting in the low bid which Bethlehem made in 1932 for the purpose of forcing out United Drydocks, you say that the two transactions taken together work out approximately one-third to each one of them?

Mr. Wilder. Yes; they got between $35,000,000 and $38,000,000 each.

Senator Clark. Were there any other bidders on this 1933 program?

Mr. Wilder. Not on the cruisers or those destroyers—wait a minute. Did Federal come in there, or not until later?

Mr. Raushenbush. Federal did not come in until 1934 on the cruiser bidding. It was in on the destroyer.

Mr. Wilder. Now, if the Senator will permit, the reason I got that information was because the shipbuilders are reported to have had one whale of a row, and as a result of that row, this row being in the week prior to July 26, 1933——

Senator Vandenberg. You mean the "Big Three" had a row?

Mr. Wilder. The "Big Three" had a row, and how! You had Charley Langell on the stand the other day. If you call him again, ask him what happened; why it was necessary for him to go out of the conference room and telephone Camden and urge Ernest Cornbrooks to get in a plane and come right down.

Senator Clark. Who is Ernest Cornbrooks?

Mr. Wilder. Operating vice president of New York Ship. Bardo was getting the worst of the argument. Langell is the estimator. Langell had sense enough to go out and fly down. That was a week prior to July 26. It was reported that the row was so severe that Mr. Cornbrooks had a heart attack at 4 o'clock in the morning, and was taken out on a stretcher at the Mayflower Hotel. That was Thursday or Friday before the bids were opened.

Senator Vandenberg. That is at a meeting, an all-night session in the Mayflower Hotel, between the representatives of the "Big Three", a week before the bids?

Mr. Wilder. The week before. I cannot place it exactly.

Senator Vandenberg. The week before the bids?

Mr. Wilder. The week before the bids, Thursday or Friday. Mr. Ernest Cornbrooks flew down, and then at 4 o'clock was taken out on a stretcher. It was reported to me that the subject of the row was that Bethlehem would not accept the fighting ship and wanted something more out of it in addition. That was the reason.

Senator Vandenberg. What else was reported out of the meeting?

Mr. Wilder. That is all.

Senator Clark. Was this before the bids were filed?

Mr. Wilder. Before the bids were opened. It was on the basis that Bethlehem get one 8-inch-gun, 10,000-ton cruiser and 4 destroyer leaders of 1,850 tons; New York Ship, two 6-inch-gun, 10,000-ton cruisers and 4 destroyer leaders of 1,850 tons; and Newport News, 2 aircraft carriers.

Senator Bone. The bids had not yet been filed?

Mr. Wilder. No, sir.

Senator Bone. Manifestly, you could not have an understanding of that kind without knowing the attitude of the Navy Department, because it involved two different parties.

Mr. Wilder. That is just what I wanted to clear up Senator Clark on. This had nothing to do with awards. This was the filing of the bids.

Senator Bone. I understand, but the award is the important part. If they were made in that way and there was collusion, the Navy Department would have to be a part of it.

Senator Barbour. Awards can only be on the basis of a bid.

Senator Bone. I understand that.

Senator Clark. Mr. Chairman, I am glad Senator Bone brought that up. Assuming collusion on any bid, the method by which that would be determined would be for the party selected by the conspirators to make the low bid and for the other parties to the understanding to make so-called "protective" bids?

Mr. Wilder. Yes, sir.

Senator Clark. Sufficiently higher so that the selected party would necessarily be the low bidder. Is not that the customary method, Mr. Wilder?

Mr. Wilder. Yes, sir.

Senator Vandenberg. In other words, if at that midnight meeting it was decided that Bethlehem is to get—what does Bethlehem get?

Mr. Wilder. One 8-inch gun cruiser and 4 destroyer leaders.

Senator Vandenberg. All right. If they decided at that midnight meeting that Bethlehem is to have that particular group of ships, then Bethlehem bids low on that group and the other two bidders bid high. Is that the way it works?

Mr. Wilder. Yes, sir; that is the way, the explanation of the 1933 situation.

Senator Bone. That is the explanation I wanted.

Senator Vandenberg. Then to reciprocate Bethlehem bids high upon whatever ships are allocated to the other builders?

Mr. Wilder. Yes, sir. They faced a rather definite situation there.

Senator Bone. They were parceling the country out? "All Gaul is divided into three parts."

Mr. WILDER. Oh, yes; it is just the "great divide." They are quite accustomed to that in Bethlehem. They used to do it, and called it "Bonus Hill."

Let us say in there, with steel down, and with labor way down, that a fair price with one of those cruisers, with a couple of millions profit, and to take care of all the laziness in the way that all the yards are operated, $10,000,000 was a fair price. That is just an assumption. I am not testifying to something of my own knowledge, but as it appeals to me as a matter of logic.

The CHAIRMAN. Ten million?

Mr. WILDER. Ten million. With steel down and with labor down, I mean. Bethlehem first got itself loaded up with one job, their award in January 1933, at $8,000,000. To make an average, they have got to get $12,000,000 for the next one.

On that point, if they bid $12,000,000 for the next one, or $11,720,000, then they really know that the two will average $10,000,000; that is, 8 plus 12 is 20, and divided by 2 is 10.

New York Ship has got to bid higher than that, and Newport News must bid higher than that.

But let me step over into the next aisle, where New York Ship is going to be low on light cruisers, and it cannot very well drop from a 12-million-dollar bid over here to a 10-million-dollar bid there [indicating on chart]. That is what "high-jacked" cruiser prices.

Senator CLARK. What do you mean by "high-jacked" cruiser prices, Mr. Wilder?

Mr. WILDER. I mean just that. It is a racket.

Mr. RAUSHENBUSH. Will you explain that last statement of yours again, Mr. Wilder? I mean the first part of it, that Bethlehem apparently was putting in a fighting or no-agreement bid.

Mr. WILDER. Whether Wakeman got scared to death or not, I do not know, or went out on a party, but he just tore 1½ million dollars off his bid.

Mr. RAUSHENBUSH. Is that the first time that United had gotten into the picture?

Mr. WILDER. Yes, sir.

Mr. RAUSHENBUSH. In other words, the big-three agreement, if there was such a thing, was not holding for that year?

Mr. WILDER. Yes, it was holding, all right. Look right here. It is here, all right [examining chart].[1] Let us say normally Bethlehem would be there [indicating]. Then he got scared to death of this, and tore it up [indicating].

Mr. RAUSHENBUSH. Go on with the second part and explain how it was necessary to average up.

Mr. WILDER. This is December and January 1933, and now you are in July [indicating on chart]. Bethlehem stands to average $10,000,000 each on the two cruisers.

Senator CLARK. If I understand you correctly, it is your contention that Bethlehem was trying to make up in the next award for the comparatively low bid which they had made in the fall of 1932?

Mr. WILDER. You have it, sir. But the next point is, as Senator Bone says, that if you are going to have that, you have got to put two protective bids on top of that; and then if you, Senator, are going to bid on the same ships, obviously you cannot put a protective bid in over Bethlehem of, say, I think, $12,250,000 for a heavy cruiser and then say, "I will build a light cruiser for $10,000,000." No; you have got to stay up.

---

[1] See appendix, facing p. 4927, for chart discussed.

Senator BONE. What is the difference in cost between those light cruisers where one uses 6-inch guns and one 8-inch guns? I mean outside the armament.

Mr. WILDER. The Navy supplies the armament.

Senator BONE. The shipbuilding company builds the turrets, does it not? What would be the difference in the cost?

Mr. WILDER. The answer is none.

Senator BONE. In other words, they build the so-called "8-inch-gun cruiser" about as cheaply as the other?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. Your contention is that this averaging process inevitably forced up the entire scale for the balance of the bids?

Mr. WILDER. Of course. Does that answer it, Senator?

Senator CLARK. You mean the fellow who really was going to get the award had to raise his bid, and the fellows running interference had to go still higher?

Mr. WILDER. Right; and when they go in there they are on the light cruiser, so that they are the same ship. The proof of the pudding is that Bethlehem lowered its bid under 1931 on the 1,500-ton destroyers. The thing you might be thinking of in August 1933, they were covered on materials, and nobody is going to run any risk there, because you have got your coverage, and your only risk is the increase in labor rates, and the labor percentage on a destroyer is far higher than a cruiser. Think of it; it is limited to only 1,500 tons when everything is in them, and they have got one-half the horsepower. Fifty-four thousand is the horsepower for the little destroyer, and it is 107,000 for the cruiser. So that if there was any justification for increasing bids, it was in that category, where the increase in labor rates was greatest, namely, the destroyer category. Did they increase? No; they lowered under 1931.

PROTEST TO PRESIDENT ON 1933 BIDS

Senator CLARK. Mr. Wilder, I call your attention to a letter dated August 1, 1933, addressed to the President, a copy of which was to be sent to the Secretary of the Navy, from Senator Trammell, of Florida, the Chairman of the Naval Affairs Committee of the United States Senate, which I will read.

Senator VANDENBERG. What is the date, Senator?

Senator CLARK. August 1, 1933.

Senator VANDENBERG. What is that date in relation to the letting of the bids?

Mr. WILDER. Just between. The bids were opened on the 26th of July, and the 3d of August was the awards.

Senator CLARK (reading):

DEAR MR. PRESIDENT: I have been quite interested in analyzing the bids opened by the Navy Department on July 26, 1933, which were submitted by the shipbuilders on naval construction. I believe a thorough study of the matter should be made.

It is my information that——

On September 16, 1931, Bethlehem Shipbuilding Corporation bid for one 1,500-ton destroyer, $2,728,500.

On July 26, 1933, Bethlehem Shipbuilding Corporation bid for an identical destroyer, $2,670,000, or a decrease in price of $58,500.

On December 14, 1932, Bethlehem Shipbuilding Corporation bid for one 8-inch gun (heavy) 10,000-ton cruiser, $8,196,000.

On July 26, 1933, Bethlehem Shipbuilding Corporation bid for the same cruiser, $11,720,000, or an increase in price of $3,524,000.

There appear to have been but 4 bidders on cruisers and 8 on destroyers. Gulf Industries, Inc., of Pensacola, Fla., appears to have submitted bids on the destroyers.

It is my information that, in addition to the facts outlined above, it was known in advance which of the four concerns bidding on the cruisers would be low on each of the several items, and it appears to have been known in advance that the position of each of the said shipbuilders would be protected by bids submitted by the remaining shipbuilders, for instance:

Bethlehem Shipbuilding Corporation, $11,720,000.
New York Shipbuilding Co., $12,100,000.
Newport News Shipbuilding & Dry Dock Co., $13,800,000.
United Dry Docks, Inc., $14,800,000.

The bid of the New York Shipbuilding Corporation on the 2 light cruisers was protected by the other 3 bidders as follows:

New York Shipbuilding, $11,657,000; Bethlehem Shipbuilding Corporation, $12,780,000; Newport News Shipbuilding & Dry Dock Co., $13,900,000; United Dry Docks, Inc., no bid.

I am unable to justify in my own opinion the increase in cruiser cost as indicated by the 1932 and 1933 bids, particularly when those bids are compared with the destroyer bids of 1931 and 1933. I am convinced that the cruiser bids should be rejected.

Your attention is invited to the fact that Gulf Industries, Inc., of Pensacola, Fla., in its letter to the Secretary of the Navy, dated July 29, 1933, stated that it is prepared to submit bids on the cruisers which will save the Government millions of dollars. And this is so whether the bidding is reopened by private negotiations or by a call for new bids.

I bespeak your careful and thoughtful consideration of this request that the cruiser bids be rejected.

What is that letter from you to the Secretary of the Navy referred to here?[1] Do you have a copy of it?

Mr. Wilder. Can I get my book back?

Senator Vandenberg. Mr. Wilder, while we are waiting for the scrapbook, I would like to get one thing clear in my mind about the advance memorandum which you made and gave to Mr. Frey. Was that memorandum based upon anything more than good guessing?

Mr. Wilder. And hearsay from those meetings at the Mayflower.

Senator Vandenberg. Was it substantially based on what Mr. Cornbrooks had told you?

Mr. Wilder. Yes; plus what I had learned from other people in other industries, and I speak of the contributing industries.

Senator Clark. You mean the subcontractors?

Mr. Wilder. Yes, sir. They all knew because they knew whom they were going to do business with.

Senator Clark. In other words, the suppliers of various parts and materials had information as to who was to secure these awards?

Mr. Wilder. Senator Clark, I knew it was absolutely accurate. It could not have been anything but accurate. The shipbuilders were not asking the suppliers to quote them on all the vessels. That is, New York Ship was taking no quotations on aircraft carriers, nor was Bethlehem.

---

[1] See text, p. 4774, for Gulf Industries letter to Secretary of Navy.

Now, remember this code was just signed the day the bids were opened, and it was code no. 2, and what was the electric code going to be? It would be perfectly ridiculous to make a bona-fide bid on anything with as much electrical things in it as that, unless you had a letter from General Electric and others saying that within 6 months we will furnish you with these things for so much money.

Senator CLARK. If I understand you correctly, these people were filing bids on each class of ship?

Mr. WILDER. Yes, sir.

Senator CLARK. And were asking for information from their subcontractors on only certain ships?

Mr. WILDER. On the ships they were intending to get; yes, sir. You take any of the three big subcontractors and ask them leading questions, and anybody could put the picture together.

The CHAIRMAN. Was there any variation in that rule at all?

Mr. WILDER. That I cannot tell you, because it is a spotty thing, Senator.

Senator VANDENBERG. Did Mr. Cornbrooks indicate that there was any conversation at that midnight session, other than you have indicated to us?

Mr. WILDER. No. The thing had been set some time, and then Bethlehem kicked over the traces and wanted something else.

Senator VANDENBERG. In other words, the agreement antedated the midnight session?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. That was just a post mortem?

Mr. WILDER. A flare-up.

Senator VANDENBERG. Have you any information as to any of the previous meetings, when the agreement may have been made in the first instance?

HEARINGS ON SHIPBUILDERS' N. R. A. CODE

Mr. WILDER. Mr. Raushenbush, do you know the date of the first code hearing?

Mr. RAUSHENBUSH. No; not offhand.

Mr. WILDER. Do you, Miss Kitchen?

Miss KITCHEN. I think it was the 18th.

The CHAIRMAN. The 18th of what month?

Mr. WILDER. Of July. It was a long meeting and they were in practically continuous session here in Washington, largely at the Mayflower, from that time when the code hearings opened to and through after the bids were opened. The meetings were going on all the time. Of course, we were fighting our heads off. They wanted an exclusion clause in the code which would keep everybody out except themselves.

Senator VANDENBERG. Did they get that?

Mr. WILDER. No; thanks to organized labor, but it was some row, though. That is what knocked me out.

Senator VANDENBERG. Then, as I understand it, they were here for a couple of weeks preceding this midnight session?

Mr. WILDER. Oh, yes.

Senator VANDENBERG. And that is the period, I take it from your story, that the arrangement was probably perfected?

Mr. WILDER. Yes, sir. You see, on the first day of the code hearing——

Senator VANDENBERG. Pardon me, but is there anything in the N.R.A. code that would protect this sort of uniform practice?

Mr. WILDER. Oh, most enlightening. The first day's hearings are most enlightening.

Senator VANDENBERG. What do you mean?

Mr. WILDER. There, sir, is the start on that exclusion clause, in that code matter. Under that they were to agree to monopolize the yards in the code list. They could not revamp an old, abandoned way; they could not reopen a dormant yard; and they could not build anything new.

Senator VANDENBERG. Who proposed this code?

Mr. WILDER. H. Garrish Smith, National Council of American Shipbuilders.

Senator VANDENBERG. That is the gentleman who presided over the meeting?

Mr. WILDER. Yes, sir.

Mr. RAUSHENBUSH. Senator, we had some evidence given here the other day identifying the testimony of Admiral Land in favor of that clause.

Senator VANDENBERG. That is exclusion of the code?

Mr. WILDER. Clause 14, sir. If you will look along a little later, you will see that Deputy Administrator Whiteside said they were going to attempt to reinsert it.

Senator VANDENBERG. This code, with the clause in it, was offered you by the N. R. A.?

Mr. WILDER. No; it was offered to N. R. A. by the National Council of American Shipbuilders.

Senator VANDENBERG. What was N. R. A.'s attitude when it was suggested to them?

Mr. WILDER. Whiteside was against it.

Senator CLARK. Who makes up this National Council of American Shipbuilders?

Mr. WILDER. The " unholy three."

Senator CLARK. Any other members?

Mr. WILDER. Only the satellites, Babcock & Wilcox, General Electric, Westinghouse, Durval, and they contribute. It is awful nice; they shake these babies for the cost of operating it.

Mr. RAUSHENBUSH. The smaller companies are there?

Mr. WILDER. They are in by sufferance, on a little different level.

The CHAIRMAN. By what?

Mr. WILDER. Sufferance.

Senator BONE. Mr. Raushenbush, might it not be a good idea at this point in the record to insert the paragraph of the code, so that anybody reading this record would be completely enlightened about that question?

Mr. RAUSHENBUSH. Yes, sir.

The CHAIRMAN. Make a note of that, Mr. Reporter, and insert the code provision.

(The code provision referred to is as follows:)

The present capacity of active shipbuilding and ship repairing companies of the United States as a whole is in excess of present or any prospective needs; therefore, it will be considered a violation of this code to make any material increase in the plant capacity of the industry.

Senator CLARK. Mr. Wilder, in this letter from Senator Trammell, Chairman of the Naval Affairs Committee, he speaks of a bid submitted by Gulf Industries on destroyers. What were the circumstances in connection with the destroyer bid?

Mr. WILDER. We made up an entirely independent bid, and it proved to be pretty low. I can find it here, if I take time enough.

Mr. RAUSHENBUSH. Were those the light destroyers?

Mr. WILDER. Those were the light destroyers. Our bid on a flat price was $3,025,000, and the next nearest one was $3,400,000.

Mr. RAUSHENBUSH. That was the *Chester*.

Mr. WILDER. There is a little yard down there which built 10,000-ton merchant ships, very good ones, and had been inspected by Commander Duncan, of the Navy.

Senator CLARK. I read a letter from the Secretary of the Navy to Senator Trammell, in response to the letter which I just read, from Senator Trammell to the Secretary of the Navy, this being dated August 9, 1933, which was immediately after the award, was it not?

Mr. WILDER. The date was August 3, of the award.

Senator CLARK (reading):

> Replying to your letter of August 1, 1933, in which you make certain assertions concerning bids for the construction of naval vessels, which were opened by the Navy Department July 26, 1933, I wish to inform you as follows:
>
> In the first place, all bids were carefully examined and analyzed prior to decision as to awards and in every case were made to the lowest responsible bidder.
>
> The bid of the Gulf Industries, Inc., of Pensacola, Fla., was rejected because a survey of the plant indicated that this company was not in position to undertake construction of the vessels upon which bids were submitted.
>
> With reference to the statement concerning advance information as to the low bidders and as to collusion of the bidders, I find that there is no justification and fact for such statement. You will recall that Admiral Standley, Chief of Naval Operations, speaking for me, received from you by telephone the information to the effect that the basis of statements contained in your letter was obtained from a Mr. Thornton who stated to you that he had received his information from Mr. Wilder who is associated with the Gulf Industries, Inc., of Pensacola, Fla.
>
> You also stated that confirming statements were made by Mr. Kelvin, who represents Mr. Frey, of the American Federation of Labor. Both of these gentlemen were contacted, and Mr. Thornton stated he had given you no information whatever in regard to these bids, and only happened to be in your office when these statements were made as to Mr. Wilder's knowledge of irregularities in the bids.

Do you know who Mr. Thornton was, Mr. Wilder?

Mr. WILDER. Mr. Thornton represented the Pensacola Air Station, or did.

Senator CLARK (continuing reading):

> Mr. Kelvin stated that his information was based on a conversation with the same Mr. Wilder 2 or 3 days before the bids were opened, at which time Mr. Wilder stated that he could name the low bidders.

Is that the same transaction referred to by Mr. Calvin and Mr. Frey?

Mr. WILDER. Yes.

Senator CLARK (continuing reading):

> In view of the above, and after a careful analysis of all bids in the light of your statements, I am convinced that there is no foundation in fact for the accusations contained in your letter and accordingly no further action will be taken.

I regret exceedingly that a question of this kind should have arisen in connection with awards for bids of these vessels, for I assure you, Mr. Senator, that I am just as anxious as you are that the United States shall obtain the very best contracts they can for the construction of these vessels. It was only after assuring myself that such was the case that the awards were approved.

Sincerely yours,

CLAUDE A. SWANSON.

Hon. PARK TRAMMELL
Chairman Committee on Naval Affairs,
United States Senate.

COMPETENCE OF GULF INDUSTRIES

Senator CLARK. What was the fact about the ability of the Gulf Industries to perform, if they had been given the award on their bid?

Mr. WILDER. At a meeting about the time that the invitation for bids first came out, in May or June, at which there was present Mr. T. M. Cornbrooks, Pickens Neagle, former Solicitor of the Navy, Admirals Land, Robinson, and Assistant Secretary Roosevelt, Admiral Land volunteered to the Secretary that we were competent to build any type of naval vessel, based on our past experience.

They wanted to inspect the Pensacola yard, so that I went down there and met Commander Duncan and went over it; and we agreed at the time that with an expenditure of about $400,000 that yard could be put in perfectly good shape to build destroyers, and it would not delay building, because that could be done while the destroyers were being designed.

I understand the report made by the commandant of the Pensacola Naval Air Station to the Secretary was favorable; that the yard was competent.

Senator VANDENBERG. Is that conditioned upon the expenditure of $400,000?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. Was that available?

Mr. WILDER. Yes.

Senator CLARK. When you say "available", Mr. Wilder, had arrangements been made to finance the enterprise?

Mr. WILDER. Yes, sir.

Senator CLARK. Where were the arrangements made?

Mr. WILDER. New York.

Senator CLARK. With whom?

Mr. WILDER. I would rather not state that.

Senator CLARK. I am asking you. You are under oath, and I am asking you to state.

Mr. WILDER. With Mr. Harvey Wiley Corbett, Josiah T. Newcomb, and Alfred O. Hoyt.

Senator BONE. These gentlemen were in a position to make funds available?

Mr. WILDER. Yes, sir.

Senator CLARK. I will read the report of the commandant of the United States Naval Air Station, or I will first read one paragraph, and I will have the report from Commander Duncan to the commandant of the United States Naval Air Station inserted on the examination of the facilities of Gulf Industries, Inc. I will have the whole report inserted in the record.

(The documents referred to were marked "Exhibit No. 1482", and are included in the appendix on p. 4918.)

Senator CLARK. However, since this document is quite long, I will read paragraph 7. [Reading:]

> The plant of the Pensacola Shipbuilding Co. was built for the purpose of constructing cargo carriers on what was known during the World War and immediately thereafter as the "fabricated-ship system"; that is, about 90 percent of the plates, framework, etc., of the ship was fabricated elsewhere than at the erecting plant and only 10 percent of the fabricating was done at the plant where the erection was accomplished. In the evaluation of the possibility of building destroyers at this plant this point should be given due consideration. Undoubtedly additional steel rolls and gang drills will have to be purchased and installed, but it appears to be entirely feasible within the estimate above given. It is believed that the plant can be reconditioned as the construction of the ships proceeds, as was frequently done in war-time plants, and there should be no delay in the construction of these destroyers at this plant on account of the necessity of rehabilitating the plant.

Senator VANDENBERG. Is that a report to the Navy?

Senator CLARK. This is a report from Commander Duncan to the commandant of the Pensacola Naval Air Station.

Then, the first endorsement on this report is from the commandant of the Pensacola Naval Air Station to the Secretary of the Navy, and these reports were taken from the files of the Navy Department, this being from the commander to the Secretary of the Navy.

It states:

> Subject: Torpedo boat destroyers nos. 356 to 359, 360 to 363, and 364 to 379, inclusive—Bids for the construction of.—Examination of facilities of the Gulf Industries, Inc.
>
> Reference: (a) Secretary of the Navy's letter DD356/L4–2 (330628) P of June 28, 1933.
> (b) Commandant's first endorsement. Ro–B/QM–G1 of June 30, 1933.
>
> Enclosures: (7).
>
> 1. Forwarded herewith is a report of Commander G. A. Duncan (C. E. C.), United States Navy, who was directed by me to make the inspection of the plant of the Gulf Industries, Inc., of Pensacola, Fla., in compliance with the Secretary of the Navy's letter, reference (a).
> 2. The commandant is of the opinion that so far as material conditions are concerned the plant is capable of constructing destroyers, provided the reconditioning of this plant as recommended in the attached report is carried out.
> 3. As for personnel conditions, it seems that such does not exist at present. It is possible, however, to obtain the necessary personnel as was done in the case of the Emergency Fleet construction during the war.
>
> F. R. MCCRARY.

Mr. Wilder, what was the situation as regards performance of the Gulf Industries at that time?

Mr. WILDER. As I say, at the time we obtained the bidder data from the Navy, at a meeting in Assistant Secretary Roosevelt's office, at which were present Mr. T. M. Cornbrooks; Mr. Pickens Neagle, former Solicitor of the Navy, our counsel; Admiral Land; and, I believe, Admiral Robinson; Admiral Land volunteered to the Assistant Secretary that Wilder and Cornbrooks were competent to build any type of naval vessel.

Senator CLARK. I am not speaking of your ability or Cornbrook's ability, but what was your situation as regards performance, assuming you had the award given you?

Mr. WILDER. There is a list of names [indicating].

Senator VANDENBERG. When was the meeting which you are now discussing?

Mr. WILDER. About 6 weeks prior to the opening of the bids, the latter part of May or the first part of June. We submitted at that time this list of personnel, who were prepared to come with us if we got the awards.

Senator BARBOUR. Where was that personnel going to come from? From other yards?

Mr. WILDER. A lot of it out of employment. I do not think we were lifting anybody from any yard.

Senator CLARK. Mr. Wilder, this enclosure in the letter of Senator Trammell, to which you have just called my attention, details the technical experience of Mr. Cornbrooks.

Mr. WILDER. I beg your pardon.

Senator CLARK. Outside of that, there is no assertion of any organization capable of building destroyers at that time.

Mr. WILDER. Mr. Senator, my secretary tells me that the letter as to what the situation was is not in the book.

Senator CLARK. If you will just describe the situation with regard to the organization which you had at that time, Mr. Wilder, and what you had in prospect, if you had been granted the award on the destroyers on which you bid, it will answer the same purpose.

Mr. WILDER. The organization was a tentative organization. It is exactly as you are covering it. Mr. Cornbrooks and I had figured out the men whom we wanted for the key positions, the marine engineers, the naval architect, the man who was to run the ways, and so forth and so forth, about 20 key men, and we had submitted that list. I am correct in that, Miss Kitchen? We had submitted that list to the Navy long prior? It was submitted about the same time we got the invitation to bid, was it not?

Miss KITCHEN. Yes; if not before.

Senator CLARK. In this meeting which you speak of, was there anything discussed as to the capacity of your organization?

Mr. WILDER. Covered by the remark of Admiral Land, that, as an organization, we were competent to build any ships.

Senator BARBOUR. As I understand it, Mr. Wilder, these 20 key men, of course, were all experts and competent authorities in their own line?

Mr. WILDER. In their own line; yes, sir.

Senator BARBOUR. And they were all unemployed at the time?

Mr. WILDER. Some of them were employed and some of them doing consultation work. I think only one man was in another yard working on naval work.

Senator CLARK. I will offer your letter of August 4, 1933, Mr. Wilder, to the Secretary of the Navy, for the record.

(The letter referred to was marked "Exhibit No. 1483" and is included in the appendix on p. 4921.)

Senator CLARK. Had there been any discussion with these men as to whether they were open to employment?

Mr. WILDER. Yes, sir; their salaries and everything about moving them down to Pensacola have all been covered. It cost us quite a lot of money to make up those bids, and obviously we would not want to spend money to make up bids unless we were prepared to go to work.

Senator VANDENBERG. What were your bids?

Mr. WILDER. On two, $3,025,000 and the next lowest was $3,400,000. We were about 12 percent below. The awards were made: Two for $3,400,000; and two for $3,410,000; and two for $3,429,000. Am I right, Mr. LaRouche?

Mr. LAROUCHE. I could not follow it; will you repeat it?

Mr. WILDER. Two to United at $3,400,000; two to Federal at $3,410,000; and two to Bath at $3,429,000.

Senator BONE. What was your bid?

Mr. WILDER. $3,025,000.

Mr. LAROUCHE. I think what the committee wants to know, mainly, at this point, Mr. Wilder, is, as a physical fact, that that is the way the bids are spread around, that that is the way it is done, from your personal knowledge.

Mr. WILDER. Mr. LaRouche, you must realize that I was not in the business during the war, and since the war there has been no such mass of vessels awarded. There have been only one or two at a time.

Mr. LAROUCHE. There were a lot in 1927.

Mr. WILDER. How many were there?

Mr. LAROUCHE. There were six at once.

Mr. WILDER. Only three to private yards, were there not? Was not the Dallinger amendment on that?

Mr. LAROUCHE. Four to private yards.

Mr. WILDER. How did they get that way? Was not the Dallinger amendment on that?

Mr. LAROUCHE. Not then.

Senator VANDENBERG. I agree with Mr. LaRouche's inquiry. Were you cognizant of the fact that this was the system upon which bidding was done?

Mr. WILDER. Yes; but I want to qualify that by saying that I I was not a party to it, to my own knowledge.

Senator VANDENBERG. But did you know, of your own knowledge, that that had been done?

Mr. WILDER. It looked like it from conversations I had had with other shipbuilders, but I did not think it was as raw as it was.

Senator VANDENBERG. In these previous cases, and based on your conversations with other shipbuilders, you were sure this was the system?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. You never participated in it yourself?

Mr. WILDER. Not to my knowledge. The only place I could have participated was in the 1927 awards. I have explained the Saratoga and the Cramp set-up.

Senator VANDENBERG. There was a time in this story when you were in the good standing of this group, was there not?

Mr. WILDER. I do not know when it was. It must have been early.

LOBBYING FOR JONES–WHITE ACT

Senator CLARK. You used to sit in with the boys before the Saratoga incident, Mr. Wilder?

Mr. WILDER. Yes; but there was not much to sit in on. I sat in with them on what we would do as to merchant-marine legislation. We were in constant discussion on that subject.

Senator VANDENBERG. Did you not hear any reminiscence of the situation in those meetings?

Mr. WILDER. Not very much. It was there, and we could feel it.

Senator CLARK. You kind of headed a lobby for them on that merchant-marine business, did you not?

Mr. WILDER. Yes; you bet your life I did. That was my own pet. But I had to keep them out of town. They did not agree with me on that.

Senator CLARK. Would they send in a check once in a while?

Mr. WILDER. Oh, yes.

Senator CLARK. You preferred their checks to their presence?

Mr. WILDER. You bet your life. We had some terrible fights on that, because I wanted to put something in that bill, and they would not let me, and had some trouble getting some compromises through—nothing but fireproof ships—our chief quarrel was on the question of fireproof ships. I wanted no ships built which were not fireproof. There was no use sending a firetrap out to sea. They have known how to build a fireproof ship ever since they could build a fireproof Pullman.

Mr. LAROUCHE. How much did you spend on that?

Mr. WILDER. I have never kept an accurate account; I suppose a quarter of a million.

Senator CLARK. Now where did you get that?

Mr. WILDER. I used to live pretty good.

Mr. LAROUCHE. Did they spend that much on merchant contracts customarily?

Mr. WILDER. I never heard of them doing it before.

Senator CLARK. Who were the other contributors?

Mr. WILDER. You know Mr. Shearer calls him the "man of language", Mr. Bardo.

Senator CLARK. Mr. Shearer was associated in that enterprise?

Mr. WILDER. Surely.

Senator CLARK. Who were the contributors to the fund besides yourself?

Mr. WILDER. Bardo ran the fund, and I think Westinghouse and the other shipbuilders put up some. He put that in in the Shearer case. It is in the record.

Senator CLARK. I am asking you.

Mr. WILDER. I did not have anything to do with the collecting but I was doing the spending.

Senator CLARK. Who gave it to you?

Mr. WILDER. From the company, the New York Ship.

Senator CLARK. You mean the funds you expended were paid to the New York Ship by the other companies?

Mr. WILDER. Yes, sir.

Senator CLARK. And you had no relation to anybody except the New York Shipbuilding Corporation?

Mr. WILDER. Right.

Senator BONE. You are referring now to the activities leading up to the adoption of the Jones-White Act of 1928?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. For what did you spend this money, in a general way? I am curious.

Mr. WILDER. We were doing two things at once. I explained that to the Shortridge committee in detail, and gave them an itemized account of it.

Senator CLARK. Explain that to this committee again.

Mr. WILDER. O. K. We were doing two things at once. We were trying to form some legislation that both the Senate and the House would accept. Now, the Senate, under Senator Jones—he had given up hope of the private operators ever doing anything, and felt that the merchant marine had to be a Government affair, just as the Navy is. The House did not hold to that view. Mr. White was going to kill that bill. The ship operators and shipbuilders were opposed to the Jones bill, so that the proposal was made the Jones bill pass the Senate, and then they made the amendment in the House and sent it back to the Senate.

At the same time I had four committees of experts working on what was then known as the "superliner or 4-day liner." I was running an engineering office here. I cannot remember all of them, but on the naval construction side we had Prof. William Hovgaard, of the Massachusetts Institute of Technology, and Prof. Alfred C. Saddler, dean of Engineering School of Michigan; Theodore Ferris, of New York; Dr. Elmer Sperry; and Ernest Rigg.

We had four committees like that because we were proposing something new. This was about the time that this country went back on the seas and went back in a proper style.

We had a committee on naval architecture, 1 on marine engineering, 1 on transportation, and 1 on the economics of the thing.

Senator VANDENBERG. Is that what these expenditures were for?

Mr. WILDER. Nine-tenths of them. We were paying retainers and defraying their expenses. It was just like running a big engineering office. We had the models in the Washington tank, and had them also in the tank at Ann Arbor, at the same time developing the plan of the new ship. The Germans grabbed it and built the *Bremen* and *Europa*. They were darned nice, and when the dignitaries came in on the maiden voyage they wirelessed me and said, "We are riding on your ship and want to talk to you."

Senator CLARK. That does not tell us where you spent that money.

Mr. WILDER. Two hundred thousand dollars on the engineering work and fifty thousand dollars on the fact we were living here, but I did not spend it on any Senator.

Senator BONE. Mr. Wilder, can you tell us who drew the Jones-White Act?

Mr. WILDER. Mr. Jones drew the preamble.

Senator BONE. I am talking about the peculiar phraseology of that act. What attorney drew it?

Mr. WILDER. I do not know what attorney. I did an awful lot of work on it, and I am not an attorney. Hundreds of different people were working on it, and came in with contributions.

Senator **Bone**. Private shipbuilding companies?

Mr. **Wilder**. Private shipbuilding companies, and particularly ship operators.

Senator **Bone**. Who drew the provisions in the Jones-White Act authorizing the sale of these vessels at a tiny fraction of their cost to which was added a provision that if the Government took them back in case of war, they would pay the price the company wanted to exact for the boats?

Mr. **Wilder**. Is that in the Jones-White Act?

Senator **Bone**. That is in the Jones-White Act, in practical effect.

Mr. **Wilder**. I thought that antedated it.

Senator **Bone**. The going market value in the case of war. Do you remember that?

Mr. **Wilder**. No, sir. Before the House it was the cost less depreciation to date.

Senator **Bone**. Some of those ships were sold to private operators at less than 2 cents on the dollar?

Mr. **Wilder**. Oh, yes.

Senator **Bone**. And in the same act there was a provision which authorized that if the Government took them for war purposes, that they would have to pay the going market value.

Mr. **Wilder**. Are you sure that is not in the 1920 act?

Senator **Bone**. 1928.

Mr. **Wilder**. Because, as I recall it, the wording under the loan provision of the 1928 act was cost less depreciation to date.

Senator **Bone**. I wondered what clever chap developed that.

Mr. **Wilder**. Maybe Ira Campbell.

OFFER TO "FIX" NAVAL AWARDS

Senator **Clark**. Mr. Wilder, there was testimony here yesterday by Mr. Calvin, and this morning by Miss Kitchen, as to a conference held at the Washington Hotel in 1933 between you and Mr. Gravem. Did you hear Miss Kitchen reading the statement which you dictated to her?

Mr. **Wilder**. Yes, sir.

Senator **Clark**. Will you tell the committee your own recollection of the circumstances leading up to it?

Mr. **Wilder**. It is in that memorandum.

Senator **Clark**. That memorandum would represent your recollection of the matter?

Mr. **Wilder**. Yes, sir. I was going to correct Miss Kitchen. The reason for the changes in that memorandum is that I submitted it to the parties who had been present, to see if they all concurred in it.

Senator **Clark**. After preparing this memorandum, immediately after the conference with Mr. Gravem, you prepared a statement of your recollection of the conversation and submitted it to the others who had been present and heard the conversation, to ascertain whether or not their recollection of the conversation checked with your own?

Mr. **Wilder**. Yes, sir.

Senator **Clark**. How long had you known Mr. Gravem prior to this conversation?

Mr. Wilder. Never saw him before.

Senator Clark. You had never seen him before?

Mr. Wilder. Before the date of August 2.

Senator Clark. What was the occasion of him coming to see you? Was it an ordinary conversation?

Mr. Wilder. No. As the memorandum says, Charlie Barrett called up and asked if he could bring a friend around. I had known Charlie Barrett for a long time, and I guess some of you know him.

Senator Clark. Who is Charlie Barrett?

Mr. Wilder. He is president emeritus of the Farmers' Union.

Senator Clark. He called up and said he wanted to bring a friend around?

Mr. Wilder. Yes, sir; and thought he might have something of interest.

Senator Clark. What was the nature of the conversation?

Mr. Wilder. As outlined in this memorandum here.

Senator Clark. Were there any preliminaries on the part of Mr. Gravem leading up to this matter before he called up on the telephone?

Mr. Wilder. The thing was something new.

Senator Clark. On the first day there was nothing in the conversation, when Mr. Barrett was present, that would have led you to have anticipated any such proposition as he made on the second day, was there?

Mr. Wilder. Excuse me, but I do not think you grasp it.

Senator Clark. Just what did he say, then?

Mr. Wilder. He said we would not get any awards unless we subjected ourselves to "chiseling" and the chiseler wanted $60,000 the first day. They found we were low bidders.

Senator Clark. You mean that was in Mr. Barrett's presence?

Mr. Wilder. Yes, sir; and in Miss Kitchen's presence.

Senator Clark. I was not in here when the first part of the statement was read.

Mr. Wilder. May I reread it to you?

Senator Clark. Yes, sir; I would be glad if you would, because I would like to get it clear.

(The witness at this point reread the memorandum previously read into the record by Senator Vandenberg.)[1]

Senator Clark. What you have just been reading was something that took place in the presence of Mr. Barrett?

Mr. Wilder. And Miss Kitchen, who was listening in the other room.

Senator Clark. Did you make any arrangements at that time for a further interview with Mr. Gravem?

Mr. Wilder. He was going to see a friend and report back.

Senator Clark. Did you arrange the time when he was to report back?

Mr. Wilder. No; we called him the next day to learn what he had done. We called him again after the awards had been made.

Senator Vandenberg. Why?

Mr. Wilder. To see what we could learn; wanted to get it on the record.

---

[1] See supra, p. 4744.

Senator Clark. There was nothing which surprised you in this information which he gave you as to the awards? This was subsequent to the time when you had given Mr. Frey the sealed envelope containing the awards, was it not?

Mr. Wilder. Yes, sir; but in giving Mr. Frey or Mr. Calvin that envelope, I did not include the 1,500-ton destroyers. The big fellows were not bidding on those destroyers. I guess there were 10 or 12 people bidding on them. They were not included in the big divide, the ones on which we were bidding; that is, the 1,500-ton. The others were the 1,850.

Senator Clark. Why were they not included in the list?

Mr. Wilder. Those big fellows would not have them. That was not what they were fighting about. They were not interested in what the smaller fry were doing.

Senator Clark. Who did get the 1,500-ton ships?

Mr. Wilder. Bath, Federal, and United.

Senator Clark. Bethlehem, New York Shipbuilding, and Newport News did not get any of those?

Mr. Wilder. No. I guess they bid on them. Did they, Mr. Raushenbush?

Mr. Raushenbush. Yes; Bethlehem bid.

Mr. Wilder. Of course, that is right.

Senator Clark. Bath, Federal, and United are known as "the little three"?

Mr. Wilder. Yes, sir.

Senator Clark. As distinguished from "the Big Three", Bethlehem, New York Ship, and Newport News?

Mr. Wilder. Yes, sir. You ought to include Electric Boat, because Electric Boat is in a class by itself.

Mr. LaRouche. Why were not "the big three" interested in those six 1,500-ton destroyers?

Mr. Wilder. No room for them.

Senator Clark. As a matter of fact, Mr. Wilder, the information which Mr. Gravem gave you as to collusive bidding was information which might be figured out of the air, the same as you figured information out of the air for the list which you gave to Mr. Frey. Is not that so?

Mr. Wilder. Yes, sir; but as to "chiseling", that was something new and rather shocking.

Senator Vandenberg. You are sure they used that word?

Mr. Wilder. Oh, yes, sir.

Mr. LaRouche. Did you think he could do it?

Mr. Wilder. I did not. I did not think it existed.

Senator Clark. In other words, he had no information, other than this statement of this gentleman himself, which would lead you to believe that he was doing anything except pulling information out of the air in the same way in which you had picked your information out of the air?

Mr. Wilder. Yes, sir. Correct, sir.

Senator Clark. It was a matter of common notoriety that that sort of thing was going on?

Mr. Wilder He gave enough of a hint so that I knew who the man was, or I knew the man I thought it was, and I knew that that man was sitting around with some of the shipbuilders.

Senator CLARK. They had quite an organization sitting around with the shipbuilders, did they not, Mr. Wilder?

Mr. WILDER. Yes, sir. One of the shipbuilders was staying in his apartment.

Senator CLARK. And now, Mr. Wilder, I will read a letter which you directed to the Secretary of the Navy on August 4, 1933, which was the day after your conversation.

Mr. WILDER. You did not read the one I directed on the 29th, and you wanted that.

Senator CLARK. I did not have that

Mr. WILDER. I gave it to you. Read the press statement first, and the letter immediately follows. That was the cause of it.

Senator CLARK. Mr. Wilder, for the purposes of identification, will you read the letter to the secretary? I simply want to identify that. It is not necessary to place it in the record, but I simply want to identify it.

Mr. WILDER (reading):

> On Thursday, August 3, shortly after the Navy released its awards, none having been awarded to Gulf Industries, Mr. Hyde phoned Mr. Gravem from room 620, Hotel Washington, and Mr. Gravem stated——

Senator CLARK. It is not necessary to read that again, Mr. Wilder. You heard Miss Kitchen read the memorandum?

Mr. WILDER. Yes, sir.

Senator CLARK. And that is the memorandum you dictated immediately after the conversation on August 3?

Mr. WILDER. And submitted to Mr. Calvin and the others.

Senator CLARK. And the changes by striking out were as a result of this comparison with the others who were present?

Mr. WILDER. With the others who were present. Mr. Calvin made his own as to the meeting.

Senator VANDENBERG. Did you submit the first memorandum to Mr. Barrett?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. And Mr. Barrett agreed to that?

Mr. WILDER. Yes, sir.

Senator CLARK. Mr. Wilder, I will read you an extract from the Washington Herald, a newspaper published in the city of Washington, on Friday, July 28, 1933, headed "Bids to build new United States ships held too high—Navy may reject them all and construct vessels in own yards, concerns told", by Fulton Lewis, Universal Service correspondent.

> Strong probability the Navy may reject all bids received Wednesday for construction of three cruisers included in the new naval building program, developed yesterday.
>
> The vessels may be built in Government navy yards unless the private yards pare down their prices to a reasonable level.
>
> LOWEST IS $11,720,000
>
> The lowest bid for construction of one 8-inch-gun cruiser was $11,720,000, by the Bethlehem Shipbuilding Corporation. The lowest for construction of one of the two 6-inch-gun cruisers was $12,251,000, by the New York Shipbuiding Corporation. Both are 10,000-ton vessels, identical except for armament and minor structural details.

The last contract for such vessels was awarded December 6, when the Bethlehem Corporation contracted to build an 8-inch-gun cruiser for $8,196,000. The keel has just been laid.

Naval officials were frank in declaring the difference between these two figures is far more than is justified by the slight increase in steel and labor prices since December.

COMPROMISE OFFER

In the instance of the New York Shipbuilding Corporation, an additional offer of $11,657,000 was made, provided it was awarded both of the contracts for the 6-inch-gun cruisers. Even this figure, however, is out of line with the December contract, officials pointed out.

When they refer to the "December contract", they mean that awarded to Bethlehem of $8,196,000?

Mr. WILDER. Correct.

Senator CLARK (continuing reading):

Bids for other classes were closer in line with past costs. Engineering experts immediately started studies of them to report what ones should be accepted. Award of contracts is expected within 10 days.

In addition to the 3 controversial cruisers, the bids were for 2 aircraft carriers, 4 heavy destroyers, 7 light destroyers, and 2 submarines.

Now, based on that newspaper article, you wrote the Secretary of the Navy a letter, did you not?

Mr. WILDER. Through Senator Trammell.

Senator CLARK. How?

Mr. WILDER. I asked Senator Trammell to personally deliver it.

Senator CLARK. You did write to the Secretary of the Navy yourself?

Mr. WILDER. Yes, sir.

Senator CLARK. I will read the letter dated July 29, 1933 [reading]:

The honorable the SECRETARY OF THE NAVY,
Washington, D. C.

SIR: We notice in the press of Friday, July 28, a signed article which is headed "Bids to build new United States ships held too high—Navy may reject them all and construct vessels in own yards, concerns told."

We concur in this reported view of the Navy that bids in excess of $11,650,000 on these cruisers are excessive.

Gulf Industries can, on its present Pensacola shipbuilding site at Pensacola, construct such cruisers, in addition to the three destroyers, on which we are we believe, low bidder.

Gulf Industries' personnel has had the broadest experience in such cruiser design and construction. Therefore, Gulf Industries guarantees to submit, within 15 days, fixed price bids at sums less than $10,000,000 each for 1, 2, and 3 such cruisers; and to guarantee delivery of 36, 38, and 40 months respectively.

We trust that the above statement may be of value to the Navy Department in determining its action in this matter; and that the price herein quoted will be treated confidentially.

Very respectfully,

GULF INDUSTRIES, INC.
By LAURENCE R. WILDER,
Chairman Executive Committee.

That was the letter referred to by Senator Trammell in his letter to the Secretary of the Navy, was it not?[1]

Mr. WILDER. It was. In the inspection of Commander Duncan, which you will find in there, he said he would prefer to have cruisers built there.

---

[1] See text, p. 4759, for Senator Trammell's letter to Secretary of Navy.

Senator CLARK. When was this conference to which you referred in which Admiral Land expressed the opinion that your yard was capable of building cruisers?

Mr. WILDER. Pardon me. The statement of Admiral Land was that the personnel was capable of building ships. It was about 2 months prior to that.

Senator BONE. I want to go back to the Jones-White Act for a moment, before we adjourn, to be sure I get the facts correctly. Your information is, Mr. Wilder, that the provisions of the Jones-White Act of 1928 were prepared by private shipbuilding interests; that is to say, the act itself was drafted outside by private shipbuilding interests, and the preamble drawn by the Senator?

Mr. WILDER. And section I.

Senator BONE. That is rather a general statement of the purposes, is it not?

Mr. WILDER. Yes, sir.

Senator BONE. And the rest of that was framed and formulated by private shipbuilding interests?

Mr. WILDER. And turned over at the time of the hearings before the Merchant Marine and Fisheries Committee.

Senator BONE. And adopted by Congress?

Mr. WILDER. Yes, sir.

The CHAIRMAN. All right, Mr. Raushenbush.

1933 NAVAL BIDDING

Mr. RAUSHENBUSH. Mr. Wilder, before we adjourn this morning, I would like to see whether we understand exactly what you have been saying about this 1933 bidding. May I outline it and will you correct me if I do not get the import of your testimony correct so far?

Mr. WILDER. May I ask that my secretary come up here to help me on that?

Mr. RAUSHENBUSH. Surely.

The CHAIRMAN. Miss Kitchen.

(Miss Kitchen thereupon came forward.)

Mr. RAUSHENBUSH. Mr. Chairman, since there has been so much discussion this morning about the bids put in, may I ask permission to insert at the very beginning of the hearing of today the official Navy figures on the bids, with the names of all the companies.[1] That will make the rest of the testimony much more clear.

The CHAIRMAN. It would be well to do that.

Mr. RAUSHENBUSH. Mr. Wilder, concerning the bidding on the light cruiser *Quincy* which carried on from 1932 and was completed in the early part of 1933, we find Bethlehem with a bid of $8,196,000, which is roughly $2,000,000——

Mr. WILDER. Nearly $2,500,000.

Mr. RAUSHENBUSH (continuing). Two and a half million dollars between its 1927 and 1929 bids for similar cruisers. We find the other members of the big three, the Newport News and New York Shipbuilding roughly $1.500,000 above Bethlehem, and yet somewhat lower than their 1927 and 1929 bidding.

---

[1] See appendix, p. 4923, for Navy figures on bids and evaluations.

Mr. Wilder. Roughly $1,000,000 under; yes, sir.

Mr. Raushenbush. They are very fairly close, one with the other. As I understood your testimony, you explained that on the ground that for the first time United, and one of the companies not a member of the big three, had entered the picture with a bid that was apparently known to be lower, or was known that it was going to be lower than the normal bidding.

Mr. Wilder. It is very evident that they did not know how much lower or they would not have put in the "fighting bid" as I call it.

Mr. Raushenbush. That in the face of such competition, the bid of the company which you say was expected to get it, dropped about two and a half million dollars. Is that correct?

Mr. Wilder. Twenty-five percent.

Mr. Raushenbush. We come to the bidding in 1933, beginning with the armored cruiser *Vincennes.*

Mr. Wilder. Have you got the numbers?

Mr. Raushenbush. Later changed to 44. In which Newport News bid $13,800,000.

Mr. Wilder. Right.

Mr. Raushenbush. New York Shipbuilding bid $12,100,000.

Mr. Wilder. Check.

Mr. Raushenbush. And United bid on two bases, one of them $14,000,000——

Mr. Wilder. $14,600,000.

Mr. Raushenbush. $14,600,000, and Bethlehem was low with $11,720,000.

Mr. Wilder. Check.

Mr. Raushenbush. Would you explain that on the ground that they were expecting to get the two aircraft carriers? That is, would you explain the high bid of Newport News on that ground?

Mr. Wilder. Yes, sir. Have you got those figures?

Mr. Raushenbush. I am going to put them in in a moment. Would you explain the low Bethlehem bid on the ground that they had bid such in the early part of 1933 on the *Quincy* that they had to make it up?

Mr. Wilder. Yes, sir.

Mr. Raushenbush. Would you explain the New York Ship bid of $12,100,000, on the ground that they were protecting the Bethlehem bid?

Mr. Wilder. Yes, sir.

Mr. Raushenbush. Although that bid was roughly two and a half million dollars above their bid earlier in 1933?

Mr. Wilder. Are you going to read in the figures on the light cruisers?

Mr. Raushenbush. I am going to do that in a minute. What explanation do you give for the fact that United Dry Dock in the early part of 1933 had put in a bid of $9,525,000 and they now jump their bid by $5,000,000 to $14,600,000?

Mr. Wilder. Learned the error of its ways, sir.

Mr. LaRouche. What do you mean?

Mr. Wilder. Been in the ranks.

Mr. Raushenbush. That needs explanation, sir.

Mr. Wilder. It would indicate that peace had been made between the three big shipbuilders and the little fellows.

Mr. RAUSHENBUSH. You find no other way to explain a jump of over $5,000,000?

Mr. WILDER. No; I do not.

Mr. RAUSHENBUSH. Coming to the light cruisers, in 1933, we find the bids were put in on both a fixed-price basis and an adjusted-price basis, in which United is again high with $16,500,000, and you explain that that is true for the same reason you have just given?

Mr. WILDER. Same reason.

Mr. RAUSHENBUSH. Newport News is again one of the high ones with $15,100,000?

Mr. WILDER. Check.

Mr. RAUSHENBUSH. Do you explain that again they expected to get the two aircraft carriers?

Mr. WILDER. Check.
